The will of the late W. Brown Smith has been probated, the value of the estate is placed at \$250,000. H. Y.

DES MOINES, IA.—R. A. Rollinson, the florist, made an assignment March 28 for the benefit of creditors. J. S. Cupernell, a real estate man, is named as assignee of the property which belongs to Rollinson and his wife, amounting to \$60,000. Hannah Bomer bringing suit to obtain possession of 160 acres of land in the city limits brought on the assignment.

JOHN G. ESLER, Sec'y. H. A., Saddle River, N. J.

Mention the American Florist when writing to advertisers on this page.

Carlton Hill, N. J.

The first thought of a visitor at Julius Roehrs' place is, how easy it is to grow fine Easter stock, because every plant on the place looks extra well. You walk through acres of magnificent flowering plants. Mr. Roehrs has a fine lot of pink moss roses in pots, the delicate green foliage and the dainty moss bud being exceedingly attractive. He also has fine hybrids in pots. The bulbous stock all looks fine and is grown by the hundred thousands. The rhododendrons are a grand sight. There seems to be every color and shade, and each plant is a mass of bloom.

Here you see azaleas of every size and color, from great trees down to little pot plants. Some of them are quite out in flower now and will have to be kept in a cool place for the next week. The kalmia is another most attractive pot plant. The flowers when forced are larger than when it flowers out of doors, and a more delicate color. Mr. Roehrs has some fine standard lilacs in bloom, also genista and acacia, and plenty of *Lilium longiflorum*. Several houses of daisies are looking fine. The bougainvillea is another attraction.

S. M. T.

Portland, Me.

The florists of this city generally report business as having been poor throughout the winter. J. A. Drwanger found the sale for Roman hyacinths, lily of the valley and other forced bulb stock to be very slow, results not being sufficient to pay for the first cost of bulbs. Mr. Drwanger has a splendid *Acacia pubescens*, said to be the largest this side of Boston, in full bloom at present, also a fine display of hybrid roses, Murechal Niels, orchids and heaths. Albert Drwanger, who has been confined to his home with a severe cold, is much better, and his many friends will be pleased to see him about once more. J. W. Minott & Son, who bought out the Morton establishment on Congress street, report business as very satisfactory with them. There has been an unusual number of funerals here during the month of March, Portland having suffered the loss of a number of her most prominent citizens.

Rutherford, N. J.

Mr. A. Nadler is doing a good trade here this season. He finds his store quite profitable, as he is thus able to dispose of his superfluous product. He grows a general assortment of stock. He has had considerable demand all winter for all bulbous stock for local orders, the daffodils being a general favorite. Mr. Nadler has done very well with violets this winter. He has picked large quantities and has had no disease. His mignonette is very fine, and he has cut quantities of it all winter. In carnations Mr. Nadler grows Daybreak, Scott and Lizzie McGowan for the most part, the most profitable one being McGowan, as that is always covered with flowers.

There is always a good demand for funeral work in Rutherford. The white swainsona is a very useful flower in this work.

HOT
AIR
PUMPING
ENGINES

A Windmill

Is unreliable because it depends upon the elements for its power; hydraulic rams also depend upon favorable conditions and waste as much water as they secure. Steam pumps require skill and hand pumps demand labor and time. The

DE LAMATER-RIDER OR
DE LAMATER-ERICSSON
Hot-Air

Pumping Engines

are especially designed for pumping water, and from shallow streams or any kind of well. They are simple, safe and reliable, require no steam and have no valves. They require very little heat to operate them, and can be arranged for any kind of fuel.

Send for illustrated catalogue to
THE DE LAMATER IRON WORKS,
467 West Broadway,
NEW YORK, N. Y.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

HORTICULTURAL ARCHITECTURE AND BUILDING.

A GOOD INVESTMENT.

"The No. 6 'SPENCE' Hot Water Heater we purchased from you in August, 1889, has proven a good investment. Our main greenhouse is 132 feet long, 18 feet wide, with a wing 75 feet long, 18 feet wide, contains 1,000 square feet of glass, and is warmed with 1,500 feet of 1-inch cast iron pipe. The coldest weather we had last winter was 24 degrees below zero, but we had no difficulty in keeping up the required temperature. We burned during the entire season 18 tons of anthracite coal, and have no fault to find on that point, as we consider it economical. During the winter of 1888 we used a larger heater than yours, with only 1,000 feet of 1-inch pipe attached, warming 2,700 feet of glass, and consumed a greater quantity of coal than was required for the 'SPENCE,' though doing only two-thirds of the work. We find your heater very compact and easily managed, requiring less attention than any we have ever used."

PRESIDENT SCOTT is now able to go out occasionally, with the assistance of a crutch. He is daily gaining strength, and hopes to be considered fully recovered by the end of the present month.

Sweet Peas.

Replying to the inquiry as to the earliest date sweet peas can be had in bloom in spring in any part of the United States, would say that in California they have bloomed on March 15. In the vicinity of Chicago they may be looked for on June 15.

In the sweet pea bulletin of Cornell University Agricultural Experiment Station, Ithaca, N. Y., with a list of 106 varieties, the earliest bloom is recorded on July 13, but the seed was planted as late as April 30. H. A. STALLWOOD.
Austin, Ill.

THE EASTER TRADE

MILWAUKEE, WIS.—An increase of 10%. Retail prices same as last year. Supply equal to demand, quality finer. A slight increase in sales of plants.

TOLEDO, O.—Increase of 25%. Retail prices same as last year. Supply equal to demand, quality better. Less sales of plants and more of cut flowers.

HAMILTON, ONT.—Volume of trade and retail prices about the same as last year. Supply equal to demand. Quality good. Sales of plants hardly equal to last year.

YOUNGSTOWN, O.—A decrease of about 30%. Supply equal to demand, quality as good as last year. No change in sales of plants. Increased call for cheap flowers.

KANSAS CITY, MO.—Increase of 25%. Supply ample except violets, quality good. Sales of plants increasing every year, especially hyacinths, cinerarias and Harrisii lilies. Palms sold well and there was an inquiry for cyclamens.

FT WAYNE, IND.—An increase of 50% in total returns, due partially to an increase of 20% in retail prices. Supply equal to demand and quality better than last year. No noticeable change in call for plants. Bulb stuff sold better than last year.

EVANSVILLE, IND.—Increase of about 50%. Retail prices about same as last year. Supply equal to demand. Quality of lilies excellent. Sales of plants about 10% larger. Lilies led. Great run on roses, hyacinths, daffodils and carnations for out of town customers.

UTICA, N. Y.—About same as last year. Would have been better but for bad weather. Supply equal to demand, quality better than last year. Very high priced azaleas were not in demand, and the people that were able to buy the larger quantity, bought the least.

PEORIA, ILL.—Best Easter in ten years. Retail prices higher, especially for good stock. Supply equal to demand, quality much better than last year. No change in sales of plants. Most all sales were for cash; indicating that money is not scarce. Select stock brought good prices and sold first.

NASHUA, N. H.—Largest sale of longi-florum lilies ever known. Carnations very short; good demand for roses, especially hybrids; violets went quick at good prices. On the whole prices were about the same as last year, except on carnations, which were higher. Weather very cold, with lots of wind.

DAVENPORT, IA.—An increase of 10 to 15%. Retail prices about same as last year. Supply equal to demand, quality

good. An increase in the sale of plants, lilies azaleas and hyacinths leading. People in general bought more freely than in former years, due probably to the fact that goods were set before them in quantity and of good quality.

SYRACUSE, N. Y.—Increase of about 25%. Retail prices same as last year. Supply equal to demand. Carnations and roses not quite up to the mark in quality, other stock good. Sales of plants much larger. Pans of hyacinths, tulips and other bulbs, and Begonia nivea, sold well. There were more flowers used for church decoration than ever before.

DETROIT, MICH.—An increase of 10%. Retail prices about same as last year, larger supply of flowers and quality better. Increase of 50% in the call for plants. Could have sold more roses. Increased demand for large plants of lilies and roses. Trimmed pot plants sold well, in fact the plant trade gives the cut flower sales a black eye.

LOUISVILLE, KY.—Increase of about 15%. Retail prices rather better. Supply equal to demand except lilies. Quality of the carnations, violets and roses was much better than last year. An increase in sales of plants, owing probably to the fine weather. The sales seemed to be very largely to buyers not usually patrons and not so much to regular customers.

CAMDEN, N. J.—Nearly double that of last year. Could have sold more carnations. Good stock went quickly at 75 cents a dozen. Low grade stock was unsalable, while best quality were quick sale at fancy prices. In plants protected stock sold well at good prices, but plants on the street were badly damaged by cold and wind and had to be sacrificed. There seemed to be an absence of hydrangeas.

DES MOINES, IA.—Volume of trade about same as last year but an increase of 25% in retail prices which made the cash returns one-fourth larger. Supply ample except carnations. Roses were better in quality but there were a good many pickled carnations. Larger call for plants, particularly for lilies and hydrangeas. Very little call for bulbous stuff; what the people wanted was roses, carnations, callas and Harrisii lilies.

ELMIRA, N. Y.—About same as last year both as to volume and prices. Supply equal to demand, quality better. Increase of 20% in sales of plants. Increase in call for violets, Jacq roses and pink carnations. Customers are not willing to pay fancy prices for even fancy stock. Individual sales are not as large as formerly, but there are more individuals as buyers. Trade was less than it would have been on account of cold

weather and high winds. It was very difficult to move and deliver plant orders.

Forced Shrubs and Hardy Herbaceous Plants at Bussey Institution, Boston.

The two views in the greenhouses of the Bussey Institution, beautiful as they are, convey but a slight idea of the brilliancy of the display made with these simple and easily managed subjects. We publish them in the hope that by this means some of our progressive florists may be stimulated to make a beginning in this line, believing that it is only necessary to call attention to the possibilities that are within reach of every one and that the time is not far distant when in the vicinity of all our large centers collections of this character will be accessible to floral decorators.

There is always a scarcity of graceful flowering plants suitable for this purpose, the range of material in the ordinary run of florists' stock being very limited, and without question a good market is assured to the man who will take hold energetically and push this class of subjects, which may be had in flower in constant succession from the day the chrysanthemums are thrown out until the spring shrubs are blooming outside. The plants are inexpensive to start with and require only to be stored in a cold pit until wanted. Unsold stock is not lost, for it is still available for outdoor planting.

Bacteriosis.

I enclose herewith foliage of Daybreak carnations which are badly affected with disease, what I take to be bacteriosis. My houses are clean and well ventilated daily. Temperature 65° to 70° daytimes, 50° to 55° nights. If good weather they are syringed twice a week. Once in two weeks syringed with sulphide of potassium or copper solution; two-thirds ounce to one gallon of the former. Can you suggest any remedy for the trouble? It is my first experience with it. W.

This is bacteriosis. Do not syringe as often. Water under the plants, and probably they need a little more water than they do get with the syringing alone, also give nourishment in the form of well prepared liquid manure, give light, but often; a little common salt is beneficial in the liquid manure. Observe these rules: Keep the foliage dry, syringe only when applying a solution of some kind, on sunny days, keep the soil well watered and give nourishment. Weakness, or any check the plant may receive, will cause a lag in the resistance the plant will naturally exercise; and a moist or wet foliage will promote the entrance of the bacteria through the pores.

FRED DORNER.

Yellow Carnations.

ED. AM. FLORIST: Mr. Fred Dorner states in AMERICAN FLORIST of March 28, that "There is no clear yellow carnation in cultivation; all are more or less striped and mottled with pink to a deep crimson." I have entire faith in Mr. Dorner's

sincerity, but shall have to discount his knowledge on this point. Field of Gold may possibly be out of cultivation, but when we had it it was a perfectly clear yellow, without a trace of anything else. Pride of Penshurst I believe was entirely clear. W. R. Shelmire now has a seedling that is so. My brother C. S. Swayne also has one. I have several times seen among batches of seedlings at Avondale and here flowers that had reverted to the primitive single type as pure as primroses.

EDWARD SWAYNE.

In reply to Mr. Ed. Swayne's corrections, I admit that I should have said "in general cultivation," and that is what I had in my mind, and if any pure yellow variety is in general cultivation at present, I admit again that I do not know it. We hardly can call a variety in cultivation that only exists on the originator's place, and probably will never go beyond. I have myself several clear yellow ones among my last year's seedlings, and had them in former years, but if they will ever go beyond my place, I can not say. Seedlings are cultivated, but are not in cultivation without the pretext "general."

As to Field of Gold, whether in cultivation yet or not, I could not say. I did try to grow it myself, but it proved a sorry failure, as I never could get a dozen flowers from fifty plants, and do not remember if they were clear yellow or not. Golden Gate is another one that came at times clear yellow, at other times badly mottled with copper red. Pride of Penshurst is I believe as much out of cultivation as Field of Gold, Andalusia or any other of the old so-called clear yellow varieties.

The yellow bloom sent with the communication I suppose was intended to show a clear yellow one, but although very much wilted when it reached me, I could detect some pink stripes in some petals. When we speak of a pure yellow it should be as pure in color as a pure white or pink. We may allow a slight shading, but no stripes or penciling.

This is rather an interesting theme, and I may add a few notes pertaining to yellow varieties. My experience is that the pure yellow varieties are more or less of a weak constitution, therefore unproductive and more susceptible to disease. To strengthen their constitution we have to cross them with strong vigorous growing varieties of other colors. We succeed in that point, but with the crossing we also modify the color, hence the stripes, penciling and their tendency to sport. It appears to me, that when that color becomes obliterated probably by propagation, or is eradicated in succeeding crossings with pure yellow varieties, these new varieties appear again less vigorous. The same existed with white varieties. President Degraw, a clear white, but a weak and spindling grower, Edwardsi and Hinz's White, vigorous growers but striped with pink. But in the whites better success is perceivable, as we have now white varieties, with strong vigorous constitutions.

Judging from the dominating pink color, the original, centuries ago, must have been of a purplish pink; that may have given rise to the blue pink of ages ago, for the purplish tone in the pink, crimson, maroon and scarlet, crops out plentifully in a batch of seedlings. The pure shades of these colors and more so the white and yellow, are the result of culture and cross-fertilization. On a bench of seedlings the production of all colors in a pure clear shade, with a strong vigorous growth is noticeable more and more

with the exception of the yellow. A pure yellow generally proves to be a poor grower. The blue color and more so a pure blue has been and will stay a myth.

Another noticeable feature is, that the striped and variegated varieties prove generally the strongest growers, the striped yellows included. This shows the result of cross-fertilization, where the blood, a mixture of two varieties, is unmistakably noticeable. Pure colors are generally of a more weak growth; but there are exceptions, and to these belong the good self colored varieties in cultivation now.

These are observations made in my experience of growing new varieties for the last seven years. We have good strong growing varieties profitable to grow of pure shades in all colors, with the exception of yellow, but undoubtedly that color will be conquered too, and to see such yellow varieties in cultivation is only a question of a little more time.

FRED DORNER.

Ferns.

I want to plant out a lot of different kinds of ferns for spores in a solid bed. How would you advise me to prepare it and what kind of soil to use. F. W.

If the ferns are to be planted out in a solid bed, as indicated by our correspondent, it would be best to begin with a good layer of drainage material in the bottom. A depth of six inches of broken stone, brickbats or coarse cinders would answer very well, and on this should be placed from four to six inches of soil, using the coarsest in the bottom.

Rich soil is not needed for the production of spores, and sandy loam without any fertilizer will be quite satisfactory for the ordinary trade species of ferns, for example *Adiantum cuneatum*, *A. pubescens*, *Pteris cretica* and *P. serrulata* in their various forms.

These should be planted from one foot to eighteen inches apart according to their growth, shaded moderately and kept at a night temperature of 58° to 60° and also ventilated freely.

W. H. TAPLIN.

New York.

New York experienced a new variety of Easter this time. "Cold and raw the north wind blew" for several days preceding, and on Friday it snowed. It was more like Christmas than Easter in this respect. On Saturday, the great day, the temperature stayed in the neighborhood of the freezing point, making it risky to attempt to transport plants without some protection from the weather, and the wind howled at a rate that warned all florists to keep their goods indoors. So the customary gorgeous display on sidewalks and front areas was missing, and its absence must have counted heavily against the plant trade. Up to Saturday forenoon business lagged, and it looked as though there was going to be a slump, but as soon as the buyers realized that there was no hope of the weather moderating they came out in force, and the big masses of flowering plants melted away as if by magic, and in the end all acknowledged full satisfaction. In stores of limited area every available inch of space was taken up, making it difficult to move around or properly handle the trade.

The great bulk of the plant stock consisted of lilies and azaleas. Of other flowering plants there was variety enough,

FORCED SHRUBS AND HARDY HERBACEOUS PLANTS AT THE BUSSEY INSTITUTION, BOSTON.

but the quantity of any one kind was very small. Azaleas sold better than ever before, and the quality was fine throughout. Lilies were, as a rule, short and well-proportioned, there being very few of the tall ungainly type of *Harrisii* that have been so plentiful in other years. There were not many genistas to be seen, and these found no buyers. The day of the genista's popularity has departed, *Acacia paradoxa* in plants of various sizes, well-flowered, sold fairly well for a novelty and took the place of the genista where yellow was wanted. There were quantities of well-bloomed daisies everywhere, but their sale was limited mainly to church decorations. Of bulbous stock there was a shortage. The quantity available was much less than last year and the demand appeared to be good. Rhododendrons were generally of dull colors and few in number. The most pleasing novelty seen was some handsome specimens of *Andromeda floribunda*. Neat pyramidal shaped plants of box from four to five feet tall in white tubs were used for outside decoration in some instances.

As regards plant trimming there was opportunity for the gratification of all tastes. Some dealers ignored all ribbon, pot covers or fancy papers, relying only on the plain flower pot as it came from the greenhouse, while others carried the tissue paper dressing to the most absurd extreme, plants being so buried in a succession of flounces as to be almost hidden

from sight, and furnishing in many cases terrible examples of the most shocking taste in mixtures of color. Between these two extremes there were all grades. In some of the larger establishments where tissue paper was proscribed ribbon was used freely and white celluloid receptacles were provided to cover the pots. Tulle of various shades was also used in connection with ribbon. Ribbon stamped with representations of flowers was seen occasionally, but the effect of this was far from pleasing. Mixed collections of plants in baskets were not in evidence as compared with last year. Among the prettiest things seen were some shallow gilt baskets filled with violets or English primroses, the high handles being ornamented with bows of purple or yellow satin ribbon, respectively. Hydrangeas looked well with bows of pale blue ribbon among the flowers. Some florists had their tissue paper deckings all prepared before hand, forming them over wire frames made to fit flower pots of various sizes.

The cut flower trade profited by the cold weather in two respects; the production was shortened up and the difficulty of handling plants under the circumstances turned customers' thoughts to cut flowers as a convenient substitute. On the other hand the trade in the lower grades of cut flowers suffered, as the Greeks who are the great medium through which this class of goods is marketed were seriously hampered in their sidewalk trade. Those

who had no glass show case with which to protect their wares made a sorry display after the wind and dust had got in their fine work on the lilies and roses. Carnations got the cold shoulder from the Greeks from the outset, the price being above their limit. Violets and mignonette were both overstocked and they took the place of carnations for street trade. Violets sold cheap, but this was their salvation; had any attempt been made to stiffen up on violet prices the loss must have been great, for the quantity sent in was almost beyond belief, many growers shipping all the way from twenty-five to fifty thousand in a lot on Saturday alone.

As usual the retailers gave but little thought or attention to their cut flower trade while the plant business continued, so that it was not until Saturday noon that much local demand in this line had been experienced by the wholesale dealers. The shipping trade was first class, however, and the commission men were well cleaned out on desirable stock on Thursday night and on Friday night also. The big demand was for roses, carnations and smilax. As far as either of these specialties in fancy grades were concerned Easter might have been dispensed with, for there is no surplus of the right kind and they go without effort. The finest roses in the market were the Jacobs from Wiegand Bros., the selected extra specimens of which measured three feet of stem, blooms and foliage being

equal in size to the finest American Beauties, and bringing, like them, nine dollars a dozen at wholesale. There were heaps of Beauties, but most of them, as Charlie Carlin would say, "only cooked on one side." In carnations the crack growers, such as Ward, Suydam, Reimels and Dailedouze, had a clear field and results ought to be exceedingly satisfactory to them.

There was but little evidence that the growers had done any storing of flowers except in the case of lilies. Of these there was a goodly proportion that showed signs of long keeping, and the shrinkage on some lots must have been considerable. Evidently the outside trade had grown enough lilies for their own needs, or past results in lily shipments have been unsatisfactory, for there were practically no lilies shipped, and the local market had to manage the whole crop. Other bulb stock was decidedly draggy; no advance in prices possible, and but little increase over the ordinary demand, which is absurdly small this year. Another unfortunate item was mignonette, which came in crates, regardless of express charges, and once in refused to either budge or pay rent. The prettiest novelty in the market was a lot of moss rose buds seen at Julius Lang's.

A. & F. Rolker held their first sale of bedding plants on Tuesday, April 7, and will continue them regularly throughout the season on Tuesdays and Fridays. Mr. August Rolker returned from his vacation trip on Thursday last feeling much improved in health. The Easter plant sale at this establishment on March 31 was a success.

Fleischman will move into his new store on the corner of Broadway and Twenty-fifth street about May 1.

Mrs. P. F. Handley, Jr., died at her home in Brooklyn on Wednesday, April 1. Ernst Asmus is contemplating a trip to Europe the coming summer.

Mr. L. G. Forbes has been secured to succeed Mr. Wm. Falconer at Dosoris.

John Reimels will make large additions to his carnation establishment at Woodhaven this season.

C. W. Ward has been on the sick list; Jas. Purdy ditto; both improving since Easter.

Pittsburg.

The florists are taking things more quietly this week, resting after the rush of last week's Easter business. Saturday, the great day, opened with snow and strong cold winds, the sun not showing until afternoon, which was greatly against those who did not have enclosed places in which to exhibit and handle their flowers. Some estimated they would have done one-third more business had the weather been as it was on Sunday, which was an ideal Easter day, but with the others it did not materially affect them, only resulting in throwing the trade into a few hours instead of having a whole day to attend to it.

Carnation were as expected, scarce, but all other flowers were in abundance; prices generally good and sales heavy, everyone expressing themselves as satisfied, very few having any stock unsold at closing time on Saturday night.

The same conditions prevailed on the "South Side" as well. Mrs. E. Williams, 1713 Carson street, reports having had a better Easter than for four years past, and is well pleased with the new houses erected last fall, having to buy very few flowers last week, although all hands worked continuously for fifty hours to

finish all orders, which was done at 2 a. m. Sunday.

In the east end Messrs. Randolph & McClements and Mr. C. H. Becker were driven to the utmost up to the last minute, and are consequently correspondingly happy, and those situated in the north side (Allegheny) and central part of the city are in the same comfortable condition.

Miss Anna Klopfer will open at 622 Smithfield street in a few days a store for sale of plants and cut flowers. The store-room is being remodeled, first story marble front and second story fine glass front. This floor will be devoted to sale of plants; also contains the office, the first floor for cut flowers, designs, etc. Her greenhouses are in Allegheny City, seven in number, and cover an area of about 12,000 square feet, and the intention is to erect as much more this summer. They are under the care of Jno. O. C. Von Schubert, formerly with Messrs. Haage & Schmidt, Erfurt, Germany. Miss Klopfer is a member of our club, and all will be pleased to have her succeed.

Mr. Wm. Falconer has arrived and assumed charge of Schenley Park as superintendent; he arrived at a time when he will see the flower lovers of Pittsburg and vicinity in great numbers, the show at Phipps conservatories having opened on Easter. The actual count as taken by Mr. O. W. Brown, the chief clerk, showed that all previous records were broken that day, and it is also beyond dispute that the display surpasses any heretofore given, reflecting the greatest credit on Mr. Joseph Spring and the gardeners under him for their skill and attention, they having been in full charge of the conservatories ever since the late Mr. Bennett was taken sick in December last. Mr. Falconer, who can certainly view this exhibit as an outside expert, not having been concerned in the arrangement of it, expresses the opinion that it is not equalled by any show in this country, and that it is worthy of all the praise that can be bestowed upon it. The first house after leaving the palm house displays in the center a large number of cinerarias which have "kept" wonderfully, being in bloom a long time, and genistas (the Dean seedlings); around the sides and ends are among other blooming plants fine specimens of *Prunus triloba* (little plum), *weigelia*s, yellow flowering currant, lilacs in variety and the new Chinese shrub, *Xanthoceras sorbifolia*, with spikes of flowers resembling a small horse chestnut, white swainsona and *Solanum Seaforthia* in great beauty.

In the Victoria regia house the place occupied by it in summer is covered by an immense pyramid of roses, surmounted by an elegant specimen of the sweet bay tree. Among the nearly fifty varieties of hybrid and Noisette roses seen here probably the most striking and best are Paul Neyron, Ulrich Brunner, Baroness de Rothschild, Gloire Lyonnaise, Gloire de Margottin, Countess of Oxford, Fisher Holmes, Jacqueminot, Magna Charta, Mme. Gabriel Luizet and Alfred Colomb. They form a most beautiful sight, surrounded as they are by lilies, daisies, white and yellow; azaleas, spiræas, genistas, etc.

In the adjoining house are large quantities of the E. A. Wood carnation, with great sheaves of pale pink blooms, while a seedling, Schenley Pink, with its profusion of bloom, being as free a bloomer as Scott, attracts a great deal of attention.

In another house is found a large collection of hyacinths and tulips. About the best of the former are for blue, William I,

Charles Dickens, Czar Peter and Baron Von Thuyll; for white, Baron Von Thuyll, Alba superbissima, Mina and La Grandesse; for pink, Gigantea, Norma, Moreno and Prince of Orange; for red, Mme. Hodson. Best single tulips are La Belle Alliance, scarlet; Duchesse of Parma, orange red, yellow border; Joost Von Vondel crimson, red and white; Kaiser's Kroon, yellow and red; Vermilion Brilliant, bright scarlet; Chrysolora, pure yellow; Pottebakker, yellow; Couleur Cardinal, crimson scarlet; Thomas Moore, orange. Best double tulips are Couronne d'Or, yellow; Murillo, bluish; Salvator Rosa, deep rose; Tournesol, red, yellow border; and Rex Rubrum, scarlet.

The exhibit of azaleas is grand; the individual blooms are very large, with the plant completely covered, nothing to be seen but the flower; the best of this collection are Cocarde Orange, Empress du Brazil, Mme. Lefebvre, Oswald de Kerchove, Fleur de Marie, Eugene Mazel, M'dlle Lefebvre, Mrs. Chas. Turner, Ermine, Glory of Sunning Hill, Mme. Vandercruyssen, Reine de Blanches, Ceres and Vervæiana.

These, with many other varieties of flowers, foliage plants, etc., arranged as they are with due regard to color and form, certainly show the vast amount of care and thought that was necessary to bring all into such perfection.

Mr. Falconer will soon become accustomed to his surroundings, and no doubt impress his individuality on the place, which is but in its infancy, increasing his reputation as one of the foremost florists of the age. The people here stand prepared to welcome him and endeavor to make him one of us.

The floral display at the Phipps' conservatories in Allegheny attracted a great deal of attention; the attendance on Sunday was very large, and crowded the houses beyond comfort all day. The exhibit there was very fine, eclipsing former years, and Superintendent Wm. Hamilton deserves the encomiums given him on the successful show. A detailed account will be given later.

John L. Wyland is about again after a two week's illness, looking pretty well.

Mr. N. Patterson is also able to be at his store part of the time although not entirely well.

Mr. T. Ulam, of Elliott & Ulam, is home after a week's sojourn in New York; the boys must have been very good to him judging by his looks and feelings.

REGIA.

Buffalo.

Easter has been here and gone and the joyous time has left happy memories in the minds of almost all we hope, but it certainly has not with our local florists. I failed to look at the weather reports of other cities through an overdose of anxiety watching our own, but I am afraid a large section of our country fared as badly as we did. The beautiful weather of the early part of the week vanished on the Wednesday, and in its place came snow flurries, frost and wind; all delivering was put off till the Saturday, and no doubt intending purchasers delayed their orders for the promised warm Saturday, but alas it did not come. Saturday opened bleak and cold and for only one short hour, about 2 p. m., did the thermometer show 2° above freezing, and it would have been far better if it had never reached that elevated point, for it was only a deceiver. During that short interval many loads were hurried off exposed in an open wagon, and before they had gone two blocks down went the temperature

FORCED SHRUBS AND HARDY HERBACEOUS PLANTS AT THE BUSSEY INSTITUTION, BOSTON.

and down came a flurry of snow. You will say enough of this weather report. The fact is it was a most disastrous time. The worst I ever remember.

In the aggregate, among all the craft, we had to receive more kicking, grumbling, etc., about frozen and delayed orders than has occurred in the past ten years. I heard of one man having fifty frozen lilies to replace, and all others had a more or less similar experience. And this is not all the trouble; the great bulk of the business being crowded into the last day of the week it was impossible to dispose of and handle all the stuff that was for sale. We are not troubled yet with the street fakir, but a thrifty set who earn an honest penny in our public markets by the sale of plants and flowers were sadly handicapped. Some of the market people handle immense quantities, and this Easter their profits must have been small if any.

Churches of all denominations decorated more or less, but nothing lavish was heard of. Ten years ago the description of the flowers and music would occupy several columns in our leading dailies. This year it was all lumped together in a very brief paragraph.

There is little doubt in my mind that had the elements given us a fair show the business would have been all that was desired. Lilies, in point of number, were most in demand, but the azalea was the favorite with the best class of buyers;

after them came other stuff in lesser quantities. The three standard flowers, roses, carnations and violets, were what everybody wanted. Bulbous stuff was not looked at much. Valley was not in much demand, but good mignonette was.

Prices were perhaps a little less than last year on cut flowers, but not on plants. At retail tea roses brought per dozen \$2.50, violets \$2 a hundred, and carnations from 50 to 75 cents per dozen. Some few hundred fine Helen Keller brought \$1. For size, substance and stem this fine fancy flower has few equals. Smilax is scarce in town, as it usually is about this time.

The promise of a good crop of spring weddings in the near future is keeping up our spirits, and if Easter was not a Cripple Creek investment for all of us, we can look forward to a good spring business when the glacial period has left our latitude. We won't grumble any more. Think of poor Mr. Scrim in Ottawa, Ontario, and Mr. Bennett in Montreal; no doubt they delivered their Easter orders on a sleigh.

W. S.

Toronto.

Reports from the various florists round town vary somewhat, but all are agreed as to the enormous supply of cut flowers of all kinds sent in, and very few report having anything of consequence left over. The weather on Friday and Saturday was bitterly cold, just enough to induce the

pious florist to let loose his "tendency" to profanity, in consequence the plant trade at the market was much restricted although a fair cut flower trade was done. No doubt the weather unfavorably affected the whole trade too, people did not turn out as they would if it had been fine and warm.

However, putting all things together, I should say that there were a great many more cut flowers sold than in former years, and that the plant trade was fully equal to the average. From what I can gather I should say that there was a slight falling off in church decorations. J. H. Dunlop says that the chief characteristics of his Easter business were the phenomenal sales of azaleas and rhododendrons and the increased demand for flowering plants of all kinds, but this may have been due to extensive advertising.

The supply of carnations was simply immense and the quality A1. Roses also were sent in in very large quantities and of the finest quality, there were none left over. Violets and valley sold together in large quantities, and daffs, tulips and mignonette were much in demand, and of these there was also a plentiful supply.

All the florists' windows had magnificent displays on Saturday morning, in the evening they looked as if a cyclone had been along. Prices ranged fair all along the line, nothing remarkable either way. One florist told me he had a very

large demand for Easter lilies and could not supply the demand, another told me he could have bought a lot more if he had wanted them. I saw very few left in the stores on Saturday night, and I don't think the growers have very many left over. Dunlop showed some very pretty white lilac, *Dentzia gracilis* and a few *Wistaria sinensis*; the latter was extremely "fetching."

At regular meeting of the Horticultural Society this week "Shade Trees" will be the special subject, and the next meeting (21st inst.) of the Gardeners' and Florists' Association will be specially devoted to "Carnations." Every one who has anything good in that line is requested to bring it down and let its merits be seen and discussed. Certificates of merit will be awarded to objects that may be considered worthy. E.

St. Louis.

Easter trade was fully up to the expectations of all the florists; the weather was most favorable to flower buyers. The bulk of the orders came in at the last moment, and compelled the majority of the florists to work half the night, and some all night, in order to get their orders in shape for delivery Sunday morning. Good roses were not over-plentiful, but of the poorer ones there was plenty. *Harrisii* were plentiful this season, the supply being slightly greater than the demand. They were sold for \$3 per dozen. Pots having from two to four flowers brought \$1, and with from 5 to 8 blooms were sold for \$2. Azaleas were in demand, bringing from \$1.50 to \$2. The general complaint this year was that hydrangeas were all behind in flower; the demand for them was good. The report is that this Easter more plants were sold than ever before. Violets were poor and scarce; the demand was greater than the supply. This was probably due to the warm weather just passed, which glutted the market at that time; they were offered at \$1 per 100. Carnations were not over-plentiful and were in great demand, the commission men asking as high as \$5 per 100 for the best, and \$3 for the poorer ones. All bulbous stuff was very plentiful, and generally speaking good in quality, and was in great demand.

The West End florists are very enthusiastic over their Easter business; the downtown florists—some are highly pleased, while others not so much. Altogether it is safe to say that the bulk of the business done was far in advance of any previous Easter week.

The majority of the florists had their windows handsomely decorated. Jordan Floral Co. had their large store decorated with hydrangeas, azaleas, palms, araucarias, *Harrisii* and a fine vase of Jacques.

Riessen Floral Co. had a fine display in both of their stores; hydrangeas, *Harrisii* and palms, with a fine assortment of cut flowers, made a most attractive display.

Ellison & Tesson made a fine display of American Beauties and other fine cut flowers.

In the West End F. C. Weber, Luther Armstrong, Ayres Floral Co. and Cannon Floral Co. made fine displays in their windows consisting of ribbons, plants of all kinds and a large assortment of cut flowers.

Trade has been good all along the line ever since Easter. The few flowers left on hand in the way of lilies and white flowers after Easter found ready sales the following day. Flowers will continue in good demand throughout the week. The

florists who had plants at the market all last week report that they sold more plants than ever before at this time of the year, 30% increase all around. Prices are a little stiff yet, but by the end of the week they will come down to about what they were a few days before Easter.

J. W. Steele & Co. of 4044 Olive street moved all their fixtures and stock out on Monday night and took them down to the auction house to be sold; some of our commission men are lamenting a loss in consequence.

Visitors this week were Simon Skidelsky of M. Rice & Co., Philadelphia, and H. P. Hagenholz, representing A. J. Kuyk, Hillegom, Holland.

E. W. Guy of Belleville, Ill., has gone to Cincinnati.

George Augermuller, bookkeeper for C. A. Kuehn, was married this week to one of our West End belles. His friends, who are very numerous among the florists wish him much joy and happiness.

The Florists' Club meeting this week, Thursday, was a rose meeting; a fine exhibition of roses was expected.

The florist bowlers on Monday went down to the alleys of the Magnolia Bowling Club, and were swamped completely, snowed under. The understanding was that the Magnolias were to respect the 56-foot line on their alleys and the 60-foot line on our alleys, but when the time came to roll they would not roll that way, so we allowed them to roll at a go as you please gait, and the florists toed the mark at this gait; they beat us by 1,437 pins, two of their men making 300 in a game, but I think the tables will be turned next Monday night when they have to respect the line. The boys had lots of fun, and those who attended enjoyed themselves. F. C. Weber was high man for the florists, and F. W. Meyer for the Magnolias. Emil Schray rolled the highest single game, 269 for the florists, and Mathie and Schnid each made 300 in a single game. J. J. B.

Boston.

Easter in Boston was memorable for three things, the very cold weather, the clean sweep on lilies and something akin to a revolt by the public against what they regarded as exorbitant prices on carnations. The weather was extremely cold and made transportation of plants especially hazardous. People who bought lilies at the department stores because they were cheap and then had them sent home by express must have come to the conclusion that they had made but a poor bargain on receiving the plants after they had made an afternoon trip exposed to the thrashing wind on top of an express wagon. The lilies in this market as a rule were longiflorums, short and tough, and but few tall *Harrisii* were seen. All indications pointed to a shortage early in the week, and when Saturday came predictions to this effect were verified. Everything that showed an open flower was eagerly snatched up and there might have been many more sold, a very different state of affairs from last year's experience when the overstock unsold was heavy. Prices were \$10 to \$12 per hundred on an average. Florists who paid these prices were naturally indignant when they found one of the cheap department stores selling good longiflorum plants at 10 cents per bloom retail. Vengeance was in the air and they are still looking for the individual who was responsible for the stock, but up to latest advices he remains undiscovered. Lilies led in plant sales everywhere. A fair number of azaleas and roses in bloom

were also sold, but lilies composed probably nine-tenths of the entire plant sales. *Spirea compacta* was offered in good shape but found little favor, and the plants were left over unsold.

The sensation of the cut flower trade was centered about the carnation. It was evident to all that the crop of carnations would be totally inadequate to the demands of an ordinary Easter. Prices went up early in the week and on Thursday reached high water mark, \$6 per hundred for good quality stock. On that day retailers were tumbling over one another in their eagerness to buy up for immediate use or to secure for Saturday a good supply. Honors were easy on Friday and on Saturday morning the growers had no difficulty in unloading their cut, which was really no larger than an average Saturday product, at stiff prices, though a trifle lower than on Thursday. This let the growers out of it nicely, but the stores did not fare so well, for the public, as though by previous understanding, gave the carnation a marble hand and Sunday found a large proportion of Saturday's flowers unsold and practically a dead loss. The bulb man, who has had a hard struggle during the winter, got the benefit of all this, as did also the violet man, both of these individuals having been trained down by misfortune so that they were willing to dispose of their stock at every day figures, and never thought of doubling prices because Easter was here. Roses experienced but slight advance above ordinary rates and sold steadily and well. In general, it was noted that colored flowers had the preference, and except in the case of lilies the old demand for white flowers for Easter use seems to have pretty well died out. Candidums were scarcely thought of. There were a few here and there and they did not average in size much larger than a common white azalea.

The wholesalers, while not experiencing any such demand from distant points as was the case a few years ago when long distance shipping was at its height, had every reason to feel satisfied with their business, both shipping and local, the only blot being their injudicious haste in gathering in carnations at top figures on Saturday morning.

At the meeting of the Gardeners' and Florists' Club on Tuesday evening, Prof. B. M. Watson of the Bussey Institution read a very interesting and instructive paper on "Effective Combinations and Arrangements of Plants in the Shrubbery and Garden." The audience, while not large, was most appreciative and the discussion which followed the reading of the paper showed how much interest is being developed in this subject, largely through the influence of such grand institution as the Bussey Institution and the Arnold Arboretum.

Lawrence Cotter was the recipient of a useful wedding present from his friends in the trade, a handsome dining room set.

Cleveland.

Easter developed a big lot of stock in the hands of the different growers. Everybody had a big supply in good variety and the result was a great display during the last half of the week; the only thing that did not appear largely seemed to be pink hydrangeas, which were not generally to be seen, although some few of the florists showed them. Outside of these, the supply seemed to be unlimited. Azaleas, *Harrisii*, genistas, spiraea, Dutch bulbs in pots and pans, daisies, rhododendrons, lilacs—everything

that even the most capricious taste could ask for, and which was at all available, the request would produce. The first half of the week was splendid as to weather, but the last half was different. It is very doubtful if April could bring worse weather than that which came during Thursday and Friday. It snowed and blew and froze miserably. It began early and hung on with the most determined pertinacity until well along into Saturday, and meantime the florists fumed and fretted over their beautiful displays. It was only with the greatest trouble and inconvenience that stuff could be moved during Friday, which was the worst of the three days, freezing as it did all day from four to seven or eight degrees with a raw wind that came out of the northeast in great gusts. This undoubtedly had a most unfavorable effect on buyers. Not only did it deter many from coming out, but those who did brave the storm, must have had their flower buying ardor grievously chilled. There was nothing whatever to suggest sunshine, spring and flowers. Saturday was somewhat better, as the wind had died down, although it remained cold and froze nearly all day—a circumstance that had a most discouraging effect upon those florists who do a market trade. Many of these did not get out until after noon and by that time all the best trade is over in the markets.

The stores report variously concerning Easter trade. Saturday was practically the only day in which buyers could get out at all comfortably, and the clear afternoon brought them out in large numbers. The result was that one or two stores had to lock their doors in the evening. These very fortunate parties should surely be well content, for not many are afflicted in that way. Some report a slight decrease in the amount of business compared with last year. With some there was an increase. But with many prices were a shade below last year, with an inclination on the part of buyers toward economy, a drift toward the cheaper class of stock. The broad general average would probably show no very great difference in the amount of stock disposed of. Prices on the whole were slightly lower. There was more stock left over by reason of the greater amount grown. Had the weather been good or even moderate there would probably have been a satisfactory gain over last in every respect. A.

Chicago.

While the Easter trade here was but little larger than that of last year it seems evident that there was an increase in the sale of plants at least, and all the retailers report excellent business. No excessive advance was made in the price of flowers, and the supply was pretty well up to the demand, except in carnations, which were short. Violets were quite plentiful and in very active demand, and bulb stock, which has been rather a glut of late, moved quite well.

The plant trade did not present any especially novel features. H. F. Halle found the strongest demand for azaleas and lilies, while cinerarias went off very slowly, being with him in less demand than last year. He obtained quite a large stock of fine pelargoniums, and these proved great favorites. Comparatively few foliage plants were sold. Mr. Halle had a lot of church decorations at Easter, and the past week brought him a good deal of decorative work.

At E. Wienhoeber's a similar activity in plant sales was noted. Here, as else-

where, lilies and azaleas led, but unlike Mr. Halle's experience, cinerarias sold well with Mr. Wienhoeber. A well-bloomed plant of good color could be sold for 35 cents, making a show unequalled by anything else for the same price. Pans of daffodils and jonquils also sold well. Singularly enough there was no call whatever for hydrangeas. Very handsome plants of pink Otaksa were to be seen, but people would not even ask the price, and they appeared entirely out of the running. Genista was hardly seen; it has never been a great favorite in the Chicago market, and rhododendrons also appear to have retired. Pot lilacs, though well-bloomed and handsome, seem losing ground in popular favor, and were less called for than in previous years.

Comparatively few baskets of plants were sold here, individual plants being preferred. There was an increase in the use of tissue paper and other decorations for the flower pots, and bulb pans so treated appeared to make a decided hit.

On the south side W. J. Smyth found business very active, there being a strong demand for cut flowers, particularly lilies, roses, carnations, violets and valley. Other bulb stock sold slowly, people making small purchases calling for roses or carnations, rather than the cheaper bulbous flowers. While the plant trade was certainly good, particularly the sales of lilies and azaleas, the heaviest purchases here were of cut flowers. On Saturday night, Easter Eve, Mr. Smyth had a large banquet decoration at the Calumet Club, calling for elaborate floral arrangement; it was certainly a particularly awkward date for a busy florist. Most of the fashionable florists say that many of their wealthiest customers were out of town, so that the usual orders from these sources were omitted; the fact that sales were up to previous years denotes an increase in the transient trade.

The wholesalers were kept very busy with both shipping and local trade, and with most of them it proved the biggest Easter on record. A great quantity of lilies was disposed of and although a lot were shipped in late from outside points the price held up, very few, if any, going below 10. In roses and carnations the only flowers that suffered were the inferior grades, first-class stock being sold readily. Bulb stock varied a good deal, still it was pretty well cleaned up. Quality of stock was usually good, but we hear the usual complaints of pickling.

This week we have experienced the usual drop. Beauties are \$8 to \$35, other roses \$3 to \$5, most of the good stock going at \$4, selected only at \$5. Carnations are \$1 to \$1.50, fancies \$2. Harrisii are \$6 to \$8, and callas wither away without purchasers. Sweet peas have made their appearance; Bassett & Washburn have received extra fine Blanche Ferry, Lottie Eckford and Emily Henderson from Mrs. Eaton of Lyons, Iowa. They sell for \$1.50 a hundred; good flowers, but with shorter stems sell for \$1. The antirrhinum, though very fine, sells but slowly.

We were more fortunate than our Eastern brethren in having fairly good weather Friday and Saturday before Easter; though chilly there was little wind, and sun enough to encourage flower buying. Since then cloudy weather and rain has made roses rather soft.

At the meeting of the Florists' Club last Thursday evening these was a discussion of the Easter trade, and of the outlook for spring business. From remarks made it is evident that what is known as the "geranium disease" is spreading. This is

caused by a worm that eats its way up through the stem, causing rot. No one seems to know of any effective means of combatting it.

At the next meeting steps will be taken to enable the retailers to secure mutual protection against dead-beat customers.

Mr. William Penn Nixon, editor of the *Inter Ocean*, has been appointed a commissioner of Lincoln Park, to succeed Andrew Crawford, resigned.

W. J. Smyth intends to move from his present location about May 1 into a store across the street, at the corner of 31st street and Michigan avenue. The premises will be decorated and fitted up in the most approved style, and will form a very desirable situation.

Recent visitors: H. J. Goemans, representing K. J. Kuyk, Hillegom, Holland; N. Dames, of Van der Horst & Dames, Heemstede, Holland.

Philadelphia.

Last Christmas the doors of the stores were thrown wide open and kept there; plants delivered without fear of even getting chilled. The tender palms mingled with the sturdy spruce in the decoration of the store fronts, and the genial atmosphere was likened to the balmy air of spring. How different the Easter just passed; Thursday, Friday and Saturday the thermometer hovered around the freezing point all day long and a biting wind coursed along the streets, making any display of plants impossible, in fact all stock sold, to insure its sale delivery, had to be wrapped up.

The small dealers and street men and the florists who with only a house or two sell their stock in the market or on the street were put in a bad way by the inclement weather. Many had stocked up in cellars and the like places, expecting to do their usual or even better business, and could not display their stock, as a few hours' exposure completely ruined it. The dealers on Market street on Saturday had a great time protecting their stock from the wind and the frost; they struggled under great difficulties all day, but after seven o'clock in the evening in the dim light the frozen to death lilies were cheerfully and quickly sold at a slight (?) reduction from store prices; none but an expert could decide that life was extinct until they taken into the house when the corpse thawed out, and the loving ones gathered round to celebrate the "wake" with tearful and disappointed faces.

Considering the adverse circumstances there was a good business done by all in the regular channels. Some azaleas were left over, but nearly all the other stock was cleared up. Lilies sold particularly well. The lily is the great Easter flower after all; many other kinds of plants are brought out from time to time, but the lily holds its own, and the demand this season was as good if not better than ever.

Large azaleas make a great show in the store, but the general public as a rule can not be made to buy them; \$5 is about the limit of the moving sizes, and the \$8, \$10 and \$15 specimens stand as if anchored. Pot lilacs and rhododendrons were quite plentiful, and moved off very well. There was plenty of *Spiraea compacta*, which sold well; the new *grandiflora* resembling the golden rod in form of flower did not seem to take, as it is not showy enough and lacks the generous foliage that makes the *spirea* such a perfect plant. Pans of hyacinths in solid colors sold well, especially when trimmed with crepe paper the same color as the flower; pots of daffodils

and small genistas, when decorated with yellow crepe, were very attractive and quick sellers. Many other plants were made more salable by the judicious use of this material and a little ribbon and gold and silver cord. Pasteboard covers to fit different sized plants and covered much the same way as the bare pots were prepared before the rush, and were used to good advantage when there was not time for decoration.

Cut blooms were not over-plentiful, carnations being particularly scarce, and commanded Christmas prices. Choice stock brought \$4, and anything fair brought \$3 per hundred; short whites sold for from \$2 to \$2.50. Roses were quite scarce, but prices did not advance but very little. The best teas brought \$10; Perles and like sorts sold at \$6; Beauties brought \$2 to \$5 per dozen; Brunners were in great demand at from \$4 to \$5 per dozen; Jacks went for \$15 to \$20, and were not very plentiful. Of bulbous stock there was enough for all, and some to spare. Valley, tulips and daffys brought 3 to 4. Smilax was scarce at 15 to 20.

Up until Saturday the business seemed to be disappointing, and storekeepers seemed worried, but when the last day arrived the customers fairly swarmed in, and it seemed almost impossible to wait on them. It's a great system that manages an Easter Saturday business satisfactorily. Robt. Craig said it's the same way every season. Thursday night of Easter week when he makes his annual tour of the stores he always finds the proprietors worried and afraid they have too much stock; they will never sell it, etc., etc., but he says Saturday night generally finds them with a different frame of mind and stock all gone.

The meeting of the Florists' Club Tuesday evening last was not very largely attended, but those not present missed a treat in not hearing Mr. J. Gardiner's very excellent paper on mushrooms. In the discussion Mr. Gardiner said that failure with mushrooms was caused mainly by the beds getting too warm and burning up. He said that there should be a gradual decomposition of the bed, and this was brought about by mixing the manure with the soil as the bed was prepared. A bed properly made generated a heat of between 80° to 90° and would produce mushrooms for six months, provided it was kept from draughts. Mushrooms needed plenty of fresh air from the top, but not from doors or bottom ventilators. To water a bed was almost sure to rot the young mushrooms and spoil the crop. He kept barrels of fresh manure standing about his house, and the free ammonia settled on the cold bed and helped the crop to a marked degree. He also made beds of fresh manure outside in an enclosure of boards, and covered the top with a thick layer of fine soil, and after the manure had heated for some time he took the soil and spread it about his house on the walks, not necessarily on the beds, and the crop was much benefited. The maggots were to come with warm weather, and there was nothing could be done to destroy or prevent them. When the bed was covered with small mushrooms that stood still and would not develop it was then they should be stimulated in some way as described above, but never watered, as that would kill them immediately; if moisture could be given them from below it would be all right, but not from above. Spawn when plantings should be placed about 16 inches apart each way, and then the temperature of the house kept up to 75° to 80°; this

would spread the mycelium quickly until the bed was covered, and then from 55° to 57° seemed to be the best to develop the mushrooms and keep up a continuous crop.

At the regular monthly shoot of the Gun Club last Wednesday the medal again changed hands; this time Ed Reid is custodian for the next two weeks, when he will no doubt have to defend it against the challenge of some envious brother member. In the regular shoot Mr. Harris, the holder, with a handicap of 8, made 24, and Mr. Reed, whose handicap was 4, made 24 in the shoot off; Mr. Reid won, 23, including his handicap, Mr. Harris losing by two points. The score of the entire team was as follows out of a possible fifty:

W. K. Harris	29	Thos. Cartledge	26
W. Parks	43	Geo. Anderson	43
M. L. Lindsay	25	Jno. Burton	37
C. D. Ball	32	A. B. Cartledge	36
Geo. Craig	29	Ed. Reid	39
W. P. Craig	34	Chas. Harris	28

K.

St. Paul.

Easter week brought a great variety of weather. On Monday it was warm and summer like; on Tuesday it rained, snowed, hailed, thundered and froze hard; on Wednesday and Thursday we had the best sleighing of the season, while Friday and Saturday were warm, bright and pleasant, causing the smiles to chase one another over the florists' faces.

Trade was very good. Had it not been for the weather the fore part of the week this Easter would have gone on record as the best known.

Stock in general was in good shape and delivered nicely. Lilies, azaleas, spiraeas, etc., were delivered Saturday in open rigs without wrapping. The supply of lilies and azaleas was not equal to the demand, and more good stock could have been disposed of.

In cut flowers, carnations, valley, violets and all bulbous stock was in good demand. Good roses sold fairly well, but the plant trade is rapidly getting away with the cut flowers at our spring holiday. There was no particular demand for crosses or set pieces, though a few of the churches asked for them.

Church decorations, while not elaborate, were numerous. Many of the churches have adopted the plan of giving away potted plants to the children, a very beautiful and appropriate custom, and one which the florists should encourage.

L. L. May & Co. had a very elaborate display of potted plants in their spacious store. A. S. Swanson had an extra store rented, which was well filled with blooming plants. Chris Hansen had a rented store filled with potted lilies. The smaller stores were well filled with choice stock, and Monday morning found nearly everything cleaned out.

Many of the stores throughout the city were beautiful with potted lilies, azaleas, etc., while one large clothing store sold potted plants along with neckties, fancy shirts and Easter hats. FELIX.

Baltimore.

The uncertainty of the week before Easter did not develop settled fine weather until Sunday. Thursday and Friday were both bad days. Saturday, though clear, was too cold and windy for blooming plants to be exposed on stalls in the open air without suffering more or less damage, and the same conditions made carrying the plants home by purchasers or delivery by vendors a very un-

pleasant task. The store man with the closed-in delivery wagon had all the advantages. Notwithstanding the trials to temper and plants in the markets an immense lot of blooming plants were disposed of at prices fairly up to usual Easter rates, and hundreds of people could be seen with heavy baskets of marketing on one arm and a battered Harrisii or withered calla plant held by the other, jogging homeward with contented faces.

Harrisii were fairly plentiful after all, the only regular stock at all hard to get being smilax, which is still very scarce. Hydrangeas were conspicuous by their absence, as were rhododendrons, but the noble plants of azaleas that were to be seen on every hand made amends, and were readily sold at good prices.

The store people made use of crepe paper and ribbon on plants to a considerable extent, and, tastefully put on, there can be no question of the very great improvement made in the looks of a plant by these simple helps. As with every other form of decoration the effect depends on the taste and skill of the user; here and there too much used or badly arranged, but generally a great improvement.

Church decorations were on the whole very pretty, though very much the same as last year. It is to be regretted that the ladies and gentlemen who have charge of these matters do not use more originality in their work, as, though confined to somewhat narrow limits in style and cost, yet by giving some florist their order a few months ahead a much greater range of form could be had. MACK.

Rochester, N. Y.

Our florist stores presented a most gorgeous appearance all through Easter week; great banks of blooming plants were to be seen everywhere, masses of lilies, azaleas and bulbous plants filled the show windows and the trade in this line was decidedly ahead of any former year. Never before was the supply of flowering stuff so large, nor of such excellent quality, as this season.

Lil. Harrisii and longiflorum however take the lead as an Easter plant; next to these pans of hyacinths, tulips and narcissus sold best, though the medium sized genistas and azaleas were also readily disposed of, very few of them being left over at any of the places.

Everybody had a hard time in delivering stuff, for the latter part of the week was decidedly cold, so all the plants had to be securely wrapped up and protected against freezing, which caused much extra work and anxiety among the storemen.

The sales of cut flowers were also very satisfactory, and the liberal supply was equal to the demand. Church decorations were rather more elaborate than formerly; in addition to the usual large palms, etc., a great many flowering plants were called for, especially the lilies of extra size, six or eight bulbs in a 10 or 12-inch pot with 20 to 30 flowers, also tall plants of genistas and white azaleas; cut flowers and smilax were used more profusely in many instances, which was a great help to the flower market, as the general public seems to prefer a well grown blooming plant to a box of cut flowers on this particular occasion.

Some of our older firms claim that the Easter trade of '96 has not been any better or even below that of former years, but when we consider the number of flower stores which opened within the

last few years in this comparatively small city and see the quantity of goods offered and disposed of, nor can deny the fact that the bulk of sales throughout the city has decidedly increased, even if the separate firms cannot record a growing trade, because five or six years ago we only had five or six stores, while at present there is a dozen or more of them, and if the older firms can hold their own with this lively competition they should not have any reason for complaining. J. B. K.

OBITUARY.

THOMAS ROBSON RENWICK, the pioneer florist of Grand Rapids Mich., died April 4 at his home in that city, aged 67 years.

He was born at Portage, N. Y., Oct. 18, 1828. When he was but 4 years of age his parents removed to Clinton, Mich., and in the 50's he located at Grand Rapids, where in 1854 he married Miss Julia Patterson.

Mr. Renwick first began the culture of fruits and flowers in Grand Rapids for the pleasure of himself and wife, and, indeed, at that time there could have been found no customers for the latter. Among the notable achievements of his early horticultural life was the dwarfing of peach trees, producing trees no more than two feet in height but bearing ten or a dozen peaches, and the fruiting of strawberries under glass in very early spring.

He saw the sale of cut flowers in this city start from a very small beginning and progress to its present large proportions, and though he had other large business interests the growing of plants and flowers was the profession he loved.

He was just and upright in all his dealings and was loved and respected by a host of friends. He leaves a widow and three children, the latter including Mr. Lauren N. Renwick, who has been the active manager of the business for years, and under whose management the business will be continued, jointly with the widow, who is the other executor of the will. The latter provides that the business shall be carried on as before for ten years after his death.

John A. Scollay, the well-known manufacturer of greenhouse boilers and of the Scollay sprinkler, died at his home in Brooklyn, N. Y., April 4, aged 69 years. He was born in Dundee, Scotland, and came to America 45 years ago. He leaves a widow, three sons and a daughter.

White Stanhopeas.

There are but twenty species or so of stanhopeas with well defined characters, yet these have had perhaps four times as many names applied to them. It is difficult to say which or how many of these may be retained as varietal names. About twenty have been introduced having more or less white in their make up, but those species affording the purest white forms, are *S. eburnea*, and *S. grandiflora*. JAMES MACPHERSON.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advts. not admitted under this head.

NEW CALIFORNIA CHRYSANTHEMUM

GOVERNOR BUDD

NOW READY. The Queen is justly pronounced the queen amongst mums. Governor Budd is identical in shape, size, and the finish of blooms; in growth it is also very similar. If anything, more vigorous and with stronger flower stems. It is only in color it differs from its parent The Queen, being of a lovely shade of lemon yellow. Certificate by the California State Florist Society. 50c each; \$5 per dozen. Cash with order.

F. A. BALLER, BLOOMINGTON, ILL.

Milwaukee.

A floral war is on. The cause of the trouble in brief is this. H. O. Frank, who conducts a drug store in the Pabst building, the most prominent corner in the city, engaged Miss Amelia Carpenter, formerly with the Paris Floral Co., as clerk in his flower dept. she to take charge March 23. A. Foster, who had rented space in Mr. Frank's store, refused to be ousted by Mr. Frank, he securing an injunction against Mr. Frank restraining him from moving his goods. Mr. Frank retaliated with an injunction enjoining Foster from selling flowers in his store, which however, was dissolved by the judge the next day on account of the perishable nature of the goods. So in consequence of Mr. Frank being unable to remove Foster, both he and Miss Carpenter are doing business behind the same counter as two firms and prices were demoralized, as stock was sold below the wholesale prices. The store is crowded continually by buyers taking advantage of the floral war.

R. F. TESSON,

West Forest Park, ST. LOUIS, MO.

Half the mushroom growers of the country get their mushroom spawn from Watson, Philadelphia. Why? Because it's always fresh, full spawned and can be relied on to produce a good crop; and the price is only \$6.50 per 100 lbs.; and none better anywhere at any price. And he sells the crop for his customers when desired. Prices realized last week, 50 and 55 cts. per pound, wholesale.

G. C. WATSON,

THE LOVETT CO., LITTLE SILVER, N. J.

NEW LATE PINK FRANCIS B. HAYES CHRYSANTHEMUM

JAMES COMLEY, Originator, says:

"I have seen, grown, and watched the **FRANCIS B. HAYES** Chrysanthemum for two years. I think it one of the best ever raised in this country, and is a chrysanthemum that every grower ought to have."

WILLIAM J. MARTIN, says:

"I have found the **FRANCIS B. HAYES** to be a remarkable variety of dwarf, robust habit, short jointed, with large dark green foliage well up to the flower. The flower is an ideal bloom and of a beautiful glistening pink of large size and a perfectly incurved, in the style of Major Bonnaillon; of excellent keeping qualities; time of flowering late. It would be impossible for me to recommend it too highly for private or commercial use."

Awarded Certificates of Merit by N. C. S., November 17, 1894; Massachusetts Horticultural Society, November 17, 1894, and N. Y. F. C., November 25, 1895.

\$4.00 per dozen; \$25.00 per 100. Ready May 1, 1896.

Address THE AMERICAN FLORIST CO., Chicago.

IN THE adv. of Mr. T. W. Breen, page
932 of our spring number March 21, the
price of his finger spades should have been
70 cents a dozen instead of 75 cents.

BULLETIN III of the Cornell Agricultural
Experimental Station, horticultural
division, is devoted to sweet peas, being
a record of detailed culture by Prof. L. H.
Bailey and Mr. A. P. Wyman. It is freely
illustrated.

IN THE article on the florist trade in St.
Petersburg published in our issue of
February 15, the types made the writer
say "the papers issued in Europe are
poorly equipped" etc., when it should
have read "the papers issued in Russia."

A PHOTOGRAPH of his house of Emma
Wocher carnations is sent us by Mr. R.
Witterstatter, Sedamsville, Cincinnati,
O. As seen in the picture the habit of
this new carnation is certainly excellent
and the plants bear a fine crop of flowers.

MESSRS. JOHN BREITMEYER & SON,
Detroit, Mich., send us some handsome
blooms of their Mayor Pingree carnation
with strong stems 30 inches long, and
blandly inquire if the stems are long and
strong enough. Yes, gentlemen, we think
they leave nothing to be desired in those
respects. The flowers are good too. If
constitution and free-flowering qualities
are all right you have a carnation that
will be a seller.

FRANK T. EMERSON has been ill for a few days while visiting friends near Boston.

VISITED NEW YORK: William Meggat, Rogers Bros., A. Outram, W. B. Hoyt, W. G. Langbridge.

UNSEASONABLE WEATHER for the seed trade continues. A summary of March business shows it to have been the poorest known for many years.

ST. PAUL.—L. L. May has returned from his trip to Washington. He feels quite fortunate in securing a small slice of the government pie, while so many unfortunates didn't get a taste. E. S. Harnden, who has been with L. L. May & Co. in their wholesale seed department, has returned to his old position at Washington. FELIX.

Sweet Potato Plants.

Will some reader of the FLORIST kindly give me information about raising sweet potato plants? Does it require a new hotbed, or will one that is half spent do? When must they be started to have plants by May 10? How many potatoes will it take to make 2,000 to 3,000 plants? I have quite a vegetable plant trade, and have had calls for sweet potato plants the past two seasons, and as I don't know anything about growing them, I thought perhaps some of the FLORIST readers could give the desired information. X. X.

Florists' Sweet Peas

New Sweet Pea "America"

Is more distinct and striking than any other variegated Sweet Pea in existence, and is of the large flowering type. Its color is a white ground and through the center of the standard is a white carnine scarlet blotch veined with fine scarlet lines running toward the edges and showing in the same manner on the wings. The dashing contrast of the heavy scarlet blotch on the white ground makes the blossoms very effective in a mass of cut bloom or when flowering in the garden. It is indispensable for any complete collection of colors in Sweet Peas. Pkt., 15c; 2 for 25c; 5 for 60c; 10 pkts., \$1.00; 100 pkts., \$7.50.

BLUSHING BEAUTY, clear "Daybreak" pink, largest size. Oz. 5c; 1-4 lb. 12c; 1b. 35c; 5 lbs. \$1.50.

COUNTRESS OF RADNOR, clear lavender, very large flower. Oz. 5c; 1-4 lb. 15c; 1b. 45c.

EMILY HENDERSON, pure white, large early. Oz. 5c; 1-4 lb. 12c; 1b. 35c; 5 lbs. \$1.50.

HER MAJESTY, clear bright rose, very fine flower. Oz. 7c; 1-4 lb. 15c; 1b. 45c.

FIREFLY, brightest fiery scarlet, large. Oz. 10c; 1-4 lb. 20c; 1b. 60c.

MRS. ECKFORD, best large yellow. Oz. 7c; 1-4 lb. 18c; 1b. 55c.

MRS. SANKEY, large, white. Oz. 5c; 1-4 lb. 15c; 1b. 40c; 5 lbs. \$1.75.

INVINCIBLE CARMINE, deep crimson scarlet. Oz. 6c; 1-4 lb. 12c; 1b. 35c.

TRUE LOTTIE ECKFORD, white, blue edge, large. Oz. 5c; 1-4 lb. 15c; 1b. 40c; 5 lbs. \$1.75.

For other varieties see our "Book for Florists," sent free to florists.

VAUGHAN'S PRIZE MIXTURE SWEET PEAS, 10 lbs. \$7.00; 1b. 80c; 1-4 lb. 25c; oz. 15c.

PLEASE mention the **AMERICAN FLORIST** every time you write to an advertiser.

Montreal.

The snow has at last shown an inclination to move; a thaw set in on the 29th and it is to be hoped that it will continue until we get a glimpse of mother earth once more; even at this date there is fully three feet of snow on the middle of some of the narrow streets, while the curb stones are hidden with over five feet of the beautiful; some of the country roads are practically impassable now since the thaw commenced, the snow not being packed, it all having fallen within a month.

The all absorbing topic in florist circles the past couple of weeks is the famous suit "W. B. Davidson & Sons versus the Queen;" it is to procure payment for flowers supplied by the suppliant on the occasion of the funeral of the late Hon. John Thompson, premier of Canada, which took place at Halifax, N. S., in December, 1894.

The order was given to Mr. Davidson by the Dominion Government and on receiving the bill a few weeks after they considered it excessive and asked for details, which was presented in due time as follows:

2,000 roses at 30 cents	600 00
400 carnations 10 cents	400 00
3,000 ferns 2 1/2 cents	75 00
500 Lilium Harrisii 37 1/2 cents	177 50
3,000 Roman hyacinths 5 cents	150 00
1,000 yards smilax 25	250 00
125 paper white narcissus	11 50
Boxes for designs	25 00
Wire designs	50 00
Bearer for designs	36 00
Time and expense	100 00
Express charges	50 00

Total 1,925 00

But even this did not satisfy the department, it was decided that the quantities were excessive also the prices too high, so it was decided to tender Mr. Davidson \$900 to settle; the amount was received and a receipt on account returned and a suit taken to recover the balance of \$1,025.

Almost every florist in the city was in attendance at the summons of either one party or the other. The Government submitted photographs of the work and Mr. Davidson a section of a wreath a foot long and twelve inches wide, which was supposed to truly represent the proportions of any of seven wreaths varying from 22 inches to 30 inches in diameter which formed part of the design. The hearing of the witnesses was concluded last Friday at Montreal but the argument of counsel will take place at Ottawa before Judge Burbridge of the Exchequer Court.

Florist A. Martin suffered considerable damage from a fire which broke out in the boiler room of his St. Catherine street greenhouses; a quantity of Easter stock, such as spiraeas, pans of tulips, hyacinths, etc., as well as a number of palms and other decorative plants were destroyed. He places his loss at about \$1,300; fortunately it is fully covered by insurance. BEAVER.

IVORY!

THE GREAT SUCCESS!

NOTHING IS IN MORE UNIVERSAL DEMAND BY FLORISTS THAN A GOOD, PRODUCTIVE WHITE CARNATION.

In **IVORY** you will have it. Try it and you will have a money maker. It produces as many blooms as Wm. Scott, is as perfect in form as any Carnation yet produced, held by a calyx that never bursts and carried on a long, wiry stem. What more do you want?

Fine plants from soil. \$10 per 100; \$75 per 1000. Stock ready now.

Also fine stock of *all the other leading varieties*. SEND FOR PRICE LIST.

ALBERT M. HERR, LANCASTER, PA.

The Bridesmaid Carnation

is the pink carnation you want. It averages more HIGH GRADE blooms than any other pink variety grown. It has a long stiff stem, strong calyx, perfect form of flower and a color that cannot be excelled in its class. It sells quickly at a high price, and stands at the head of the list of pink carnations. It won the honors at the American Carnation Society Show at New York as best pink in classes A, B and C. Its growth is clean and healthy.

Order now to get your stock early.

No Rust, Strong Cuttings.

\$5.00 per 100, \$40.00 per 1000.

If you have not already received our list send for it.

NEW CARNATION, W. D. SLOANE.

This new sort will prove a leader to all Florists. We know of no better variety of its color, and none can equal it in fragrance. The plant is a strong and vigorous grower, needing but little support, with dark foliage about as heavy as Tidal Wave. Flowers are large, good substance and lasting qualities, borne on stiff stems 15 to 20 inches in length; color a beautiful cerise. Very profuse bloomer.

PRICE, \$10.00 PER 100; \$75.00 PER 1000.

Pitcher & Manda, Short Hills, N. J.

Sam'l S. Pennock, 1612 Barker St., Philadelphia, who handles the entire crop of flowers of this new variety, says under date of March 26th, 1896: "Your W. D. Sloane, the way you grow them, are certainly fine, with the long stiff stems and good sized flowers. A ready sale for them is found at an advanced price over the average varieties."

S. WHITTON & SONS, Wholesale Florists,

City and Green Sts., UTICA, N. Y.

St. John, N. B.

Easter has again come and gone, with all its rush and bustle, and now the florists will have time to turn their attention to the spring stock, which has been crowded to make room for the Easter display. Saturday was busy day in all the establishments, and all seemed to be doing a rushing business. H. E. Goold, from Sussex, was represented again as usual, although he did not seem to be doing much in the cut flower line, being more confined to plants. McLean disposed of the most of his roses to the dry goods stores, to be given away to purchasers of goods from the firms he supplied.

Mrs. W. H. Jones as usual made a very good showing of plants and cut flowers, there being some fine plants of azaleas, finding a ready sale.

H. S. Cruikshank made a good display of hyacinths, crocus, and other bulbous and spring flowering stock; his spiraea and longiflorums were exceptionally fine, while in cut flowers he undoubtedly had the largest and finest display ever made in this market. He reports a ready sale for everything at prices 25% better than any previous year. Roses this year have been plentiful and of very good quality. Carnations have been very short, not more than half what could have been disposed of.

The Horticultural Association is now busy at the Public Park and gardens. Superintendent Knott says they intend to do a big piece of work this season in the making of drives and walks, and in laying out the gardens, but they are very much delayed by want of funds. Some of our St. John moneyed men should take a lesson from the public spirited citizens of the United States and Upper Canada, and give such substantial aid as will enable them to carry on the work of such a noble scheme to a successful completion.

ST. JOHN.

Syracuse, N. Y.

The weather, like lovely woman, is fearfully fickle, as we have good reason to know. The first three days of Easter week were perfect spring days, and most every one thought winter was gone for good, but on Wednesday a change came, for we had a terrific thunderstorm accompanied by heavy rain. The wind jumped around to the north, and very soon the temperature fell to 10° above zero, and so it kept till Sunday, blowing from 40 to 60 miles an hour with a blizzard thrown in. All the florists have had very hard work delivering plants. In spite of the bad weather trade on all hands is reported good, and very little flowering stuff left over. Carnations and roses are scarce, everything else was up to demand.

The florists made a grand show. H. Burt's store, 100 feet long, was banked on either side from floor to ceiling with Harrisii, azaleas, cinerarias, valley, tulips, narcissus, daisies, and at the end an immense pyramid rising to the height of 20 feet made chiefly of Harrisii and azaleas. Wild smilax was used extensively throughout the store, making the whole effect fine.

P. R. Quinlan & Co., as before, had an annex store on South Salina street, which was made very attractive, in fact one might fancy it a spring flower show. The plants were arranged on tables the whole length. Harrisii and azaleas were particularly fine, pans of hyacinths, narcissus, valley, etc., were in abundance. Their regular store was also made most attractive.

H. Morris made a very pretty showing at his store. He was one of the fortunate ones with carnations and violets, for his crop was immense.

L. E. Marquisee made a superb exhibit in his fine show house, which was replete with everything one could desire. His crop of carnations was simply enormous; his roses too were in crop and fine. All the other florists had nice displays. Flowers sold as follows: Carnations, 50 cents to \$1 per dozen; roses, \$2 to \$12; valley, \$1; daffodils and tulips, 75 cents; hyacinths, 75 cents to \$1.50; violets, \$1.50 to \$2 per hundred. H. Y.

LEMON OIL INSECTICIDE,

News Notes.

NEWPORT, R. I.—A. Brandt has opened a new branch establishment at 134 Thames street.

PRINCETON, N. J.—Theo. Knocke has taken J. Lannahan's business, located at 150 Canal street.

NEW ORLEANS, LA.—The New Orleans Horticultural Society has decided to hold a fall flower show.

WALTHAM, MASS.—R. T. Lombard, of Wayland, has opened a retail store on Main street in this city.

ELKHART, IND.—R. Hoffmann, formerly of Hillsdale, Mich., is now in business here at 120 Prairie street.

NORTH EPPING, N. H.—The greenhouses of Mr. Daniel Dow together with contents were destroyed by fire March 25.

POTSDAM, N. Y.—The Garden street greenhouses have been rented by Mr. J. M. Richardson of Plainfield, N. J.

FRYEBURG, ME.—S. W. Fife has bought out the interest of his former partner in the seed business, E. W. Burkank.

RICHLANDTOWN, PA.—Wm. Stine has erected three houses 60 feet long, and is raising carnations for the Philadelphia market.

THOMPSONVILLE, CONN.—Mr. D. Wm. Brainard made his third annual Easter display April 2 to 4. A neatly printed invitation was issued.

SPRINGFIELD, MASS.—The Hampden County Horticultural Society will hold a sweet pea exhibition on Tuesday and Wednesday, July 28 and 29.

BENNINGTON, VT.—The firm of Richardson & Gardner has been dissolved, and the business will hereafter be conducted by W. G. Richardson, as formerly.

NORTHAMPTON, MASS.—The Horticultural Society is planning to hold an exhibition of strawberries, roses, etc., next June. The receipts of the recent exhibition more than covered expenses.

STOCKTON, CAL.—Mr. Geo. West's place one mile north of the city, has two greenhouses and he will build this summer one 80x100 feet. His specialty is cactus, he also has a fine collection of orchids. Mr. H. P. Fitch has extended one of his houses; he also has strong faith in the cactus by the looks of his stock. Murray & Co. were closed out; a new firm has started on the same street.

PROVIDENCE, R. I.—The Florist and Gardeners' Club had a very interesting meeting on the evening of March 27. Among the matters discussed was the proposition to establish an exchange or market for the sale of flowers. There was a fine exhibition of carnations from local growers. Entertainment in music and recitations was furnished by W. H. Mason and Frederick Mahoney.

HARTFORD, CONN.—The spring exhibition of the Connecticut Horticultural Society this week has been a most successful event. Among the exhibitors were A. N. Pierson, W. B. May, Jas. Young, J. J. Goodwin, Robt. Patchet, G. Minge, Jas. Smith, T. J. McDonald, John Coombs, Stephen Delbar and C. H. Pember, all of whom staged interesting groups of spring flowering plants and bulbs. The judges were Robt. Veitch, Jr., of New Haven, and C. S. Morris, of Farmington.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

A Heating Problem.

Can some reader of the FLORIST tell me a practical plan for utilizing artesian water, of about 100° Fahr., for keeping a small greenhouse warm in winter? Somewhere I have read of some one in Alabama or Louisiana I believe, who uses artesian water for such a purpose but don't know in what publication I saw it. Would any vapors that might arise injure plants? The water is strongly impregnated with sulphur.

A GOOD INVESTMENT.

"The No. 6 'SPENCE' Hot Water Heater we purchased from you in August, 1889, has proven a good investment. Our main greenhouse is 132 feet long, 18 feet wide, with a wing 75 feet long, 18 feet wide, contains 4,000 square feet of glass, and is warmed with 1,500 feet of 4-inch cast iron pipe. The coldest weather we have had last winter was 24 degrees below zero but we had no difficulty in keeping up the required temperature. We burned during the entire season 18 tons of anthracite coal, and have no fault to find on that point, as we consider it economical. During the winter of 1888 we used a larger heater than yours, with only 1,000 feet of 4-inch pipe attached, warming 2,700 feet of glass, and consumed a greater quantity of coal than was required for the 'SPENCE,' though doing only two-thirds of the work. We find your heater very compact and easily managed, requiring less attention than any we have ever used."

Society of American Florists.

The annual session of the executive committee of the Society of American Florists, which was postponed on account of the illness of President Scott, will be held at the Hollenden, Cleveland, Ohio, beginning Tuesday, April 28. All communications for the committee should be addressed to the Secretary, Wm. J. Stewart, 67 Bromfield street, Boston.

OBITUARY.

DAVID ALLAN, the well known florist of Clifftondale, Mass., died Thursday, April 16, at the Consumptive's Home, Boston. The funeral will be held Sunday, 19th inst.

LAWRENCE, MASS.—Volume of trade and retail prices same as last year. Supply equal to demand, quality good. Increase of 10% in sales of plants.

SHELBYVILLE, ILL.—Easter trade was a little better than last year. More call for lilies and carnations, less call for roses. Very little call for plants.

CLEVELAND, O.—A slight increase, but a tendency toward lower prices. Supply equal to demand, quality fully as good as last year. The call for plants was rather less if anything.

KALAMAZOO, MICH.—Increase of about 20% with retail prices about the same as last year; supply equal to demand and quality satisfactory; increased call for plants and bulbous stuff.

HARRISBURG, PA.—Increase over last year; no change in retail prices; supply not quite equal to demand; quality about as last year; increase in the call for plants, especially azaleas and lilies.

LAWRENCE, KANS.—An increase of about one-third. Retail prices same as last year. Supply short. Quality about as last year. Not much call for plants. Principal demand was for *Harrisii* lilies.

FORT WORTH, TEXAS.—Easter trade was very good. Stock was in good shape and sufficient to meet all demands except lilies, the supply of which was short owing to dark weather preceding Easter.

PATERSON, N. J.—Increase of about 35% with retail prices about the same as last year; supply equal to demand and quality fully up to last year; increase in the call for plants and a greater demand for lilies.

PROVIDENCE, R. I.—Both volume of trade and retail prices about the same as last year; plenty of flowers with the exception of carnations; quality very good; no change in call for plants; very bad weather for delivering.

MINNEAPOLIS, MINN.—An increase of about 15%; retail prices same as last year; supply nearly equal to the demand; quality about the same as last year; an increase in the sales of plants; lilies seem to be most in demand.

LYNN, MASS.—A comfortable increase in total receipts and in retail prices. There was a shortage of carnations. An increase in the call for plants. The increase would have been greater had the weather been more favorable.

ELIZABETH, N. J.—A decrease of about 10% with retail prices about the same as last year; supply equal to demand and quality a little better than last year; large increase in the sales of plants and an increase in the call for carnations.

SALT LAKE CITY, UTAH.—Increase of 25% in total receipts with retail prices about the same as last year; supply equal to demand. One of the leading dry goods houses sold flowers at about 50% less than cost as an advertising scheme.

NEW HAVEN, CONN.—Volume of trade and retail prices about the same as last year; supply was ample except carnations; quality rather better than last year; increase in the sales of plants and a marked increase in the call for cut carnations.

LONDON, ONT.—A slight decrease. No material change in prices. Supply exceeded demand. Quality about as usual. Plant sales were not as large as last year owing to extreme cold. Probably 50% more business would have been done had the weather been favorable.

BRIDGEPORT, CONN.—Both volume of trade and retail prices about the same as last year; everything sold except some tulips and hyacinths; quality of stock better this year in roses, hyacinths and tulips; increase in the call for plants. In flowers carnations were in great demand.

NEW ORLEANS, LA —About the same as last year in total receipts, but retail prices about 20% lower; supply fully equal to demand and quality better than last year. In plants about the only call was for Harrisii lilies, and in cut flowers the special call was for blooms of the same.

WILMINGTON, DEL.—An increase of 50% over last year; retail prices were about the same; supply was equal to demand except cut carnations, which were short; quality about as last year; less sales of plants as the cold weather was against us; there were too many Harrisii on the market.

DENVER, COLO.—Slightly larger than last year with retail prices somewhat lower; supply fully equal to demand and quality better than last year; a very large increase in the sales of plants. This was the first pleasant Easter for three years, which with the lateness made trade better though prices ranged lower.

TERRE HAUTE, IND.—Increase of about 10%. Retail prices about as last year. Short of roses and carnations. Quality of flowers better than last year. Increase of 25% in sales of plants. Hyacinths in flat pans sold best. Bad weather threw all the business into Saturday and Sunday.

NEW LONDON, CONN.—Increase of 20%. Retail prices about same as last year. Supply ample. Lilies were freer from disease and finer. Sold more bulbous stuff in pans. Sales commenced earlier than last year. Thursday was a busy day; Friday and Saturday were cold and stormy, which hindered sales.

SAVANNAH, GA.—Best Easter we ever had, a large increase over last year. No change in prices. Supply short, could have sold double the quantity. All flowering plants sold well, especially those with white flowers. There was not half enough pot lilies. Owing to cold weather there were no outside flowers. Hardly any set pieces are now called for.

DANVILLE, ILL.—Every florist in the city reports a fine trade at Easter. Carnations were in the greatest demand; in most cases home grown flowers were the best, foreign grown not as good as formerly. Mostly all were cash sales, which pleased the "poor florist" greatly. Stock of Dutch potted hyacinths was exhausted. Good Easter come again; day lovely.

LOS ANGELES, CAL.—Much larger than last year. No change in retail prices. Supply ample except *Harrisii* lilies. Quality better than last year. Few plants were offered, we need many more. Carnations led in demand, callas next. Roses were good and plentiful. One church used 10,000 callas and 10,000 roses, in addition to set pieces and a large quantity of other stuff.

WORCESTER, MASS.—An increase of about 20% with prices about the same as last year; full supply of bulbous stuff but somewhat short on carnations and lilies; quality better than last year with the exception of violets; increase in the call for plants, and in flowers a larger call for carnations and violets. Good roses at fair prices went begging, while there was an enormous demand for carnations.

PORTLAND, ME.—Decrease of one-third from last year though retail prices held about the same; supply exceeded the demand and there was considerable stock left over; quality fully as good as last year with the exception of carnations, many of which were very poor; slight increase in the sale of plants and increase in the call for lilies and carnations; fewer set pieces called for and also less decorating in churches.

TRAVERSE CITY, MICH.—Easter trade here shows quite an increase over last year. Carnations were in good demand and sold readily at from 35 cents per dozen for ordinary to 50 cents for the best grades. A fine Easter display of cinerarias, genistas, carnations, etc., at Paue's greenhouse drew a large crowd of visitors, and as a result good sales were made. Prospects are good for a lively trade in spring bedding plants.

NEW BEDFORD, MASS.—About the same as last year; retail prices lower except on carnations; supply equal to the demand except carnations; quality better; no change in sales of plants; better call for violets and hybrids; a big call for cheap plants of *Harrisii* lilies that could be sold from 50 to 75 cents each; higher priced plants went slow; carnations were rather poor in quality but sold at 75 cents per dozen for mixed and \$1 for Daybreaks.

ALBANY, N. Y.—Both volume of trade and retail prices about the same as last year, with supply equal to demand; quality about as usual at the season. The weather being exceedingly cold and stormy the sales of plants were not quite up to last year; people seemed to buy more carefully on account of the general business depression, yet this did not seem to affect general trade seriously, the weather was the most adverse factor of the two.

MONTREAL.—An increase of at least 25%. Retail prices better than last year on flowers, but about the same on plants. Supply was good, though more first-class roses and carnations could have been sold. Quality in general was better than last year. Sales of plants were about as last year, except on spireas, which did not go quite so well. Good roses seemed to be first choice. Supply of *Harrisii* was short owing to diseased bulbs. An entire absence of orders for made-up work is becoming the rule at Easter.

OTTAWA, ONT.—About 20% larger than last year, with no change in retail prices. Supply equal to demand except roses and carnations. A slight increase in the sale of plants notwithstanding the weather. A marked increase in the call for carnations. The demand for bulb stuff, including valley, is falling off more and more each year. Scrim opened an extra store on Tuesday and delivered his plants in sleighs, but the sleighing was bad. His total sales were larger than last year. John Graham also had all he could do and is quite satisfied. A department store imported a lot of roses from New York and advertised them at 98 cents. This made the trade a trifle careful and few others were brought in.

Carnation Notes.

It is a natural consequence that when the culture of a certain variety of plants undergoes great improvements, when the florist makes a specialty of the growing of this variety, when these specialists make every effort to bring their culture to perfection, so with the study of the requirements to perfection comes hand in hand the study of its enemies. It becomes just as important to study the elements that destroy as those that build up. So I say again it is a natural consequence when we study the habits, the requirements, of these plants, we come in contact with their enemies and their diseases. Diseases that have existed, but escaped our notice, or were hardly thought of any importance; the consequence of ignorance and inattention. Again these diseases existent, may have developed with the culture of the plant, and so been brought to our notice. And still another possibility that I will give with a comparison. Civilization is followed by diseases that are unknown to the savage. So in the culture of plants, diseases appear that were not known in their primitive originality. Science tells us that plant diseases are caused by parasitic fungus and bacterial growths. May not a disease develop with the culture, a culture that mostly to some extent causes some alteration in form, habit, and the requirements for existence?

I felt very much gratified over the perusal of the bulletin on bacteriosis in carnations by Dr. Arthur and Professor Bolley, issued by the Purdue Experiment Station. And it is especially very gratifying to me to be confirmed in my ideas on bacteriosis, formed on former articles of the same author. There is much cause for thankfulness to have such men among our scientists, who devote time and labor in experiments with artificial cultures of

these microbes for a close observations of habits and growth, that will enable them to show us these deadly minute germs, their rapid multiplying and disastrous ravages, and give us with the knowledge of their nature, when not an absolute remedy, the power to counteract their growth, and reduce the danger of injury to a minimum.

Regarding the existence of this parasitic *Bacterium Dianthi*, as they have named it, (for it exists only in the *Dianthus* family according to investigations) in the carnation, prior to these investigations Dr. Arthur says in his introductory remarks, "Anomalous as it may seem the disease which we are now calling bacteriosis, and find to be the most abundant and ever-present of the maladies of the carnation plant, was not previously known to the cultivator, although it was before his eyes continually, and when at its worst caused the foliage of his plants to turn a sickly yellow, or to dry up and die, and the crop of flowers to become greatly curtailed on account of it." I do remember very well (and who will not, who has grown carnations 8 to 10 years ago) the sickly yellow spotted leaves, attributing it to some mistreatment, I always considered the cause overwatering, never imagined used how near my guess came to the point, with the only difference that the water on the leaves helped to further the disease, and not as I believed, too much on the roots. I also remember very well having these yellow spots pointed out to me as bacteria by the Purdue University florist, Mr. Pierre Vanlandigham.

Bacteria has existed, but was not known as such. May be it was an attendant of the *Dianthus caryophyllus* in its improved forms decades or centuries ago. We know the disease existed, we had to cope with an unknown enemy, had to fight in the dark. But thanks to the investigations of these scientists we receive light.

It is very interesting reading to follow them in their investigations so graphically described and illustrated in the bulletin; the separation of the specific germ (for others than that of the *Bacterium Dianthi* mixed in, in their cultures from the air), the cultures started from these pure germs in transparent nutritive media, their observations of the rapid development and multiplication, their infective experiments, all helping to a knowledge of these parasitic microbes; their entrance into the tissues of the leaves, their habit, growth and multiplication, the character of the injury to the plant. Again I say it is very interesting reading, and do not run over it casually, but read again, and study until you comprehend and master its contents, a knowledge that took these scientists a long time to arrive at. When the enemies' intentions and tactics are known, it is a comparatively easy matter to make a successful fight. So with this parasitic bacteria, if we have a full knowledge of its growing, we know how to meet it. Dr. Arthur says, "That the conditions of its life within the carnation plant are not the best for its highest development is evident enough." (For the artificial cultures in the nutritive media showed a much more rapid and higher development). Again "The bacteria progress from cell to cell very slowly and each diseased area is long kept within narrow and well-circumscribed limits. The danger from the germ as a parasite lies rather in the great number of chances for centers of infection than in its aggressive character."

A GIANT PLANT OF BIGNONIA VENUSTA.

This gives the key to the remedy, which does not consist in a medicinal prescription, but in the mode of culture, in the strengthening of the natural resistance the carnation plant develops. This I will make the theme of my next notes.

FRED DORNER.

Blighted Carnations.

What is the cause of white carnation flowers, when half grown or nearly out, showing a yellow appearance, development ceasing at that point.

Ayer, Mass.

A SUBSCRIBER.

This complaint, coming at this time of the year, is often caused by the hot sun scorching the young tender blooms in the bud. If the plants were much wilted through some of the bright warm days, often suddenly bursting out in March with a cold temperature outside, it may account for it.

FRED DORNER.

American Carnation Society.

Reports have been received by the secretary and are now being sent out to all members not in arrears over one year's dues.

ALBERT M. HERR, Sec'y.
Lancaster, Pa.

Scott Carnation not Opening Well.

What is the cause of Scott carnations not opening well? I have three benches of them in a house, all treated the same. One bench is coming out finely, while one bench is not bringing a single flower perfect, and the other one is both good and had mixed.

W. A. B.

If the three benches are located in the same house it is hardly possible the plants have not received the same treatment. I do not doubt W. A. B.'s statement that the daily treatment necessary is all alike, but probably the difference has to be located before the plants were placed on the benches. There are many influences that may be at the root of this uneven behavior. Were the plants all propagated at the same time and from the same batch of plants? Did they all receive

the same treatment in summer, on same soil? Were they all housed at the same time? Were the soil and fertilizers used on the benches the same? Are the benches so located that they receive the same benefit of light and air? And is the temperature the same all over the house? These questions I propound to W. A. B., but the solution of this mysterious occurrence I must leave to him.

FRED DORNER.

Rose Notes.

The longer days and brighter sunshine will make necessary increased ventilation, and a combination of these will cause a much more rapid evaporation. To supply the extra moisture required, the plants must be syringed oftener (in fact every day if the weather is at all favorable). They will also drink up a great deal more through the roots. In order to keep up the quality of the flowers we must watch the watering very closely, a lack of moisture at the root, and a hot sun over head, are not factors likely to produce first-class roses. If the beds or benches can be given a mulch of rotted manure it will not only save a good deal of watering, but will protect the surface roots from the hot sun and at the same time supply necessary food for the plants; without very strong feeding now the size of the bloom must inevitably diminish.

The hot sun and dense foliage will furnish conditions suitable for the spread of red spider; our only safety is to go for him with a strong blast of water every time we syringe. By the way I find comparatively few men who syringe properly and thoroughly all the time; they find it so much easier to stand erect and let the water fall upon the plants, than to bend the back and by pressure of the finger

produce a fine but powerful spray, which coming in contact with the under side of the leaves and reaching every part of each plant in the house will make it impossible for spider to exist. With a good hose and good water pressure there is no excuse whatever for spider in a rose house. Ventilation will be necessary very early in the morning; as soon in fact as the temperature begins to rise, and gradually increase as the sun rises, to neglect the houses because of packing or anything else, and allow the temperature to run up several degrees above the proper limit before giving air, and then open the vents a foot or more at once, must work injury to the plants, and is calculated to give a good dose of mildew. In rose culture as in almost all things, it is the small things (so called) which when faithfully attended to bring success, and neglected result in failure. Lack of faithfulness in a man who has charge of a rose house cannot be compensated for by any amount of work done, or any other quality he may possess. It may be that the bright, active, energetic young man receives recognition and promotion at the hands of his employer, in advance of the slower, less pretentious, but more reliable and conscientious man at times, but the qualities possessed by the latter are those which make a man valuable in charge of rose houses. ROBT. SIMPSON.

Cutting Roses from New Canes.

When roses send up new canes from 3 to 4 feet, with one large rose, where should the cane be cut to insure best succeeding growth?

E. C. N.

South Dakota.

The strong shoots sent up from the base of the plant, especially those produced late in the season, when the plants are large and vigorous, have several eyes at the lower end which do not develop, unless they are compelled to by having that part of the shoot above them cut off; they then break very slowly, the result being a considerable loss of time between the first and second blooms. Unless the extra stem given will enhance the value of the flower sufficiently to compensate for loss of time between the crops, it is more satisfactory when cutting to leave at least one or two good prominent eyes on each shoot.

ROBT. SIMPSON.

Bignonia Venusta.

The Bignonia venusta is a grand greenhouse climber and one whose flowers are very useful to the decorative florist. The accompanying cut is of a single plant in a house 100 feet long by 22 wide. It is planted in the middle and is trained to the ridge pole, extending the entire length of the house. Every season since it was planted, some twelve years ago, it has flowered abundantly. The past winter's crop, which is about 500 flowers larger than last year, amounted to 3,700 clusters. Each cluster contains from 15 to 25 tubes; these average in length from 3 to 4 inches. The color of the flower is a bright orange shaded somewhat according to the age of the flower tubes, which do not all open at once. It commences to open its flowers about Christmas, and continues to flower about six weeks.

Messrs. T. E. Edwards & Bro. of Bridge-ton, N. J., at whose establishment this plant is growing, say they have no trouble in disposing of the flowers, and could the past winter have sold many more. Mr. Steen Edwards, the father of the present proprietors, has only recently

retired from the firm; he has passed his 85th birthday and is now enjoying a well earned rest. Mr. Edwards was the first florist in this country to discover virtue in the freesia, and for several years all the stock grown was sent out from his establishment. K.

Dendrobium Nobile Burfordiense.

Among the orchids now blooming in the collection of Mr. D. S. Brown, at Brownhurst, in the suburbs of St. Louis, are several plants of an unusually beautiful form of *Dendrobium nobile* that he procured some five years ago. While *nobile* varies extremely, so that over twenty named varieties are met with in collections, the greater number of them differ merely in habit, or size and color of flower, and it is only when monstrosities (as a botanist would call them) occur that the type is strikingly departed from. This is the case in the present instance, for the lateral sepals, below the median line have assumed the texture of the labellum, and are somewhat creamy toward the undulated lower margin, while the basal two-thirds on this side is marked by a deep maroon or rose-purple blotch somewhat radiately broken up on its lower outline.

This variety, exhibited in England some six years ago, was figured and described in the *Journal of Horticulture* in January, 1890, xx. 65, t. 9, under the name of *D. nobile*, Burford var. It is also mentioned in *Garden and Forest*, vii. 159, and the *Orchid Review*, iii. 150. From what I can now learn, it has appeared with Sir Trevor Lawrence in England, and Hicks Arnold, C. J. Carpenter, and Mr. Brown, in this country. Mr. Carpenter's form, described as having broader, rounder segments and larger flowers, perhaps deserving varietal distinction. As shown by Mr. Brown's plants, intermediates occur between it and the type.

Two other comparable monstrosities of *D. nobile* are described. One, the most beautiful of the *nobile* varieties, with the lateral petals somewhat like the lip, is *D. nobile Cooksonianum*, Reichenbach in Gard. Chron. n. ser. xxxiii. 692, *Lindenia*, iv. 11, pl. 340; the other, *D. nobile Tollianum*, Reichenbach, Gard. Chron. n. ser. xxi. 445, with the flower inverted and only partly expanded.

WILLIAM TRELEASE.

Floriculture in Colorado.

At the meeting of the New York Florists' Club on April 13 Mr. E. A. Wood of West Newton, Mass., read an interesting paper on his impressions of and experiences in floriculture in the west. After a brief explanation as to the meaning of the term "the west," a country which like the east seems to recede as one approaches it, Mr. Wood said he proposed to restrict his remarks to that section in which he had recently spent a year and a half, Denver and Colorado Springs, which are the center of the flower trade of the states and territories of Wyoming, Colorado, New Mexico, Arizona, Utah, Montana and Idaho. Conditions in that part of the world, he said, are so different from those prevailing in the eastern United States that the first year's labor

of a man going there from the east is hardly worth any pay. A man must abandon the idea that there is but one way to grow a crop, and must make up his mind to break away from established rules if he would avoid a record of total failures, and that even the path of the careful brainy grower will be found beset with thorns, and he will spend many an hour over snarls difficult to untangle.

There are, he stated, in the two sister cities of Colorado over 500,000 square feet of glass used in the cultivation of cut flowers, the greenhouses being modern in pattern, of finest construction, with immense boilers and best methods of piping and ventilating. There are 350 bright sunny days in the year, and coal is plenty at a moderate price. The houses as a rule run north and south, the growers preferring them that way on account of the intense sunlight in the middle of the day during spring, summer and autumn. One great mistake made by the growers is that none of them seem to make a specialty of any one or two of the various branches of the business, but all are trying to cover the entire field, wholesale, retail, plant, flower and nursery, the result being indifferent success, a poor average quality of almost everything and consequent low prices. Roses are grown in the same varieties as in the eastern states. Beauties do nicely up till Christmas, then the crop lightens, but the plants recover early. Then in the months of February and March the warm sun causes the temperature in the houses to run very high, producing the growth of those extremely long shoots that require so much time to develop a flower. The Wootton seems to have found its ideal climate here and is often seen with 24 to 30-inch stems, and grand blooms that rival the American Beauty. Carnations do grandly and give flowers that would command top price in any market. With chrysanthemums the growers are especially successful, the plants growing lower and more bushy than in a moister climate. Violets suffer from the excessive summer heat and very few make any success with them. Palms and decorative plants require shading both in winter and summer, it being also necessary to cover the glass with cotton cloth on the inside. The culture of ferns is an unsolved conundrum. Pot plants are grown with varying success, flowering plants, geraniums especially being the most in demand, and coleus and fuchsias being generally unsatisfactory, and pansies perhaps the most successful of all, both on mountain and plain.

Speaking of the climatic troubles Mr. Wood said that growers in that section could get but little instruction from the cultural articles written for the trade papers by eastern growers. "Cut your sod and stack it up with well-rotted manure" is advice of little use in a country where there is no sod and none can be made except at a great expense for irrigation and attention for two or three years, and where the only material at hand is prairie soil dry as dust, plastic when wet, and frequently containing more or less alkali. Sheep manure is abundant and cheap, but horse and cow manure are very poor, the animals being fed principally on alfalfa, having very little grain, and the manure no body at all. Rotted manure is out of the question, the air being so dry that it does not remain wet more than an hour or two after being dropped, but becomes so dry that it will blow away.

Out of doors irrigation is necessary for everything, and the expense of cultivation is thus increased fully one-half. Even

with the best attention some plants, such as bouvardias and hydrangeas, will not grow under irrigation. The character of the soil and the extreme heat during the day make the quantity of water required inside the greenhouses very great also, it being hardly possible to overwater a bench of roses from April 1 to November 1, and red spider is an ever-present pest on carnations and roses. With these climatic difficulties added to the financial depression that has prevailed to an aggravated extent in the western states it is plain that the life of the florist of the far west is not all a bed of roses and the unwise competition on prices and lack of harmony in the trade have made the burden still heavier for all. Mr. Wood thought that within ten years carnations might be shipped in quantity from the west to the east. They grow beautifully, produce wonderfully, and like the California Bartlett pear, grown in a dry climate have wonderful keeping qualities.

Effective Combinations and Arrangements of Plants in the Shrubbery and Garden.

BY PROF. B. M. WATSON.

[Read before the Boston Gardeners' and Florists' Club.]

The permanent value of any ornamental planting, confining ourselves for the present to the plants alone and not considering the surroundings, depends upon the arrangement of the component parts, i. e., upon the grouping of the trees, shrubs or herbaceous plants, which taken together, make up the landscape or garden. The object of this paper is to call attention to various combinations of good plants which by means of their flowers, foliage, fruits or the coloring of their twigs produce pleasing effects at different seasons of the year. These groups may sometimes be a part of a larger plantation, at other times they may be sufficient in themselves to produce desirable effects.

My text, so to speak, is a bit of planting on the park-way in Brookline, Mass. where a clump of scarlet dogwood and golden willow has recently been set out, and has attracted much attention, and many imitators, by its warm, bright coloring during the winter months. Many men and women, who do not usually pay much heed to trees and shrubs, have been charmed by this gay bouquet, which thrives in the midst of our New England ice and snow. The effect in question might be considered fantastic, undoubtedly this combination of colors, even if relieved by the green foliage of neighboring plants, would not be advisable in summer, but in winter these crude and glaring colors are not only pardonable but commendable.

This subject is not new, all gardeners have their pet combinations for indoor and outdoor work; it is largely to promote discussion that I have introduced the topic; so that we all may profit from each other's experience. In a way there forms of planting may be compared to a bouquet, or other floral arrangement, if the "set pieces" done on wire frames are eliminated, but they are living and growing bouquets, their duration is of weeks or months, instead of hours or days. The same care must be exercised in grouping living plants that the florist would give to his decorations, or rather, much greater care must be bestowed, since these embellishments are so much more lasting; the more striking and showy the plants, the more attention must be given to the grouping, the greater the need for green backgrounds and foregrounds. The

DENDROBIUM NOBILE BURFORDIENSE.

modern florist often makes a bouquet of a single kind of flower and arranges it with its own foliage, what, indeed, can be better for roses than their own fine leaves? Is there anything which harmonizes better with the carnation than its own soft, glaucous green foliage? Does anything better set off the lily of the valley than its own green? So too in planting, most happy results are often produced by large masses of some one species of tree, shrub or hardy perennial, but it is also necessary that variety should be given, to obtain this we must have combinations.

The simplest groups are those in which different species or varieties of the same genus are used, as for example, where one plants together the various forms of *Rosa rugosa*, the crimson, the white *Mme. Bruant* and others. A variation of this single arrangement would be the addition of *Rosa Wichuraiana* in front and some of the strong growing roses such as *R. multiflora* and its varieties, the dog rose or sweetbriar, behind. If more variety is sought, *Berberis Thunbergii* could be introduced into the middle foreground, and a background for the whole could be furnished by some bold leaved conifer like *Abies Nordmanniana*. An effective wind-break must necessarily be made of some one or two kinds of coniferous evergreens, but the monotony of each a plantation can be broken by the introduction of a few deciduous trees, birches and larches naturally suggest themselves for such a purpose. The beautiful Hemlock Hill in the Arnold Arboretum is much relieved, both in summer and winter by a few maples scattered through the wood, while the willows by the brook at the foot of the hill are an additional charm.

Care must be taken in selecting plants which will not only produce the desired effect, but which will also be in good condition throughout the season, or such plants as can be succeeded by others, if

their duration is comparatively short, as for example the spring blooming bulbs. Due attention must be paid to differences in rate of growth, to harmony in foliage as well as in flowers, and it is hardly necessary to observe, the plants must be adapted to the situation. Some plants are always good, particularly those which have white flowers, where there can be no possible clash in color. Examples of such plants are *Spiræa Van Houttei* and *S. Thunbergii*, *Berberis Thunbergii*, the Californian privet, *Polygonum cuspidatum*, *Funkia subcordata*, *Rosa Wichuraiana* and *Lonicera japonica*, both the type and the variety *Halliana*; these all have good foliage, it would be hard to find a combination in which they were not admirable. These are simply suggestions by way of introduction, many circumstances must be considered in problems of this nature, soil, climate and cost must all be kept in view.

Naturally our first thoughts turn to spring flowers. A very effective arrangement for early bloom can be made by grouping together various plums and cherries. *Prunus Davidiana* is the first to bloom, indeed it is so early that the frost often nips the flowers, *Prunus subhirtella* (*pendula*), *P. tomentosa* and *P. cerasifera*, the myrobalan plum, bloom almost absolutely at the same time and make a charming display long before the leaves expand. *Spiræa Thunbergii* makes a graceful border to such a group, and it might be backed up by some of the double flowering cherries. In sheltered positions the double almond and the double Japanese plum, *Prunus triloba* fl. pl., could be added, besides other members of this genus, and thus, a succession of flowers be provided in early spring. Whenever effects of this description are attempted, it must be remembered that the foliage of these plants, and of many others, comes generally after the blossoms, or at all events is insufficient, therefore it is well to have a

mass of evergreens to give relief to the otherwise too conspicuous flowers. Such a setting of green is comparable to the background of a picture and serves to still further enhance its value. After the season is advanced the grass and surrounding foliage is adequate; in early spring, and always with bright and striking flowers, plenty of green must be furnished.

It is hardly necessary to say that the Dutch bulbs are important spring blooming plants, their usefulness is so well illustrated in the Public Garden that no extended remarks are required. They are much more effective when planted in large masses, the now common method of sending import orders makes it possible to obtain them at very reasonable prices. Snowdrops, crocus, squills, *chionodoxa* and all this class should be planted by the hundreds and thousands. Care must be given to the color combinations, blue does not go with pink and scarlet, nor bright scarlet with pink; for example, you should not plant purple hyacinths with scarlet *Duc van Thol* tulips, nor should this tulip be set near pink hyacinths, such as *Lord Macaulay*. The blues and purples harmonize with yellow, but yellow should be next apart from scarlet and pink. All statements of this description must be made in a general way, the delicate shades of many tulips and hyacinths makes it possible for those who have an eye for color to bring strange bed fellows together. Condense planting of this kind as much as possible; narrow borders long strung out are not nearly so effective as broad masses. Other spring flowers can be introduced into beds of bulbs, arabis, primroses, pansies, forget-me-not, *Phlox subulata*, *Alyssum saxatile* and so on. They may not bloom at the same time, but their foliage affords a much needed relief, and succession is provided. Some shrubs like *forsythia* flower with the early tulips and gay results can be produced with these combinations; here much depends upon the background, the dark green of the Austrian pine or the silvery blue of the white or black spruce heightens the effect.

A good arrangement of herbaceous plants for late spring or early summer is *Lilium candidum* with the tall hybrid larkspur behind and Chinese larkspurs in front; the autumn crocus and colchicum can be introduced to give succession. Another good combination for this season of the year is the large purple German iris and yellow lilies, *Hemerocallis flava* and *H. Thunbergii*. The scant foliage of the iris is much relieved by the abundant green of the *hemerocallis*, while the yellow and purple flowers of both agree. It may be well here to call attention to *Hemerocallis fulva*, an excellent plant to use where a background of bold dark green is needed, easily grown under adverse conditions such as shade, poor soil or exposed situations, while its tawny mahogany yellow flowers come late in the season after the abundance of summer bloom is past.

A good combination, to insure succession, is obtained by planting the Oriental poppies with the Japanese anemones or with *tritoma*; sufficient room must be given to permit full developments and to allow good cultivation. In many gardens now lilies are planted with *rhododendrons* and *kalmias*, this is highly commendable, the preparation of the soil and the same cultural conditions in general being suitable for all these plants. Our native lilies, *L. canadense* and *L. superbum*, are particularly desirable for this use; nothing could be found to make a

better setting for the bright and abundant flowers of the lilies than the deep green of these broad leaved evergreens. Perhaps some one can suggest an equally happy combination for hybrid perpetual roses, the attractiveness of these roses in our climate passes away with the June bloom; it is a great desideratum for gardeners to find some means by which the rose bed can maintain its interest throughout the season. *Polygonatum multiflorum*, Solomon's seal and *Funkia subcordata*, the white day-lily, make a graceful group, they are not only good together but also in connection with many other hardy perennials. A pleasing summer group is golden elderberry with *Prunus pissardii* and purple barberry.

In the late summer and early autumn, the asters, golden rods, *boltonia*, *rubbeckia*, *liatris* and sunflowers are very efficient, and many apt dispositions can be made of these glorious plants. Some of them are lacking in good foliage, this failing can be obviated by introducing such plants as *Polygonum cuspidatum*, *Hibiscus moscheutos*, *cosmos*, *coreopsis* of sorts, *Asclepias tuberosa*, ornamental grass and others which will not only furnish green but also prolong the season of blooming. This perhaps is the best possible illustration of the kind of effects which it seems desirable to produce. We have here a collection of plants most suitable to our climate, they are largely natives and accord with the surroundings, they bloom in pleasing succession and their colors are harmonious. The family *Compositæ* furnishes a large number of decorative plants, both for flower and foliage, most happy results can be obtained by planting them together; a bed or border of these plants is always most interesting, particularly where there is room to plant on a large scale.

Although the above named plants prolong their period of blooming well into the autumn there comes a time when we can no longer depend upon flowers; we must look to foliage, fruits and the coloring of the twigs for continued interest in the garden and shrubbery. Foliage effects at this season of the year are twofold, we have the brilliant autumn colors and we have some trees and shrubs, less well known, which carry their green leaves well into the early winter. In other words there are some semi-evergreens which keep green long after most trees and shrubs have lost their foliage. This green effect during the autumn is supplemented by the broad leaved evergreens, *rhododendron*, *kalmia*, *ilex*, *andromeda*, etc., but many of them require protection, at any rate for some time until fully established, and go into winter quarters in November. The pines and spruces are most useful but often too large for, at any rate, garden use. The English oak, California privet, Hall's Japanese honeysuckle and the type, *Lonicera japonica*, often called Chinese honeysuckle, *Akebia quinata* and *Rosa wichuraiana* are examples of this class of plants and can be most effectively used as framework for our bright and vivid autumn foliage, or as a setting for the brilliant fruits of *crataegus*, black alder, etc. Plant a back ground of English oak, in front of it a clump of sumachs, *Rhus typhina* with *R. semi-alata* (Osbeckii), *R. glabra*, *R. copallina* in the order named, in front of them *Spiræa thunbergii* or *Berberis thunbergii*, finishing off with *Rosa wichuraiana* or substituting for the latter either *Rhus canadensis* (aromatica) or *Xanthorrhiza aspiifolia*, thereby a brilliant autumnal effect is produced, while the fruit and coloring of the twigs

carries the interest through the winter. Some delightful grouping has been accomplished in the Arnold Arboretum by combining *Vaccinium corymbosum*, *Leucothoe racemosa*, *xanthorrhiza* and *Thunberg's barberry*, effectively relieved by the green of privet and honeysuckle. Our common wild roses, *Rosa lucida* and *R. nitida*, are very bright in their autumnal coloring, their abundant fruit and vivid red twigs keep the border gay the whole winter; both effects are heightened by a border and backing of green. Another good combination, which might be included in or adjacent to the group suggested above, would be the prostrate juniper in front, the *Berberis thunbergii* and, behind, the holly-leaved mahonia, *B. aquifolium*, unfortunately the foliage of this last named plant is seriously affected by severe weather, but throughout the early winter its fine red bronze leaves are most telling. The common barberry, *Rosa rugosa* and *R. multiflora*, the sweetbrier and dog rose would make still further and acceptable additions to these plantings.

The most pleasing arrangements, where winter fruits are concerned, depend upon such combinations as will provide foliage after the fruiting plants have lost their leaves; for example with black alder plant the ink berry and Californian privet. There are not many plants which furnish bright berries after severe frost, the black alder, the chokeberry, *Pyrus arbutifolia*, the bittersweets, *Celastrus scandens* and *C. paniculata*, barberries, hawthorne and roses are the most important, all of them are much improved by a setting of green; the nature of the green must be determined by the surroundings. In addition to the semi-evergreen plants lately enumerated many conifers are at our disposal. We are however, sadly in want of perfectly hardy conifers of moderate size, nothing is better than the English yew where it can be grown, the American yew is thoroughly good, but the Japanese cedars are not to be depended upon. In many cases of this nature we must resort to clipping, or rather heading in strong growing firs like *Abies Nordmanniana* and *A. pectinata* to furnish the bright lively green which makes the best background for winter fruits and twigs.

Those plants which bear a profusion of fruit during the late summer and autumn are generally planted together in good sized clumps and for the most part can be relied upon to furnish their own foliage. Good plants of this description are Tartarian honeysuckles, particularly some of the new hybrid sorts, *Lonicera Morrowi*, *Viburnum cassinoides* (nudum), *V. dentatum*, *V. Lantana*, *V. Lantanoides*, when procurable, and *V. opulus*, the tree cranberry, which is one of the very best, holding its fruit in good condition until severe weather. *Myrica cerifera*, the bayberry, produces good fruit in autumn and winter and its semi-evergreen habit makes it effective in many combinations; the snow berries, *Symphoricarpos racemosus* and *S. vulgaris* are attractive; the last named, having fine foliage, and succeeding well in the shade, makes a most useful plant in various groups; many of the cornels have showy berries, and doubtless other plants will be suggested.

The effective planting of golden willows and scarlet dogwood, to produce color in the landscape during the winter, has already been mentioned. I should like to make some suggestions in regard to variations which might be made on this original composition. The first planting was made of *Salix alba* var. *vitellina* and *Cornus siberica*, *Corchorus japonica* was added, the green twigs affording relief to

the yellow and red of the osiers. By introducing other species and varieties of the scarlet osiers, *Cornus sanguinea*, *C. sericea* and *C. stolonifera*, each in clumps, an attractive effect in shading can be produced in the reds, while the same shading can be given the yellows by using not only *S. alba vitellina* and an unnamed Russian variety. It must be noted that both cornels and willows, particularly the latter, in order partly also to equalize the size, must be severely pruned in late spring, otherwise the strong annual growth upon which the color depends, will not be produced in sufficient abundance especially after the plants get old. *Cornus Mas* and *Forsythia Fortunei* can be added which, by their flowers in early spring, prolong and intensify the red and yellow of the original combination; the yellowish cast, too, of the *forsythia* twigs is very marked during the winter. It is hardly necessary to say that a background of sturdy evergreens is highly desirable. Winter effects of warmth are always good, and it is by no means necessary to have the extremely gay planting described above. The warm brown of the twigs of *Thunberg's barberry*, *Spiræa thunbergii*, *Rhus typhina*, some of the hardhacks, *S. tomentosa*, etc., are in their way, equally effective.

Washington.

Easter has come and gone, and all the florists are happy. Saturday before Easter was an exceptionally busy day with them all. The cool chilling winds, snow and rain of Wednesday, Thursday and Friday prevented the buyers from placing their orders earlier, and the business of the entire week was crowded into one day. Flowers were plentiful, with the exception of carnations, which began to run low toward evening. The quality of the flowers was above the average. The stands in the markets were crowded with flowering plants of all kinds and quantities of cut flowers. There was a scarcity of outdoor early bloom, which was so abundant last Easter. This was due to the unusually late spring, and was much to the florists' advantage. The old colored women who usually glut the market were not in the business this Easter, and the flower lovers and the church decorators were obliged to go to the florists for all their flowers.

The demand for plants in bloom is growing every year, as most people think the blooms last longer on the plants than when cut. Hydrangeas did not seem to be among the favorites this year, owing to the fact that they wilt so easily; the same complaint is made of *Astilbe japonica*. Lilacs in 6 and 8-inch pots sold readily. Yellow and white *Marguerites*, of which a great number were used for church decorations, sold well. *Cyclamens* were also easily disposed of at a good price. *Astilbe* was never in finer condition, and sold very good at from 75 cents to \$1 each, according to the number of flower spikes. There was a big demand for azaleas, but unfortunately the supply was limited, and they were soon disposed of at from \$2 and \$3 each.

Harrisii was probably the best selling plant in the market. The majority of the stands were well supplied with them in 7, 8 and 9-inch pots. Single stems brought \$1, while those having two and three stalks readily brought \$2 and \$3; those in 9-inch pots sold for much more, some of them bringing as much as \$5 and \$8.

There were but few cut *Harrisii* in the market; everyone wanted the plants in bloom. Many were used in the decoration of churches. There was quite a

FROM THE ENTRANCE.

FROM THE CASHIER'S DESK:
VIEWS IN THE STORE OF SAMUEL FEAST & SONS, BALTIMORE.

demand for pans of growing tulips, which retailed for 50 cents per pan.

Beauties, Brunners and La France were fine and in great demand, the two former selling at \$6 to \$9, the latter at \$1.50 to \$2 per dozen, according to quality; Perles \$1, extra fine ones \$1.50. Meteors and Woottons, being a little deep in color, were not so much in demand, retailing for \$1 to \$1.50. Brides and Bridesmaids were good sellers and brought \$1.50 to \$3. Golden Gates were much sought for and sold for \$2 and \$3. Carnations were greatly in demand at 25 to 75 cents per dozen, fancy ones \$1. Lilies, both callas and Harrisii, \$3 to \$3.50 per dozen. Violets, \$1 to \$1.50 per hundred; they were very good and in great demand. Sweet peas, 50 cents per dozen. Tulips sold well at from 50 to 75 cents per dozen. Narcissus sold fairly well at 25 cents.

There seems to be a growing demand for small mailing orders which are taking

the place of the (former) Easter cards. The florists say there is but little in these orders, as they require much time in preparing for mail, at a time when time is money, but they lead to larger and more profitable orders, and the customers are seldom turned down.

All the florists' stores were decked in Easter array as early as Wednesday; they all made a very creditable display. J. H. Small & Sons' entire store was a mass of flowering plants. Their large 14th street window represented a garden. In the center was a small fountain edged with *Adiantum cuneatum*, with gravel walks radiating from it. The grassy lawns were made with *Adiantum cuneatum* edged with *selaginella*. In the foreground were two beds of *cypripediums*; just back of those were three rose beds. In one was a fine group of Paul Neyron, in another Mabel Morrison, and the third was Brunners, all of the finest kind; these were cut

blooms in low vases entirely hidden by the *adiantum*. In the center at the back of the grounds was an immense Easter egg of cape flowers. One side was broken; from this opening, falling over the side of the egg, were the graceful fronds of several small plants of *Farleyense*. Around this was tied broad pink and green ribbon, the ends being lost among the plants in the background. In one corner of the window was an arrangement of cork representing a stump of a tree with its branches projecting; these branches, as well as the stump, were a mass of *Dendrobium nobile*, plants well covered with bloom. In the center of the background stood a fine specimen *genista* in full flower; on either side of this were arranged a group of white lilac, heaths and astilbe. The ceiling and side of window were covered with mull delicately sprayed with asparagus. The store was filled with blooming and decorative plants of all kinds, making a fine show.

Gude Bros' window was arranged with a large circle of astilbe and pink hyacinths, with a ground work of *selaginella* and a background of *Harrisii*. Their store was well stocked with bulbous flowers of all kinds, hydrangeas, marguerites, white and yellow, azaleas, roses, carnations and decorative plants.

J. R. Freeman's window display was of cyclamens with *mignonette* and lily of the valley, with a ground work of *adiantum* backed with a grand lot of *Harrisii*. His elegant salesroom, which is really a greenhouse, was well stocked with azaleas, hydrangeas, astilbe, tulips, hyacinths, roses, carnations, violets and decorative plants of all kinds.

C. F. Hale displayed a fine lot of azaleas, *Harrisii*, hyacinths, tulips, cyclamens, palms, dracæas, *pandanus*, rubbers, in fact everything which goes to make up full line of Easter stock.

REYNOLDS.

New York.

Warm weather has brought on at last the expected heavy production of roses and resultant down fall in prices. On Tuesday of this week the ten-dollar-a-thousand limit was reached for the first time in many weeks and inferior stock went at even less figures. On first quality American Beauty with long stems, perfect foliage and large flower the highest price possible has been \$25 per hundred. Carnations have felt the pressure somewhat but not to the same extent as have the roses. All other stock, with the exception of *smilax*, is too abundant, and although there have been a good many large wedding decorations during the week yet the surplus retains its unwieldy proportions.

At the meeting of the Florists' Club on Tuesday evening Mr. E. A. Wood of West Newton, Mass., read an interesting paper on his impressions of the west. The discussion over the proposed constitutional amendments reducing dues and initiation fees furnished an opportunity for much oratory on both sides of the question. The amendment was finally defeated by a decisive vote. An invitation from the North Hudson County Florists' Club to attend their third annual ball and floral fete was received and accepted with thanks. A number of members urged the necessity of the club's taking some steps towards holding exhibitions in the future if it is to retain its present prominent position. This subject was discussed at length and it was finally ordered that the sum of one thousand dollars be set aside as an exhibition fund and the trustees were instructed to make such

arrangements for a fall show as would seem to them to be for the best interests of the club. Mr. J. I. Donlan announced that the New York Gardeners' Association would hold an exhibition of roses and hardy herbaceous flowers next June and asked the co-operation and assistance of the New York Florists' Club in making it a success, in accordance with which president Allen appointed Messrs. O'Mara, Sheridan, Plumb, May, and Young as a committee to act for the club. Mr. Withers called attention to a proposed exhibition to be held in October by the American Institute, in which the Concert Hall of Madison Square Garden will be reserved for the floral department. It was voted that the club hold no sessions during July and August of the present year.

On Saturday evening, April 11, the N. Y. Gardeners' Association held an enthusiastic meeting at which J. F. Withers gave a talk on old favorite flowers, of which there were on exhibition for purposes of illustration ninety varieties contributed by eleven exhibitors. Alfred Outram of England was present and made a few remarks. A delegation came from the New Jersey Floricultural Society seeking co-operation in a plan to form a National Horticultural Society.

Prof. L. H. Bailey delivered a lecture on April 11 before the New York Botanical Society at the American Institute rooms, on the subject of landscape gardening.

Mr. P. Giatras sailed for Europe on Saturday, April 11.

Visiting New York: R. McDonald, Lenox, Mass., and Mr. Johnson of Dalton, Mass.

St. Louis.

The regular monthly meeting of the St. Louis Florists' Club was held Thursday afternoon, April 9, at 3 p. m., President Fillmore in the chair. The increased interest in the meeting was shown by the large attendance. A large number of fine roses were on exhibition, also some carnation blooms. C. A. Kuehn had on exhibition a fine lot of Brunners that were much admired, and E. W. Guy, of Belleville, Ill., a vase of as fine a lot of Kaiserins as ever seen. Brown & Canfield, Springfield, Ill., showed Siebrecht, Kaiserin, Perle, Bridesmaid and Meteors. Dr. Halsted, of Belleville, had some fine blooms of carnations and a mixed bunch of choice roses. F. J. Fillmore and Emil Schray had some well grown roses at the meeting. C. W. Wors showed a remarkably fine vase of Helen Keller carnations grown by Markey Bros.

The committee appointed by the president to look into the merits of the blooms on exhibition was as follows: R. F. Tesson, F. C. Weber and Julius Koenig, Sr. At the next meeting of the club Dr. Halsted, E. W. Guy and President Fillmore were requested to read essays. Dr. Halsted's essay will be on growing chrysanthemum blooms for exhibition, E. W. Guy on chrysanthemum plants for exhibition, and Mr. Fillmore's will be on chrysanthemum plants for the market.

The next meeting of the club will be a sweet pea meeting, and all members and others as well are requested to bring cut blooms of any kind for exhibition. Every meeting hereafter will be made as attractive as possible in order to bring the members out in full force. The blooms will be sold after the meeting at auction, the money to go for a special prize at the next chrysanthemum show. The question box was full and a great many queries were answered by those present.

After the questions the cut blooms were put up and auctioned by J. J. B., and they all brought good prices. The meeting then adjourned until Thursday afternoon, May 14.

Trade the week following Easter has been dull; a few large weddings kept some bus, but since nothing has been going on of any importance. Stock has become quite plentiful in most lines, and roses in particular, and a great glut is threatened. Prices have gone down on all stock except carnations; they seem to hold their own. Roses are sold in the wholesale market from \$1 to \$5 per hundred, and good stock at that. La Francis plenty; most of the stock offered is of medium size, clean and salable blooms, and of good color. Here and there a lot of extra fine blooms brings a fair price. Carnations are the only thing the wholesaler is sold out of after the morning rush. Day-break and Scott and some extra fine Garfield that come in find ready sale. Very little bulbous stock is seen now, many of the growers being cut out entirely. Some good Harrisii are still coming in. Valley is good and in demand, and brings \$3 and \$4. Violets are very scarce, the supply being far short of the demand.

Plant trade continue good, both local and shipping; the plant corner in the Union Market is full from top to bottom, and florists report good sales.

P. W. Von Bockleemann, proprietor of the Greene County Floral Nursery, White Hall, Ill., was a visitor last week.

Wm. Lingenbrink (Ellerd Floral Co.) will move in May from his present location, 525 Olive street, to across the way into Alexander's drug store. Mr. L. will fit up a fine store, having much more room at the new place. His fixtures will be white and gold.

The stock and fixtures of J. W. Steele & Co. were sold at auction Friday and brought good prices. A few Harrisii plants left over from Easter without any blooms on them sold for 50 cents each, but they were not bought by any florists. Very few florists were in attendance at the sale.

The bowlers went out Monday night to turn the tables on the the Magnolias, but the tables would not turn. The Magnolias with their big solid balls mowed them down just the same, and beat us by 300 pins. Some of our boys were not in shape to roll good games, Mr. Weber being sick, but came out and rolled. Five games were played and the score was as follows: Magnolias 5,349, Florists 5,049. Beneke made the best showing for the Florists, 938, and also the highest single game, 234. Schnit of the Magnolias was high man for his side; total 1,024, and highest single game 242. The boys took their defeat good-naturedly and all had a good time. J. J. B.

Philadelphia.

The old summer quotation "Is it hot enough for you?" has been revived and there are several severe cases of spring fever reported. There has certainly been a great change in the weather the past few days. At 10 p. m. Tuesday the thermometer registered 60° and through the next day it reached 80°. This temperature is beginning to tell on the stock, which is coming in, particularly roses, in great quantities. The price for regular lots in small quantities is not reduced much is yet, but large lots go at extremely low figures. Carnations do not seem to be over-plentiful and good stock still brings \$2, with \$2.50 to \$3 being asked

for the fancies. Cheaper grades sell at from 75 cents to \$1.50 per hundred. There is still a little bulbous stock about but it is nearly done, outside daffys are in and bring \$2 per hundred, good flowers. Valley sells at \$3. The price of the best teas is \$6 to \$8, Beauties, first grade \$3 per dozen, Jacques 8 to 10 per hundred, Brunners 3 to 4 per dozen. Small teas sell for \$2 to \$4 per hundred.

A look among the growers and handlers of Easter plants finds everybody fairly well satisfied, most all had a little too much of this or that, some grew too many hyacinths and some have a lot of pot roses left unsold; the stock of azaleas in from \$2 to \$3 sizes also seemed quite a good deal larger than the market would take, while of the \$1 to \$1.50 size there was not enough. With lilies it was a clean sweep and almost all the growers are preparing to increase their orders for Bermudas. The Harrisii and longiflorum types appear to be fast merging into each other and it is now quite difficult at times to say to which variety a flower belongs. There is no difference in the price of longiflorums over Harrisii in this city, as is the case in Boston and New York, and many more of the latter variety are grown in preference to longiflorums. The bedding plant men now have their tables crowded with young stock, which is being shifted as they get the room, they anticipate a busy season. Business in the stores the past few days has been very quiet and the hustlers have a great time disposing of their stock. Sweet peas are getting more plentiful and are now selling at from 1 to 1.50 per hundred.

There is talk of a good time up at Wissnaming one of these days soon, a club shoot, followed by a planked shad dinner is the program. The memory of a like occasion a year ago is not yet forgotten by the members lucky enough to be present. K.

Pittsburg.

It seems as if we were to do without any spring this season at all, for this week we have had real summer temperature, 84° several days in succession, and frost just prior to them, and evidently the people have a heavy attack of spring fever, as the florists are complaining of a dullness in business, and quietness also prevails in nearly all other branches of trade at present.

The club held the regular meeting on the 9th inst. The committee to arrange for a reception to Mr. Falconer reported everything would be in readiness for Thursday, 23d inst., our next regular meeting night; refreshments will be served in our own room. A full attendance is expected, as all wish to meet Mr. Falconer and assist in welcoming him. Mr. John O. C. von Schubert, foreman of Miss Klopfer's greenhouses, was elected a member, and Mr. David Smith proposed for membership. Mr. Boddington, with Pitcher & Manda, Short Hills, N. J., was a welcome visitor to the meeting.

Mrs. Chas. W. Kerr has opened a very nice store at Duquesne, about four miles above Homestead, for sale of cut flowers and plants. The outlook is very promising for her; at Easter she sold all her stock, and has done a good business right along since she commenced.

Beckert Bros., wholesale growers, Glenfield P. O., have dissolved partnership, Albert retiring to go into the oil business, and Mr. Theodore F. Beckert continuing, who will no doubt manage the business as successfully as heretofore; they have been among our most progressive grow-

crs, keeping fully abreast of the times, both as to houses and stock.

Harry, Mr. Dunlevy's son, who was so badly burned in the gas explosion a few weeks ago, has recovered enough to enable him to get about a little. Mr. Paul Bruno, who was burned at the same time, is not getting along so well, crypticlas having set in, but is not considered as in a serious condition.

Two large contracts were awarded last week by Director Bigelow to Edwanger & Barry and Thos. Mehan & Sons, they being the lowest bidders, for trees, shrubs and nursery stock for use in Highland Park, all to be delivered as rapidly as possible. Supt. Burke will now have something he has needed for a long time, and that is a "nursery" in his own park (Schenley having one of its own). When the other improvements contemplated are completed he will have one of the handsomest parks in the country. REGIA.

San Francisco.

Easter has come and gone again and every person is asking the same question: "How was trade?" Some very extensive preparations were made by some of the florists, and the general verdict is trade was as good as last Easter but none better. Harrisii seemed fairly plentiful a week before Easter, but the supply shortened up considerably. Many more could have been disposed of had they been in the market. Roses of every kind sold well, Beauties bringing \$3 per dozen, Testouts \$1.50 and nearly all other small roses from 75 cents to \$1 per dozen.

The plant trade did not amount to much, as it never does here at Easter time. Although quite a lot of spiraea was on hand the stores seemed to be pretty well cleaned out of it. Lilac was a glut on the market, but it will not last more than another week.

One of our principal growers of Harrisii for the San Francisco market told me that he does not intend to grow Harrisii another year. His reasons were that the low prices, diseased bulbs, and the competition of the Japs, who just flood the market with longiflorums, make it an unprofitable undertaking.

Violets are now a back number and no more are seen here. Carnations are getting very plentiful and cheap also.

The growers say that the shipping trade was not near so good as last Easter, there seeming to be a decided falling off in that line. Sweet peas are coming in slowly and as yet we have seen none of the newer sorts.

Coop & Seelig, the well-known violet growers of Ocean View, have removed their plant to San Carlos, where they have secured the old Britton place, which with increased facilities for their growing trade will be a permanent benefit.

R. Mann, of O'Farrell street, has moved his store from the Alcazar Theater to Pine street, near California.

Mr. E. W. McLellan, formerly of Laurel Creek, has purchased a block of land at Burlingame, where he has commenced the erection of 12 houses, each of 100x20 feet. This extensive plant will be devoted exclusively to the growing of roses, carnations, etc., for the market. Mr. McLellan will personally superintend the plant. In the meantime the place at Laurel Creek will be carried on as before.

The great crowds of visitors who have been visiting the Conservatory in Golden Gate Park the last few weeks have been treated to a fine exhibition of cinerarias. The cinerarias are now done blooming and are being removed to make place for

other plants. The outdoor cinerarias will begin to show their bloom in a short while. The azaleas in the greenhouse will probably last another week. The roses in the houses are not looking so well, but outside there is a perfect mass of bloom everywhere. The season for roses blooming outdoors in California extends over nearly ten months. The greenhouse display of roses lasts only a few months in the winter to bridge over the interval when the outside stuff is not in bloom.

They have just placed 200 potted coleus of different varieties on display also. They are particularly well grown and are proving one of the most interesting features in the conservatory. METEOR.

Chicago.

Like all the other large cities, Chicago has been demoralized this week by the sudden change to summer weather, and the flower market is in a very unsettled condition. The quality of stock has suffered greatly; roses are very flabby and pale, and an order for high quality stock causes a great deal of picking over. Prices keep fluctuating, and it is very hard to give any fixed rate. The best Beauties, fine flowers with long stems, are down to \$2 a dozen. Of the large teas the best stock is held at \$4 a hundred, and though some extra selected is sold at \$5 little seems to reach this figure. From this prices slide downward with alarming rapidity and we hear of some stock going as low as \$7.50 a thousand. A number of large shipping orders have been filled at \$10 and \$12 a thousand. A great many flowers have gone out of town, but a good many have found their way into the streets.

Carnations suffer also, nor do they seem to be in any active demand. In big shipping orders, amounting to thousands, they bring 60 cents, and fair average stock sells for 75 cents; from this the price ranges up to \$1.50 or \$2 for fancies. Some extra fine Morello from Hopp & Lemke were held at \$3 earlier in the week. Helen Keller is seen in fine quality. Lilac made its first appearance from outside on Thursday, and sold for 50 cents a bunch. Sweet peas are more plentiful, and the prices vary from 50 cents to \$1 a hundred. Bulb stock is still very quiet; valley is much scarcer than it has been, and brings \$3 to \$4; outdoor Dutch hyacinths from the neighborhood of Chicago have appeared, and outdoor daffodils are plentiful, with few buyers. Harrisii lilies bring \$4 a hundred; they are beginning to be crowded by longiflorum, which sells for \$5. Some of the beautiful white Marguerite centaureas have been sent in by Fred Timme; they are so delicately lovely that they ought to sell.

The greenhouses at Lincoln Park made a very attractive Easter display of flowering plants, including a quantity of calceolarias, which were very rich in color.

A. G. Prince & Co. intend moving from their present quarters about May 1, their new location being on the second floor of 88 Wabash avenue, which is rapidly becoming colonized by our wholesalers. Samuel Reubens, for several years with Kennicott Bros. Co. has now assumed a similar position with Prince & Co.

Recent visitors: S. Skidelsky, Philadelphia; P. Vos, Sassenheim, Holland.

Toronto.

There has been a good deal of business during this last week and the supply has been very large, but prices are somewhat reduced since Easter day.

The weather has turned very mild again and things at the market last Saturday looked pretty lively. This week promises well too, the Canadian Horse Show being in full blast. A large number of fashionable people will be in town including the Governor-General (Lord Aberdeen) and suite. Yellow and blue are the show colors. Violets are plentiful but daffs are likely to run short. E.

Boston.

On all sides reports indicate a brisk and satisfactory business since Easter. Warm, spring-like weather has set the plants abloom at a lively rate, and the stock coming in now is larger in quantity and better in quality than it has been for some weeks, but there is no difficulty in disposing of it with the present demand. There was quite a large remnant of un-bloomed lilies that were just too late for Easter, and these have been abundant at reduced prices. Carnations have come down to about one-half of their Easter figures, and roses have also dropped in price, but are not down to the slaughter figures prevailing in some past seasons at a corresponding date. Plant business has not started yet, owing to the extremely backward spring. Outdoor operations have been badly retarded from the same cause, and when it does open it will be with a rush.

On Saturday, April 11, there was an instructive lecture in Horticultural Hall by Wm. C. Bates on mushrooms. The lecture was illustrated by means of numerous stereopticon views, and the great interest taken in this subject by the public was evinced by the very large and enthusiastic audience which greeted the lecturer. On the exhibition tables were some very handsome displays of flowers and plants. James Comley showed some azalea plants and a miscellaneous collection of roses, peonies, wistaria and seedling carnations. Carl Blomberg had some pretty pond lilies, including nymphæa scutifolia, rubra and cærulea. Lawrence Cotter showed some magnificent blooms of rose Mrs. Whitney; A. H. Fewkes a plant of Spiraea astilboides floribunda, which by the way is the most beautiful of the genus for forcing; and from J. S. Fay came a superb collection of pansies. Edward Butler staged a group of well flowered angræcums, odontoglossoms and dendrobiums.

Considerable speculation is heard about town as to who shall be the next city forester, it being asserted that Mr. Doogue, who has held the position for nearly 20 years, will not be re-appointed. Several gentlemen are making an active canvass, and considerable influence, political and otherwise, is being brought to bear upon the mayor in the interest of the various aspirants, but at present writing it looks as if Mr. Doogue would be his own successor.

Visited Boston: Burt Eddy, representing J. C. Vaughan, and D. Macrorie, representing W. A. Manda.

St. Paul.

Trade since Easter has not been very lively. The weather has been wet and disagreeable, keeping the shoppers at home. The growers are busy getting their bedding stock repotted and their hot beds in order. Most stock is off crop now, and the cloudy, rainy weather has not benefited the quality of the flowers.

The stock of the assigned firms, L. G. Venzke and De Cou & Co., has been consolidated, and birds and blooms seem to go well together.

The assignee of L. G. Venzke is offering the entire stock, including greenhouses and lease of ground on which they stand, for sale. As the property is not advantageously situated it will not sell readily.

Recent callers: P. J. Goemans, representing K. J. Kuyk, Mr. Waaran, of Van Heemstra & Co., and Mr. Rolker of New York.

FELIX.

San Jose, Cal.

The Easter trade was not large by any means. This place has the reputation of having the worst Easter trade of any large city around San Francisco. The season here being so mild all the outside stuff, such as callas, lilac, and the like, were plentiful in the private gardens, so that the buying public did not have to patronize the florists. Some of the florists are making quite extensive preparations for the carnival of roses next month. We hear that some of the growers here are going to have stands on the streets during that week.

Mr. G. A. Lehmann has an immense crop of carnations now, but he claims that there is nothing in them at all. Portia, Scott and McGowan are his standard sorts.

Mr. E. H. Bourguignon, the rose grower, is going to try his hand at literature. He, in company with Mr. Bourns, has begun the publication of a monthly magazine, the *California Garden*. It is edited by Imogene E. Johnson, of Los Gatos.

Mrs. R. H. Dunlop, of West San Fernando street, intends to give up her store in June, as business is not up to the standard.

Mr. Navlet's store presents a fine appearance, the window display being particularly striking. Genial Mr. Parson's store also has its usual display of high-class roses and carnations, and that gentleman reports trade as growing rapidly.

METEOR.

RICHLAND CENTER, PA.—Frank Sorver has entered the business here raising flowers, etc., for a local trade.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

FOR SALE. EVERGREEN LODGE, Clarksville, Tenn.

On May 22nd, 1896, we will sell at public auction, if not sold privately before that date, this valuable property. This is the finest property of the kind in the South, and a large trade is already established throughout the Southern States. The property consists of eight acres of beautiful grounds, excellent improvements, six first-class greenhouses, well supplied with all modern equipments, one chrysanthemum house. These greenhouses are not excelled by any to be found in the South or elsewhere.

A fine opportunity is here offered to any one wishing to engage in the floral business. Correspondence solicited. Terms one-fourth cash, balance in six, twelve and eighteen months, secured by a lien.

CLARKSVILLE, TENNESSEE.

THE NEWS comes from England of the
death of George Gadd of Liverpool on
March 10. Mr. Gadd has for many years
supplied some of the largest dealers in
this country with mistletoe for Christmas
trade.

THE Fishkill Standard, of Fishkill-on-
Hudson, N. Y., devotes four columns on
the front page of its issue of April 11 to
an illustrated article descriptive of Mr.
Benj. Hammond's "slugshot" works,
under the heading "local industries." An
excellent portrait of Mr. Hammond is in-
cluded.

WHILE our Easter trade reports show
a very gratifying condition of affairs
under the circumstances, they cannot
compete with the reports in the daily
press. From this reliable (?) source we
learn that the Philadelphia florists sold
"something like \$500,000" worth of
Easter flowers and plants, and that the
receipts of one retail florist amounted to
"more than \$22,250." How happy the
Philadelphia boys would be if it was only
true!

THE DAHLIA is the title of a monograph
by Laurence K. Peacock, the dahlia
specialist, and secretary of the American
Dahlia Society. This is, we believe, the
first American book devoted to this
flower. It contains much valuable cul-
tural matter, and the select list of varie-
ties, with descriptions, will be of great
service. It is freely illustrated with fine
half-tones. This is certainly a valuable
addition to gardening literature, and will
be very serviceable to florists generally,
as well as amateurs. (W. P. Peacock,
Atco, N. J., publisher. Price 50 cents,
stiff paper cover.)

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. B. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON. 111 Chambers St., New York. See 'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

E. S. HARNDEN is reported to have resigned his position with L. L. May & Co. and taken that of inspector of the vegetable seeds now being put up by Messrs. Landreth & Sons, at Bristol, Pa., for the Department of Agriculture.

THE DAILY PRESS reports are very full of details regarding the charges against Secretary Morton by The Northrup, Braslan, Goodwin Co. It is doubtless in order for the department to explain why the contracts were awarded at a price \$11,000 above the lowest bidder, in the face of the very severe conditions as to germination and purity required by the Secretary's original circular, and in the face of the further fact that a certified check to the amount of 10 per cent of the bid was in the secretary's hands. Some other conditions required by the circular, and which are alleged to have been since waived, should be satisfactorily explained at the same time.

San Francisco.

Again we have been visited by splendid warm rains, which are helping the growing crops immensely. We note that the blight is making its appearance at this date in the onions, but at this early period it is difficult to ascertain the amount of damage likely to be done.

The later sowings of lettuce are coming up well and will be greatly benefited by these rains. Sweet peas, strange to say, in some localities are not looking so well. We notice that there is a pest attacking them at the roots destroying the whole plant. METEOR.

Syracuse, N. Y.

The many friends of our genial and efficient Park Superintendent, Thomas Bishop, will be pleased to learn that in spite of much political wire-pulling he will retain his position.

The members of the Central New York Horticultural Society will on April 17 give the first of a series of object lessons and practical talks at the Business Men's Association rooms. The following is the program: Potting plants and sowing seeds, D. Campbell; the care of lawn and shrubbery, Thos. Bishop; window gardening, H. Youell; insects on plants and insecticides, R. Bard; watering and fertilizers, P. R. Quinlan. H. Y.

LANSING, MICH.—Easter trade was about 25% greater than last year. C. S. FitzSimmons has opened a cosy little store on the main street. He is also building another small house and a few hundred feet of cold frames. A double calla has attracted some little attention in one of his greenhouses lately.

Florists' Sweet Peas

New Sweet Pea "America"

Is more distinct and striking than any other variegated Sweet Pea in existence, and is of the large flowering type. Its color is a white ground and through the center of the standard is a wide enamine scarlet blotch veined with fine scarlet lines running toward the edges and showing in the same manner on the wings. The dashing contrast of the heavy scarlet blotch on the white ground makes the blossoms very effective in a mass of cut bloom or when flowering in the garden. It is indispensable for any complete collection of colors in Sweet Peas. Pkt. 15c; 2 for 25c; 5 for 60c; 10 pkts. \$1.00; 100 pkts. \$7.50.

BLUSHING BEAUTY, clear "daybreak" pink, largest size. Oz. 5c; 1-4 lb. 12c; 1b. 35c; 5 lbs. \$1.50.

COUNTLESS OF RADNOR, clear lavender, very large flower. Oz. 5c; 1-4 lb. 15c; 1b. 45c.

EMILY HENDERSON, pure white, large early. Oz. 5c; 1-4 lb. 12c; 1b. 35c; 5 lbs. \$1.50.

HER MAJESTY, clear bright rose, very fine flower. Oz. 7c; 1-4 lb. 15c; 1b. 45c.

FIREFLY, brightest fiery scarlet, large. Oz. 10c; 1-4 lb. 20c; 1b. 60c.

MRS. ECKFORD, best large yellow. Oz. 7c; 1-4 lb. 18c; 1b. 55c.

MRS. SANKEY, large, white. Oz. 5c; 1-4 lb. 15c; 1b. 40c; 5 lbs. \$1.75.

INVINCIBLE CARMINE, deep crimson scarlet. Oz. 6c; 1-4 lb. 12c; 1b. 35c.

TRUE LOTTIE ECKFORD, white, blue edge, large. Oz. 5c; 1-4 lb. 15c; 1b. 40c; 5 lbs. \$1.75.

For other varieties see our "Book for Florists," sent free to florists.

Mention American Florist.

Cincinnati.

The regular monthly meeting of the Cincinnati Florist Society was held April 11, and called to order by President Gillett. The meeting was well attended and the flower show brought out a goodly number of lady visitors during the afternoon. There was a table containing about 100 vases of cutflowers, roses and carnations predominating. The judges consisted of Messrs. Sunderbruch, Walz and Bock; they awarded the following certificates: to John Conger for pot petunias; Wm. Murphy, Scott and Portia carnations; H. L. Sunderbruch, Scott carnation, Meteor and Brunner roses; R. Witterstaetter, Emma Woelher carnation; Magrie & George, Lily of the valley; Hofmeister Floral Co., Bride, Beauty and Mermet roses; Thomas Jackson, daisies, Bridesmaid and Uncle John carnations; Chas. Schweizer, Lilium Harrisii; H. Schwarz, Daybreak carnations. A vase of mixed seedling carnations from R. Witterstaetter was much admired, also a vase of his scarlet seedling which is not named yet. There were 46 entries made. No special business was transacted and the meeting adjourned.

Easter is a thing of the past and the boys are well pleased, having done a good business in their various lines. The store men and wholesale houses report an increase of 25%. The flower market was well stocked with choice plants and by 7 p. m. most all were sold out. Very little salted stuff was sold. The following were the ruling Easter prices: Carnations 50 to 75 cents per dozen; roses, teas \$1 to \$1.50 per dozen; hybrids \$1.50 to \$2 per dozen; tulips, hyacinths, narcissus and valley 50 cents per dozen. Some choice hydrangeas were seen on J. Peterson's stand. Mr. Peterson made a grand display in his 4th street store during Easter week, the same may be said of his neighbors Messrs. Kelly and Hardesty.

H. SCHWARZ.

Omaha.

Easter trade was fully up to expectations, and the weather could not have been more favorable. Wrapping was required only to keep the blooms of the plants from being bruised, but several dealers did not go to that much trouble; we hope we will not see this negligence again. Two weeks preceding Easter was cloudless and spring-like, consequently there was an abundance of stock, and in most places the supply was equal to the demand. Carnations and valley were short. Prices were about the same as last year. Good lilies sold for 12½ and 15 cents, while a great deal of poor stock for 10. An effort was made a few days before Easter to establish a price on lilies. A meeting was called at the Paxton Hotel, but few were in attendance, consequently very little was done. Azaleas and potted hyacinths sold well, better than several years previous. Very little demand for palms and ferns.

J. R. McPherson, of Council Bluffs, spent a few days of last month in Chicago on business. G. R. H.

ST. JOSEPH, MICH.—Mr. J. H. Brumby has opened a floral store here. He has been cutting a fine lot of Jack roses since the middle of February, most of which have gone to the Chicago market.

Della Fox and Annie H. Lonsdale
ALL SOLD.

MYERS & SAMTMAN, Chestnut Hill, Phila.

IVORY! THE GREAT SUCCESS!

NOTHING IS IN MORE UNIVERSAL DEMAND BY FLORISTS THAN A GOOD, PRODUCTIVE WHITE CARNATION.

In **IVORY** you will have it. Try it and you will have a money maker. It produces as many blooms as Wm. Scott, is as perfect in form as any Carnation yet produced, held by a calyx that never bursts and carried on a long, wiry stem. What more do you want?

Fine plants from soil, \$10 per 100; \$75 per 1000. Stock ready now.

Also fine stock of *all the other leading varieties*. SEND FOR PRICE LIST.

ALBERT M. HERR, LANCASTER, PA.

The Bridesmaid Carnation

is the pink carnation you want. It averages more HIGH GRADE blooms than any other pink variety grown. It has a long stiff stem, strong calyx, perfect form of flower and a color that cannot be excelled in its class. It sells quickly at a high price, and stands at the head of the list of pink carnations. It won the honors at the American Carnation Society Show at New York as best pink in classes A, B and C. Its growth is clean and healthy.

Order now to get your stock early.

No Rust, Strong Cuttings.

\$5.00 per 100, \$40.00 per 1000.

If you have not already received our list send for it.

Carnations!

To make room immediately I offer for cash with orders, the following varieties in extra strong transplanted stock from flats, in fine condition for immediate planing in open ground:

ALASKA and HELEN KELLER	\$3.00 per 100
WM. SCOTT and MME. ALBERTINI.....	2.00 "
LIZZIE MCGOWAN	1.50 "

JOHN N. MAY, Summit, New Jersey.

NEW CARNATION, W. D. SLOANE.

This new sort will prove a leader to all Florists. We know of no better variety of its color, and none can equal it in fragrance. The plant is a strong and vigorous grower, needing but little support, with dark foliage about as heavy as Tidal Wave. Flowers are large, good substance and lasting qualities, borne on stiff stems 15 to 20 inches in length; color a beautiful cerise. Very profuse bloomer.

PRICE, \$10.00 PER 100; \$75.00 PER 1000.

Pitcher & Manda, Short Hills, N. J.

Sam'l S. Pennock, 1612 Barker St., Philadelphia, who handles the entire crop of flowers of this new variety, says under date of March 26th, 1896: "Your W. D. Sloane, the way you grow them, are certainly fine, with the long stiff stems and good sized flowers. A ready sale for them is found at an advanced price over the average varieties."

WHOLESALE SPECIALTIES:

CARNATIONS,
CANNAS,

CHRYSANTHEMUMS,
GERANIUMS.

EMMA WOCHER, The New Shell-Pink Carnation

This Carnation is of a "lively bright shade," deeper than Daybreak, blooms measure from 2 to 2 1/2 inches in diameter, fragrant, with a stem that carries the bloom erect at all times, calyx perfect, flower of good form; will grow erect with no other support than a V shape wire netting and is pronounced by all who have seen it to be an acquisition and many orders have already been booked. In our Cincinnati market it sells more readily than either Scott or Daybreak; it is not a cropper but a continuous bloomer.

Price for strong well-rooted cuttings, \$10 per 100; \$75 per 1000; 500 at 1000 rates. Cash must accompany all orders or satisfactory reference. Address

Probst Bros. Floral Co., 1017 Brdwy, Kansas City, Mo.

Worcester, Mass.

Easter Saturday dawned bright and clear, but before long the sky was overcast, the thermometer dropped, and a nasty wind combined to make it as disagreeable as possible to ship our stuff to the city, and for the storemen to deliver it. In spite of the inclemency of the weather all did a good business, in fact all we could handle. More stock was grown this Easter than ever before, and though there was no surplus of any account still in several lines we had more than enough. Carnations, as a matter of course, were short, and though the quantity brought in exceeded our anticipations all the good stuff was sold out before Saturday noon. Lilies were also on the short side and we probably could have handled a few hundred more plants if we had them, but the cold and the wind made it such a hard job to deliver a lily plant and get it there in decent shape that the loss wasn't felt as much as it would have been in fine weather. Bulbous stuff we had in enormous supply, and though it sold well quite a quantity was left over with the exception of Von Sions. Violets were very scarce and decidedly poor in quality, with the exceptions of a very few single ones. We had the biggest supply of roses ever seen on an Easter day in this town, and for once we had enough. Spiræa, deutzia, mignonette, antirrhinum, smilax, etc., were plentiful.

Potted plants sold well; azaleas went early in the day and hyacinths, narcissus, tulips, spiræa, lilacs, cyclamens, cyrtisus, daisies, etc., were in good demand. All the churches decorated more or less extensively, using a great many palms, etc. Prices didn't advance at all, not withstanding the shortage on some lines; most of the storeman don't believe in increasing prices on the slightest provocation, but a few retailers who had to depend on the commission men had to advance to get their money back. Outside of Easter trade has been quiet and steady and from now every thing will probably be plentiful except violets.

C. B. Knickman, representing J. C. Vaughan, paid us an Easter visit.

A. H. L.

Milwaukee.

The preliminary premium list for the next chrysanthemum show under the auspices of the Milwaukee Florist Club, to be held in November, is now ready and can be had by making application to the secretary, Wm. Freytag, 794 Forest Home avenue, Milwaukee, Wis. INCOG.

STAPLETON, S. I. N. Y.—Fred G. Hawkins has sold out his old place, and secured a more extensive establishment. He will also run a store in connection with his greenhouses, at 126 Vanderbilt avenue.

WHEN writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

Louisville, Ky.

No complaints are to be heard among the boys, as regards their Easter trade, which has proved to be away ahead of last year's, surpassing the most sanguine expectations of many. The demand for cut flowers of all kinds has been unprecedented in the history of the flower trade in this city. Everything in the shape of a flower sold like the proverbial hot cake, the only drawback being the shortage of flowers, which was a great disappointment to many. Plants too sold as readily as they were handed over the counter. Taken all in all the Easter of 1896 will long be remembered as one that yielded the most satisfactory returns.

Haupt's "Floral Bazaar," on West Jefferson street, presented a most attractive appearance on Saturday. The mammoth store was handsomely decorated for the occasion, numerous palms, plants and cut flowers having been used in profusion and to the best advantage, while an orchestra stationed in the back part of the store discoursed some classic and popular music all day and late into the night. It was a splendid "drawing card," many taking advantage of the free entertainment, spectacular as well as musical, with the result that the store, spacious though it is, had but "standing room." I need hardly add that Mr. Haupt was all smiles over the results of his Easter trade.

Mess. Lewis & Gilbert have removed to 640 Fourth avenue and report an all around satisfactory trade.

Miss Maggie Gorman contemplates removing to Jefferson street, between third and Fourth avenues. HOMO.

Columbus, O.

Mr. John Romans has sold his retail store to the Highland Park Floral Co., intending to confine himself to the wholesale trade exclusively.

Mr. Carl Brown has severed his connections with Livingston's Sons and has opened a flower store. His location on High street is one of the best in the city.

The Franklin Park Floral Co. are about to erect four additional houses, each 108x18. Three of these are intended for roses and one for carnations. The houses will run east and west with the short-span-to-the-south. The glass to be used is 16x24 of double thickness. Gasser's zinc joints and the clipper bar will be used. The houses will be built in the best possible way and with this new addition the company will have a total of 32,000 feet of glass. Mr. Knapp's carnations look exceptionally fine, especially his Lizzie McGowan, which could not possibly be surpassed anywhere. HOMO.

Springfield, Ill.

The was a marked increase in the Easter trade with a large demand for plants which sold readily at fair prices. The supply of roses was about equal to the demand, but carnations were rather scarce.

Mrs. H. L. Phelps has left for Newburg, N. Y., intending to visit also New York city and other eastern points.

A new flower store in town is that recently equipped by Mr. H. L. Phelps at Fifth and Monroe streets. It is a splendid location and Mr. Phelps is well satisfied with the result of his venture.

Messrs. Brown & Canfield are cutting some fine Brides, Meteors, Bridesmaids and Perles. Their American Beauty are just now not quite so fine as they usually have them. HOMO.

NEW LATE PINK FRANCIS B. HAYES
CHRYSANTHEMUM

JAMES COMLEY, Originator, says:
"I have seen, grown, and watched the FRANCIS B. HAYES Chrysanthemum for two years. I think it one of the best ever raised in this country, and is a chrysanthemum that every grower ought to have."

Awarded Certificates of Merit by N. C. S., November 17, 1894, Massachusetts Horticultural Society, November 17, 1894, and N. Y. F. C., November 25, 1895.

\$4.00 per dozen; \$25.00 per 100. Ready May 1, 1896.

When you write to any of the advertisers in this paper please say that you saw the advertisement in the American Florist.

Indianapolis.

In some instances there was a very substantial increase over last year in the Easter trade, and it will probably average 20%. Retail prices were about 25% lower except on some special items. Supply was equal to demand and in bulbous stuff there was an oversupply, except lilies. Quality was better than last year. At the public market there was a big increase in the sale of plants and fairsales at the stores. Next to lilies, carnations, Beauties and fine roses led in demand. The weather being fine market sales were good, but low prices prevailed on many plants. There was a scarcity of good lilies; the bulbs seem to have been inferior and they forced irregularly.

The regular monthly meeting of the Florists' Club was held April 1 with a fair attendance. The question of holding a spring show under the auspices of the club was discussed, the admission to be free or merely nominal.

The chrysanthemum show committee reported progress. The secretary has issued the advance premium list.

Mr. John Hartje, who has had a siege with typhoid fever, is about again and attending to his regular duties.

Will Bertermann is still suffering from his fall but is well enough to attend to some of his lighter duties.

Mrs. Fred Dornier of Lafayette, Ind., is in the city on a visit. She reports their Easter trade as very good; did not have near enough of their fine carnations.

Holland agents have been in town as usual in numbers. They generally fill up the town to excess; a few less would be agreeable to a majority of the florists.

The seed stores are doing a very good trade, although the cold weather interfered to some extent. W. B.

Grand Rapids, Mich.

The Florists' Club held the regular meeting in the parlors of the Eagle, with an average attendance. The subject for discussion was the Easter flower sales, which were reported fairly satisfactory, Easter lilies retaining their oldtime popularity. Plant sales were larger than formerly.

As to prices on spring bedding plants it was stated that at no place were they sold so cheap as here. It lies largely with the florist to develop a taste for flowers and plants among his retail customers. Opinions pro and con of various wholesale seedsmen and dealers were freely given; results vary so in dealing with different firms that this topic will bear impartial discussion in any Florists' Club.

The printed premium list for the second annual chrysanthemum show is ready for distribution by N. B. Stover, secretary. The show will be given November 16 to 21, by the Florists' Club and ladies of the Childrens' Home Society. Plants intended for exhibition to be in possession of the exhibitor after July 1.

J. K. Johnson, proprietor of the hotel, invited the club members, their wives and sweethearts, to a spread to be given after the next meeting, April 21. The invitation was accepted (of course) and each member is expected to give a short talk on their favorite spring garden flower; as each has been given a topic, and with a spread in sight, the next meeting can but be a grand success. EVELYN A.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

A GOOD INVESTMENT.

"The No. 6 'SPENCE' Hot Water Heater we purchased from you in August, 1889, has proven a good investment. Our main greenhouse is 132 feet long, 18 feet wide, with a wing 75 feet long, 18 feet wide, contains 4,000 square feet of glass, and is warmed with 1,500 feet of 4-inch cast iron pipe. The coldest weather we had last winter was 24 degrees below zero, but we had no difficulty in keeping up the required temperature. We burned during the entire season 18 tons of anthracite coal, and have no fault to find on that point, as we consider it economical. During the winter of 1888 we used a larger heater than yours, with only 1,000 feet of 4-inch pipe attached, warming 2,700 feet of glass, and consumed a greater quantity of coal than was required for the 'SPENCE,' though doing only two-thirds of the work. We find your heater very compact and easily managed, requiring less attention than any we have ever used."

THE Postmaster General has issued a lottery and fraud order against the Monon Seed Co., of Chicago. This concern commenced operations a few months ago, advertising to award a large number of prizes to those making the largest number of words from the letters contained in the phrase "Monon Seeds Grow," each contestant to send money for seeds to a limited amount. This was followed up by an offer of further "neighborhood prizes" in consideration of an order for a bulb collection at \$2.75. The concern did a rushing business until the order of the Postmaster General was issued.

Rose Notes.

The almost unprecedented warm weather of the last ten days has been very hard on blooming plants; coming so early and so suddenly, and with no shading on the glass, the plants were not prepared for torrid heat, the result is a severe drain on their vitality. In such weather it is quite impossible to furnish the necessary food and atmospheric conditions required to keep pace with the rapid growth and development of the flowers. To resort to shading the glass as a means of reducing the temperature, as early as April, at least in the northern states, is rather risky, for a very warm spell is liable to be followed by cold, cloudy and perhaps rainy weather, when shade would be very much out of place. By the time this is in the hands of the readers, should the days be very warm it will be reasonably safe to shade the houses containing blooming plants; in fact to have salable flowers it will be necessary, but no more should be given than is absolutely necessary. I have good reason to think that too much shade is a prolific cause of mildew, plants rendered soft by insufficient sunlight are fit subjects for any parasitic disease that may attack them and once badly affected they are almost incurable. The best material for shading rose houses that I know of is naphtha and white lead, just enough of the latter to make the mixture white; when thoroughly mixed and strained it is easily applied with a hand syringe. Naphtha being very inflammable, suggests great care in handling and storing it, it also evaporates so rapidly that it must be used at once, or the loss is considerable. One great advantage in using the above is the ease with which it can be removed when necessary; a dry duster will rub it off with very little labor; there is no danger of its injuring the paint on the house, which cannot be said of lime.

The warm nights will probably lead some inexperienced growers to pull out the fires, supposing that summer is here, and there is no further use for them. It may be all right to pull the fires, but everything should be in readiness to start them again whenever they are needed, as they surely will be at times for four weeks more. It is not economy to lay the fireman off too soon, it may seem useless to have him around with the outside temperature at 70°, but again his being on hand to regulate the ventilation, and run a little

heat through early in the morning if it gets cool and damp, may reduce your bills for sulphur and make it possible for you to sleep soundly until six in the morning. There is apt to be much more foolish expenditures of money than that of paying a fireman for three or four weeks during May. A little ventilation and a little fire heat when it is cool enough, furnishes the best atmospheric conditions during the night at this season. Amid the rush of potting, etc., we should not neglect disbudding, cleaning, tying, and the weekly application of manure water. As long as the plants are allowed to remain in the house they should receive the necessary attention.

ROBT. SIMPSON.

Eel-Worms.

According to Mr. May's argument on page 785 of the FLORIST all root-galls found on clover roots contain eel-worms, and therefore if we use soil containing clover roots or permit clover plants to grow on our benches we are sure to be afflicted with eel-worms. At least, if not the argument, this inference may be drawn. This is frightful to contemplate, if true. Mr. May has, no doubt, grown more rose plants than I have ever seen, but in my limited experience I have seen many thousands of rose plants grown in soil containing clover roots in greater or less degree and not a single plant was affected with eel-worms. I have grown roses on a very small scale for the past three years in soil cut from an old pasture and containing an abundance of the roots of *Trifolium repens*. In fact the sods were purposely cut where the clover was the thickest, and up to date no eel-worms have appeared.

During the past six months clover plants have been growing on a bed 4x10 feet of roses, in the station greenhouses, and if any eel-worms have spread therefrom to the roots of the rose plants they certainly have not affected the health of the plants. The clover plants are from seeds that were scattered on the bed after having been soaked in strychnine for mice.

Mr. May is no doubt quite right in all his assertions in regard to having found nematodes on clover roots and also it is possible that he has found, at some time, clover roots destitute of galls of any description, but the statement which he doubts is nevertheless a truth; that the great majority of all healthy plants of the Leguminosæ family have swellings, galls or tubercles on their roots which do not contain eel-worms. It is something that has been proven so many times by scientific men in every civilized country of the world that it no longer admits of discussion.

These tubercles were known to exist many years before their cause or value

was known and many were the surmises as to their probable cause. It remained for a German biologist to demonstrate that they were caused by a "bacteroid" which intruded itself upon the host plant and was for a time nourished by it, but repaid this care by assimilating and storing nitrogen and giving up this, with its life, to the plant for its future development. This parasitic micro-organism obtains entrance to the plant in much the same way as the nematode, viz., by attaching itself to a root-hair or other tender tissue. There is certainly a possibility of mistaking them for nematode galls by casual observation, although examination, even under a low power microscope, would show a wide difference.

A mature specimen of *Heterodera radiculicola* is, as Mr. May has said, from one-hundredth to one-fiftieth of an inch in length and distinctly a form of animal life. They may be easily separated from the gall by maceration of the tissues and their outlines plainly discerned, with even a low power microscope. *Bacterium radiculicola*, an extremely low form of plant life, may be observed only by skillful manipulation of a high power lens and with the aid of stains and re-agents. Fifty of these, placed end to end, would rest on the edge of this sheet of the FLORIST and still no danger exist that the ones on the end would fall off!

Prof. Atkinson, of Cornell, in 1889, at Alabama Experiment Station, in a bulletin of December of that year, pages 38-39, notes the following difference: "These tubercles, which recent experiments seem to show play an important role in the acquisition of atmospheric nitrogen by Leguminous plants, are irregularly oval enlargements of the roots, from the size of a pin-head to a large pea, or sometimes elongate, or clavate, or very much branched and convoluted. The root-galls will usually not be mistaken for the tubercles by one familiar with these bodies. The tubercles are formed only on the very youngest roots, so that they are connected with the root from which the diseased one branched by a very slender attachment. Sometimes, however, the attachment is very stout. Usually the surface of the tubercle, though it may be greatly convoluted or lobulated, is smoother and does not present the scurfy or cracked appearance so common, especially in age, on the surface of the root-galls. The root-galls may occur on proportionately large roots and in a majority of cases the attack is made some distance from the end of the root, so that the root continues to grow beyond the gall and several galls may be formed on the same root in succession. The root also continues to enlarge so that few of the galls are attached by such slender pedicels as the attachments are in the case of tubercles I have seen. Since the tubercles vary greatly on the roots of different species there are probably cases in which it would be difficult from an external examination to say whether the enlargements were root-galls or 'tubercles.' The structural characters are, however, very different."

On page 35 of the same bulletin the author also notes the "comparison of root-galls (nematodes) with 'club-foot of cabbage': 'It will be of great interest to compare the diseased condition of the cabbage roots caused by *Heterodera radiculicola* with the disease of the roots vulgarly known as 'club foot' of cabbage, since in many respects the external characters are very similar, while the two

EEL-WORMS. FIG. 1.

diseases are caused by very widely different organisms. The one which causes root-gall, *Heterodera radiculicola*, is, when compared with the organisms of a lower grade, an animal of quite a complex and high organization. The one which causes 'club-foot' is one of the slime moulds, a plant of the very lowest organization, called by Woronin, who first discovered it to be the cause, *Plasmodiophora Brassicæ*."

The two pots of clover plants shown in the cut were grown in the station green-houses during the winter of 1893-4,

EEL-WORMS. FIG. 2

under the conditions noted in the issue of February 22 of the FLORIST. The sand and pots were both burned in a furnace before the work was begun and great care taken at all times that no foreign substance, not even dust, should come in contact with the surface of the sand. Into the pot on the right were introduced a few drops of turbid water, the washings of a small portion of soil from a clover field, in which the solid matter had been allowed to settle. The one on the left was not "seeded" and upon examination, no tubercles or other swellings were found on the roots. Fig. 2, drawn from nature, shows the condition of the roots

of the plants in the "seeded" pot. The swellings marked "t" contained—not eel-worms—but bacteria.

FREDERIC CRANFIELD.
Wisconsin Experimental Station.

Wishing to make sure of the correctness of Mr. Cranfield's position before giving further space to this discussion we submitted the above article to Prof. Wm. Trelease, Director of the Missouri Botanical Garden, St. Louis, with request for his opinion. He replied as follows:

"There is no doubt whatever that Mr. Cranfield's statements about the normal root tubercles of Leguminosæ are all right. I never saw the roots of a naturally grown clover plant that did not bear them, and they have nothing to do with the root-galls of the nematode. The latter affects a considerable number of plants, but I should not look on the clover with especial disfavor. The soil, and decaying masses of organic matter in it, are pretty sure to contain numerous nematodes other than the *Heterodera*, and I have myself seen such in old opened clover tubercles. But aside from all question of the clover, steam sterilizing the soil as recommended by Mr. Rudd and Mr. May, is a good practice where it can be done."

Hybrid Perpetuals on Multiflora Stock.

Stock is obtained either from cutting or seed. Hard-wood cuttings made in spring are fit to graft upon in the following autumn. If seedlings are wanted the seed should be sown early in rich sandy loam. A good many will be strong enough to use the first season, if necessary, but the best plan is to use two-year old stock as the roots will be then much stronger. Strong roots can be cut into pieces six or eight inches long and splice-grafted with the crown of the root up. Grafting may be commenced as early as latter part of November and may be continued until the first week in March to keep up a succession. Pot-grown stock kept in pots all summer will give especially good results.

The grafts should be from firm well-ripened wood but before the plant freezes hard. Avoid long, sappy shoots. If the grower has hybrid-perpetuals under glass the canes pruned from these houses as late as last of December may be used for grafts. These grafts should be tied in bundles (not too many in a bundle as they are liable to get heated) and laid away in a cool pit, packed in damp moss.

The plants, one of which is represented in the accompanying photograph, were taken from the pit about Christmas,

HYBRID ROSE GRAFTED ON MULTIFLORA:

becked in moss till about January 1, then grafted and placed in damp moss in a close frame for about ten days until the grafts got united, care being taken not to over-water. They were then potted up and at the end of twenty days were ready to be brought out into the full light. As soon as the pots were filled with roots they were repotted. Temperature not over 50° at night and 60° to 70° by day. With this treatment the plants bloom handsomely in ten weeks from date of grafting.

JACKSON DAWSON.

Carnation Notes.

The statement made by Dr. Arthur—that the condition of the life of the bacteria within the carnation plant is not the best for its highest development, that the bacteria progress very slowly from cell to

cell, and that the danger from the germ as a parasite lies rather in the great number of chances for centers of infection than in its aggressive character—gives the key to the remedy, or we may better say prevention. When we look for bacteria, examine a carnation leaf by holding it against the light, we may see a few yellow spots, and when badly infected these spots show in great numbers, but always separate, with well circumscribed limits. Larger spots are, as easily can be detected, from different points of infection, but so close that the spots did run together. Each yellow spot contains a colony of bacteria, but the germ of each entered from the air without. We find that when entrance is gained a rapid growth is only effected in the young soft leaves, mostly unfolded and unfinished in their growth. As soon as the leaves attain their full size, when its tissues, the cell walls, become hardened, when the leaf attains its full grown normal texture, it becomes an uncongenial place for the bacteria and its development. From this we must infer that when the soil is in a condition to furnish the plant with all it needs, the nutritive elements, moisture, when the soil is of such a texture so it

will encourage and facilitate root action, when the plant is so situated that it is not impaired in its freedom of growth, when temperature, air and light can be of the fullest influence in a rapid, healthy development of the young growth, we impede the growth of the bacteria. Poor soil, impoverished condition, too close planting, lack of air and light, insufficient support, uncongenial temperature, neglect, anything that will help to retard the plants in their development, to keep it in this soft condition natural in the young growth, will facilitate the growth of the bacteria and cultivate the pest.

Bacteria is aggressive as long as the leaves are young and in a soft condition, or made and kept soft by a wrong mode of cultivation. But as Dr. Arthur says the danger lies in the chances of many centers of infection, in other words, in so many places for the germ to enter. A few yellow spots will not impede the plant to a great extent, but when the leaves are dotted all over it is surely a great impediment and may result in its total destruction.

When we want to meet and prevent the entrance of the bacteria we must learn and know how it gains admittance, and this is a very interesting chapter of the bulletin. Dr. Arthur says: "Our study of the disease gives no evidence that the germs are able to effect an entrance through the cuticle of the host by means of an enzymic perforation. On the contrary, they are dependent upon either natural openings (stomata) or accidental punctures (insect stings) to get inside the plant. The stomata (breathing pores) are the usual points of attack. Germs of the disease which have been deposited upon the surface of the host by wind or rain find their way through the opening between the guard cells into the air chamber beneath." Here their ravages begin, force entrance from cell to cell in the living tissues, as long as in a soft condition; the hardening of these tissues will check their work. Again he says: "It is evident that after the bacteria fall upon the leaf sufficient moisture must be present, so they may move about and find their way into the cavities of the stomata. A natural dew or artificial sprinkling will furnish the needed moisture. And so it is that plants in a greenhouse, where the air is kept moisture laden, will show most disease." What more natural conclusion will follow in our effects of prevention than only to wet the soil and keep the leaves dry, and not only keep the leaves dry, but have a buoyant dry atmosphere in the house, and that can only be regulated by a judicious ventilating in a roomy house. A natural dew is often formed in a house after a syringing with not sufficient time to dry up before night, and will be increased by a too low night temperature, or when a part of the house is warmer than the other.

To touch again the susceptibility of the young growth being attacked by the disease only, this apparent preference is explained by Dr. Arthur as follows: "The cellulose walls of the stomatal air cavities are easily penetrated in young leaves, but in mature leaves they have become incrustated with lime salts deposited from the evaporating water, and are also somewhat changed chemically, making them less susceptible to the action of enzyme, and consequently almost impervious to the bacteria." Undoubtedly bacteria will enter older leaves as well as the young, but find the field for development too uncongenial and hard. This all tends to show that only a healthy normal growth will impede the bacteria in their work.

Regarding other entrance for the bacteria beside the natural way of the pores, Dr. Arthur says: "Beside gaining entrance to the plant through natural openings the germ of bacteriosis may enter through insect punctures. The only insects that require attention in this connection are plant lice (aphides). The common greenfly or aphid of the greenhouse may in some instances prove such an efficient bearer of the contagion that every leaf on a plant may be inoculated at hundreds of points, and the whole plant be turned a sickly yellow by the growth of the bacteria in the tissues. It is evident that only in a neglected greenhouse will the disease be seriously spread by this means, for only in such would the aphid be allowed to flourish."

From all this we must come to the conclusion, and it has proved with me a fact, that the bacteria are ever ready to begin their work when they find a congenial field, and the only remedy, or rather prevention, is a careful, judicious culture that will make the plant grow on strong and uninterrupted through the whole time of its existence. FRED DORNER.

Yellow Carnations.

Had Mr. Dorner used the phrase "general cultivation" in his first letter as in his second I should have found nothing to criticise; I only feared that he was not aware of the facts, or that he was giving a false impression unintentionally. My experience has been the same as his with pure yellows. It seems as if nature abhors them, but I still hope that we may be able to get vigor with purity of color. There is one sentence in Mr. Dorner's letter which I should like to have explained, as it places me in rather an unfavorable light. "The yellow bloom sent with the communication I suppose was intended to show a clear yellow one, * * but I could detect some pink stripes in some petals." I sent no flower with my letter, yellow or otherwise, and hardly see how Mr. Dorner could find one with it. EDWARD SWAYNE.

I am sorry that the description of the yellow bloom has been coupled with Mr. Swayne's communication. It was sent to me with the letter, requesting an answer, and must have been mistaken in the office of the AMERICAN FLORIST. I am so much more glad to make this statement, as I hardly could believe Mr. Swayne would pronounce that bloom a pure yellow. FRED DORNER.

Orchid Novelties.

A number of orchid novelties, either new species or varieties, or new hybrids, were recently passed upon by the Royal Horticultural Society in London. *Epidendrum elegantulum* was one of the hybrids receiving a first class certificate. Its seed parent was *E. Wallisii*, pollen parent *E. Endresio-Wallisii*, itself a hybrid. The sepals and petals are rich brown, mottled with yellow, passing into soft yellow at the base, the lip white marked with purple. *Cymbidium lowioeburneum*, which is the reverse cross of *C. eburneo-lowianum*, has creamy white sepals and petals, with a lip of the same

CYPRIPEDIUM SPECTABILE.

hue, having a red horseshoe shaped blotch at the apex, and some red spots on the side lobes. It was also certificated. *Miltonia blenana aurea*, another hybrid, is white, the base of the petals rosy mauve, with a large orange blotch at the base of the lip. It was awarded a first class certificate.

Laeliocattleya Doris is a new bigeneric hybrid, the parents being *Laelia harpophylla* and *Cattleya Trianae*. The petals and sepals are deep orange, the lip has an orange tube, purple on either side of the apex. *Dendrobium Doris*, a hybrid from *D. leechianum* and *D. japonicum*, is very delicately pretty, the flowers being pure white with a light purple blotch on the lip. A new species which received a botanical certificate, is *Dendrobium glomeriflorum*, which has dense lateral clusters of small white flowers, tinted with lilac on the outside. *D. Cassiope virginialis* resulted from *D. japonicum* and *D. nobile album*. It is pure white, with a rich purple blotch at the base of the lip. *Zygopetalum Perrenondii* is a beautiful novelty resulting from a cross between *Z. intermedium* and *Z. maxillare Gantieri*. The petals and sepals are of olive green barred with brown, and the conspicuous lip is a rich violet color.

Odontoglossum Wilckeanum, Pitt's variety, has caused much enthusiasm among those who have seen it; a small plant was recently sold at auction in London for 74 guineas (about \$370). The ground color is light yellow, shading to cream at the edges. The sepals have two-thirds of their surface covered by large brownish red blotches. The petals have numerous smaller blotches of the same color, the lip having one large blotch in the center, and a smaller one on each side of the yellow crest.

The Native Cypripediums as Forcing Plants.

Cypripedium spectabile, one of the most beautiful of our native orchids, is usually found in our northern swamps in limited quantities and when a few clumps are forced carefully they compare most

favorably with the choicer and more expensive foreign species and varieties.

For collecting the roots from their native haunts, early September, just as the leaves are turning yellow, is the best time. If possible it is best to do your own collecting so as to select suitable roots with strong flowering pips. All the weaker roots should be set one side for planting out around the grounds.

In their native haunts both *Cypripedium spectabile* and *Cypripedium pubescens* are comparatively surface rooters, their mat roots seldom reaching six inches below the surface in a light peaty soil. This should be borne in mind in potting them up, which should be done as soon as the clumps are received from the woods. Have the soil light with plenty of leaf-mould and old peat and make the drainage very good. The clumps can be crowded in the pans quite thickly, care being taken not to cover the crowns too deep with soil or they are apt to rot. After potting they should be top-dressed with a thin layer of sphagnum moss and after a good watering should be placed in a cold frame where they should remain until they are brought into a temperature of about 55°, not earlier than January 1, and the later the better.

The crowns will take their time about breaking, it sometimes being 3 to 4 weeks before they show signs of starting, but after once starting the growth is very rapid and care should be taken not to let the plants get drawn or weak. If possible they should be placed in a cooler temperature where the growth will get hard and the flowers allowed to develop slowly. As soon as the flower buds commence to appear great care should be taken to avoid all excess of moisture, as the delicate tissues of the flowers are very sensitive to moisture. During the process of growing the plants will require careful attention in regard to watering, as they are heavy drinkers and yet the young growth is sensitive to rot, so extremes must be avoided.

From 10 to 11 weeks is the time required to bloom the plants from the time they

CYPRIPEDIUM ACAULE.

are brought into heat, and after they have passed out of bloom they should be grown on carefully for the succeeding season, when they will do equally well for three to four years to come. This is also true of *Cypripedium pubescens*, which is the easiest of all our native cypripediums to grow under cultivation. About 8 weeks is sufficient time to bloom this species and from 6 to 7 weeks for *Cypripedium acaule*. *Cypripedium acaule* should be collected new every fall, as it is extremely hard to carry it over from year to year.

All the above are truly herbaceous plants, dying down every fall and making a distinct crown (like lily of the valley) which the gardener should take care to develop to its highest state. *Cypripedium spectabile* grows to a height of from 2 to 3 feet, stem covered with large leaves. The flowers are white with globular lip painted with pink. *C. pubescens* is a little dwarfier than the above, having yellow flowers, and *Cypripedium acaule* is the common stemless lady slipper usually found in pine woods.

CHAS. JACKSON DAWSON.

A Novel Method of Fumigating.

A piece of work, which promises to be of very great importance to those in the trade, was successfully carried out April 16 under the direction of Prof. Galloway, chief of the division of vegetable physiology and pathology in the Department of Agriculture; this was an exhibition of a new method of fumigating plant houses by the aid of cyanide of potassium. This deadly chemical has for several years past played an important part in the fumigation of orange trees in the Southern States. Prof. Galloway conceived the idea that it might be utilized in greenhouses to kill insects, especially the pest which seems to be spreading everywhere, commonly known as the "black spotted mealy bug," the scientific name of which is *Orthozia insignis*. This little pest is a native of the tropical parts of South America. It was first observed in some greenhouses in New York State some five years ago, and seemingly from this beginning it spread

over a wide area in a short period, until now there is scarcely a greenhouse establishment free from its ravages. Several of the insecticides in common use have been tried on it, and while they kill a great many of the insects, in a short time the plants are as bad as ever. Prof. Galloway therefore made a number of experiments in his laboratory with certain chemicals, to ascertain the exact quantities which could be used to destroy the insects and yet leave the plants in an uninjured condition. To Mr. G. H. Brown, of the propagating gardens, he showed some of his work, and that gentleman placed a house of coleus at his disposal which were so badly infested with the *orthozia* that they were almost unfit for bedding purpose. The house contains in the neighborhood of 15,580 cubic feet of space.

The time chosen for the work was after darkness had set in, as strong light so changes the character of the liberated gases that they are then more hurtful to the plants than to the insects. The ingredients used in the operation consisted of water and sulphuric acid, three pints of each, and 5½ pounds of the cyanide. This was divided up into three equal parts and placed in three 2-gallon jars, arranged at intervals on the side benches, and near enough to the ventilators so that the operations could be conducted with safety from the exterior of the house. Arrangements were also made so that air could be given at the top when the gas had done its work. Into each jar water was first poured, then the sulphuric acid, this raised the temperature of the compound to 212° F., when the cyanide was added, and the ventilators closed tight. The resulting gas permeated every part of the house within two minutes; after the expiration of twenty minutes air was admitted to the house. When it was deemed safe to enter in an examination of the plants was made, and not a live insect could be found anywhere, even the eggs situated in the appendage to the body of the female were in a discolored condition. Next day the search was continued with the same satisfactory results. The gas did not seem to have

had the slightest deleterious effect on the foliage of the coleus, nor on even more tender foliage, such as the tender fronds of *Adiantum cuneatum*, the leaves of *Cyanophyllum* and *sphaerogynae* and several other things. The cost of the operation is insignificant, \$3 covering all expenses.

C. L. REYNOLDS.

Conducting a Retail Store.

BY W. S. SCOTT.

[Extract from a paper read before the Milwaukee Florists' Club April 7.]

A store should be a model of neatness to begin with, and kept so as nearly as possible. It need not necessarily be luxurious in its appointments or gorgeous in its appearance, but it should be neat and clean. If there are good show windows the glass should not be obscured by the dirt of several weeks, but should always be a clean and polished as brightly as will permit. A tasteful arrangement of cut flowers or plants is an attraction the value of which can not be overestimated. This is current history, being made every day, and is evidenced by the fact that the largest retail commercial houses to-day pay a window trimmer who knows his business a larger salary than they do a department manager.

The interior of a store should not be allowed to suffer; it should reflect the beauty of the show windows. The floor should be swept as often as necessary, and after that a thorough dusting should follow. Glass in your cases should be cleaned regularly, the incandescent lamps polished, all flower pots washed clean; all these little details attended to. It may take time to do this, but the time is well spent, for a stranger entering your place will come to the conclusion that where there is cleanliness in that line there must be as much attention paid to the other details of the business.

In the retail business a dealer should make it one of his rules to do exactly as he promises. Bear in mind that deception is something which can not be put upon a wide awake customer a second time. If fresh flowers are promised send fresh ones; if flowers are promised at a certain hour have them there at that hour. Don't promise one thing and do another. It is better not to take an order than to do so and not fill it according to promise. If a person wants a design in pink and white, make it so, don't substitute your own ideas for that of your customer. They are paying for what they order and it is your place to give them what they want.

In the delivering of cut flowers or designs the same rule of neatness and cleanliness should be observed. The boxes should be clean, the flowers tastefully arranged, the package securely tied and see that it is delivered in the same condition. As for plants, all dried or dead leaves should be cleaned off, the pot washed—or what is better a new pot should be substituted—and the plant carefully wrapped so that when it is delivered the recipient of it will feel that you wish to do your best to serve him. The ideal manner of delivering is a neat and clean wagon, a driver and a boy in uniform, polished shoes, clean collar, also face and hands. These are probably ideals, gentlemen, but we will find that the first to introduce them in this city will reap his reward.

Of course it need scarcely be noted that there should always be courteous yet decided treatment accorded to all customers. Let them understand that you appreciate their trade, yet do not allow them to think you should bow before

them and be submissive to all their whims.

The foregoing are matters which have impressed themselves upon me during my brief career in the retail business. That I do all that I have written is not said. There are some things there which Milwaukee is hardly ready for, yet, if the florists intend to keep up their end of the retail business they must follow the examples of other retail trades. One thing first desirable is to obtain customers, and one of the best ways to do so is by judicious advertising. For this the best mediums undoubtedly are the daily papers, followed by theatre programs, for theatre goers are largely flower buyers, and then a well written and well printed booklet, sent in sealed envelopes to prospective customers, is not at all a bad idea. In advocating advertising do not understand me to mean that you should spend money recklessly, for there is no doubt but that injudicious advertising is one of the most expensive items in the retail business.

In all matters in the florist business, as in all others, there should be a close watch kept on the expense account, but it is a bad policy to be niggardly and close, for it is only by liberal dealing with one's customers that one may expect to keep them. If you should receive a check for a bill instead of sending the receipt by mail, if in the city, put up a few flowers, not necessarily an expensive lot, and send with the receipted bill. The customer appreciates it and you are quite certain to receive returns. It flowers are not cheap send a plant. We have done this for the past two years and found it a good investment. There are many details of this character which may be attended to and if judiciously looked after will add not a little to your volume of business.

And another thing, perhaps a little moss-covered, but nevertheless important, why could we not all stand on an equal basis before each other, be friendly, talk about business freely, and not feel that we are figuratively speaking, trying to cut each other's throats. I do not hope for any love feast but the fact is there is too much jealousy among the members of the trade, and I am certain that better results would be secured were we all amiable and friendly to each other.

Mushrooms.

BY JOHN G. GARDNER.

[Read before the April meeting of the Philadelphia Florists' Club.]

The material I have used for beds has been chiefly fresh manure from horse stable, with soil or well rotted manure mixed together in proportions to which system of culture was to be adopted; I must say that the general system in use by many of mixing material is fatal to a good all-round crop, as the bed formed under the old system has a very complicated service to render. First it is the home of the spawn; secondly, it must furnish the necessary warmth, for a healthy and free growth; thirdly, it must supply the general food for the mushrooms' development, so if any of these conditions fail a good crop cannot be gathered.

In the culture of mushrooms in greenhouses under benches, etc., we will start at the forming of beds, and taking into consideration that the temperature of the greenhouse will furnish warmth for a healthy growth, which relieves the bed, the material may be half fresh manure with the straw left in, and soil and well rotted manure, well mixed together and put down in layers. In using soil care must be taken to half lift and shake

slightly, so as to let the soil filter down among the straw; this will prevent burning and drying out, and the bed will need less water. The fermentation will be slight and the decomposition of the mass slow, which is one of the chief features in keeping up a constant supply of food for mushrooms. Keep adding layers until you have a depth of 14 inches, the material kept pressed down until it become firm and the bed will be ready in a few days for spawning.

I have used hotbed sash or shutters as a covering for beds under benches, having placed 3 inches of rye straw over glass, tacked on with plastering laths to shut out light and sun with good success, closing down sash or shutter during days and propping them up at nights 6 to 8 inches. Canvas and paper I have used to cover and close in beds, but not with as good results as sash and shutters, owing to the effect upon them, during day time, of light and sun, which make too rapid charges of temperature for the very sensitive mushroom. I have had the best results when I could maintain a temperature of 55° to 60°, slightly moist, with a wholesome air. The mushroom needs good fresh air, but not in the way of a severe draft. The air must be changed each day and a slight moisture kept up. If the air is too dry the mushrooms will crack and become scaly on top of cap. If too moist they will draw up with long soft stems and small caps and become useless for market and shipping, and if the excessive moisture is kept up 48 hours all the small mushrooms the size of a pea will turn brown and rot; many beds are missed in this way. All decaying stalks should be removed from beds. I cut all my mushrooms, not pull them, and in three days after cutting I remove stalks, at which time they will separate from spawn without pulling out and damaging it.

If you watch the natural mushroom, in open pastures, you will find they spring up where the grass is short and the air is moist, the light and sun changing the conditions each 24 hours. In heavy long grass laden with moisture no mushrooms can live, although in the same spot, if grass was cut and removed, mushrooms would spring up, showing us very plainly that the condition was too moist, and with no circulation of air to form the atmospheric conditions that mushrooms develop in.

I advise making mushroom beds early in September, bearing in mind that the

SECTION OF MR. GARDNER'S MUSHROOM PIT.

best results come from a slow and prolonged fermentation, and beds that dry and burn out will not pay. Make no beds less than 14 inches in depth when packed down.

I now give you my experience in a outside small pit system of mushroom culture. I have here with me a small sketch of structure needed. The material is 3x4 hemlock and boards. You will see that the lumber bill will not be large. The first operation is to dig out a trench five feet wide and 14 to 16 feet deep in center sloping down banks to center. Mix together manure and soil, and form bed in trench, high enough when complete to be 9 inches above ground level, when well tamped down. Now take 3x4 material and form rafters for a span roof, allowing the north side rafter 8 inches longer than south, so as to over-lap. Now take boards and place them lengthwise overlapping like shingle roof to turn water, the north side boards may be nailed fast and the south left movable, leaving in south side 6 inches of space for ventilation at top, where the overhanging roof of north keeps rain out. When gathering mushrooms, the south side boards may be taken off to allow space to reach in freely. Mushrooms can be grown during April, May, June, September, October and November, under this system. The only attention the bed will need is a slight watering when crop is cutting and the pit covered with litter or long manure, to keep off sun and frost. I have used a bed several years by adding 4 inches of new soil and manure, which had been in compost, spreading it evenly over the surface of bed. The beds should not be allowed to get water soaked, and ground must be graded, to turn all surface water. During July and August, I let in a good supply of air and remove litter, and the beds becomes quite dry upon the surface, and I give no water until September to start them up again, anyone having space outside can raise good mushrooms in this way with little expense for material and labor, etc.

I have found that in total darkness mushrooms, during their growth will turn and draw over to air circulation, the same as fibre making plants turn to light, which makes it very clear that the air of the mushroom house must be considered of great importance. The best means to keep the atmosphere of a mushroom house moist is to place a few barrels of fermenting manure in the house, changing them when cooled off. This is a bet-

SWANLEY WHITE VIOLET GROWN IN A POT.

ter plan than syringe and watering pot, and the risk of getting beds too wet is avoided. The ventilation must be from the top, or above the bed, avoiding all strong currents of air passing over the surface of beds when in bearing.

I have used hot water and steam for heating, but prefer the former. No pipes should be placed near surface of beds. A temperature 57° will bring rapid growth and if air is perfect a good supply of mushrooms will be the result. All sudden changes either of temperature or atmosphere, will affect the mushroom and should if possible be avoided. In regard to spawn I like the brick form best, and use it perfectly dry and so on beds when temperature is below 90° and with a tendency to fall.

Many times I have been asked what weight of mushrooms is it possible to raise per square foot. To answer this question fully you must know the length of time, the conditions of cellar, pit or house. I have a cellar below ground from which I can cut mushrooms nine months of the year. Now in a greenhouse five to six months is all the time possible. In Jobstown in 1886, I kept record of cut from 24 hotbed sash and I cut during five months an average of 107 pounds per sash. I have a cellar below ground 50x20 feet that has yielded 80 pounds of mushrooms in one day and the average of same cellar in 1886 was 9 pounds per day for 8 months. I have a mushroom bed under barn at Conshohocken where 360 pounds mushrooms were cut in one week, but this is an exceptional case.

Pot Culture of Violets.

Economy of space was the leading motive that induced us to experiment with violets as pot plants, and not only has this method proved economical but the quality of the produce and the health of the plants has improved yearly.

Runners are taken from the strongest plants during February or March and

dibbled in boxes of sandy soil, kept carefully watered and shaded until well rooted. They are then removed to cold frames where they remain until planted out in field. This is done early in May, selecting a moist time. We do not practice watering at any time during the summer, preferring if the season is very dry to give a generous mulching of old manure. Hoeing among the plants to keep the soil loose and weeds down, and taking off useless runners is all the attention given through the summer.

The soil we use is composed of rotted sod three parts, old hotbed manure one part, adding a slight sprinkling of wood ashes. We start potting the second week in September, using 8 and 9 inch pots, care being taken to have them provided with sufficient drainage. In lifting we preserve all the roots possible, and the soil in the pot is made firm with the potting lath.

When potted they receive a thorough watering and are then stored under shaded sashes in the cold frames. Air is freely given day and night and syringing is attended to on bright days. They are kept in frames until chrysanthemums are gone, then taken into the greenhouse and are treated as regards watering and temperature as if they were planted out on benches in the usual manner.

South Framingham, Mass.

Mushrooms.

[Abstract of a paper on the edible and poisonous kinds, read before the Massachusetts Horticultural Society by William C. Bates, vice-president of the Boston Mycological Club.]

"We shall consider the subject, 'Mushrooms, Edible and Poisonous,' almost entirely from an economic point of view, that is, in relation to their value as a food product.

"Mushrooms have been eaten since the earliest times, especially in early Roman times, and have been used in large quantities and in considerable variety for two

or three hundred years in Italy, France, Russia and Germany. The common people of France and Italy depend on mushrooms to supply their tables, and seem to have an intuitive knowledge of the edible varieties. Mushrooms are gathered on the Himalayas and in the Vale of Cashmere, dried and shipped to Europe; Japan exports to China large quantities; Patagonians have them for an exclusive diet part of the year; in New Zealand and Australia the consumption is very noticeable, and yet in this country the use of mushrooms has been confined to a limited area, and until a few years to a single variety and that not one of the most conspicuous, or, in the opinion of many mycologists, the most valuable, the mushroom of commerce, *Agaricus campestris*, with its several varieties. The reason of this is not far to seek; first this mushroom is almost the only one which is known to lend itself to artificial propagation, and so has become better known as an edible species than any other; and second, because of a wholesome and necessary fear of bad results from eating poisonous mushrooms, for it is known to all that some are very injurious if eaten; in fact, it is probable that every year there are a number of deaths in the United States from this cause alone.

"It may be argued from this that if the use of our native mushrooms is made more popular and general, these fatalities will largely increase; this would undoubtedly be the case, unless the knowledge of the poisonous varieties goes before and with all acquaintance with mushrooms, and this knowledge it is the aim of mycologists to make prominent and foremost in all speech, writing, or object lessons, by exhibition or photograph, given upon the subject. There is but one way by which this knowledge may be obtained—we must learn to know them—that is, learn to know at sight certain edible varieties and the poisonous species; there is no other way 'to pluck the flower safely from the nettle danger.' This knowledge is not so difficult of acquisition as it seems. In recent years upwards of two hundred varieties of mushrooms have been tested, identified and branded for all time and all climates as edible, but perhaps the most notable service of all is the running to earth of the arch enemy of all, the 'Deadly Amanita.' To this species all the fatal results of mushroom poisoning are traced, and it follows that if we can banish this species from our diet comparative safety is assured. It is now generally known and admitted that from the genus *amanita* arise all the accidents. We cannot find other species chargeable with fatalities. This is not to say that all other mushrooms are edible; there are others that are injurious and others unfit for food, but it would seem that if we had learned to know the *amanita* half our battle with ignorance is already won, and we are on the road to safety in gathering mushrooms.

"The principal divisions of fungi which are to furnish this abundant food product are the mushrooms with gills, laminae or plates, the most abundant and common form, the agarics; mushrooms with pores on the under surface, the Boletini and Polyporei; mushrooms with spines; and the miscellaneous, as the puff-balls and coral mushrooms. The *amanita* belongs to the agarics; it follows, therefore, that in other species we are free from its dangers, though we have still to learn which of the boleti and others are fit and proper for food. But the agarics are a large family and we cannot part with them on account of the *amanita*. This brings us to some

considerations of the manner of growth of mushrooms in general and the amanita in particular. Mushrooms may be considered as the fruit of the plant itself, which is a thread-like substance below the surface—the mycelium of the mushroom. In the proper conditions the growth is quickened and little knobs begin to grow and soon push above the surface. In this first stage the mushroom is enclosed in an envelope or volva, which is soon ruptured and leaves behind it, in the amanitas, several indications of its presence. These may well be called nature's danger signal. As the mushroom grows, a portion of the ruptured envelope adheres to the cap; another portion, 'the veil,' connects the cap at its edge with the stem, and another part remains at the base, a cup or sac, from which the stem rises. As the cap expands, the scales or warts remain on it, the veil falls away from the rim and surrounds the stem, the sac remains at the base, and we have the complete *Amanita verna*, a deadly poison. This mushroom is one of the most attractive in appearance, pure white, without distinct odor; it is very common, generally accompanying edible species, and would be likely to be the first to be selected by the untrained person. As the scales upon the pileus or cap are missing at a later stage of growth or would be rubbed off by contact, it will be seen that if this mushroom were cut above the volva at the base it might give no indication of its character; hence the impossibility of accepting a miscellaneous basket of mushrooms without a certificate of character. The rule of safety is, as all amanitas grow from a volva or sac, gather no mushrooms growing from a volva or cup. If there are scales on the cap and a veil-like ring and the color is pure white, scarlet, orange or yellow, we should look for the cup, and as it is not always visible above the ground pass the knife below the surface, taking care to lift the whole. The *Amanita muscaria* is orange, yellow or scarlet, with scales or warts upon the cap, a distinct veil or ring and a volva. The student is not to be content with verbal descriptions, but should turn to the colored plates now available, in the works of W. Hamilton Gibson and Captain Julius A. Palmer, Jr.; the reports of the division of microscopy, department of agriculture, by Dr. Thomas Taylor; and the English works of Mrs. T. J. Hussey and Rev. M. C. Cooke. If possible he should have practical instruction from an expert friend.

"Now let us turn to a pleasanter phase of our subject, and consider some edible species, which cannot possibly be mistaken for poisonous ones. The number of edible species is much larger than is generally supposed; upwards of two hundred have been catalogued, and any mycologist should have an eating acquaintance with from fifty to one hundred. The plate, from the report of Dr. Taylor for 1894, may fairly be put before the student as his task for a single season. If he accomplishes this nature will ever after have a new meaning to him, and these twelve edible mushrooms will furnish him a succession of healthy, nutritious diet from spring to early winter. These twelve species are *Lactarius deliciosus*, *Cantharellus cibarius*, *Marasmius oreades*, *Hydnum repandum*, *Agaricus campestris*, *Coprinus comatus*, *Morchella esculenta*, *Clavaria cierea*, *Clavaria rugosa*, *Boletus edulis*, *Lycoperdon giganteum* and *Fistulina hepatica*."

Mr. Bates then carefully described and illustrated by stereopticon views some

twenty or thirty edible mushrooms, common to the United States, including the *Chanterelle*, *Coprinus*, *Fistulina hepatica*, *Boleti*, *Clavariæ*, *Russulas* *Hydnei*, *Puff Balls*, *Marasmii*, *Agaricus campestris*, *A. ostreatus*, *A. ulmarius*, etc.

OBITUARY.

DAVID ALLAN.

On Sunday, 19th inst., all that was mortal of David Allan was laid away in Cambridge Cemetery beside his wife, who died a few weeks ago from the same disease that took him away, consumption. The body was laid out in a bed of *Dendrobium nobile Allanium* and other rare and beautiful blossoms of the orchids he loved so well, and was followed to its last resting place by many of the friends who knew from past experience the generosity of his heart, who loved him for his simplicity and ingenuousness, and who had sympathized with him in the succession of misfortunes that had begun with the burning of his home and its prized contents three years ago, and which with the discouragement so keenly felt by a man of his peculiar temperament must in a considerable degree have hastened his untimely end.

THE LATE DAVID ALLAN

David Allan was born in Banffshire, Scotland, on October 16, 1853, and served his apprenticeship at Ballindalloch. From here he went to Gester House, East Lothian, and afterwards to London, where he was employed in the public parks for a short time. His next position was with Sir Wm. Marriott, the great orchid enthusiast, in Dorsetshire. He came to this country nineteen years ago, finding employment on the lovely Pratt estate at Watertown, Mass., where after about two years he was given entire charge, remaining until the place was discontinued. While at Mr. Pratt's he displayed wonderful skill in the cultivation of grapes, orchids, ferns and stove plants. He soon became one of the leading exhibitors at the shows of the Massachusetts Horticultural Society, evincing rare taste in arrangement as well as cultural ability and winning many medals and diplomas. He served on several important committees in the society and was an active participant in all horticultural events in Boston. His hospitality was instinted, and members of the craft always found an open door and hearty welcome from David Allan and his little wife. He leaves two daughters, aged seven and nine years respectively.

Boston.

The weather of the past few days has worked an almost miraculous change in the appearance of the country. Long green grass covers the lawns which ten days ago were brown; trees and shrubs are coming rapidly into leaf and spring

flowering bulbs make the gardens gay. In outdoor work there is almost a panic, it being necessary to crowd the work of several weeks into a few days, and the nurserymen and hardy plant dealers find it impossible to keep up with the demand. The effect on the cut flower trade is just the opposite. There is a tremendous over-production of everything and little demand as compared with the supply. Prices have gone to pieces; "take what you can get" is the rule forced upon the growers by present conditions. The funeral of the theatrical manager, John Stetson, made a gratifying call for flowers, and there were many very large and elaborate designs ordered which made a good inroad for the moment on the stock in market.

On Wednesday, April 22, Edward Hatch had a sale of hardy roses, rhododendrons, etc., for C. H. Joosten, the stock coming from the Boskoop Nursery Association. There was an old time crowd present and prices were good. Mr. Hatch entertained his friends in the florist trade at his cottage in Scituate on Patriot's Day.

N. F. McCarthy & Co. have begun the regular series of plant sales and will continue throughout the season on Tuesdays, Thursdays and Saturdays. Indications are that the auction business will be equal to past seasons in volume.

Mayflower peddlers are abundant in the streets and the effect is felt by the florists in the diminished call for violets and carnations.

Visiting Boston: A. T. Boddington, Short Hills, N. J.; C. H. Joosten, New York; Martin Reukauf, Philadelphia; W. A. Manda, South Orange, N. J.; E. O. Orpet, South Lancaster, and Geo. McWilliam, Whitinsville, Mass.

New York.

The heated term which came on so suddenly and has continued so persistently during the past week, has wrought destruction in the flower trade here. Never before have values been so quickly and thoroughly wrecked. To say that sales of good roses have been made as low as \$2 per thousand conveys but a slight idea of the situation, for a great many have been thrown away through lack of any other possible means of disposing of them. Carnations have felt the severe effects of the hot weather to such an extent that large quantities have been unfit for sale by the time they arrived in the city in the morning, being ready to go to sleep at once as soon as the boxes were opened. No variety and no quality seem to be exempt from these consequences, and the net results of sales must necessarily be disheartening to both growers and dealers. Violets do not show the effects of the weather as much as would be expected, many lots being still received in fine condition, but the prices obtainable are infinitesimal in the present over-crowded condition of the market. Buyers are very scarce. The fine roads, green grass and budding trees make outdoor life very attractive, and customers are spending their money on bicycles and their time in the parks, and the flower trade comes in for little encouragement under such circumstances.

The third annual ball and floral fete of the North Hudson Florists' Club on Wednesday evening, April 15, was an unqualified success, and most creditable to the gentlemen who had devoted their time and interest to the occasion. The hall was lavishly festooned with evergreen and the stage was a perfect garden of palms and blooming plants, which

served as a screen behind which was stationed Prof. Eckert's orchestra, who furnished the musical part of the entertainment with creditable energy and spirit; their familiarity with Scottish melodies being something remarkable, suggesting just a suspicion that canny John Birnie had been coaching the aggregation. The grand march to supper was executed with as much enthusiasm to the tune of "The Campbells are Coming," as if the pace had been set to the music of "Mein Vaterland." All the youth and beauty of Hoboken were there, and the merriment was fast and furious until day dawn. The affair was in charge of Mr. Chas. Deitz, who officiated as floor manager, with the following assistants: Chas. Menne, Chas. Heins, M. Hansen, A. Bartsch, H. Steiger, John Birnie and H. Baumann, supported by a reception committee of twenty-five.

Mr. Dimmock was greatly pleased at the results of the recent auction sale of orchids at A. & F. Rolker's from F. Sander & Co. It was a most successful sale and a large quantity of commercial varieties was disposed of to the trade at satisfactory prices. There was also a good representation of amateurs present, who eagerly secured the novelties.

The entire collection of orchids and greenhouse plants belonging to the F. Schuchardt estate, Newtown, L. I., will be auctioned off on April 29, by Wm. Elliott. The list includes a great variety of cattleyas, cypripediums and dendrobiums.

Mr. Thomas Young, father of Thos. Young, Jr., and John Young, celebrated his eightieth birthday on April 15.

Alfred Outram sailed for England on April 18, per steamer Etruria.

Visiting New York: Wm. Griffin, Lenox, Mass.; George Field, Washington, D. C.

Mr. and Mrs. E. V. Hallock sailed for California via Panama on Monday, April 20.

Philadelphia.

The weather is still hot enough for us, and entirely too warm for the business, both from the growers' and dealers' standpoint. The past week has been the hottest on record for the season; stock will not keep from one day to another, and in many cases is not fit for sale when first offered by the growers. Brunners pop wide open on the plants, as do Jacques, and all other roses show the effects of the hot sun or shading to prevent it. The loads of the hustlers have increased from two to three times over what they carried two weeks ago, and the pack horse of the Rockies isn't in it with some of the poor fellows who struggle along with five to six boxes on each arm, selling a few in this shop and some in another, and finally dumping the balance in some fakir's arms for a song.

The Kaiserin is beginning to assert itself, and the fact that it is fixed firmly as the best summer rose is quite apparent. What a grand summer rose is the Testout. Good stock of this variety brought \$8 per hundred all through the summer in the New York market last year, and several large growers are planting it largely for the coming season. Carnations of some kinds are scarce; good pinks are eagerly taken at \$1.50 to \$2, but most other colors are plentiful; \$1 to \$2 is the range of prices. All the varieties that seem to be related to Buttercup or that resemble that variety in form and color seem to enjoy the warm spring weather and are now at their best. The Beauty rose has been a

good seller the past week; there have been great quantities about, and as they could be bought cheap the store men sold them cheap, and the people took them in preference to other favorites. The wholesale quotation was \$3 per dozen for the best, and from that down; on the abilities of the interested parties depended the price. The best teas are now \$6. Sweet peas are in full swing and find ready sale at from 50 cents to \$1.25 per hundred. Few growers seem to know how to handle this flower. Some leave it on until the color is gone, others cut the sprays with only one blossom open; in many cases it is cut and kept too long before being sent, and the most common and glaring fault is to see the flowers bunched tightly and without foliage. Sweet peas should be handled much the same as violets, they should be bunched nicely with as long stems as possible and always with enough of their own foliage to make the bunch look as large again. If possible they should be placed in water in a cool place for an hour before shipping and then should reach the market in the shortest possible time. To sell well sweet peas must be bright in color, must be sweet, and bunched attractively. It seems such a pity that growers should produce flowers that are all that can be desired, and from carelessness in cutting, bunching, packing and shipping lose 25 to 50% of what they might derive by more intelligent methods.

The meeting of the Horticultural Society was slimly attended, and not much business of importance was transacted. The hall is now so near completion that arrangements are being made to fit up the library and secretary's office, and possession will be given in about 60 days. Mr. Wm. Tricker's paper on "Aquatic plants and water gardening" was very interesting and instructive, and showed the possibilities of this class of plants. A water lily society was hinted at by the essayist as a probability in the near future. The Bee Association will have charge of the May meeting, and an essay on the rose by Dr. Huey, a prominent rose amateur, is down for June.

John Welch Young is to remove from his present location, and is erecting a house on his new property a few blocks from his present location. It is to be 200x22, and other modern structures are to follow.

Myers & Samtman are also putting up one 168x20, and Edwin Lonsdale is adding a 200x22 structure to his plant, to be largely occupied by Beauties in solid beds.

K.

Cleveland.

Over a week of midsummer heat is what we have had to endure lately. Not a gentle sliding from the lap of spring into the embrace of summer, but a mad leap out of winter's arms into a degree of torridity that might have tried the endurance of the three Hebrew worthies who incurred a royal potentate's displeasure. Easter week we shook and shivered, cut off by the rigors of winter from a fair opportunity to do a little profitable business. Now we fry under a sun that brings flowers to maturity before their time, makes ice-boxes of little avail, brings quality to a midsummer level, and prices—ye gods! Don't talk of prices. There are none. They are gone, evaporated, disappeared. During the past week there has not been a florist's store in the city of Cleveland into which the public could not go and get carnations for 10 cents a dozen and roses for

25 cents. Not poor stock either, but fair average goods, that should normally at this time of year bring at least double the money. It is useless to speculate concerning causes, for they are perfectly evident—a combination of weather and human cussedness. Combine these two with the perishability of flowers and you have an aggregation before which prices apparently cannot stand. All that can be done is to wait for cooler weather to tone things up again. This sudden glut will likely be succeeded by a period of shortage, as we are certainly now getting stuff that normally would be spread over another week's time at least. In the meantime Greece, Israel and the grocery store men rejoice and are glad, while the other fellows are correspondingly melancholy. Dutch bulb stuff is on its last legs, and wavering and uncertain legs they are. The last lots of flat grown stock are being cut. With most growers indeed they are about gone. Hyacinths in the open ground are in full bloom and a good many tulips are showing color.

At the last club meeting a good deal of business was transacted, most of it relating to the holding of a flower show in connection with the national meeting; there was also considerable discussion concerning the chrysanthemum show. A committee was appointed to outline a plan to be submitted at the next meeting, April 28, when both projects will probably take definite form. As the national executive committee convenes on the same day there will be a good opportunity for the local men to meet members of that body. There will be a banquet in honor of the committee at the Hollenden Wednesday evening, April 29, for which tickets can be obtained from Mrs. Ella Grant Wilson.

Mr. James Wilson, of the Williams-Wilson Co., is to be married the latter part of the month and congratulations are now in order.

A.

Buffalo.

Like other localities we have experienced a great change of weather. Winter jumped with one leap into summer. If this had only occurred a week earlier how happy would be our recollections of Easter. That's forgotten now and all plant men are rushed with work, spreading out and shifting; rushed with work if not with sales, but they will come in time; people who have a garden have begun to "make it." The first thing when they "make garden" is to throw the empty tin cans over the fence into their neighbor's garden, and then purchase a 5 cent packet of sweet peas, and if they know anything plant some pansies, but with all the talk and good advice to our patrons the great majority of people put off the pansies till it is time for coleus. Violets are getting small and so is the demand for them. There are plenty of A1 carnations coming in and now selling at popular prices, 25 cents per dozen. The local supply of roses is much larger than it has been. Outside daffies and tulips are not quite here yet, and those grown inside meet with a ready sale. This week has been lively with golden weddings, silver weddings and weddings of the ordinary kind, or first attempts, all of which has used up a good many flowers and lilies that have been skillfully kept since Easter.

I have heard of no stranger in town this week and have not heard that Daniel B. Long has been out of town.

Mrs. Thomas Clayton, the wife of our long established and respected florist of

Richmond avenue, died last week; she will be sadly missed by a husband and two sons.

About this time of year we begin to miss a face for years so familiar in almost all the florist's places. It was that of poor "Baltimore," who died in January. He began years ago to supply some of us with moss and ferns, but by degrees established a bulb farm. He had something to sell to us almost the whole year, and his wagon loads of spring flowers were always in demand. Poor Fleishman, everybody liked him, but he was seldom called Mr. Fleishman. He was Baltimore to everybody, because he had the colored or Baltimore dialect. W. S.

Chicago.

The trade has passed through a week of demoralization caused by the unseasonable heat, and is now reviving a little. During the warm week stock arrived in such bad condition, when only a few hours cut, as to cause much dissatisfaction, in spite of the most careful selection and packing. Quality was poor with everything, and prices were most erratic. This week, however, we see an improvement. With cool weather quality has improved, roses especially showing the difference. The quantity coming in has very materially lessened. First-class Beauties are rather short, and other roses of really high grade are none too plentiful, though there is plenty of second-class grades. Beauties are about the same in price as last week; other roses \$3 to \$4. Carnations are plentiful at 75 cents to \$1.25; and lower in big lots. A great many flowers are going out of town.

Of outdoor flowers irises from southern Illinois are now seen—a pale lilac variety sells for 35 cents a dozen, deep purple for 25 cents. Lilac is not coming in equal to demand now; the heat rushed it all out at once in the southern part of the state, and it is not yet in bloom in this vicinity. Arbutus has been seen, but only in very small quantity; it seems late this spring. Poet's narcissus is in, and there is plenty of other outdoor bulbous stock. Sweet peas vary from 50 cents to \$1 a hundred. Perhaps the only scarce item in the market is smilax, which is short and in good demand at \$15 to \$18 per hundred.

The Florist Club met April 23, but nothing beyond routine business was transacted.

The preliminary premium list of the Horticultural Society of Chicago for the exhibition of 1896, to be held Nov. 10 to 14, has been issued. There are 190 classes as against 157 classes last year. An addition to the rules requires that where judging is by scale the entry must score 85 points to be entitled to first premium, 75 points for second and 65 points for third. The premiums in the plant classes are larger in amount and also more numerous. For the "best display of stove, decorative and greenhouse plants arranged for effect," premiums of \$75, \$60 and \$45 are offered, to be judged by the following scale: Quality of plants 35 points, arrangement 35 points, quantity 30 points. The carnation premiums cover all leading varieties by name. This plan has been so satisfactory with the carnations that the society has now offered premiums for chrysanthemums in 13 classes by name. Prizes of \$25, \$15 and \$10 are offered for 12 blooms of the new chrysanthemum Mrs. W. C. Egan. For table decoration the prizes have been increased to \$100, \$75 and \$50, the entries to be in position on the second

day of the show, same to be kept in condition during the remainder of the exhibition, to be judged each day and the premiums to be awarded on the last day to the ones scoring the highest average number of points during the four days.

Toronto.

The weather during last week was more suitable for July than the beginning of April. Last Monday the grass was scarcely visible; this Monday (20th) the lawn mowers are at work, and the early chestnut trees are in leaf. The thermometer in its saltatory exercises reached the height of 80 degrees.

The paper read by Mr. C. Ross on "Shade trees for street planting" at the last meeting of the Horticultural Society was a first-rate one and thoroughly practical, just the kind of thing that should be circulated among the citizens in order to teach them the why and the wherefore of many things they see and don't understand, but often complain about in the daily papers. The president promised to get it published in all those papers, but I have not seen it yet.

Mr. E. Worden, formerly of England, later with Mr. J. Cotterill of Deer Park, and latterly foreman and rose grower for Messrs. Nanz & Neuner of Louisville, Ky., is taking a rest to recruit his health in this city. He has not made up his mind yet whether he will stay here or return to the "other side."

Charlie Tidy reports trade very good since Easter. The warm weather has made cut flowers plentiful and prices slightly lower. The demand last week during the Horse Show was very good. Mr. Tidy had a big wedding on to-day (Dalton McCarthy's son); the bride was to be fixed up with four dozen Bride roses and a hundred lily of the valley, the bridesmaids with Meteor roses and mignonne.

To-night (21st) the gardeners and florists at their regular meeting discuss "Carnations." Mr. Worden mentioned above has promised a paper, and all the principal growers will bring specimens.

Mr. A. Dimmock, from Sander & Co., St. Albans, has just paid us a visit, his first appearance in Canada. We hope he will call every year now the ice is broken. E.

St. Louis.

The early part of the past week has been marked by the worst glut of many seasons, the best of stock being hard to dispose of, and the prospects are good for the glut to remain over this week. Stock of any kind can be bought at buyer's price, and the fakir is having his picnic just now. They are selling fine stock on the street at any price they can get, 10 cents per dozen for carnations and 25 cents per dozen for roses. They can well do it; they buy them from the wholesaler for 50 cents and \$1 per 100, and carnations for 50 cents per 100. The retailer can buy the stock for the same price, but he can't dispose of it in his store as the fakir can on the street. Not only roses and carnations are selling for almost nothing but every other flower, sweet peas at 25 cents per 100, valley and tulips \$1 and \$2; the fact is bulb stock is dead. Harrisii sell from \$4 to \$6. The only scarce articles in the market just now are ferns, and smilax will be in great demand.

Trees planting has been very brisk this spring. Mr. C. C. Sanders reports that never before has he been so busy as this

spring in planting trees, shrubs and evergreens, others in the same line report about the same. In the plant shipping trade C. Young & Sons Co. report large orders coming in and from the looks of things now will do more in this line than ever before.

The floral decorations at the Pierce wedding were very fine and fully up to the famous Busch wedding as far as floral work went. At the church 1,000 Harrisii were used, and plants around the inside of the church; no decorations of plants could be made on or around the altar, the rule of this church being that any and all decorations made around the altar must remain the property of the church and can not be taken away. The bride's and bridesmaid's bouquets were of white lilacs and valley. At the residence every room was decorated with plants and cut flowers; this was the work of C. Young & Sons Co.

Joe Rolker of A. Rolker & Sons, New York, was a visitor last week on his way east.

Tom Peterson, late with R. F. Tesson, has branched out on his own hook and has opened up a floral establishment at the corner Hunt and Easton avenues. He will grow plants and cut flowers for the trade. Tom is a jolly good fellow and well liked by his brother florists, who wish him success in his new venture.

The Bowling club had its rolling Monday, but very few were able to attend owing to spring planting, and all hands being too busy only seven members put in an appearance and rolled some good games. The high man of the night was Beneke, 581 in three games and highest single games 218, Al Baur was second with 506 in three games, Fillmore was second on highest score, 206. Next Monday night the club will have a meeting; very important matters will come before them, and the president requests every member to be present. J. J. B.

Rochester, N. Y.

Since my last report business has decreased materially, and prices of all cut flowers have taken a decided drop. The unusual and continuous warm weather has brought out a great many roses, carnations and violets, even out door narcissus and hyacinths are in the market, so there is no scarcity in any line and the quality is good also, but the stuff is entirely too plentiful, and much of it finds its way into the ash barrel, reminding us of midsummer abundance. A few receptions, dinners and weddings helped to dispose of part of the surplus stock, but none of these called for very elaborate decorations; in former years wedding and other parties shortly after Easter were frequent and numerous, but this season very few of them have occurred so far, and most retailers are disgusted with the slow business. The violets from cold frames are very good now and plentiful, California seems to do excellently in that way at Geo. J. Keller's, who is perhaps the only one in town who tried it on a large scale. The flowers are fully as large in the frames as those which were picked in the houses during the winter, and are of a darker and deeper color; compared with the old Czar or the Victoria Regina, the California is preferable on account of its stiffer and longer stems, and because of its facing upward, thus, when bunched, presenting a full view of every individual flower, while in the Russian varieties the bend in the neck throws the face of the flower on the side, and when bunched many of them show the large green calyx

and the exterior instead of the interior of the blossom is seen from above. Altogether I think it is the best single violet for the flower market yet introduced, though in rich ground the foliage and growth is rather rank and weedy in appearance.

The packing season in our nurseries is in full blast yet, and all are very busy digging up the stock for the numerous orders. The hot summer weather is starting all trees and shrubs into growth, and extra help is put on the regular force to get them out of the ground before it is too late. Most all of the firms are well satisfied with their sales this spring; the largest establishment in the city, doing business all over the United States for more than fifty years, has never before had such a liberal demand for ornamental stock as this season. Many of the larger orders are for park planting in different parts of the Union, and are principally for rare and choice stock. Their spacious and well equipped packing sheds, although greatly enlarged during the past winter in anticipation of the rush, were found to be yet too small for the immense quantity of stuff to be packed, and additional temporary sheds had to be erected to accommodate all the packers.

J. B. K.

Worcester, Mass.

Well, we have had a very hot time of it this last week, a regular scorcher in fact, with the thermometer hovering uncomfortably near the nineties and much humidity. It has had a depressing effect on trade, people being too listless to think much of festivity and consequently flowers, and making the blooms open so fast that nearly all kinds of flowers are too plentiful. Bulbous stuff and flowering shrubs outside are very much advanced, and should we get a cold snap, which is more than probable in this delightful New England climate, much damage will be done.

Violets are the only item that we could use more of; outside violets are not in bloom yet and those inside are small and rather pale. Prices are showing a tendency to drop.

The horticultural show April 16 brought out a nice showing of spring flowers and was well attended, the feature of the show was the magnificent roses shown by H. F. A. Lange. The following first premiums were awarded: Cut flowers, H. F. A. Lange; tulips, Edward Hall; narcissus, H. A. Jones; hyacinths, H. F. A. Lange; geraniums, A. A. Hixon; basket, F. B. Madaus.

A. H. L.

Pittsburg.

The extremely hot weather affected every one so that another week of continued dullness to the trade is the result. It has been a very trying time with the growers too, mainly detrimental to bulbous stock and making roses flabby. Those who are growing bedding stuff are beginning to make quite a display in our markets; trade in this department has been very fair, and the quality of the stock brought in has been good.

Mr. John Murchi of Sharon, Pa., visited us in the early part of the week, and S. S. Skidelsky, with M. Rice & Co., Philadelphia, was also here.

REGIA.

Des Moines, Iowa.

There has been a fair demand for all kinds of florists' stock since last report, and prices are about the same. The supply is good and up to demand.

The R. A. Rollinson failure was not a florist failure, he having gone out of the florist business several years ago.

The State Executive Council has engaged the services of a life insurance agent to plant the State House grounds with herbaceous plants.

J. T. D. F.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

WISCONSIN FLOWER EXCHANGE,
Box 87. MILWAUKEE, WIS.

FOR SALE. EVERGREEN LODGE, Clarksville, Tenn.

On May 22nd, 1896, we will sell at public auction, if not sold privately before that date, this valuable property. This is the finest property of the kind in the South, and a large trade is already established throughout the Southern States. The property consists of eight acres of beautiful grounds, excellent improvements, six first-class greenhouses, well supplied with all modern equipments, one chrysanthemum house. These greenhouses are not excelled by any to be found in the South or elsewhere.

A fine opportunity is here offered to any one wishing to engage in the floral business. Correspondence solicited. Terms one-fourth cash, balance in six, twelve and eighteen months, secured by a lien.

CLARKSVILLE, TENNESSEE.

PAYNE & SAVAGE, Trustees.

Baltimore.

The last meeting of the club was well worth attending if for nothing else than the pleasure and profit to be derived from listening to Mr. N. F. Flitton's exceedingly well written essay on "Shade Trees." Though short it was in every way commendable, and was a synopsis of the author's very careful observations and long experience.

The executive committee was appointed consisting of Mr. Chas. Hamilton, chairman, and Messrs. C. M. Wagner, Wm. Cristie, Hy. Ekas and Wm. McRoberts, Jr., members.

The date of holding the annual show was also decided after much and careful consideration. It will be held the third week of November in the Music Hall. This is the last step in preparing for the show, and so far there has been no slight mistake to mar the prospect of a perfectly successful show. MACK.

Cincinnati.

The general run of business has been slow the past week. The weather has been very warm, the thermometer recorded 83° in the shade on the 17th and 18th inst. We have had a very dry spring and the growers are anxious to see some rain, as they are about getting ready for spring planting.

Market last Saturday was exceptionally dull for this time of the year. Every one is looking forward for a good spring trade. Bedding stuff all around looks well, especially roses.

Mr. John Raising, one of the oldest pottery men of this city has connected himself with the Cambridge Tile Mfg. Co. of Covington, Ky.

Mr. Thomas Hardesty was married April 21 to a charming young lady of Newport, Ky. H. SCHWARZ.

Sharon, Pa.

Mr. M. I. O'Brien reports an exceedingly good trade all along the line, the volume of business transacted during Easter week having surpassed that of last year's by at least 25%. Between the demand for cut flowers and the large funeral designs he put up on Easter Saturday, his supply of flowers, prepared though he was, gave out completely. Among the numerous other designs, Mr. O'Brien made a gates ajar and pillow combined five feet high and three and one-half wide. A casket bouquet 3½ feet long and 2 feet wide, composed of the choicest flowers, such as lily of the valley, orchids, etc., was another piece that attracted a good deal of attention. These were the finest and costliest designs ever made in Sharon. Mr. O'Brien intends building a new wind mill, his present water supply being utterly inadequate for his plant. Homo.

E. M. H.—The double calla sent, though
abnormal, is not by any means uncom-
mon, though the triple appearance of
the spathe, of which there is an indica-
tion in your specimen, is rarer.

The reference lists of roses, chrysanthemums
and carnations in the new edition of
our directory and reference book are
the most complete ever published, and
the reference list of cannas is the first of
the kind. Their value to the trade can
hardly be estimated.

The Mexican Plant Co., of Maravatio,
Mexico, send us bulbs of *Sprekelia for-
mosissima* in flower. The flowers were
so dried when received that we could not
judge of their beauty. The senders state
that they grow them the same as hyacinths,
in glasses, potted or in open
ground.

Removal Notice.

Owing to the great increase in our business, we have been obliged to move to larger quarters. We have secured ROOM 20, at 88 WABASH AVENUE, where we will be found after May 4th.
This will be of great advantage to our patrons, as there is plenty of light and room.

Respectfully,
A. G. PRINCE & CO.

Our Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

The Government Seed Purchase.

In a very lengthy statement appearing in public print last week, Secretary Morton of the Department of Agriculture states his side of this case in a four column article. A summary of his defense seems to be that the Department "resolved to buy the best seed" and that the Secretary, Representative Wadsworth and Senator Proctor, constituted a purchasing committee, and this committee did decide which firm offered the best and cheapest seed, notwithstanding that no public notice was given to the various bidders in the printed proposal or elsewhere, that any investigation would be made as to qualities of seeds sold by the various bidders.

We believe it was generally understood that the printed schedule fixed the germinating and purity standards required by the Department, and that the 10% deposit put up by the bidders was a guarantee "for the faithful performance of the contract." Such was the exact wording of the proposal and such certified check must be held to have been equivalent to a bond that these high standards of germination and purity would be met (so severe and unusual were they that one of the most reliable and prominent New York seed houses is reported to have declined to bid under such a standard). Why, it may be asked, was the opportunity not given to all bidders to provide against questions as to their reliability.

We publish below the letter and charges filed with the Secretary in this matter; they make very interesting reading, and the N. B. G. Co. claim to be able to prove all of them.

Washington, D. C., April 7, 1896.

HONORABLE J. STERLING MORTON, Secretary of Agriculture, Washington, D. C.

Dear Sir:—We send you under separate cover and by special messenger our charges preferred against your Department relative to the placing of seed contracts with Landreth & Sons, of Philadelphia, Pa., and May & Co. of St. Paul, Minn., all under date of March 31, 1896.

If you desire to confer with us or our representatives with reference to these charges, we would be glad to come to your Department at any time you may designate.

Until you are advised to the contrary, will you please address us at the Riggs House, Washington.

Will you do us the honor to acknowledge receipt of this letter and of the charges sent you under separate cover?

Respectfully yours,

NORTHUP, BRASLAN, GOODWIN Co.,
Per Charles P. Braslan, Gen. Mgr.

[To the above letter we received no reply or acknowledgment of charges from Honorable J. Sterling Morton.]

COPY OF THE CHARGES.

HONORABLE J. STERLING MORTON, Secretary of Agriculture, Washington, D. C.

Sir:—On the 31st of March, 1896, as Secretary of the Department of Agriculture, you entered into a written contract with David Landreth & Sons of Philadelphia, Pa., by the terms of which Landreth & Sons agreed to sell 10,125,000 packets of Vegetable Seeds, and you agreed to pay D. Landreth & Sons therefor the sum of \$70,000. Also on the same day you entered into a contract with L. L. May & Co. of St. Paul, Minn., by which said L. L. May & Co. agreed to sell to the Department, and you agreed to buy 1,000,000 pkts. of flower seeds, and you agreed to pay therefor the sum of \$5,000.

Prior thereto and at the same time these contracts were entered into, you had before you a proposition of the undersigned to sell and deliver to you 10,125,000 packets of vegetable seeds and 1,000,000 packets of flower seeds for the sum of \$64,000.

At that time you had in your possession a certified check drawn by O. G. Staples, upon the

Columbia National Bank, Washington, D. C., payable to your order, for the sum of \$8,000, deposited with you for the purpose of securing the absolute and faithful performance of the contract on the part of our corporation.

You also had at that time in your possession, telegrams from leading Banks, Bankers and Financial Institutions of Chicago, Minneapolis, Boston and Manitowoc, Wisconsin, stating that our corporation was solvent and able to fully carry out and perform its contracts.

Notwithstanding the fact that we stood before you in a business way and financially accredited; our seeds as good as any of our competitors; our bond for faithful performance in your possession, and our bid \$11,000 less than that of any other bidder, we did not get the contract but you awarded it to Landreth & Sons and May & Co.

We now respectfully but firmly charge the facts to be that we were not given the contract and the same was awarded to Landreth & Sons and May & Co., because of collusion, fraud, corruption, false statements and specially prepared reports, practiced, carried on and had and done in your Department.

To be more specific in the matter we charge the facts to be:

(1). That the real and only cause why we did not get the contract in question was because of the ill feeling you and your Assistant Secretary, Mr. Charles W. Dabney, entertained towards our corporation because of its alleged labors in connection with the passage of the joint resolution of the Senate and House of Representatives of the United States at this present session, directing you to buy and distribute seeds.

(2). That to carry out the purpose of your Department that we should not have the contract false and unfounded charges were made to you to the effect that the seeds which we had heretofore furnished the Department were not good, and lacked purity and germinating power.

(3). That reports were especially prepared and made to you and to Senator Proctor and Congressman Wadsworth to the effect that the seeds that we had furnished the Department had been tested and were found lacking in purity and germinating power.

(4). That you and your assistants stated that Landreth & Sons and May & Co. were willing that their names should appear on each packet of seeds and that we refused to permit our names to be printed on the packets of seeds that we furnished the Department, and that these statements were made to Senator Proctor and Congressman Wadsworth at the time that they were acting as a Committee to award the contract, all of which was false, as we stated orally and in writing to you that we would cut our bid \$10,000 if you would permit us to print our names on each packet.

(5). That the Assistant Secretary, Charles W. Dabney, was in collusion and connivance with the Brown Bag-Filling Machine Co. and insisted upon our corporation using these bag filling machines should the contract be awarded to us and because this we positively refused to do he did all in his power to defeat us.

(6). That the tabulated list of tests of our seeds which was furnished to you by Assistant Secretary Charles W. Dabney, and which showed that our seeds were of inferior quality, was false, and known by him to be false, either at the time it was presented by you or before the contracts in question were signed.

(7). That Gilbert H. Hicks, Seed Expert, of your Department made false statements to you and to Mr. Dabney with reference to the tests which he made of the seeds which we had heretofore furnished your Department.

(8). That the Committee consisting of Senator Proctor and Congressman Wadsworth were informed by officials of your Department that our seeds were inferior; that tests had been made and that they showed our seeds to be lacking in purity and germinating power; and that these statements so made to this Committee were false and untrue, and known to be so by the persons who made them, and were designedly made for the purpose of preventing us from getting the order.

(9). That the full correspondence between your Department and our Corporation together with our propositions and statements in writing relative thereto, were not shown to the Committee but mere statements and abstracts made therefrom.

(10). That the records in your Department show our proposal to furnish these seeds for \$64,000 being \$11,000 less than any other bidder; that we had given bond for the faithful performance of the contract; that our seeds were of the very best quality; that hundreds of letters on file in your Department bear testimony to the good quality of the seeds which we had been furnishing the Department for years; that your Chief Clerk and the Chief of your Seed Division know that the seeds we have been furnishing your Department were of the very best quality; that out of 150 to 160 distinct varieties which we furnished to the Department last year, the test showed that they possessed the highest degree of germinating power; that the table of germination required as set forth in your circular letter of March 18, 1896, was made from tests from our seeds, and although this is our record in your Department our proposal was unjustly, illegally and fraudulently rejected.

(11). That the reports and statements made to Senator Proctor and Congressman Wadsworth, and upon which they were influenced to act in the premises, were false and not made or pre-

pared from the official records in your Department.

(12). That a combination was formed in your Department consisting of Charles W. Dabney, Gilbert H. Hicks and Enos S. Harnden for the purpose of making false statements and records in your Department relative to the quality of our seeds.

(13). That although our communications, propositions and correspondence were delivered personally by our Mr. Braslan to Donald McCuaig, your chief clerk, and without disclosure on our part of their contents to any one, yet within a few hours when the papers were filed in your Department, the contents were disclosed and talked about in the streets and about the hotel lobbies among seedsmen.

(14). That you, as the head of this Department, at the time the bidders were before you and in your Department with their proposals to furnish seeds, advised our competitors of the contents of bids, and suggested and advised our competitors that they should refigure on the grounds that their proposals were over the amount of our bid.

(15). That the real reason you did not give us the contract was, as you stated, that we were supposed to have something to do with the procurement of the joint resolution directing you to purchase and distribute seeds. The reasons assigned that our seeds were inferior were false, unfounded, and the records of your Department so show.

(16). That your treatment of our proposal and rights in the premises all along have been of a similar character as that shown by copies of the telegraphic correspondence between us April 1 and to April 4 inclusive, hereto attached and marked "Exhibit A."

[PART OF EXHIBIT "A."]

TELEGRAMS.

NORTHUP, BRASLAN, GOODWIN Co.,
No. 57 Jefferson St., Chicago, Ill.,

For identification please place your firm's name on each package of charges. They will be thoroughly tested as to veracity, purity of purpose and power of growth. The Department hopes they may soon be formulated and given to the country. No one here seems scared up to date. J. STERLING MORTON, Sec'y.

OUR REPLY TO ABOVE TELEGRAM.

Chicago, Ill., April 4, '96.

HON. J. STERLING MORTON,

Secretary Agriculture, Washington, D. C.
It has always been and is now our intention to lay our case before you. We regret that as a Cabinet Officer of this great Government you should believe it was your duty to answer facetiously and sarcastically the earnest request of an American citizen to be heard before you, in order, as he at least thinks justice might be done him.

NORTHUP, BRASLAN, GOODWIN Co.

[To the above telegram we received no reply from Hon. J. Sterling Morton.]

(17). That the lists which accompanied the bids of Landreth & Sons and May & Co., and upon which the contracts were awarded, were not in accordance with either the circular letter of the Secretary of date March 18, 1896, or of the Act of Congress.

(18). That Gilbert H. Hicks, the alleged Seed Expert of the Department, is wholly incompetent and his opinions and reports are worthless and valueless.

(19). That after the contracts were awarded to Landreth & Sons and May & Co. changes were made in the varieties of seeds to be furnished in such a way and manner as that it will result to their benefit and advantage in a sum between \$7,000 to \$10,000, and that the Government will consequently lose a like amount.

(20). That many of the facts herein charged, the record in your Department, and the conduct of certain of the officials of your Department, were daily reported during the pendency of negotiations for the contract to your chief clerk, Donald McCuaig, by our general manager, Charles P. Braslan.

We assert that because of the amount of our bid, the standing of our corporation, and the character of our seeds, we were entitled to this contract.

We charge that it was not awarded to us because of the fraudulent processes, false reports, misleading statements and irregular conduct in your Department, and this we are and will be at any and all times ready to prove.

Respectfully submitted,

NORTHUP, BRASLAN, GOODWIN Co.,

Per Charles P. Braslan, Gen. Mgr.

[We received no acknowledgement of the above from Honorable J. Sterling Morton.]

BOSTON.—Mr. Robert Farquhar is confined to his home with inflammatory rheumatism.

NEW YORK.—Mr. E. V. Hallock and family started for California via Panama on April 20, expecting to be absent three or four months. Mr. F. T. Emerson is in town.

Florists' Sweet Peas**New Sweet Pea "America"**

Is more distinct and striking than any other variegated Sweet Pea in existence, and is of the large flowering type. Its color is a white ground and through the center of the standard is a wide carmine scarlet blotch veined with the scarlet lines running toward the edges and showing in the same manner on the wings. The dashing contrast of the heavy scarlet blotch on the white ground makes the blossoms very effective in a mass of cut bloom or when flowering in the garden. It is indispensable for any complete collection of colors in Sweet Peas. Pkt. 15c; 2 for 25c; 5 for 60c; 10 pkts. \$1.00; 100 pkts. \$7.50.

Montreal.

As reported in my last the Easter trade was the best on record. Good flowers and plenty of them, good prices and good weather, were the causes which led up to the above result.

Mr. Bennett and his Montreal confreres are very thankful to Mr. Scott for his sympathy, but would say the use of the sleigh in handling a large Easter plant trade, especially with the thermometer 50° in the shade, is not one of our worst grievances in this northern climate.

At the regular monthly meeting of the Gardeners' and Florists' Club, which took place last Monday evening, J. Bennett read a paper on "Useful Summer Flowers for the Florist." It was a comprehensive list of things that should be grown both on private and commercial places, also some very practical hints on their culture, which was well received by the members; the discussion which followed was also very interesting and instructive.

Mr. Walter Wilshire also read a paper on the florist's trade. He treated the subject from the grower's standpoint, he deplored the existing condition of the business, but it is a satisfaction that the same condition of things is common to all lines of trade. He strongly advised the growing of specialties, with the view of producing stock of better quality, as only good flowers will sell nowadays.

The president announced that the club's charter was now complete and exhibited the documents.

The prize list for the next chrysanthemum show was circulated among the members; it is a great improvement on previous lists, the prizes being larger and several new sections being added.

Mr. Joseph Bennett's resignation from the executive committee was accepted and Mr. J. Holliday elected in his place.

John Kirkwood, late foreman for Walter Wilshire, has gone to Compton, Que., to take charge of the Hon. Senator Cochrane's place. BEAVER.

Davenport, Ia.

The Tri-City Florists' Club has reconsidered its vote not to have a chrysanthemum show, and last week voted to have a chrysanthemum show on November 11, 12, 13 and 14, the week following the presidential election.

For the past two years the Florists' Club has given the exhibition for the benefit of the public library; this time it will be for the benefit of the club.

AMERICAN FLORIST CO.

IVORY! THE GREAT SUCCESS!

NOTHING IS IN MORE UNIVERSAL DEMAND BY FLORISTS THAN A GOOD, PRODUCTIVE WHITE CARNATION.

In **IVORY** you will have it. Try it and you will have a money maker. It produces as many blooms as Wm. Scott, is as perfect in form as any Carnation yet produced, held by a calyx that never bursts and carried on a long, wiry stem. What more do you want?

Fine plants from soil, \$10 per 100; \$75 per 1000. Stock ready now.

Also fine stock of *all the other leading varieties.* SEND FOR PRICE LIST.

GEO. HANCOCK & SON, Grand Haven, Mich.

HERR'S CARNATIONS.

ROOTED CUTTINGS that will give good results, because they are taken from healthy stock, and will be well rooted when sent out.

VARIETIES:

McGOWAN,
STORM KING,
ALASKA,
ANNIE LONSDALE,
IVORY.

DAYBREAK,
SCOTT,
ROSE QUEEN,
PEACHBLOW,
DELLA FOX.

DORNER,
STUART,
PORTIA,
JUBILEE,
IAGO.

HELEN KELLER,
KITTY CLOVER,
ELDORADO,
CARTLEDGE,
TIDAL WAVE.

Fourteen large houses full of Carnations. State how many you will want of each variety in asking for prices.

L. B. 496.

ALBERT M. HERR, LANCASTER, PA.

NEW CARNATION, W. D. SLOANE.

This new sort will prove a leader to all Florists. We know of no better variety of its color, and none can equal it in fragrance. The plant is a strong and vigorous grower, needing but little support, with dark foliage about as heavy as Tidal Wave. Flowers are large, good substance and lasting qualities, borne on stiff stems 15 to 20 inches in length; color a beautiful cerise. Very profuse bloomer.

PRICE, \$10.00 PER 100; \$75.00 PER 1000.

Pitcher & Manda, Short Hills, N. J.

Sam'l S. Pennock, 1612 Barker St., Philadelphia, who handles the entire crop of flowers of this new variety, says under date of March 26th, 1896: "Your W. D. Sloane, the way you grow them, are certainly fine, with the long stiff stems and good sized flowers. A ready sale for them is found at an advanced price over the average varieties."

The Bridesmaid Carnation

is the pink carnation you want. It averages more HIGH GRADE blooms than any other pink variety grown. It has a long stiff stem, strong calyx, perfect form of flower and a color that cannot be excelled in its class. It sells quickly at a high price, and stands at the head of the list of pink carnations. It won the honors at the American Carnation Society Show at New York as best pink in classes A, B and C. Its growth is clean and healthy.

Order now to get your stock early.

No Rust, Strong Cuttings.

\$5.00 per 100, \$40.00 per 1000.

NEW LATE PINK CHRYSANTHEMUM FRANCIS B. HAYES

JAMES COMLEY, Originator, says:

"I have seen, grown, and watched the FRANCIS B. HAYES Chrysanthemum for two years. I think it one of the best ever raised in this country, and is a chrysanthemum that every grower ought to have."

Awarded Certificates of Merit by N. C. S., November 17, 1891; Massachusetts Horticultural Society, November 17, 1891, and N. Y. F. C., November 25, 1895.

\$4.00 per dozen; \$25.00 per 100. Ready May 1, 1896.

F. MACRAE, 1138 Smith Street, PROVIDENCE, R. I.

WILLIAM J. MARTIN, says:

"I have found the FRANCIS B HAYES to be a remarkable variety of dwarf, robust habit, short jointed, with large dark green foliage well up to the flower. The flower is an ideal bloom and of a beautiful glistening pink of large size and a perfectly incurved, in the style of Major Bonaffon; of excellent keeping qualities; time of flowering late. It would be impossible for me to recommend it too highly for private or commercial use."

PINK IVORY,

(MISS AGNES L. DALSKOV.)

Springfield, Mass.

The unusual cold during the week preceding Easter, especially the Saturday before, blocked sales somewhat, especially of plants. With all due precaution some of the florists still suffered from frozen plants. It made the work of packing twice as hard and long, and all had to hustle to get orders out on time. The mercury stood for the most of the week and over Easter at about zero or below.

The unscrupulous demands of some commission men are to be deplored. Even though they exacted an exorbitant price for carnations the stock itself was very poor and unsatisfactory. They had been stored so long that when they were exposed to the air they would blacken and wither, thus causing quite a loss to the retail man. The demand was far greater than the supply, and customers rather kicked at the prices they had to pay, which price was hardly enough for the firm to get out right, and even then so many had to be thrown away one might as well not have had them at all.

Easter Sunday, however, opened up beautiful, weather being warmer. Some of the churches were elaborately decorated. One, the South Church, was made very beautiful with violets, hyacinths and Easter lilies. The old First Church had everything in white and green, some Southern smilax being used with beautiful effects there. Unity also blossomed forth in these two prevailing colors, the lilies being used almost exclusively. Christ Church was decorated in different colors, which were blended together beautifully. Other churches were miscellaneously decorated, but all used lilies, the Easter flower.

Easter week was gay with social affairs of more or less prominence. First came the Cushman-Flynt wedding at Monson. The decorations consisted of Easter lilies, tulips, carnations and Bridesmaid roses, colors predominating, of course, pink and white. Southern smilax was also used as the green, and was beautiful.

Two weddings on Wednesday, one being quite elaborate. It was supposed to be an Easter bridal and so decorated according with Easter lilies, valley and roses, with the beautiful green of the Southern smilax.

The other wedding on Wednesday will be interesting to those who remember Mr. E. W. Clark, who for so many years was in the flower trade here. His youngest daughter Edith was on that day united in marriage with Edwin Thayer, a young man of social and business importance in this city. It was a home wedding and the house was decorated with palms and Southern smilax, and was a lovely setting for the pretty bride.

Trade has been quite brisk since Easter. Carnations still are very short and violets are getting scarce. Every one now is thinking of their flower gardens and are calling for sweet pea seed and other kinds. B. M.

RICHMOND, INDIANA.

Please mention the American Florist every time you write any of the advertisers on this page.

Grand Rapids, Mich.

Heavy storms and cold weather during the early days of the week threw 75% of the Easter trade into Saturday. The result was that with one or two exceptions sales did not come up to last year. The churches did less decorating than ever before.

Our florists did not "hit it" just right with their Harrisii, but enough did to supply others, so that it is safe to say that 1,200 of these plants found their way into houses, not counting a large number an enterprising grower sent out on Saturday with the compliments of the firm.

Next to Harrisii, carnations, tulips and roses came in for popular favor, while vast quantities of violets were sold. Small potted plants sold well, but spiræas, hyacinths and narcissus did not move as in previous years.

Crabb & Hunter opened for a week a store on Monroe street and report having had a very successful week.

Chapman had a large number of very fine azaleas of the smaller sizes but perfect, and sold out.

Chas. Chadwick cut twenty thousand violets, most of which went to Chicago.

The custom of giving a small plant to each pupil in Sunday school is getting quite common here on Easter Sunday, and many of the schools offer premiums to the most successful grower of his plant shown at the June children's day exercises.

CREELMAN.

Oswego, N. Y.

Easter trade was not up to that of last year owing to the very unfavorable weather. The weather during the first part of the week was all that could be desired, and orders came in at a lively rate, but on Wednesday the glass fell to 12° above, with heavy northwest gales and snow storms sandwiched in, for the rest of the week, which seriously interfered with trade generally, and the delivery of plants was made very difficult.

The supply of carnations, roses and violets was little short, while there was somewhat of an oversupply of lilies and bulb stuff. Quality was good, roses being better than last year. Call for plants less than last year. There was a marked increase in the demand for carnations with a corresponding decline in the call for roses.

— OF —
FLORISTS,
NURSERYMEN
AND SEEDSMEN

— OF THE —
UNITED STATES AND CANADA,

— AND —
REFERENCE BOOK,
FOR 1896,

IS NOW READY

CONTENTS.

The names and addresses of all the Florists, Nurserymen and Seedsmen in the United States and Canada, arranged alphabetically in States and Provinces, the exact branch of the business each is engaged in being indicated by the following

. . . . KEY

- F** Florists who do a general local trade, having greenhouses and retailing the product of same.
- G** Florists who grow cut flowers or plants for the wholesale market and who do not sell at retail. Almost always within a short distance of a large city.
- R** Retail store florists who have no glass of their own. Nearly always in the large cities.
- D** Wholesale commission dealers in cut flowers.
- N** Nurserymen.
- X** Those who are both Nurserymen and Florists.
- S** Seedsmen.
- Z** Those who are both Seedsmen and Florists.
- A** Those who combine all the branches, viz.: Florists, Nurserymen and Seedsmen.

. . . . ALSO

- A list of Trade Organizations, both National and Local, with names and addresses of principal officers, time and place of meetings and date of organization.
- Statistics regarding Floriculture, the Nursery Industry and Seed Growing from the last U. S. Census report.
- A list of firms in the trade that issue catalogues, with a key indicating the prominence of each branch of the trade in same.
- A list of leading Cemeteries in which attention is paid to Ornamental Horticulture.
- A list of leading Park Superintendents and of the Botanical Gardens of the United States.
- Seasonable Hints for the year about the practical work of the Florist, written by Wm. Scott, giving instructions not only when to do certain work, but how to do it most effectively and economically.
- A complete alphabetical list of Roses in commerce in America, brought up to date and of incalculable value for reference.
- Similar lists of Chrysanthemums, Carnations and Cannas.
- Historical sketches to date of the Society of American Florists, American Carnation Society, National Chrysanthemum Society of America, Florists' Hail Association, American Seed Trade Association and American Association of Nurserymen.
- A list of Leading Horticultural Societies.
- Full and accurate information about Express and Postage rates.

Chicago, Dec. 18. 1896.

Messrs. Kroeschell Bros. Co.
City

Gentlemen:

In reply to your inquiry we must say
that we are well satisfied with ^{your} boiler. It works well
and saves us considerable coal. Our savings on
coal this winter we guess will amount to about
one-fourth of what the boiler cost us.

Yours truly
Damm Bros.

Chicago, Dec. 18. 1896
Kroeschell Bros. Co.,
41 to 59 Erie St. Chicago
Gentlemen

we great pleasure to ^{send}
my check for \$305.00 in payment
of green house boiler & ^{transport}
- The boiler is efficient
and a work of art, and
your boiler makers are the
most and pleasant
gang I have ever seen

Very respectfully,
William W. Greer
P.S. Please mail me one of
your little books -

KROESCHELL BROS. CO.

Paterson, N. J.

The Easter trade has been very good indeed this year, the churches of all denominations making a brave show. In one instance large palms, kentias and arecas were used as a backing for quantities of longiflorum lilies. Azaleas were also much in demand for decorations and gifts, the pure white and magenta shades being most in demand. Joseph Towell did very well with his Easter stock. He some very fine genistas and used them to good effect in church decorations. He also had fine azaleas, bottle brush and other flowering stuff, but found the demand for lilies greater than the supply, the lilies being the favorite gift in pot plants. Mr. Towell is sending in to New York very choice carnations. He still heads the list with his Minnie Cook.

McCornac & Co. report a better Easter trade than last year. They used flowering stock of all kinds, but fell short on lilies. Of course they have fine carnations. Some of the best now are Corsair, Minnie Cook, Alaska and Cartledge.

Edward Seery found his Easter trade quite up to that of last year. He used plenty of flowering plants of all sorts, but like the other Paterson florists he found the lilies the first choice as an Easter gift. Mr. Seery found a ready sale for all flowering plants, but in cut flowers carnations and violets were in the greatest demand.

Mr. Vescelius reports an excellent trade for Easter. He says his business was double that of last year. The demand for all cut flowers has been very good, but more especially for roses, carnations and violets. The demand for violets the day before Easter was very large, as it is the most correct flower for street wear. Mr. Vescelius is using some very fine white violets and gardenias in his trade.

The Paterson store keepers presented quite a bright and Easter-like effect, for most of them had pots of azaleas, lilies or some other flowering plant arranged in the window with the display of goods. Violets were to be had in any quantity of good quality and cheap. S. M. T.

Hackensack, N. J.

This has been a wonderfully good Easter for the florists here. Flowers were used in all the churches to a greater or less extent. The churches used mostly white and yellow, azaleas, genista, daisies and white tulips being the most conspicuous.

The Red Towers Greenhouses did a most satisfactory Easter trade, selling out entirely. Henry Hugues also sold out everything he had in the way of flowers and supplied plants for several church decorations. S. M. T.

BERNARD SPAE, GHENT, BELGIUM,

offers at moderate prices the following plants, of which he makes a specialty:

Azaleas Indica and Mollis; Araucarias excelsa, glauca and compacta; Palms, Rhododendrons, Laurus, Laurestinus; Spiraeas astilboides, floribunda and compacta; Metrosideros, Mimosa, etc., etc.

When writing mention the AMERICAN FLORIST.

Pansies and Verbenas

WE HAVE A LARGE STOCK.

Strong and stocky, coming into bud. A superior strain at the following low price:

	Per 100	Per 1000
PANSIES	\$0.40	\$4.50
MAMMOTH VERBENAS	.70	5.50
CALIFORNIA VIOLETS, rooted	1.00	8.00

S. WHITTON & SONS, Wholesale Florists.

City and Green Sts., UTICA, N. Y.

SUNBEAMS CANNA.

Altogether the best yellow yet produced. Exceedingly dwarf, only two feet, splendid foliage, wonderfully free and the flowers are of great size and substance. Flower heads large, full and compact. Almost clear yellow and very bright and clean in color. In effect, it is absolutely pure, brilliant yellow. Eldorado, Florence, Vaughan, etc., are not "in it" with Sunbeams.

Roots, dry or started, \$2.00 per dozen; \$15.00 per 100.

OTHER GOOD CANNAS.

All good strong roots in perfect condition.

AM. FLORIST CO.

News Notes.

MEDFORD, MASS.—A. W. Crockford has opened a retail florist store at 7 Forest street.

TOLEDO, O.—This city has eight parks, containing a total of 691 acres, valued at \$825,570.

PAWTUCKET, R. I.—Frank O'Reiley & Son have removed to the new store at 10 Park place.

TYLER, TEXAS.—The 10th annual meeting of the State Hort. Society will be held here July 8 to 10.

SO. FRAMINGHAM, MASS.—Peter McPhee has bought the establishment of the Framingham Nursery Co.

MADISON, WIS.—A range of greenhouses will soon be built on the grounds of the University of Wisconsin here.

MECHANICSBURG, O.—S. L. Harper is building a new greenhouse 16½x70 for roses. He reports business good.

MELROSE, MASS.—Frank Gibbons, a well known gardener of this town, died suddenly on April 13, aged 65 years.

PITTSFIELD, MASS.—F. S. Follwell has purchased the Burbank greenhouses, and will engage in the florist business in this city.

LOUISVILLE, KY.—Easter trade was about 25% larger than last year, with no change in retail prices. Supply short on some stock. Increase in the call for plants, especially lilies.

WAYNESBORO, Pa.—Mr. Henry Eichholz, the florist, will be married April 28. The bride is Miss Alvina E. Sommer of Flatbush, N. Y., and the ceremony will take place at her father's home in Flatbush.

TOPEKA, KANS.—Easter trade was about the same as last year with no change in retail prices. Supply was equal to demand. An increase of 20% in call for plants. In flowers there was an increased call for roses, carnations and lilies.

ALLIANCE, O.—This section of the country was visited by a very destructive hail storm April 20. The florists suffered a severe loss in glass. L. L. Lamborn's loss was about 1,000 lights, J. F. Zimmerman's about 600 lights, and other florists in like proportion.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Mansfield, Ohio.

The Berno Floral Co. will build two additional houses, each 65x12 for chrysanthemums and a fair sized violet pit. Business, according to reports, has been exceptionally good and the prospects for a good spring trade look bright and encouraging.

HOMO.

Mr. John Speelman, of Sassenheim, Holland, now making his annual American trip, says hyacinths will be scarce again this season. In tulips he finds less call for the forcing varieties and an increase in the demand for bedding sorts.

Rose Notes.

One of the operations which must soon claim our attention, and one that is of the greatest importance to all rose growers, is that of getting together and preparing the soil for this season's planting. Doubtless a great many having sufficient time and forethought laid up their year's stock of soil last fall, but I am quite sure there are others who have not done so, to such I would suggest that immediate attention be given the matter.

During the winter I have had sent to me for answer letters from rose growers in all sections of the country; these people were in trouble and wished to get out if possible, and I have found that in most cases the soil was the cause of the trouble, or at least the chief cause. Good houses are very desirable with a maximum amount of light, experience and practical knowledge of rose growing is considered essential to even fair success, but both of these combined will be of little value if linked to unsuitable soil. Most of us have seen magnificent blooms in very inferior houses at times, also the veriest novice at rose growing far surpassing others who have had an extended experience. There may be exceptions, but I think the secret may generally be found in the soil; rose growing is rendered comparatively easy when given proper soil, and vice versa. Granted that such is the case we shall conclude that any man who beds his roses in inferior soil, when by a little trouble and extra expense he might have a good article, is lacking in good common sense. There are certain things which go to make up a good soil for roses; first in importance perhaps is the mechanical composition of the soil; that generally termed loam is usually recommended for roses, but the term is capable of such expansion that it is liable to be misleading. For instance there may be a difference in the amount of sand contained, between clay loam and light sandy loam of from 50 to 70%. I should say the clayey loam is just a trifle too adhesive, and the light sandy loam much too light for best results. A good soil for most varieties when taken in the hand and rubbed between thumb and finger should not be gritty, but have a soft, smooth, mellow feeling. I might state here that I have found Perle to do better in a soil considerably lighter than is usually recommended, while Bride, Mermet, Bridesmaid and Meteor prefer a soil with a strong tendency to clay. If

possible the soil should be rich in plant food, this may, however, be overcome by the use of fertilizers, but poor soil and very little manure will not produce luxuriant foliage and superb blooms. To economize at the manure pile is the poorest economy any florist can practice, the best rose growers of my acquaintance are those who do not spare the manure. There is however, a limit, beyond which its use is both wasteful and harmful; from $\frac{1}{3}$ to $\frac{1}{6}$ according to the richness or poverty of the soil, and quality of manure will be safe. Nothing so far has given such universal satisfaction as cow manure as a base, with an addition of sheep manure, wood ashes and bone meal in small quantities. The three latter may be (and I prefer it) mixed with the soil after it is in the benches, mainly because I do not care to trust the average laborer to mix it in with the compost.

The prevalence of eel-worm renders it highly important that we do not overlook this little fellow in putting together our compost, if he troubled us last or rather this year, and we take soil from the same piece of ground we may naturally expect a like result next season. I do not wish to enter into any controversy, but I think sod containing clover is more liable to introduce eel-worm into the benches than it would be without the clover, I would also repeat that light soil, and especially that from an elevation, which on that account is generally dry, seems to be best suited to their tastes. The natural inference to be drawn from this is that we should try to secure heavier soil from low ground. It is generally conceded, and very properly so I think, that tough sod full of fibre makes the best compost; some people recommend plowing the sod and then spreading on the manure, after which it is harrowed several times and plowed again, and so on until the whole is completely pulverized and ready for use. The objection I have to this is that the manure gets baked with the sun until much of the strength must be lost; on the other hand this method affords quite a saving in labor. At the same time the continued stirring and exposure to the sun and air thoroughly sweetens it and puts it in fine condition for use. The plan generally followed, and which perhaps is the best, is to plow the sod about three to four inches deep, and take only such as can be loaded with a manure fork, stacking it with the manure in thin layers, making the compost heap not more than five feet high. It is not advisable to drive over the heap because if the sod is pressed down firm it will not rot so quickly and is much more difficult to break up and mix. After the heap has laid four or five weeks it may be turned over, chopped up or pulverized and unless the manure was very fresh it is then ready for use. I do not advocate composting soil for roses a year or more

THE reference lists in the new Directory and Reference book give descriptions and other valuable information regarding 2,543 varieties of roses, 2,988 varieties of chrysanthemums, 495 varieties of carnations and 524 varieties of cannas.

in advance of using it, in such cases the fibre in the sod is lost, and the manure also has lost much of its strength.

ROBT. SIMPSON.

Rose Yellow Rambler.

The rose quite widely catalogued under this name is *Alister Stella Gray*, a very worthy variety, likely to be extensively grown. Another rose, hybrid of *Reve d'Or*, named *Aglaia*, is, however, also described as *Rambler jaune* (Yellow Rambler) by the French *Journal des Roses*. *Aglaia* is to be sent out by P. Lambert, of Trier, Germany. It is described as flowering in clusters in the same style as *Crimson Rambler*, as many as 150 flowers being seen at the same time on one plant. The similarity between *Alister Stella Gray* and *Aglaia* seems likely to cause confusion, but the pseudonym of *Yellow Rambler* belongs apparently to the first named by right of priority. The "Rambler" attachment to roses seems likely to cause as much confusion as "Ostrich Plume" to chrysanthemums.

Carnation Notes.

There is one more point worth mentioning in that interesting bulletin on bacteriosis, when Dr. Arthur says: "No varieties of the carnation are exempt from the disease, but they differ much in susceptibility. The seat of the difference is chiefly in the vigor of the plant. Poorly grown plants are more affected than those well grown. Partly starved or stunted plants are specially liable to attack. It must be remembered in this connection, however, that plants of any degree of vigor may be essentially free from the disease because the foliage is kept dry, so that the germs cannot pass from the surface into the stomata and aphides are absent.

Susceptibility can only be shown where the conditions for the spread of the disease are present. But on the other hand, if the conditions are particularly favorable to the disease, any plant, however vigorous, may succumb."

The variety *Uncle John* furnishes a very interesting example. I have found this variety of the quickest growth that has yet come to my notice. The young shoots grow up surprisingly fast, form bud and open out in full bloom. This quality makes *Uncle John* to my experience the most prolific bloomer, but beware, the slightest check or disregard for its welfare will develop the bacteria. The same quality that makes it so profitable to a careful grower, is also the source of being more susceptible to the disease; it seems the fast growth, as a natural consequence will make the leaves, the tissues, the cell walls softer, probably the cells may be larger, the cell walls thinner, it will render the whole construction of the leaf more favorable for the disease. This gives us another proof, of how we shall meet this disease. As I have said before it can not be cured with a medicinal prescription, being parasitic, it lives on the plant, lives on the same substance that the plant takes up through its roots from the soil to build up its structure, the nourishment

is the same for both, and consequently, what will kill the parasite, having its growth entirely in the tissues of the leaves, will injure the plant, if not kill it also.

We do not know where the germ of this minute microbe, only discernable by a powerful microscope, comes from, we only know it is about, ever present. We are powerless and have wholly to depend on the natural resistance the plant exercises. So I say again the only remedy lies in a strong healthy growth, to enable the plant to make this resistance; and otherwise make the atmosphere as uncongenial to the germ as possible in the houses, and interfere with its entrance into the leaf by keeping the same dry.

In the rust we have a more tangible form of disease; parasitic, it has its seat also in the tissues of the leaves and stems, the germ entering from without but the plant can not so well resist its growth. While we find bacteria in the young growth, rust develops in the matured leaves, the hardening of the tissues is no resistance as with the bacteria; it waits not for a check or soft growth of the plant, it attacks a healthy strong growing plant just as well, and is in this point more dangerous than bacteria. On the other hand as I said before it is a more tangible form of disease. There is a separation of the germ (spores or seed) from the rust plant, we know, we can see where it comes from, and in this visible separation lies a chance to kill this germ before it finds another location to form a new plant. So in this point, rust is less dangerous than bacteria. We may sum up the two diseases both being parasitic as follows: Bacteria grows from a germ ever present in the air, we do not know where it comes from; but the plant when in full vigor has the strength to resist its ravages, and we are also enabled to make it more difficult for the germ to enter the leaves. Rust grows from the spores, emitted by the mother plant. The carnation plant can not resist its ravages as well as with the bacteria, but there is a chance to destroy the germ or spores, check the disease, and eventually in time exterminate it. Bacteria is easier to be handled and less dangerous to a careful grower, for all the care he exercises to prevent bacteria will only tend to improve the quantity and quality of his flowers; while the remedies used to destroy rust can not but have a retarding influence on the carnation plant. To a careless grower one is as bad as the other.

The warm moist weather we have of late is rather hastening the carnations on too fast in the houses, and will soon show bad effects. But as early planting in the field of the young stock is of great benefit, this should be taken advantage of and young plants strong enough should be out by this time, to gain a good hold of the soil before hotter weather sets in.

FRED DORNER.

Carnation Ivory.

Some blooms of this new carnation were recently received from the originators, Hancock & Son, Grand Haven, Mich. We were very favorably impressed by this variety on former occasions, and the blooms now under notice strengthened this impression.

There is something very distinctive about the shape of the bloom, giving it marked individuality, which makes it easily recognizable from other varieties. It makes a very graceful appearance in a vase.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Smilax, Violets, Etc.

A number of questions from Swampscott, Mass., is referred to me, and like Sandy McTavish's sermon which he delivered in Drumtochty, I will divide them into several "heads."

SMILAX.

"I do not succeed in getting four crops a year. Does fumigating injure it? I have large roots a year old and some seedlings. Should the roots be divided? They are at a standstill; can it be grown out of doors?"

It is useless to expect four crops in one year unless you have a steady heat of 60° to 65°. Don't bother with old roots; throw them away; seedlings are raised so easily and give so much better results. Seedlings are sometimes planted out about June 1, and sold in the fall for planting in beds in the houses. To me they are very undesirable, and you have lost three months' growth inside, during which time the plants inside would have made a fine string. I have seen the tips of smilax burnt with tobacco smoke, or rather the hot smoke, but a moderate fumigating, strong enough to kill the aphid, will do no harm to smilax. To produce four crops in the year strong young seedlings that are filling a 3-inch pot should be planted in the bed as early as possible in July. You will cut a good string in September, again at the holidays, another early in April and another by end of June. A great mistake is made by people who grow only a limited quantity of smilax by dodging all over the bed to cut the best strings. You should, when the bed is fit to begin cutting, start at one end and clear it off as it is cut, for then you can give the proper treatment to that part that is cut and to that which is still standing. Red spider is the great enemy of smilax, and daily syringing will help it in every way.

VIOLETS.

"Will any violet be profitable through the cold weather in a protected frame, but without heat? My Lady Campbell bed is in full bloom now, April 10, but I have not cut a blossom all winter. Does fumigating hurt violets?"

New England will not do for violets in a cold frame in winter. We hear of them being profitable in New Jersey in cold frames, and perhaps in southern New Jersey, which is a very different climate from Massachusetts. I know of no violet that would flower profitably without heat in the latter state. No wonder you are picking a fine lot of flowers now; they have been dormant all winter, and as we are near the natural time of violets flowering you should now have a grand burst of bloom. It pays any florist to have a frame of violets for spring. They get small and odorless in the houses after April comes in, and you may also want the benches badly for other stock, and then your cold frame violets come in mighty convenient. I have never seen any harm done to violets by a judicious use of tobacco smoke. They should need little of it unless you have other plants in the house to which aphid is attached. Pansies will besure to have plenty of greenfly, so keep them out of your violet house. They need more heat anyway to be profitable in winter than the violets.

NEPHROLEPIS.

"Will nephrolepis grow in a temperature of 45° to 70°, with about three hours' sunlight? Does fumigating hurt this fern? What reliable ferns for cutting could be grown under these circumstances, and how about the tobacco smoke?"

VIEW IN THE STORE OF MR. C. A. DARDS, NEW YORK.

What a range of temperature; it carries one almost from the glacial-fed yellow waters of the Yukon River to the delta of the Mississippi. *Nephrolepis*, one of the most useful ferns (perhaps *tuberosa* or *exaltata* is meant) we grow, would thrive well in winter in a night temperature of 55° to 60°; if hotter perhaps would grow faster. Mild fumigating has no effect on it. Of all the ferns for cutting the genus *adiantum* has no equal, either for beauty, usefulness or easy culture, and *cuneatum* and its several varieties are best. There is still room for more growers of *cuneatum*. The young fronds are easily destroyed by tobacco smoke, and unless they can be thoroughly covered when smoking the house should be removed. Other methods, such as evaporating tobacco extract, would I think be harmless. The *nephrolepis* will thrive with little sunlight, but should not be too dark.

SOIL LACKS ADHESIVENESS.

The same correspondent says his soil takes too much water. It is described as being one-fourth "cow dressing" and three-fourths sod. This is good mixture and would suit a large class of the commercial florist plants. "Is this all right for violets and carnations, and how much bone meal should be applied to a cord of the compost?" I have never used bone meal on violet benches, and don't think it desirable. You see violets a failure in many different kinds of soil, and you see them flourishing in as widely a

different soil. The trouble is seldom with the soil, but atmospheric and otherwise, and the latter word covers an immense territory.

Bone meal is of the greatest help to carnations: of that I am very positive. I have used a 4-inch pot of bone dust to an ordinary wheelbarrow of soil with the best of results, and that with soil that was without a particle of animal manure, and had been for 7 or 8 years. Our inquirer complains that the soil does not "hold water." "The water runs through, and so it is constant watering." That's just what you want; you don't want soil that will hold water. If water hangs on the surface of the pot or bench there is something wrong. It is possible that the compost described may be too sandy; if so add a stiffer soil. There are perhaps thousands of inexperienced folks in this country calling themselves florists who don't realize how firmly a plant should be potted or well pressed down the soil in a bench should be. WM. SCOTT.

After Easter, What?

Competition and low prices have so reduced the profits in every line of greenhouse work that it is no longer possible to make a fair year's profit on the returns from six, eight or ten months. In most establishments, nowadays, it takes twelve well occupied months to ensure a reasonable return on the investment and the grower of plants or flowers finds it

necessary to look carefully ahead and be fully prepared, as soon as one crop is out of the way, with another to take its place and thus keep his houses constantly at work. Monday after Easter comes, and looks in upon the houses stripped bare of the gorgeous display of a few hours before; what are you going to do with the vacant room? We asked Mr. J. M. Keller of Bay Ridge, N. Y., this question. This gentleman is one of the most successful of the large growers of Easter plants for the New York market. Mr. Keller sends us the following reply:

"The question of how to utilize greenhouse space immediately after Easter is, to a good many of us, a very important one. In establishments where spring stock is grown it is easily solved, a houseful or two of stock grown for that purpose and kept until Easter time in small pots and at close quarters, will, if properly shifted and given the necessary room, occupy five or six times its former space. With proper treatment this stock ought to be salable by the latter part of May. I have also seen such space utilized for a crop of sweet peas; the plants had been grown in pots and kept in a well protected frame. They were planted out immediately after Easter and the result was very gratifying in dollars and cents. In my own place but little spring or bedding stock is grown. Easter being over, we generally give our empty houses a good overhauling. Painting, glazing and general repairing is in order. At the same time we

begin to fill up again by shifting and repotting palms, dracaenas, pandanus, etc. etc., and it is astonishing how soon every inch of space is occupied again. Of course for the last couple of months before Easter, palms and decorative stock take a back seat, and are crowded together pretty well; probably this stock gets a little more room than what is absolutely necessary right after Easter, but it does not take long to fill out. Take it all in all I believe, however, that a crop of bedding stuff judiciously handled after an Easter crop gives the best and quickest returns for by far the majority of the growers."

Mr. James Dean, who also devotes a large space to Easter plants, makes use of his houses after Easter for cannas. He finds little profit in late grown bedding plants for spring sales. Jas. Weir & Sons, who do a large retail plant business, especially for cemetery trade, fill their houses at once after Easter stock has been cleaned out, with spring bedding plants, following these up with chrysanthemums, after which stock for the next Easter is in order again.

Several growers recommend cucumbers as a good crop to fill in between Easter and the chrysanthemums. The cucumbers are started in pots and by Easter have attained a good size, and are then planted out in the benches. The soil for the cucumbers is made very rich and after these are done is just right for chrysanthemums.

Fern Notes.

Aspleniums: It is those of the "bulbiferum group" which are most extensively grown for our London florists' trade; though there are some others well worthy of attention. It is not necessary to give a long list of varieties. Taking those referred to above the normal form of *A. bulbiferum* is one of the best, and as it produces the bulbils freely it is easy to propagate. *A. biforme* has longer and more drooping fronds, and being equally prolific is the greater favorite of the two. There are several slight variations of this, the best form has pale green fronds growing more erect, and drooping over sufficiently to give the plants a most graceful appearance. *A. flaccidum* is the most useful for suspended baskets, the long drooping fronds are of good substance. *A. feniculacum* is another good species, with finely cut fronds. *A. laxum pumilum* is one of the most popular. It makes a most symmetrical plant; the dark glossy green fronds are finely cut. This does not produce bulbils so freely as those referred to above, but as stated in a previous note, it always makes a higher price in market. *A. viviparum* and its variety *nobilis* are both very pretty in a small state, but are not likely to become useful market ferns.

Of those which do not produce the bulbils, *A. lucidum* is one of the most useful; this has broad pinnate fronds of great substance and the surface is a bright fresh green. It is rather slow, but when once established it keeps in good character for a long period, and is most serviceable for almost any purpose. It is only from spores that this can be propagated, and it requires great perseverance to get a good stock. I have succeeded in raising seedlings, but have had many failures. The spores must be taken just at the right time, and should be sown as soon as sufficiently dried. Under the most favorable circumstances they are very slow and several crops of other free growing sorts will generally spring up before the true sort appears. With a little

DRESSED EASTER PLANTS AT HODGSON'S, NEW YORK.

experience these fern-weeds may generally be detected by the shape of the prothallii, and should be carefully removed.

A. cicutarium is rather a small growing species with finely-cut erect fronds of a pleasing shade of pale green; there is not much difficulty in getting this from spores, and it may be included among those worth growing for using in a small state. *A. Pteridioides* is a very distinct species, but like *lucidum* it requires some perseverance to get up a stock. I have raised seedlings and among them have had some good varieties but have not yet succeeded in getting further stock of these varieties. *A. novæ-caledoniæ* is worthy of mention, the branching fronds have narrow pinnules of a deep olive green. There are several varieties intermediate between this and *Viellardi*, which has broad pinnæ. I will conclude the list with *A. longissimum*, which is a fine fern for suspended baskets. I have seen this with the long drooping fronds fully eight feet long, there is a variety *caudata* which has the pinnæ deeply lobes or serrated. These produce one young plant near the point of each frond, they will grow to a good size before they are removed.

As previously stated it requires some perseverance to succeed with spores. The fronds for spores should be taken from well-matured plants. I find in many instances that spores saved from old plants germinate better than those collected from younger plants. And there is also an advantage in saving from such as have been grown in light airy positions. After the fronds have been dried sufficiently there will usually be found some good spores in the packets which have dropped out. Not much good is got by rubbing up the fronds as this only gives a lot of rubbish from the spore cases. For aspleniums I like to use a little fine peat for the surface of the pots. When taking the seedlings out the seed pots should be kept for some time, as the first or even the second crop may prove to be something else. The seedlings are very slow during the early stages of growth, but after they are large enough for potting off they soon make headway.

Those propagated from bulbils may be treated in the same manner as fresh pricked off seedlings. I find loam and peat in equal parts with a good sprinkling of sand added suits the aspleniums in a young state, and for potting later on,

some leaf mould and manure may be used. The compost should be used in a rough state, and plenty of drainage given. They delight in a rather shady position but should not be grown under the shade of other plants. While growing they like a moist humid atmosphere but should never be over watered at the roots. Manure may be used after the pots are well filled with roots. Most of the aspleniums make symmetrical plants in quite a small state, but it is plants in 6-inch pots which are the most serviceable. One great recommendation is that they keep in good character for a considerable time. Of course they require a little hardening off before they are used for decoration. A little more exposure to the sun and air will make them finish off a brighter shade of green and also make them more serviceable.

CYRTOMIUMS.

Botanists now include these with the aspidiums, but I think it far preferable to retain the old name for all trade purposes. There are only three distinct species usually grown, *C. caryotidium*, a very distinct fern of strong growth, has broad pinnate fronds of a pale greyish green. It is most effective in a young state, and to make nice plants they must be grown on freely without receiving a check in any way. As soon as the plants get stunted either by age or neglect, they have a very untidy appearance. *C. Fortunei* (known also as *C. anomophyllum*) is of more erect growth; the rather long narrow pinnæ are of a bright fresh green when young, but with age they have rather a dull appearance. *C. falcatum* is the most popular of the group, indeed, it is one of the most useful ferns grown for decorations. There are several distinct varieties of this. The normal form has twisted pinnæ, and the fronds grow nearly erect. The best variety, known as *Fensomi*, has more spreading fronds, the pinnæ are very broad; the terminal one being of extra size, and deeply cut down into narrow segments, the fronds have a flat surface, and are of a bright glossy green. This variety may be recommended as a most effective fern either for a 5-inch pot, or for growing on into larger specimens, and there is always a good demand for well grown plants. It is not so generally grown as some ferns, but those who do succeed with it grow very large quantities.

DISPLAY OF EASTER PLANTS IN HODGSON'S SHOW ROOM, NEW YORK.

Culture: The cyrtomiums all produce spores abundantly, and if collected at the right time they germinate freely. The fronds should be taken as soon as the first spore cases begin to open, otherwise the best spores will be lost. The seed pots should be placed where the sun does not come on them, but where they get as much light as possible. They also do best in a cool house, being much more liable to damp off when placed in a high temperature. The seedlings should be pricked off in small patches as soon as the prothalli have well covered the surface of the seed-pots, and later on they should be divided again. Cyrtomiums make the most symmetrical plants when grown singly; but where good bushy plants are required three or four seedlings may be grown on together.

All the cyrtomiums like a good loamy compost. I find good yellow fibrous loam with a little manure added suits them well. Young plants may be grown on in heat, but they will do equally well in a cool house, though of course they do not make plants so quickly. They do best when grown on a cool moist bottom; being very liable to the attacks of thrips a dry atmosphere should be carefully avoided. For making good plants for early spring use they should be grown on in cool pits the previous summer, and confined to rather small pots. If kept just above freezing point during the winter, they will start away quickly if potted on and placed in warmth early in the year.

Although cyrtomiums do not realize high prices, they are profitable to grow, as they always find a ready sale and it does not take long to establish good plants when treated well.

GENERAL NOTES.

When the kentias and other palms first began to come to the front in quantities it

was anticipated that the trade for ferns would diminish, but far from this being the case; for at the present time they are more in demand than ever. I remember when only a few years ago you would not find half a dozen fern growers represented in Covent Garden Market. Now almost every grower who has a bit of glass goes in for growing ferns and they all seem to go.

Although we have very considerably extended the area devoted to ferns it has been as much as we could do to keep up a sufficient supply for our trade during the past winter. The prices too for really good stuff keep up well though since so many have taken up ferns, a lot of inferior stuff finds its way into the markets. The trade for palms has been equally good, more especially for well grown Kentia Belmoreana, this is undoubtedly the favorite palm of the day. Good Cocos Weddeliana are also in demand, especially medium sized plants. In 1894 very little good seed was to be had, and we begin to feel this now. A. H.

Salary of All-round Man.

What is a man worth who manages a business of about 5,000 feet of glass, 8 acres of land, attends everything in person, does all the repairing on greenhouses, dwelling-house and outbuildings, makes improvements, propagates about 50,000 plants, keeps the books and does the outside customers' business, without any help except the aid of night man while attending to the fires? W. F.

W. F. must be a daisy if he can do all this himself. I think he will soon make work scarce, and assistants for the florists' business, jobbing carpenters, glaziers, painters, bookkeepers, etc., will have to turn their attention to some other lines of business, for possessing the qualifica-

tions to fill all those positions and the ability to execute them all in addition to attending to the wants of outside customers and stoking fires at night inside, he must be a bonanza. Anyone having such a gem in his employ will of course fully appreciate him and guard him so carefully that he can never get away either by fair means or foul, coaxing or cuffing, kindness or kicking, should never allow them to part company. We have heard a great deal of late years about evolution, but this outstrips all we have ever heard of in that line, and with a few hundreds of such able and willing men the florist business can soon be brought down to a very fine basis. Such men of course will receive correspondingly high salaries. To raise and grow 50,000 plants, which at a low estimate should be worth at wholesale 3 cents each or \$1,500, repairs to greenhouses, 5,000 feet of glass, would probably cost \$10 to \$12 per year; to dwelling house—well this is an unknown quantity, as many dwelling houses are kept in repair for \$2 or \$3 per year for several years in succession—the outbuildings may possible be in rather bad repair and need say \$5 to \$10 per year to hold them together. About the eight acres of land, that is also somewhat guess work, as it may be in grass or other condition. If the former a crop of hay of say eight tons, more or less, may have to be made and cared for in July, if in the other condition—well I cannot form any idea what labor it may require. About the improvements it seems rather puzzling to form any correct basis of calculation without further facts in the case—for instance I have known some men to think they were improving time by leaving a gate open to save themselves the trouble of shutting it each time they had to go through, and by adhering to such methods of improvement allow

the neighbors' goats, pigs, etc., to ramble all over the place, gathering up all the stray tin cans, digging up the potatoes, etc. This of course is rather an extreme case of improvement, and I do not infer that W. F. means anything in this line so radical, but as the word has such a wide scope, from the leveling of a barrow-load of soil to making a good road, or nailing up a broken fence rail to building a new barn—anything between these points may be and really is an improvement, but without knowing what they are we cannot form any correct estimate of the value of them.

The bookkeeping must be considerable on such a place, and the doing of the outside customers' business means a very trying thing, for one can form no idea what their business may or may not be. In conclusion I would advise W. F. if he has such a man in his employ to treat him fairly, pay him what the business will afford after careful calculation of the net income, after deducting interest on investment, coal, pots, manure, and the one hundred and one other items which go to make up the expenses of running greenhouses. After all these things are carefully computed then divide your profits by paying him all that you can in fairness to yourself and family, and as he is undoubtedly as bright mentally as he is physically he will see at once that he is being fairly and honestly treated and put forth still greater efforts to excel.

JOHN N. MAY.

Piping.

I desire to build a greenhouse 100 feet long and 19 feet wide, and heat same with hot water, using a common tubular steam boiler for heater. The sides will be 4½ feet high double boarded with row of sash under south plate; sash bars 12 feet long; house running east and west with shed on west side for heater.

I cannot excavate for pit on account of water, therefore will have to pipe the house as described by A. L. Shriver in AMERICAN FLORIST of March 21. I desire to partition off 25 feet on west end of greenhouse for a temperature of not less than 60°, the balance of the house to be used for carnations. A windy exposure, and temperature frequently reaches 15° to 18° below zero. Please arrange size, number and location of pipes for me.

SUBSCRIBER.

He will need seven runs of 4-inch pipe in house of the dimensions given; one 4-inch overhead flow and six returns. This should give a temperature of 55° to 60° when outside temperature is 18° below, with average water temperature 180° in pipes.

If wrought pipe are used enough extra runs will be required to make the same amount of radiating surface, viz.: If 2-inch be used, fourteen runs; two overhead flows and twelve returns. If 1½-inch pipe be used for returns it will require sixteen returns. If wrought pipe be used would prefer the 3-inch as there is less friction to circulation and it will contain double the volume of water that 1½-inch does and as a consequence needs less attention than any of the smaller sizes. In this respect the 4 inch is preferable, having four times the volume of 2-inch, and double the radiating surface, but more labor is required in construction when using the 4-inch cast iron pipe.

The overhead flows should be run level the first fifty feet, then down one inch to ten feet, and as near to ridge as ventilating apparatus will allow. If two 2-inch flows are used, run parallel and supply-

EASTER DISPLAY AT J. H. SMALL & SONS, NEW YORK.

ing their respective sides, when flows reach far end of house drop to returns under benches or on walls, whichever mode of placing pipes be used; if pipes are on walls (as they should be) angle from flow direct to returns; if 4-inch flow be used drop perpendicular to level of returns, branch each way to returns; the grading on all returns not less than one inch to ten feet.

For heating the twenty-five foot room on west end to not less than 60° I would advise two extra runs of 4-inch pipe, or an equivalent if smaller pipe be used, and would have them all independent of east end of house, the same as if two separate houses were being piped; this can be done by connecting all returns into one upon reaching partition, then by duplicating piping in east end he will have the two extra pipes in west end. The supplies for west end can be taken direct from main flow by tapping on sides with suitable valves placed in each supply to control circulation; or still better to run a separate supply direct from boiler.

If boiler has not been tapped for hot water work would cut a 4-inch hole in bottom midway between bridge wall and rear end, top hole directly over grate same size, use cast flanges threaded for 4-inch wrought pipe, bottom of flanges cast same curvature as boiler, use a lead gasket made from sheet lead of eight pounds thickness under each flange, bolt flanges on with six ½-inch cap screws, then with a calking tool calk around flange on lead gasket and it will make a tight joint; the wrought pipe will calk into bell of cast iron pipe the same as if cast iron.

I believe I have covered all the ground; if subscriber wants further information he may feel himself at liberty to write me. Hoopston, Ill. A. L. SHRIVER.

Changing Plan of Greenhouses.

Replying to your correspondent W. F., St. Paul, who wishes to change two small 10-foot houses into one 20 feet wide by means of a hipped roof, there is nothing to prevent him from constructing it as proposed, but are the advantages to be gained equal to the evils of such a structure? First the proposition to put

ventilating sash on the lower side of each hip will give him a great deal of trouble to keep the rain from washing in at every shower, and it will be necessary to devise a plan to divert the water running off the upper part from the tops of these sash. While this can be done by raising the sash above the other glass and forming a drip at the header, yet it will be a clumsy looking affair at best. Then the flat piece or upper part of these hips will be a place for snow to lie in bulk with but little chance of its melting off, and in case of a heavy snow would be very apt to carry some of the glass through on such a flat roof. Furthermore, being so flat, it would very hot on warm days without any ventilation at the center or highest point.

If W. F. is not afraid of shading other houses I should advise him to raise the roof considerably in the center and put the ventilation opening from the center ridge plate instead of on the lower hips as proposed. This would probably raise the house at the ridge 2 to 2½ feet above what W. F. proposes, but it would make it a much better house for all practical purposes, and although it would take probably 200 feet more glass, the construction would be considerably less, as it would be straight lines from the gutters to the ridge plates, and for growing plants it certainly would be much better and the temperature could be more evenly regulated.

From what little I know of the winters in the section of the country where W. F. is located I should think twice very seriously before building a house such as he proposes, and unless there was some very important reason for so doing it I would not do so at any price. But possibly there is some particular reason why your correspondent wishes to build in this particular form. In that case he should take every precaution possible to protect the headers at the top of the ventilating sash from leaking. To do this it might be necessary to form a small gutter above each sash to divert the water. But no matter how he decides to build it is very important that the center columns should be quite sufficient to carry any weight which it might be called upon to bear,

EASTER DISPLAY IN FLEISCHMAN'S WINDOWS, NEW YORK.

otherwise the house would spread badly, which in turn would lead to trouble with the ventilators, etc.

Possibly W. F. thinks that the proposed flat roof would enable him to keep his plants nearer the glass, and thereby gain some advantages. This in practice is not so, as the little additional height of the ridge with light from both sides would be fully equal to the other, and with the consideration about snow and rain taken into account it would be a great advantage on the score of light in winter and better ventilation in summer, hence better adapted for plant culture all around.

JOHN N. MAY.

Oak Posts.

How long will black and yellow oak posts last if cut now and used in June for greenhouse building, the posts to be 7 to 8 inches in diameter, and will it pay to use these posts?

R. H.

My experience with oak posts for greenhouse building has been that it does not pay to use anything in oak except what is known as clear *white* oak. These if fairly well seasoned will last from 10 to 15 years in most soils, though in a light sandy soil they do not last so long as in clay soil, while all other kinds of oak with us have to be replaced in five or six years at most. All the farmers to whom I have ever mentioned this matter always say they will not use anything but white oak for posts for fencing as it does not pay to do so. Where other oak has been used in this section, from want of knowledge of its value, I have never known of its lasting over six years, and more frequently it had to be replaced in less time.

The best post for greenhouses is first young sound trees of yellow locust, next red cedar and cypress, white oak coming next, with good sound chestnut in some soils. Here the last named, on a clay and

gravel soil, is hardly worth using. Yellow pine, if it can be had with plenty of pitch in it, is a good post, but if there is any sap in it, that will be rotten in two years. If yellow is used the greener it can be had the better. Old, dry, seasoned yellow pine, even with plenty of pitch in it, is of very little value for this purpose. At least such has been the experience of

JOHN N. MAY.

Cycas Revoluta.

How should the dry stem of *Cycas revoluta* be treated, and what soil should be used?

SUBSCRIBER.

Dry stems of *Cycas revoluta* should be potted at once when received, the most satisfactory soil for the purpose being good loam of rather light character, to which has been added a sprinkling of bone-dust. Some drainage material should be used in the pots, and the stems firmly potted to a depth of at least one-third of their length, using as small pots as the size of the stems will permit. For example, stems weighing from two to four pounds can be readily potted into 6-inch pots, while those weighing five to ten pounds usually require 7-inch or 8-inch pots. A good watering should be given after potting, and the cycas should then be placed in a warm house, a temperature of 70° to 80° usually starting them in a few weeks, but occasionally a stem will be found that only produces roots the first season, in preparation for a stronger start the second year.

Shading will be needed to protect the tender young leaves, for they are very easily injured while unfolding, and it is essential at this period particularly that the plants should not suffer from dryness, else the leaves will be crippled. After the leaves are fully developed the plants should be removed to a cooler and more

airy house, a temperature of 60° being then ample, but to retain the deep green color of the foliage it is still advisable to shade somewhat during the summer.

W. H. TAPLIN.

Cytisus Andreanus.

In your issue of April 4, you have some valuable information as to *genistas*. Your remarks are, however, confined to *G. canariensis* and *G. racemosa* (syn. *fragrans*). It might prove of value to others besides myself to learn something of *G. Andreana*, which seems now to be the one preferred upon the continent.

G. N. H.

Cytisus Andreanus, sometimes called *Genista Andreana*, is of quite different character from *C. racemosus* and *C. canariensis*, and is a form of the common broom (*Cytisus scoparius*).

C. Andreanus is an upright growing shrub, the flowers of which are deep yellow except the keel, the latter portion being bright red, and is the chief distinctive characteristic of this variety.

The variety in question was found growing wild in Normandy about ten years ago, and is much esteemed as an outdoor shrub in Europe, and is also probably hardy in the United States at least as far north as Philadelphia.

C. Andreanus has been tested to some extent as a forcing shrub for Easter decorations, but has not proved a decided success, the plants being so sparsely covered with foliage that they appeared rather ragged and straggling.

W. H. TAPLIN.

How to Raise Sweet Potato Plants.

Would advise Mr. XX to make a new hot bed, the same as for early vegetables. Instead of using loam on top of the

manure, cover with three inches of sand; then take medium-sized sweet potatoes and press each potato down in the sand lightly and so they will not touch each other; then cover with an inch and a half of sand, keep the sash well closed at night, in daytime ventilate a little, water lightly as the sand gets dry on top and increase the water as the sprouts come up.

The plants will be fit to pull when four or five inches high. When you pull your plants hold your hand on the sand around the potatoes so you won't disturb your potatoes. In ten or twelve days or two weeks a second crop will appear. I should say you would need to plant one bushel to get two to three thousand plants. Start your hot bed now.

ARNOLD STAPPEN.

Charles River Village, Mass.

Cupid Sweet Peas.

ED. AM. FLORIST: In reply to your letter stating that you have had some complaints that Cupid has failed to grow well under glass in winter we would state frankly that we likewise have received similar complaints, in fact in some of our own trials in mid-winter have only had 25% of the seed germinate. The fault is not however, with the seed, as in our own trials, both in the early fall and the past few weeks from 90% to 100% of the seed has germinated. Messrs. Hurst & Son, our London agents, likewise report that the seed grows fully as well for them.

Below we give you in full the circular which we issued in February to answer inquiries received from our own trade. [That part which applies to failure to germinate is as follows.—Ed.]

From our own experience both at Fordhook and with several florists, we find the seed requires a good deal of warmth to germinate readily. We would not advise planting in an ordinary window garden until well along in March, when there are plenty of sunny days. Our customers, of course, must take into consideration the mid-winter is the most difficult season in which to start seed of any kind, as the aid of nature is then almost entirely lacking.

We have to-day mailed you under separate cover 20 packets of Cupid and would request that you give these to some of your leading florists, as we are sure that the germination and growth now would be perfectly satisfactory. We would be pleased if the publishing of this letter in the FLORIST should bring forth expressions of opinion from others as to just how to grow Cupid as a pot plant in winter. Yours truly,

W. ATLEE BURPEE.

Phalænopsis Schilleriana.

The illustration shows a corner in the Phipps Conservatories in Schenley Park, Park, Pittsburg, Pa., with a plant of *Phalænopsis Schilleriana* (moth orchid) bearing ninety-six blooms, grown by Mr. Joseph Spring, foreman of the conservatories. The plant is a side growth of one cut down by the memorable hail storm of '93 in the greenhouse of Mr. Thos. Mayberry. The color of the flowers is a very fine pink, much darker than the blooms on the plant having 102 flowers, noticed some time since. It has been universally admired. REGIA.

Sweet Peas.

In answer to O. O. I would say that my sweet peas are in full bloom since the first days of this month. I don't mean to say that I am ahead of anyone but they have been grown outside without any protection. M. M. LAPOUYADE.

New Orleans, La.

New York.

Flower receipts have been considerably reduced in bulk during the past week and the relative balance between supply and demand has been more evenly maintained. There has been increased activity in the large retail stores owing to the number of weddings, receptions and other occasions requiring the use of flowers. In the wholesale establishments business has been running more smoothly on account of the decreased receipts, but there is still much more stock, especially of the commoner grades, than can be disposed of in a legitimate way, consequently the street men have things generally in their favor and wherever there is found a surplus of stock there also will be found a horde of jabbering Greeks and it takes close watching and sharp practice to keep up even with this disturbing but apparently indispensable element. The quality of the roses now coming in is below standard generally.

Taking into consideration the average of quality, quantity of cut and regularity of demand for the past season it would appear that Bride and Bridesmaid are still the leading varieties for this market, and will no doubt be planted as extensively as heretofore for the coming season. The quality of young stock seen at the various establishments appears good, and many growers will be ready to plant earlier than usual. Hybrids have not taken their usual prominent place in the spring trade, that is with the exception of Brunner; this variety holds its popularity and not only makes it uphill work for the other hybrids but also for Jacq and American Beauty when at the height of its season. American Beauty has puzzled its growers worse than ever this season, the number of unproductive houses being unusually great and the proportion of abortive blooms in the wholesale market discouragingly large. Beauty growers are plucky, however, and one seldom hears of one willing to quit his favorite variety even under continued adverse fortune.

One of the most effective pieces of flower work seen this season in New York was a funeral pall of smilax thickly studded with lily of the valley, a wreath of dark bronzy galax leaves and Meteor roses, the latter massed on one side of the wreath, being placed in the center. The wreath was tied with broad white ribbon.

Walter F. Sheridan is moving to his new wholesale store at 39 West 28th street. Walter is extremely popular with his associates in the wholesale trade and his advent on this hustling thoroughfare will be greeted with the utmost cordiality from the trade already located there. 30th street is not yet left desolate, though, for it still boasts seven wholesale cut flower establishments.

Out door planting of the hardier bedding plants is now at its height. Pansies and English daisies are seen massed in beds, baskets and vases in parks, front areas of the hotels and public buildings and in window boxes in the residential districts.

On and after May 1, C. H. Joosten will occupy the fire store and basement at 193 Greenwich street. Its close proximity to the ferries and elevated railroad stations make this the ideal location for Mr. Joosten's trade.

At a recent wedding in St. Agnes Chapel a very effective decoration was made in white and pink, longiflorum lilies and pink hydrangeas being used, with palms as a backing. The center aisle was

an avenue of tall kentias, the pots being covered with white crepe paper tied with satin ribbon. At either side of the church were groups of specimen palms of a large size. The rood screen was banked with lilies, large clusters at each end, those next the aisle being tied with wide white satin ribbon. Hanging between the bunches of lilies was a thick garland of hydrangea. The choir stalls were also wreathed with hydrangea flowers. The altar and altar rail were banked with lilies; while large palms and tree ferns made a most effective background to it all. Sieb echt & Wadley were the decorators. S. M. T.

Pittsburg.

The Florists' Club did not hold a business meeting on Thursday night, 23d inst., but instead devoted the evening to making a success of the banquet and reception tendered the new superintendent of Schenley Park, Mr. Wm. Falconer. The room was very handsomely decorated with palms and foliage plants furnished by John Bader, while the tables, four in number, arranged so as to form a square, were decorated with choicest specimens of flowers. John L. Wyland sent roses, Brides, Bridesmaids and Mrs. Pierpont Morgan; Fred Burki, Brides, Bridesmaids, Meteors and Perles; Theo. F. Beckert, bougainvillea, Helen Keller and Buttercup carnations, amaryllis and sweet peas; E. C. Ludwig, lilies and white lilacs; Gustave Ludwig sent Albertini carnations and bougainvillea. These were beautifully arranged in elegant jardinières and vases furnished by Randolph & McClements. Mr. Henry H. Negley, chairman of committee, in a very appropriate address, welcomed Mr. Falconer, who responded in an interesting reply, expressing his pleasure of the reception and highly appreciating the honor of meeting the representative florists of this section. He also spoke with pride of Schenley Park and the great possibilities its future holds, as the natural advantages it possesses are fully equal to if not greater than any other park in the country.

Mr. E. C. Reineman, president of the club, then introduced each member to Mr. Falconer, after which all were seated, to the number of 75, and enjoyed the good things of the season served by one of our leading caterers; after full justice had been done the tables were cleared, cigars, etc., passed around. Mr. Negley, acting as master of ceremonies, addresses were made by President E. C. Reineman, James Dell, John Bader, W. R. Watson, A. F. Dalz II, M. C. Dunlevy, Fred Burki, J. R. Murdoch, P. S. Randolph, Alex Nelson, John Herron, J. Ludwig, Ernest Maver, O. A. C. Oemhler, E. C. Ludwig, Geo. Oesterle and Mr. Falconer, who feelingly mentioned his acquaintance with the late Mr. Bennett, having known him, his father and family for many years, and saying that the welcome extended so heartily by the florists' club was but a repetition of the welcome that he and his family had received ever since their arrival here. He wished to be considered one with us and would most certainly become a member of the club. Mr. Fred Burki, seconded by Mr. M. C. Dunlevy, moved that the cut flowers used in decorations be donated to the different hospitals of Pittsburg and Allegheny and to the Fruit and Flower Mission; carried unanimously, and Mr. Henry H. Negley kindly volunteered to see that they would be delivered as desired. About twelve o'clock the meeting adjourned, everyone well satisfied with the way in which the committee,

PHALAENOPSIS SCHILLERIANA AT SCHENLEY PARK PITTSBURG.

consisting of H. H. Negley, Sam'l McClements and Geo. W. Burke, had conducted the reception intrusted to their care.

Trade has not improved any during the past week, the weather being too warm and not many social functions going on. Funeral work has helped several to keep things moving, and all are patiently awaiting an improvement in the demand.

Elliott & Ulam secured the decorating at the banquet given by the Americus Club on the 29th in honor of the birth of Gen. U. S. Grant, at the Monongahela House, and the decorations sustained the reputation of this firm for effective work.

Mr. Julius Ludwig contracted for the planting of the park at Indiana, Pa., belonging to the West Penn. Division of the P. R. R., also at Homer City. He expects to show something very fine.

Mr. M. C. Dunlevy of Carnegie has settled with the Gas Line Co. for damages to his greenhouses and stock at the recent explosion. The satisfactory adjustment, and without delay too, is very creditable to all concerned, and especially so as to Mr. Geo. W. Burke, superintendent of Highland Park, who appraised and whose award and judgment was acceptable to both parties concerned. Mr. Dunlevy's son continues to improve, and Mr. Paul Andrew (not Bruno, as I had it previously) is considered out of danger. A settlement of their damages will, it is hoped,

be as promptly arranged as those of M. C. Dunlevy were.

Mr. Gus Ludwig, finding his stand in the Allegheny Market too small, has rented a basement room 75x20 on South Diamond street, and will fix it for a work and storage room; this will enable him to carry stock of plants, etc., which is impossible at his other stand.

Elliott & McGinnis report a very satisfactory trade in seeds. This is their first season as a firm, although well known as formerly connected with the B. A. Elliott Co. Their cut flower trade is like the rest, a little slow at present.

A visit to Highland Park last Sunday well repaid the exertion of getting there. It was a sight worth seeing, a grand outdoor display of tulips and hyacinths. Supt. Burke had planted nearly forty-five thousand of these, and they were in their prime. A very large number of people visited the display, the weather being simply perfect that day. REGIA.

Boston.

Spiraea Anthony Waterer was exhibited by R. & J. Farquhar at Horticultural Hall on April 25. The plants were in small pots and were in profuse bloom. A certificate of merit was awarded. From the same exhibitors came a plant of a new *silene*, *S. pendula* Amalia, bearing deliciously fragrant pink flowers. It

received a complimentary notice. The usual large Saturday display of cut flowers was missing, there being but a few exhibits staged. Presumably the exhibitor are holding back until next Saturday, May 2, which is the first regular prize day after the spring show and which always brings out a fine display.

The cut flower trade has taken on a better tone, the weather being cooler and the big surplus forced in all at once by the unseasonably hot period having now disappeared, leaving the plants well stripped of flowers. There has been a continued good demand for carnations and extra quality blooms sell rapidly at fair prices. Roses have deteriorated somewhat in quality and violets show plainly that they are drawing to a close for this season. Lilies are quite plentiful and cheap.

E. A. Wood and W. J. Stewart have gone to Cleveland, O., to attend the executive committee meeting of the Society of American Florists.

Cleveland.

The executive committee of the S. A. F. convened pursuant to previous arrangements at the Hollenden April 28, and buckled down to hard work with characteristic grace. The absentees were Waldhart of St. Louis, who was unable, owing to illness, to be present, and Mr. Dawson, who was unavoidably detained. Mr. J. M. Gasser of Cleveland was selected by President Scott to act in their stead.

Among other thing that which most interested local florists was the matter of a convention hall. After a tour of the available buildings the committee selected Army and Navy Hall, but owing to the representations of the Cleveland Florists' Club kindly so far altered their choice as to select in addition the County Armory building, a very large one, which will give ample room for all trade exhibitors, as well as for the flower show, which it is intended will be given by the local florists. This hall is amply lighted overhead by huge skylights, has an inexhaustible supply of committee rooms for all purposes, and in the way of artificial illumination is provided with an abundance of electric light. The location is also very convenient to hotels and business, and is near Army and Navy Hall, which will be used for meeting purposes. Altogether it felt that the committee has done well for us.

Owing to pressure of business at home there was a natural desire on the part of the committee members to get through as speedily as possible, and for this reason the social side of their meeting here was restricted to a tally-ho ride tendered Wednesday afternoon by Mr. J. M. Gasser, and a banquet at the Hollenden in the evening of the same day.

Bright and early Wednesday afternoon the coach drew up at the Hollenden, and the committee and host sallied forth and beheld the splendor of their chariot. The same was elaborately decorated with flowers garlanded on the sides and disposed in available places on the top. Being composed of marguerites and red and yellow Tournesol tulips, the effect was decidedly gorgeous. Each of the gentlemen was carefully concealed behind a particularly large and glowing tulip, and the entire turnout, with its soloist perched on high to wake the echoes, was a conspicuous object as it invaded the peace-precincts of the West Side. On the road out the party stopped for a short time at Mr. Herman Hart's to stretch their legs and accept the kindly hospitality of Mr. and Mrs. Hart. Arrived at the Rocky

River establishment of Mr. Gasser, the party inspected the greenhouses and stock, partook of a most excellent lunch and returned to the city by way of the Lake Avenue Greenhouses of Mr. Gasser, arriving at the Hollenden in good time for the banquet tendered by the local club. The room was beautifully decorated with palms and flowering plants, and the tables, extending down both sides of the room and across one end, were handsomely provided with cut flowers. One of the most noticeable features in this was a number of vases of chrysanthemums, single stem Viviani-Morel, excellent in every respect, from Mr. James Eadie's establishment.

In addition to the out of town guests, Mr. J. G. W. Cowles, the president of the Chamber of Commerce, and Mr. Wilson M. Day, director-general of the Centennial Commission, honored us with their presence. A very pleasant time was spent, the guests in the course of the evening favoring those present with words of eloquence, wit and wisdom that will long be remembered. The assemblage broke up about midnight, and the Cleveland part of it went home firm in the belief that the S. A. F. and its executive department is all right. In fact if the Cleveland florists should have made as good an impression on the committee as they have done on us, how immensely pleased everybody must be with each other! A.

Philadelphia.

The bedding plant men are now loaded up with business, and their teams are kept going constantly delivering orders. There is not much new in this line, the same general stock being seen as in the past few years. Cannas will be largely planted, as will also crotons, when the weather warrants. Crotons, both in the park and at Girard College, where they were to be seen at their best, attracted a great deal of attention.

We believe it would be greatly to the benefit of the trade if the different florists' clubs in all the large cities would use their influence in such a way as to get the proper authorities to set aside a portion of the public parks to be known as the flower garden, and in this section show what could be done with ornamental foliage and flowering plants. It properly planted and kept up this would soon become the most attractive part of the city's pleasure ground, and public opinion would compel the necessary annual appropriation.

Business has been quiet the past week, but about up to the average for the season. The weather has been much cooler, but the expected hard frost that many feared did not materialize. The roses are all getting smaller, and show plainly the effects of the roasting they received. Beauties are much off color, and from \$2 to \$2 50 per dozen is the top figure for the best. Second crop Brunners and Laings look quite well, and bring from \$1 to \$2 per dozen. The best teas are now \$6 per hundred; smaller roses \$2 to \$3. Carnations are plentiful at from 75 cents to \$1.50, and a few extras go slowly at \$2. Sweet peas are in fair supply at from 50 cents to \$1 per hundred. They are not quite so good as they were, being short in the stem.

This is a bicycle age, and the streets are now lined with them all day long and far into the night. The florists have caught on largely, and if they would all get together quite a good sized club would result.

The gunners are having a lively time; two matches last week with organized

clubs. One was on the 23d with the college boys of the University of Pennsylvania, whom they easily vanquished by 34 points, as the following score at 25 targets each will show:

FLORISTS.		UNIVERSITY OF PA.	
W. K. Harris	14	Freed	21
J. W. Colflesh	21	Nelson	9
John Burton	19	Ashbourn	15
A. B. Cartledge	20	Steel	11
Chas. D. Ball	13	Cooper	11
W. Peters	23	Roberts	14
G. Anderson	23	Paul	18
	133		99

It was different in their contest with the Penn Club of Norristown on the 25th, they being defeated by the narrow margin of 2 points. Florists, 153 out of a possible 300; Penn Club, 155.

In the match on Thursday the 23d, the Donaldson medal was won by J. W. Colflesh by a score of 21 and a handicap of 3, making 24. Anderson, scratch man, made 23. K.

Toronto.

The carnation meeting of the Gardeners' and Florists' Association was a great success. The tables were filled with magnificent bunches and single specimens. Mr. Geo. Mills brought large bunches of Lizzie McGowan and Bride of Erlescourt, both very fine, cut as they came on the benches; Miller & Son sent many specimens of the newer kinds; Manton Bros. a big bunch (with asparagus green) of Scott, Portia and Harrison; Spears & Muston also a large bunch; J. H. Dunlop a few Stuarts, very fine; and last but not least Mr. Geo. Hollis brought down specimens of some of his seedlings, some of which will doubtless be heard from later on. Some of them were really immense, and apparently ahead of anything in commerce yet. The association, however, withheld giving certificates of merit to any of these until after having seen further proof of their excellence.

Mr. Hollis read an extremely instructive and interesting paper, concise, practical and to the point. So much has been and is being written on this subject that I forbear to give the whole essay, but some extracts may be useful:

"As to raising new varieties, which a good many are doing just now, I think we make a great mistake in raising seedling varieties from old varieties. I have never seen anything written on this subject, but in my opinion it is of vast importance. Healthy seedlings not showing a trace of disease in their second year I consider most likely to bring the healthy robust plant that we are all looking for. I should not advise crossing in too closely.

"Albertini should be grown rather warm, 55° at night; Mr. Dunlop does this variety very well. Rose Queen, a fine, robust, healthy grower, strong stem, should be grown like Albertini. No one will go far wrong in planting this variety. Peach Blow, similar in color to Rose Queen, thinner and more wiry stem, free flowering. Bridesmaid, extra strong robust plant, very long stem, inclined to come in crops; good for high class trade; 50° at night. Meteor, about same color as rose of same name, a first class variety, very fine stem and flower, should be grown cool. Storm King, very fine white, moderate bloomer, should not be forced. Lizzie Gilbert, one of the finest scarlets, strong grower and very free, should not have chemical or other strong manure or flowers will burn.

"Helen Keller, a variegated variety of great merit, strong stems and large flower, should be grown in an even tem-

perature and not kept wet in winter, the north bench of a long-span-to-south house would suit them best. Alaska, another good white, makes a fine compact plant. Some people object to smooth petals, I consider it extra good. Minnie Cook, variegated in the way of Helen Keller, very strong stem and large flower, has done very well with me. Bride of Erlescourt I expect to see in better shape next year. I have found stiff soil with very little manure suits this variety best. Should be grown on the cool side. Triumph, an improvement on Scott both in flower and stem, very free, one that will make its way. Abundance, a short, sturdy growing plant, large flower, would be good for pot.

"In describing these varieties I have no interest further than a love for the divine flower; it is a special favorite of mine. I have raised seedlings for over twenty years and this year will grow about 2,000."

In the discussion that followed Mr. Hollis thought that no one ought to be much bothered with rust who used the arsenical preparation recommended by Mr. E. G. Hill; Mr. Muston said that he had not found Mr. Hill's formula of sufficient strength to be thoroughly effective.

Mr. E. Worden also read an interesting paper from a strictly trade standpoint. Mr. W. spoke strongly against inside planting.

The weather still holds very mild. I never remember being able to leave ventilation open so much in April before. Out door garden operations are now in full blast. The plant trade is looming up larger and larger every day. Market trade has been rushing. Cut flower trade appears to have started on the down grade, though there is still a large quantity of stuff changing hands. E.

San Francisco.

Business is not what it should be at this season of the year. The demand for some things is very small. This is particularly true of lilies, which certainly are a glut on the market and it is very hard to dispose of them at any price. For several years past lilies have been rather scarce at this time of the year, but so many more were planted this season than on previous ones that they are now a glut on the market. The late sharp frosts have nipped a great many outdoor roses, which were in bud, thereby holding up the prices a little on all inside roses, which so far are holding their own. A few violets are yet to be seen in some of the stores. Carnations are now of fine quality, and specially Scott. Grallert of Colma is sending in some fine yellow carnations which find ready sale. We note some very excellent rhododendrons in the florists' windows, the pure white in particular attracting considerable attention. The late frosts last week have spoiled all soft wooded stuff that was coming along outside, cannas, etc., being nearly all cut down. Some very good Emily Henderson and Mrs. Gladstone sweet peas are being sent in by Mrs. Merriman. Blanche Ferry also can be had. These bring 1.50 per dozen bunches, and many more could be disposed of if they were to be had.

The first spring rose show of the San Mateo County Floral Society takes place in Redwood City, April 30 to May 2. Great preparations have been made for this show, and as nearly all of the wholesale growers for the San Francisco market reside in this county it is to be hoped that it will be a success.

The annual flower show and festival of that charming seaside city of Santa Bar-

A FIELD OF CANNAS AT J. C. VAUGHAN'S, WESTERN SPRINGS, ILL.

bara took place last week. The show was formally opened on Wednesday afternoon the 15th, with a grand flower show in the Opera House. The display of flowers of this wonderful city was very attractive. In the evening there was a promenade concert. The event of the week, namely, the grand floral procession of decorated floats, carriages, carts, equestrians, etc. took place on the following day, and was one of the grandest sights ever witnessed in California, and in no other place could it be duplicated except in California. This was followed by the "Battle of the Flowers" which was truly a novel sight. After this was over flowers were knee deep all around. A great number of visitors from the east and other points witnessed this festival. It may also be interesting to know that Santa Barbara was the first city in this state to originate the idea of flower festivals, which are now so popular throughout this state, there being hardly a city of any size or importance now that does not have its annual carnival.

Mr. Andrew McDonald, formerly with Col. Eyre, has entered the employ of M. Lynch at Menlo Park.

The annual floral carnival of Los Angeles is now under way. The rose show and carnival of the Santa Clara County Floral Society takes place the first week in May in San Jose, and promises to be equal to the fiesta in Los Angeles. The

Santa Cruz festival does not take place until June. In San Jose the public schools had acres of sweet peas planted to decorate the city with during the carnival, but on account of the late dry spring they will not be in bloom.

The outdoor bloom in Golden Gate Park is fine just now. All around the conservatory there are immense beds of yellow pansies, which make a very brilliant showing. Along one of the main drives some immense dracaenas are being planted.

Mr. Chas. Fick, late foreman for Wm. Hale of the Dwight Way Nursery, has resigned his position and is now in Colma.

Mr. W. Morris who has been with the Sunset Seed & Plant Co. for several years has resigned his position and left for the east.

The fine rains that fell the last two days will greatly benefit all growing crops and is likely to bring sweet peas around all right. Also onions, leeks, cabbage, celery and late plantings of lettuce. It will prove a great boon for Cupid, which is a very slow grower. If this warm moist weather continues now after this rain it will be of great benefit, as previously after these rains, cold north winds have set in doing much damage to soft growing crops and drying up the ground very rapidly.

Mr. Benj. Casey, whose life has long been connected with horticulture in Cali-

fornia, died at his home in Campbell, Colo., last week. Mr. Casey began importing plants and seeds into California in the early 50s, and was widely known as an authority on many subjects pertaining to floriculture.

The Los Gatos Floral Society is growing very rapidly in membership, and now numbers over 100. Every month they give an exhibition of some popular flower. The monthly show in April will be of poppies, and it is expected that many new sorts will be brought out. Mr. Culter is now president of the society.

Mr. M. Lynch of Menlo Park spent several days in Santa Cruz last week on business.

Mr. R. E. Evans, the well known florist of Salt Lake City, is spending several days with Mr. M. Lynch at Menlo Park, accompanied by his wife. Mr. Evans was surprised to see the mild weather we are now having, and is also greatly interested in the floral carnivals.

Mr. John Rock, the president of the California Nursery Co., was a caller during the week.

Again is California going to give to the world a dwarf sweet pea. This time it is Blanche Ferry, one of our most popular sorts. It is claimed to be identical with Cupid, except in color, which is the same as Blanche Ferry. It is to be sent out this fall by one of the largest growers.

Mr. Wm. Hole's place at Berkeley,

known as the Dwight Way Nursery, has been disposed of for a number of years to Aby & Fromenweiler. This is a very large nursery and for years has been one of the leading cut flower establishments on the coast.

The large greenhouses and the cut flower department of the Sunset Seed & Plant Co. has been leased by the foreman, Mr. Sidney Clack. This establishment has long been known as one of the largest places on the Pacific Coast, and enjoys a very fine reputation for the quality of stuff sent out from there. Mr. John Jacks, the inside foreman, has everything looking well in the houses, and as there is a large area of glass quite a lot of help is needed at all times. Mr. Chas. Mitton, an expert carnationist, has charge of the carnation houses, and their always healthy condition reflects great credit on that young gentlemen. The seed and plant business of the company, will continue as heretofore. Mr. Clack has the best wishes of the trade in his advent into the ranks of the growers, and it is to be hoped that success will follow his efforts.

METEOR.

Chicago.

The glut is still with us. For fifteen days stock has been piling in, and warm, humid weather has injured the quality quite seriously. At the beginning of this week prices were fairly firm, as far as good stock was concerned, but with the continued warm days they fluctuated more and more. Really good selected stock holds at same figures as last week, but poorer flowers go much below them, particularly in large lots. Great quantities of the cheaper stock go out of town. First-class Beauties are not over-plentiful, and as the regular demand keeps up they do not fall in price, some during the past week going up to \$3 a dozen. A number of Beauties were required for the Pullman wedding, but this affair did not really make much impression on the market. Some of the Beauties come a little off color, as if burned on one side, the evident result of the humid heat varied by dull days.

All the spring flowers are in full blow. Lilac is all out in Chicago, and will soon be over. While some dealers complain of feeble demand, others think the crop is hardly up to the usual quantity. Apple blossoms are seen everywhere; this is unusually early for our locality. Snowballs are sent in, but are unsalable. Irises hold at the same prices as last week. Daffodils, poet's narcissus and hyacinths are the same as last week; some very beautiful parrot tulips are seen.

Sweet peas range from 50 cents to \$1; good long stemmed flowers sell well, others can't be given away. Fine gladiolus is seen. It is quite possible local trade may brighten a little during the next week, as several large weddings are expected.

The quarterly meeting of the Horticultural Society of Chicago was held last Saturday afternoon. Several new members were elected and action taken toward securing hall for the next exhibition. A meeting of the executive committee will be held soon.

Mr. E. G. Uihlein, vice-president of the Horticultural Society is considerably enlarging his conservatories, and connecting them with his residence by a wide glass covered corridor, which will form an additional show house. Mr. Uihlein has been adding a number of very choice orchids to his collection lately. At the present time he has a specimen of *Eulophia Elizabethae* in bloom, being the first

time this rare and beautiful orchid has been flowered in Chicago. It is a native of Madagascar.

Geo. W. Miller has given up his place at Hinsdale, and sold his establishment to Payne Bros.

Recent visitors: Wm. Hagemann, Philadelphia; J. E. Killen, representing C. H. Joosten, New York; P. M. Koster, of Koster & Co., Boskoop, Holland; A. Colijn, representing C. Colijn & Sons, Voorhout, Holland; John Speelman, of C. J. Speelman & Sons, Sassenheim, Holland.

St. Louis.

The cut flower trade in St. Louis is demoralized, and the great glut is still with us. Quantities of cut flowers are being received daily as a result of the higher temperature, and there is a heavy loss in all kinds of flowers, there being very little demand, and only the very best of stock sells. It is impossible to give the poor stock away. The various commission men receive fine specimens of all kinds of flowers in season, but trade is nothing like what it should be; prices are merely nominal. Beauties have been in fair demand, but have suffered with the other stock. Complaint of poor business is universal in retail circles; nothing whatever seems to be doing. There is here and there a little funeral work, but nothing else of note. Transient trade is almost entirely monopolized by the fakirs, who fairly swarm in the down town district. It has been a long time since prices were as low on roses, carnations and other cut flowers as they have been during the past week. Roses in particular have suffered in this respect, and there have been more of them coming in than the market, fakirs and all could possibly consume. Carnations are down with the rest; the best of stock is sold at 75 cents, and the bulk going at from 50 to 60 cents, and in larger lots even less. In bulbous stock valley has been scarce; tulips, daffs and Dutch hyacinths are coming in from the open ground, but there is little demand for them. Violets are scarce, and the few that come in are sold readily. Smilax is in great demand, owing to the scarcity of ferns. Sweet peas are coming in in large quantities, and sell at 25 cents per 100.

Chandler Floral Co. have closed their doors, and on Saturday two large storage wagons moved out every article in the store.

The committee on the picnic will meet next week and make arrangements for the third annual picnic of the St. Louis florists. The committee this year is as follows: J. W. Kunz, chairman; J. J. Beneke, treasurer; Emil Schrav, secretary; Alex Waldbart, Fred C. Weber and Robert Beyer.

The bowlers had a great time Monday night, ten members rolling, and some good scores were made. Beneke again rolled high man in three games, 552; F. C. Weber, 509, was second; Mr. Weber also had the highest single score, 205. At the next meeting of the club, May 4, election of officers takes place, and all members are requested to be present, as the newly elected officers will be given a banquet after the regular rolling. J. J. B.

Sulphur Fumigation.

Is there any method whereby rose houses can be fumigated with sulphur without danger from fire or injury to the operator? J. W.

We use sulphur for fumigating in our houses very largely, and we have no

trouble whatever with it so long as we do not allow the sulphur to burn. We simply evaporate it a low and steady temperature. In Bulletin 96, Horticultural Division, Cornell University Agricultural Experiment Station, may be found an account of this method of using the sulphur vapor. We find it to be very effective. L. H. BAILEY.

SCOTLAND, PA — W. F. Schmeiske, formerly with G. W. Park, Libonia, Pa., was appointed gardener of the Scotland Soldier's Orphans' Industrial School, and was installed in this position April 22.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—By a first-class competent man as florist and gardener; private place in country. Address M. P., care Am. Florist.

SITUATION WANTED—By expert grower of grapes under glass; 18 years' experience married. Best references. Address A. R. Box 1541, Joliet, Ill.

SITUATION WANTED—As cut flower grower and propagator; married. Best reference from present employer. CHAS. A. MOSS, Box 181, Knoxville, Tenn.

SITUATION WANTED—Young man age 20, with 5 years' experience, desires a position as assistant. Steady and sober; single. Address CHICAGO, care American Florist.

SITUATION WANTED—By experienced fruit grower and market gardener; thoroughly competent under glass and outside. Address GARDENER, care American Florist.

SITUATION WANTED—By a competent young man on a private or commercial place; with 5 years' experience; single; steady and sober. Address J. W. S., care American Florist, Chicago.

SITUATION WANTED—By competent florist and gardener; German, single man, with life long experience. Please state full particulars in answer. Address COMPETENT, 427 Auburn Ave., Atlanta, Ga.

SITUATION WANTED—In San Francisco or vicinity by first-class German florist, 30 years old, single; private or commercial; long experience; Chicago references. Address CARL VOIBECK, 316 1/2 St., San Francisco, Cal.

SITUATION WANTED—By thorough practical florist and designer. A No. 1 rose and plant grower. Commercial or private place. Carnations and violets a specialty. Age 36. Very best references. Address W. 408 Lsgonda Ave., Springfield O.

SITUATION WANTED—As working foreman in commercial place where first class staff is wanted. None but those paying good wages need apply. Western states preferred. CHAS. MCANIFF, 2540 Cottage Grove Ave., Des Moines, Iowa.

SITUATION WANTED—As foreman by a practical grower of palms, ferns, mums, roses, carnations, violets, forcing of bulbs; 21 years' experience; single. References O. K. Only reliable parties noticed. Address FLORIST, Collingdale, Pa. Lawrence Co., Pa.

SITUATION WANTED—As foreman where a reliable and experienced grower of roses and carnations, etc. is wanted. Have held such position for years, and can give A1 references. Married; age 31. Address COMMERCIAL, 75 W 9th St., New York.

WANTED—One good young man for work around greenhouses. Address A. FAHUT, Crown Hill Cemetery, Indianapolis, Ind.

WANTED—Catalogues of nurseries and seedsmen, and yearly reports of superintendents of parks and cemeteries. Address SUPERINTENDENT, 501 Park St., Hartford, Conn.

WANTED—Six to ten large palms, latanas, arecas, pincelx or clamedorea, in 18 to 24 in. pots. Send prices to EDW. G. UHLEIN, Ohio and Union Sts., Chicago.

WANTED—A good smart boy, 17 to 19 years, one that cares more for a good home and to learn, than high wages. Send letter, with references, and state wages wanted with board. Address TH. E. VAN DER MEULEN, Drockirk, N. Y.

WANTED—A single young gardener, English or Scotch, as assistant in growing greenhouse plants and taking care of house grapes on private place. Send references, etc. ANDORRA NURSERIES, Chestnut Hill, Phila., Pa.

WANTED—A young man capable of caring for a retail store, well up in design work and decorations, also to look after conservatory. Must be of neat personal appearance, good habits and a hustler. Address, with reference, age and wages expected. NEW YORK STATE, care American Florist.

FOR SALE—Three greenhouses with stock and all belonging to it, very cheap. Address W. S. P., care American Florist.

FOR SALE OR RENT—Two connected greenhouses, each 18x30 feet, potting shed and sleeping room. Hot water. No competition. Southern Wisconsin. RETAIL FLORIST, care American Florist.

ANNOUNCEMENT.

Having decided to hold over my old Meteor and Bridesmaid rose plants another year, I have consequently a surplus lot of young

BRIDESMAIDS
and METEORS

which were grown expressly for use in the *Sunny-woods Greenhouses*.

These are offered at \$4 per hundred, from 2 1-2 inch pots. Five per cent. discount to those who will come and see them before buying; for they are worth seeing. From 3 1-2 inch pots at \$6 per hundred.

FRANK L. MOORE,
Originator of the BRIDESMAID,
Chatham, New Jersey.

NOW is a good time to secure a strong healthy stock of the

CELEBRATED NEW ROSE

MRS. PIERPONT MORGAN

which has unmistakably grown in popularity as the season advanced.
Prices for strong plants ready for immediate delivery are as follows:

From 2 inch pots.	per 100	\$125.00
" " "	per 500	625.00
" " "	per 1000	1250.00
" " "	per 50	8.00
" " "	per 12	2.25
From 3-inch pots.	per 100	18.00
" " "	per 50	10.00
" " "	per 12	2.50

Cincinnati.

We are still having bright and warm weather with little prospect of rain. Business is improving slowly but steadily. The writer visited Mr. Fred Walz, of Cumminsville, last week; he takes special interest in his house of seedling carnations; although late in the season, several of them show up well. Among them No. 1 is a brilliant scarlet, flowers three inches across, strong grower and free bloomer; Mr. Walz thinks this one has a bright future. No. 2 is white with pink cast, very large and fragrant; No. 3 dazzling red, stiff stem, strong grower, well built flower with high center. From here we visited Mr. K. Wolf's establishment and found among an importation of new plants one that will surely take the lead of late introductions, *Actinidia polygama maxima*. This is a native of Japan, a climber and perfectly hardy, as Mr. Wolf has experimented with it last winter. Its flower is reddish-purple, in shape like wistaria, sweet scented, blooming in June and July, foliage dark green; fruit in the shape of the gooseberry and has delicious flavor. The plant is all right, but Mr. Wolf fears the name might kill it, there is a great deal in a name.

H. SCHWARZ.

GRAND FORKS, N. D.—The Grand Fork Floral company, organized some months ago, has about completed a fine range of five houses, about 4,000 square feet at 324 N. 8th street. A down town flower and seed store will also be opened for the spring trade.

OWENSBORO, KY.—The Women's Auxiliary Committee of the Y. M. C. A. will hold a chrysanthemum show November 11 to 14. The premium list has been printed and copies may be had on application to Mrs. J. C. Wandling, secretary of the committee.

STAATSBURG, N. Y.—Mr. James Macfarlane, who is in charge of the conservatories on the Dinsmore estate, was married April 29. The bride was Miss Emma K. Crapser, the eldest daughter of Mr. John A. Crapser, for many years the superintendent of Mrs. Hoyt's estate.

The new directory contains a total of 9,528 names and addresses, of which 5,258 are florists who do a general local trade, having greenhouses and retailing the product of same, 797 are florists who grow for the wholesale market only, 645 are retail store florists who have no greenhouses, 52 are wholesale commission dealers in cut flowers, 1,524 are nurserymen, 543 combine the business of florist and nurseryman, 364 are seedsmen, 248 combine the business of florist and seedman, and 97 who combine all three branches of the business.

The boxes as they appear when set up for use.

We make them in a sufficient number of sizes, including for violets, to meet all necessary requirements.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

THE USUAL rumors of the June 1st failure crop are in the air and apparently too well founded.

SYRACUSE, N. Y.—The seedsmen are experiencing the heaviest trade this spring that they have ever had, and consequently feel very happy.

THE Richard Frotscher Seed Co., Ltd., succeeds the late Richard Frotscher at 521 to 525 Dumaine street, New Orleans. The officers of the Co., are as follows: John T. Finke, president; J. A. Schalck, vice-president and general manager; L. Burns, Jr., secretary and treasurer. The J. Steckler Seed Co., Ltd., succeeds to Mr. Frotscher's branch store at 518 and 520 Gravier street, with officers as follows: Mary T. Frotscher, president; Jos. Steckler, vice-president and manager; R. P. Steckler, secretary and treasurer.

Moon, Morrisville, Pa., ornamental trees, shrubs, fruit trees and hardy plants; L'Horticulture Internationale (Linden), Brussels, Belgium, orchids; H. H. Given Florist Co., Denver, Colo., plants; V. Lemoine & Son, Nancy, France, plants, bulbs and tubers; A. W. Livingston's Sons, Columbus, O., seeds; W. P. Peacock, Atco, N. J., dahlias.

A Violet Deal.

Last spring we purchased 100 plants of the new California violet for \$10, our idea being to try them, and if good to work up a stock, but after growing them all winter we got no bloom larger than the common single violet, and very light in color; we came to the conclusion that all was not right, and on comparing our plants with those of other growers we found quite a difference; our neighbors' plants had large dark purple flowers, plants growing flat, and a different shaped leaf; our plants grew tall and weedy like. We knew then we had the wrong species, or the common wood violet, and at once dumped them, first sending the seller a full plant.

As the matter stands we are out the cost of plants, space, labor, and have no stock, and ask compensation. The question is, what are we entitled to?

Florists' Sweet Peas

New Sweet Pea "America"

Is more distinct and striking than any other variegated Sweet Pea in existence, and is of the large flowering type. Its color is a white ground and through the center of the standard is a wide carmine scarlet blotch veined with fine scarlet lines running toward the edges and showing in the same manner on the wings. The dashing contrast of the heavy scarlet blotch on the white ground makes the blossoms very effective in a mass of cut bloom or when flowering in the garden. It is indispensable for any complete collection of colors in Sweet Peas. Pkt. 15c; 2 for 25c; 5 for 60c; 10 pkts. \$1.00; 100 pkts. \$7.50.

BLUSHING BEAUTY, clear "Daybreak" pink, largest size. Oz. 5c; 1-4 lb. 12c; 1b. 35c; 5 lbs. \$1.50.

COUNTLESS OF RADNOR, clear lavender, very large flower. Oz. 5c; 1-4 lb. 15c; 1b. 45c.

EMILY HENDERSON, pure white, large early. Oz. 5c; 1-4 lb. 12c; 1b. 35c; 5 lbs. \$1.50.

HER MAJESTY, clear bright rose, very fine flower. Oz. 7c; 1-4 lb. 15c; 1b. 45c.

FIREFLY, brightest fiery scarlet, large. Oz. 10c; 1-4 lb. 20c; 1b. 60c.

MRS. ECKFORD, best large yellow. Oz. 7c; 1-4 lb. 18c; 1b. 55c.

NEW CALIFORNIA CHRYSANTHEMUM GOVERNOR BUDD

NOW READY. The Queen is justly pronounced the queen amongst mums. Governor Budd is identical in shape, size and fine finish of blooms; in growth it is also very similar. If anything, more vigorous and with stronger flower stems. It is only in color it differs from its parent The Queen, being of a lovely shade of lemon yellow. Certificate by the California State Floral Society. 50c each; \$5 per dozen. Cash with order.

J. A. CARBONE, West Berkeley, Cal.

When writing to any of the advertisers on this page please mention the American Florist.

Mention the American Florist when writing to advertisers on this page.

Rochester, N. Y.

Trade in cut flowers is still rather slow though since my last report a slight improvement can be noticed everywhere. Flowers are very plenty and they are good in quality; the warm weather we had, has brought them out in a rush, so that all the growers in this neighborhood have more on hand than can be disposed of advantageously; consequently prices have gone down to a very low figure. Several lots of carnations only brought \$7 to \$8 per 1,000, while others found no purchasers at any price; a few fancy ones only were sold at higher figures. Tulips, hyacinths, double and single narcissus are very plenty also, and prices range low; good valley is scarce at present, also smilax, but no great amount of the latter is wanted very badly just now, for elaborate decorations in this town are few and far between. Violets continue in demand but are not so plentiful now, and show the effects of the recent hot weather in the diminished size of the flowers. The English out door violets are rather small and short stemmed here this season, and if we should get another warm spell they will soon be over entirely.

An unusually early spring for this section has created quite a demand for plants of all descriptions, and the retail plant trade is better than we are accustomed to at so early a date, but prices obtained are low; there seems to be an overabundance of bedding plants in this vicinity which the growers are willing and anxious apparently to dispose of at almost any price. The demand for hardy plants has increased to a considerable extent within the last few years, and has been better this spring than ever before; many parties who are planting shrubs intermix them with hardy flowering plants, mostly of those species and varieties which flower in midsummer and autumn, when but few shrubs are in bloom. Delphiniums, phloxes, coreopsis, helianthus of sorts, helenium, aconitum, monarda, anthemis, Pyrethrum uliginosum, rudbeckias, chelones, foxglove, hollyhocks, platycodons, hibiscus, anemones, saponaria, catananche, eryngium, boltonia and others are principally called for in such cases, excluding almost entirely all dwarf, and all spring flowering stuff, probably because the majority of shrubs are in bloom from early spring to summer, and the shrubbery at that time presents an attractive appearance without the addition of hardy herbaceous plants. J. B. K.

Tightening a Leaky Tank.

In answer to F. J., how to tighten a leaky tank, I would suggest after tightening the hoops as suggested by Mr. John N. May, and the tank still leaks, get a bucket full of horse droppings and distribute them on the water in the tank immediately over the leaks. These will settle and will be drawn into the cracks and will stop the leaks within five minutes. It never fails, and lasts as long as the tank is kept partially full of water.

W. H. KING.

A BILL has been introduced in Congress to create a national park at Appomattox, Va. The bill provides for the appointment of a commission to purchase 3,000 acres of ground at Appomattox, and appropriates \$250,000 for that purpose.

FOR SALE.

One thousand 1-inch GERANIUMS, best leading sorts, large plants and good flowers, at \$10.00 per hundred.

R. ROY DAVIS, MORRISON, ILL.

IVORY! THE GREAT SUCCESS!

NOTHING IS IN MORE UNIVERSAL DEMAND BY FLORISTS THAN A GOOD, PRODUCTIVE WHITE CARNATION.

In IVORY you will have it. Try it and you will have a money maker. It produces as many blooms as Wm. Scott, is as perfect in form as any Carnation yet produced, held by a calyx that never bursts and carried on a long, wiry stem. What more do you want?

Fine plants from soil, \$10 per 100; \$75 per 1000. Stock ready now.

Also fine stock of all the other leading varieties. SEND FOR PRICE LIST.

GEO. HANCOCK & SON, Grand Haven, Mich.

HERR'S CARNATIONS.

ROOTED CUTTINGS that will give good results, because they are taken from healthy stock, and will be well rooted when sent out.

VARIETIES:

McGOWAN,
STORM KING,
ALASKA,
ANNIE LONSDALE,
IVORY,

DAYBREAK,
SCOTT,
ROSE QUEEN,
PEACHBLOW,
DELLA FOX,

DORNER,
STUART,
PORTIA,
JUBILEE,
IAGO,

HELEN KELLER,
KITTY CLOVER,
ELDORADO,
CARLEDGE,
TIDAL WAVE.

Fourteen large houses full of Carnations. State how many you will want of each variety in asking for prices.

L. B. 496.

ALBERT M. HERR, LANCASTER, PA.

EMMA WOCHER, The New Shell-Pink Carnation

This Carnation is of a "lively bright shade," deeper than Daybreak, blooms measure from 2 to 2½ inches in diameter, fragrant, with a stem that carries the bloom erect at all times, calyx perfect, flower of good form; will grow erect with no other support than a V shape wire netting and is pronounced by all who have seen it to be an acquisition and many orders have already been booked. In our Cincinnati market it sells more readily than either Scott or Daybreak; it is not a cropper but a continuous bloomer.

Price for strong well-rooted cuttings, \$10 per 100; \$75 per 1000; 500 at 1000 rates. Cash must accompany all orders or satisfactory reference. Address

R. WITTERSTAETTER,
Sedamsville, Ohio.

NEW CHRYSANTHEMUMS.

MRS. W. C. EGAN, 50c each; \$5 per doz.; \$35 per 100.
TIPPECANOE, AMARANTH.

New Begonia Lillian Harrington.

A cross between Alba and Rubra. Florets and sprays very large and of a deep rose color. The bronze green foliage and large panicles of flowers make it very attractive and desirable. 2½-inch pots, \$10.00 per 100.

Dwarf Scarlet Salvia Kobold.

Dwarf growth, only half the height of Splendens. Its early and free continuous blooming with its dwarf habit makes it one of the best bedding plants, and so much more attractive than the old tall growing Salvia Splendens now in use. 2-inch pots, \$4.00 per 100.

Pandanus Veitchii.

We still have a few plants from 8-inch pots, very fine and good color, at \$3.00 each.

Swainsona Galegitolia Alba.

A most desirable white cut flower, very free. 2-inch pots, at \$4.00 per 100.

Antirrhinum Majus Alba.

The best of the whites for winter forcing, as well as fine bedding plants. Fine stock. 2-inch pots, \$4.00 per 100.

F. DORNER & SONS CO.

LA FAYETTE, IND.

Chrysanthemum Novelties

Following varieties our seedlings, except Governor Budd. They have been awarded Certificate of Merit from California State Floral Society.

PRIDE OF JAPAN—Perfectly round; deep pink.
GOLDEN CORONET—Gorgeous, bright, intense yellow; incurved.

MRS. HUNTER—Improvement on Lady Playfair.
MRS. J. SEULBERGER—Grand white, style of Ivory; size as much as The Queen, with great depth; slightly hairy.

MRS. MARGUERITE CARBONE—Best of hairy varieties, incurved, snow white.

VERNAL BEAUTY—A grand size, incurved, salmon yellow and buff.

THE KING—Incurved, red and bronzy gold, great size and depth.

GOVERNOR BUDD—Yellow, sport from The Queen. Price, 50c each; \$5 per dozen; \$35 per 100.

AMERICAN FLORIST CO.

NEW LATE PINK FRANCIS B. HAYES CHRYSANTHEMUM

JAMES COMLEY, Originator, says:

"I have seen, grown, and watched the FRANCIS B. HAYES Chrysanthemum for two years. I think it one of the best ever raised in this country, and is a chrysanthemum that every grower ought to have."

Awarded Certificates of Merit by N. C. S., November 17, 1894; Massachusetts Horticultural Society, November 17, 1894, and N. Y. F. C., November 23, 1895.

\$4.00 per dozen; \$25.00 per 100. Ready May 1, 1896.

F. MACRAE, 1138 Smith Street, PROVIDENCE, R. I.

WILLIAM J. MARTIN, says:

"I have found the FRANCIS B. HAYES to be a remarkable variety of dwarf, robust habit, short jointed, with large dark green foliage well up to the flower. The flower is an ideal bloom and of a beautiful glistening pink of large size and a perfectly incurved, in the style of Major Bounaffon; of excellent keeping qualities; time of flowering late. It would be impossible for me to recommend it too highly for private or commercial use."

PINK IVORY,

(MISS AGNES L. DALSKOV.)

The invincible New Chrysanthemum, Strong, healthy plants from 2-inch pots \$2.00 per dozen; \$10.00 per hundred.

Pink Ivory { Identical with its parent (Ivory) except in color, rich clear pink.

Mrs. Raynor { Beautiful florists' early, pure white, round, free bloomer. Certificate at New York.

Don't be Left on Thanksgiving and Christmas Bloomers, try

Mrs. H. H. Battles. "I have grown Mrs. Battles in quantity for two years for a late variety. It has no equal in its color, being a beautiful bluish tint. It sells on sight, and I think growers will find this the greatest acquisition to their late collections." W. K. HARRIS.

"A remarkable, new and popular seedling. It has proved a good fortune to the raiser, W. K. Harris, not only for its size and beauty but from its flowering later than others."

MEEHAN'S MONTHLY.

Liberty. Certified by American Society, awarded 98 out of a possible 100 points.

"'Liberty' Chrysanthemum is a clear, rich yellow, large in size, having fine foliage, with stout and erect stem. Its lateness makes it very valuable, being the best late yellow I have seen."

EDWIN LONSDALE.

"I think you will find Liberty a good investment. It is decidedly the best extra late yellow I have seen."

ROBT. CRAIG.

"Yes, you may book me for Liberty. It is indeed a fine variety."

E. G. HILL.

Mrs. R. Crawford. "Mrs. Crawford, the finest late white Chrysanthemum I have ever raised, except Ivory, which it resembles both in form and color. It is much stronger and larger, blooming later. I believe this variety to be the gem of the year."

W. K. HARRIS.

\$2.00 per dozen; \$6.00 for 50; \$10 per 100. All others \$1.50 a doz.; \$4 for 50; \$6 a 100.

Grand Rapids, Mich.

The Florists' Club met in the parlors of the Eagle April 21 and were afterward royally banqueted by Landlord Johnson, who also furnished excellent music. Profuse floral decorations were furnished by the florists, who brought of their best. Smith had incomparable La France roses, Crabb & Hunter carnations with strong stems thirty inches or more long.

President Henry Smith called for short talks by members of the club. John Schmidt talked about his specialty, new and rare plants. Alfred Harmon talked on carnations, holding that Daybreak was the best commercial sort. J. A. Creelman gave a humorous recitation on the stuffed owl, which was received with applause. Mrs. A. Chapman, mignonette, the market for it should be more cultivated; it should be grown on poor soil to possess fragrance and is impatient of damp. Wencel Cukerski put in a plea for hardy shrubbery. F. A. Chapman gave a good talk on the beauty of verbenas, an old-time favorite. Wm. Cunningham talked of gladioli; the old bulbs should be thrown out and propagate from the bulbets to get them to come true; deterioration, as it is called, is from allowing the old bulbs to be used instead of the bulbets; try this and then the gladioli will return to its old-time popularity. Mrs. Cunningham talked on asters, saying the American branching aster, owing to its size, long stems and robust habit was destined to take front place.

After an instructive three hours' session the club adjourned with an unfinished program.

EVELYN A.

Bradford, Pa.

A prospective bride placed a very liberal order with Mr. W. C. Rockwell for a lot of Easter lilies, but in the end changed her mind, compromising on \$2 worth of cut flowers. The lilies having been ordered two weeks before Easter, to be used a week after the holiday, that is, at a time when lilies were much in demand and could have been disposed of without the slightest trouble, the result of course was a loss. The moral of this incident is obvious. Get a liberal deposit and thus make your transactions binding.

W. L. Yelton is building two fair sized houses, intended for roses and carnations. M. Duell has in the course of erection a 75x12 carnation house.

Mr. W. C. Rockwell has conceived a good idea of disposing of his stock of spring plants to good advantage. Almost every country paper within a radius of 50 miles of Bradford contains his neat little ad. enumerating the collections of plants put up at certain prices. The results are very satisfactory. Homo.

RICHMOND, INDIANA.

Please mention the American Florist every time you write any of the advertisers on this page.

Syracuse, N. Y.

The heat of the past week has been unprecedented, the glass several days registering 85° in the shade. This has caused all outside stuff to start into growth, which will not be advantageous to nurserymen, for the week before very little could be lifted, as the frost was not out of the ground. Now every one is in a rush to get plants and trees. Flowering stuff in the houses has not benefited by the heat.

The object lessons given by members of the Central New York Horticultural Society was not so largely attended as could be desired, the heat preventing many from sitting in a hot room for two hours. Mr. Campbell's object lesson on potting plants and sowing seeds was very able and instructive; he showed some remarkably fine plants of hybrid calceolarias which would be hard to duplicate both in size of plants and flowers. Mr. R. Bard's discourse on watering was interesting and instructive. H. Youell spoke on window gardening, which he illustrated by growing plants.

The severe winter has caused great damage to fruit trees and grape vines, many being entirely ruined. H. Y.

Warren, Pa.

Mr. D. Offerle has his hands full, pushing the building of his four additional houses to completion. Of these, two, intended for roses, will cover 150x20, one for carnations, 150x26, and one for violets, 150x10. The houses are well planned and are being most substantially built, double thick butted glass and a ventilating apparatus of Mr. Offerle's own device being some of the features introduced. The plant throughout will be heated by hot water.

Mr. W. M. Lott intends to build an additional goodsized chrysanthemum house.

Considerable funeral work during the past week has kept the florists quite busy.

There is a rumor going the round that an itinerant florist from "somewhere" is about to open a store and try his luck in Warren. "The more the merrier" as Mr. Lott remarked. HOMO.

PLEASANT HILL, MO.—On April 16 the employes of Geo. M. Kellogg presented him with a fine silk hat, it being the 58th anniversary of his birthday.

REFERENCE BOOK,

FOR 1896,

IS NOW READY....

CONTENTS.

The names and addresses of all the Florists, Nurserymen and Seedsmen in the United States and Canada, arranged alphabetically in States and Provinces, the exact branch of the business each is engaged in being indicated by the following

..... KEY

- F** Florists who do a general local trade, having greenhouses and retailing the product of same.
- G** Florists who grow cut flowers or plants for the wholesale market and who do not sell at retail. Almost always within a short distance of a large city.
- R** Retail store florists who have no glass of their own. Nearly always in the large cities.
- D** Wholesale commission dealers in cut flowers.
- N** Nurserymen.
- X** Those who are both Nurserymen and Florists.
- S** Seedsmen.
- Z** Those who are both Seedsmen and Florists.
- A** Those who combine all the branches, viz.: Florists, Nurserymen and Seedsmen.

..... ALSO

- A list of Trade Organizations, both National and Local, with names and addresses of principal officers, time and place of meetings and date of organization.
- Statistics regarding Floriculture, the Nursery Industry and Seed Growing from the last U. S. Census report.
- A list of firms in the trade that issue catalogues, with a key indicating the prominence of each branch of the trade in same.
- A list of leading Cemeteries in which attention is paid to Ornamental Horticulture.
- A list of leading Park Superintendents and of the Botanical Gardens of the United States.
- Seasonable Hints for the year about the practical work of the Florist, written by Wm. Scott, giving instructions not only when to do certain work, but how to do it most effectively and economically.
- A complete alphabetical list of Roses in commerce in America, brought up to date and of incalculable value for reference.
- Similar lists of Chrysanthemums, Carnations and Cannas.
- Historical sketches to date of the Society of American Florists, American Carnation Society, National Chrysanthemum Society of America, Florists' Hall Association, American Seed Trade Association and American Association of Nurserymen.
- A list of Leading Horticultural Societies.
- Full and accurate information about Express and Postage rates.

J. W. C. DEAKE.

IDLEWILD FLORAL COMPANY.

TELEPHONE 99

324 CHARLOTTE STREET,
ASHEVILLE, N. C.

Kroeschell Bros Co.,

Chicago, Ill.

March 20, 1896.

Gentlemen:--

In reply to yours of the 11th: So far we are perfectly satisfied with the boiler bought from you last Summer. We are only heating about half the space that you say it will so we have not given it a very severe test, but it has saved us at least 15 per cent of fuel over last Winter. Our foreman says that the saving is nearer 20 per cent than 15, and he thinks that the saving will be even greater when the boiler is properly loaded.

Very truly yours,
Idlewild Floral Co

SEE OUR ADVERTISEMENT, PAGE 1099.
.... Write for Catalogue.

KROESCHELL BROS. CO.

Springfield, Ill.

Easter sales were an average of 10% larger than last year. Prices about same as last Easter, except on roses and carnations, which were a trifle higher for the best stock. Supply was ample except roses and carnations, which were a trifle short. Quality of cut flowers averaged better than last year.

With the exception of lilies the sales of plants were not equal to last Easter. There was an increase in the call for pot lilies, and for good cut carnations, roses and violets.

The lack of demand for bulbous flowers, both potted and cut, was very noticeable. Customers would pass fine hyacinths, tulips and narcissus and order a lily. It was the same way in cut flowers. They would stand before vases of handsome tulips, daffodils and valley and ask for roses or carnations. When the supply of the latter was exhausted they often would not buy the bulb stuff, and when they did it would be but half what they would have invested in roses or carnations.

BROWN & CANFIELD.

Hagerstown, Md.

Quite a few changes in the way of remodeling and extending their plants are being contemplated by both Mr. Wm. Bester, and Mr. Henry Bester. The former, besides remodeling his entire plant upon an up-to-date scale, will erect two additional houses, one 100x20 for chrysanthemums and the other one 75x16 for carnations, while the latter will build two additional houses, each 100x20 for roses and carnations, intending likewise to give his entire plant a thorough overhauling.

Mr. Wm. Bester's flower store on Washington street, under the Hamilton Hotel, has proved to be the long-felt want of the town. Miss Mary Bester is in charge of the store.

Misfortunes never come singly is an old saying. Aside of the business reverses with which Mr. and Mrs. Dayhoff have recently met, the death of their daughter, a seventeen year old girl, has cast a gloom upon their home and both parents are inconsolable. Mr. and Mrs. Dayhoff have the heartfelt sympathy of all their friends.

HOMO.

Springfield, Mass.

The sweet pea exhibition of the Hampden County Horticultural Society will be held July 28 and 29. Prizes are offered for sweet peas in twenty-one classes. Prizes for other flowers are offered in thirty-one classes.

The annual exhibition of fruits and vegetables will be held October 6 and 7.

The chrysanthemum exhibition, to be held November 17 to 19, is announced as an "International Exhibition." The international feature is covered by prizes of \$10 for the best twenty-five blooms in twenty-five distinct named varieties, from each state and territory in the Union and the Canadian provinces, a total of fifty-seven such prizes.

CHATTANOOGA, TENN.—Mr. Geo. M. Bradt has been appointed director of the horticultural department of the Tennessee Centennial Exposition to be held here next year. The horticultural building will occupy one of the most conspicuous sites on the grounds and will have 18,000 square feet of space. A chrysanthemum show will be held in the building next November, at which time it will be dedicated.

SUNBEAMS CANNA.

Altogether the best yellow yet produced. Exceedingly dwarf, only two feet, splendid foliage, wonderfully free and the flowers are of great size and substance. Flower heads large, full and compact. Almost clear yellow and very bright and clean in color. In effect, it is absolutely pure, brilliant yellow. Eldorado, Florence, Vaughan, etc., are not "in it" with Sunbeams.

Roots, dry or started, \$2.00 per dozen; \$15.00 per 100.

OTHER GOOD CANNAS.

All good strong roots in perfect condition.

AM. FLORIST CO.

When you write to any of the advertisers in this paper please say that you saw the advertisement in the American Florist.

News Notes.

VANDERCOOK, ILL.—W. A. Duke is just starting in the florist business here.

MANCHESTER, O.—Edw. Bradley has just gone into the florist business at this place.

WESTFIELD, MASS.—George Mieliez is enlarging and remodelling his store, and a conservatory has been added.

STUART, IOWA.—E. P. Clowse, who started in the florist business here last year, intends to enlarge his glass this season.

YONKERS, N. Y.—On the morning of April 7 the store of F. Milliott was destroyed by fire. Loss estimated at \$900, insured for \$200.

HARRISBURG, PA.—Carl Taube has purchased the stock and leased the greenhouses of Logan E. McClintock and will continue the business at 1021 to 1031 South Cameron street.

WELLINGTON, O.—Mrs. G. W. Monosmith has sold her florist business here to W. H. Townsend, who will take possession June 1. Mr. Townsend intends adding to the establishment quite extensively.

WARREN, OHIO.—Mrs. Annie E. Hoyt now conducts the florist business formerly controlled by her husband, A. T. Hoyt. Mr. Hoyt is devoting his attention entirely to his system of greenhouse heating.

PROVIDENCE, R. I.—An interesting paper on parks and park-ways was read before the Horticultural Society on the evening of April 17 by E. H. Burlingame. There was an interesting display of cut flowers from a number of local growers.

NEW CASTLE, PA.—The firm of Paul Butz & Son, florists and nurserymen, established in 1851, was dissolved April 1, and the new firm of Wm. T. and Frank P. Butz will continue the business at the old stand, as heretofore, except on a larger scale.

BATAVIA, ILL.—P. G. Pearson & Co., who are starting in the florist business here have two houses of equal span, one 8x60, the other 16x60, and are building two 20x110 short-span-to-the-south and a propagating house 8x75. They intend to grow roses, carnations and violets for wholesale and retail trade. They have their boiler in and water connections made.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Oswego, N. Y.

W. H. Workman intends to extend one of his houses, built last spring, having in view many other less extensive improvements about his entire plant, which will comprise about 6,000 feet under glass. Mr. Workman has had exceptional success with his carnations.

Mr. C. Becksteadt has added another good-sized house to his plant.

Business has been rather quiet of late, though the prospects for a good spring trade look bright and encouraging. The sale of plants in this section, owing, perhaps, to the unsettled condition of the weather, does not fairly commence before the middle of May. HOMO.

OWING to an unfortunate error the date line of the issue of the preceding week appeared on part of last week's edition. The date should have been May 2 and the number 413.

Orchid Notes.

Since most of the different species of cattleyas, laelias and other similar orchids have left us to prepare for a fine show next fall and winter there are comparatively few of that tropical family at present to be mentioned. Cattleya Aclandiae does not seem very particular in time of blooming as I have had it in October and at present it is again in fine bloom. Laelia xanthina, a nice yellow orchid, Phaius Wallichii and P. Bernaysii, both considerably larger in flower than P. grandifolius, Leptotes bicolor and L. serrulata; Epidendrum aurantiacum with fine cluster of bright orange blossoms, the old but always good Chysis bracteescens, Coelia macrostachya, Oncidium sphacelatum with a half dozen long yellow flower spikes; Dendrobium Findlayianum, D. chrysotoxum and D. albo-sanguineum, Odontoglossum Rossi and a few good bletias help a little to decorate the show house. Epidendrum Godseffianum, with immense bulbs and flower spike some four feet long with over a hundred blossoms in coming on finely.

Eulophiella Elizabethæ, the Madagascar orchid about which two of the leading orchid importers in Europe had quite a controversy (see Lindenia, 1893, page 22 and 46, also plate 1892, number 325) is at present in full bloom, and has a flower spike about one foot long with eighteen white and pale rose charming flowers, which apparently remain in their beauty for several weeks. The plant is a good grower and does best in the warm house, in pot filled with potsherds and fern peat; it was introduced only about four years ago and named in honor of Queen Elizabeth of Roumania, also known under the literary name of "Carmen Sylva."

The cypripedium family produces a few flowers all the year around. At present I find in bloom C. Boxalli alb. marg. Pearcei, C. Dominyanum rubescens, C. Victoria Marie, a very robust grower, C. Haynaldianum, producing some five or six flowers on each stem, C. vexillarium, a little gem, C. Druryi and many others.

By the way, will you allow me to make a few remarks on nepenthes? The pitcher plant as it is popularly called is of course not a marketable plant, but to the amateur it offers a great deal of pleasure and by the public it is always admired, as I observed at the last chrysanthemum show in November, for its peculiar shaped pitchers, which it produces in various colors and shapes at the end of each leaf. The

culture is comparatively easy, requiring a warm but very moist temperature of about 70° in winter and 80° in summer. It is not too late to make cuttings from last year's well-ripened shoots in sharp sand and closed glass frame; when rooted, which will take about 5 to 6 weeks, plant in baskets filled with fern peat and sphagnum mixed, add a few pieces of charcoal. Young plants thus treated will show five to eight pitchers next fall. I will only name of the over thirty to forty species in cultivation as good growers Chelsoni, Mastersiana, Henryana, Morganæ, Dominyi, hybrida maculata, Rafflesiana, Outramiana, phyllamphora pallida.

EDWARD G. UHLEIN.

R. L. G., Kentucky, has a house 100 feet long, the center bench of which is to be planted with roses, Perles, Bride, Bridesmaid and American Beauty. "With fire heat there is a difference in temperature between the two ends of 10 degrees. How should the roses be planted to secure the best results?"

Unless the ground is very much higher at one end of the greenhouse than the other, there is no good reason why there should be so much difference in the temperature, that is if hot water or steam is used for heating. The arrangement of the pipes is probably faulty, in which case it will be economy to dispense with some of the radiating surface at the warm end, or else add to the piping at the cool end, whichever may seem more desirable, and thus more nearly equalize the temperature of the whole house. If this plan is not feasible then the only remedy as far as I can see is to plant as you suggest. If it is possible to substitute Meteor in place of American Beauty, then the difficulty is entirely overcome. Meteor is at its best in a night temperature of 65° to 62°. Bride and Bridesmaid 56° to 58°. It might not be out of place to add that Beauty is generally the most unsatisfactory rose for a beginner to take hold of, and more particularly so if planted in a mixed house. ROBT. SIMPSON.

Herbaceous Plant Notes.

The early spring this year has adorned our herbaceous borders somewhat ahead of the usual time, and we are not sorry over it. The past severe and continuous winter has not, as a rule, hurt anything

in the herbaceous line. Although we have used no covering of any kind in any part of the borders, everything stood well, excepting one small low and poorly drained spot, where toward spring the melting snow for some days caused a pool of water to stand over the plants, and under such circumstances any of our hardiest perennials would suffer severely, so we lost a very fine patch of *Lychnis plenissima semperflorens* which had been in constant bloom all of last spring and summer, and only a few plants out of the lot were saved. Beds of bulbous stuff have been in full bloom since the middle of April, snowdrops, crocus and scillas have been out even before that date. *Narcissus* of many varieties are in full bloom and make a grand show. Hyacinths and early tulips also were two weeks ahead of their usual time, and there is a slim chance this year of saving even the latest flowering tulips for Decoration Day unless we should get continuous cool weather during the month of May, for they are now pushing their flower buds ahead fast. Even the Parrot tulips on the northside of buildings are beginning to show color at this early date.

One of the loveliest sights in early spring is a large thickly planted patch of *Iris pumila*, mostly the dark blue variety, which was in bloom in a sheltered position before the snow had fairly disappeared from the more exposed places, and they are in full flower yet and can be seen from a long distance away.

Arabis albida, with its large clustered heads of pure white flowers soon followed the example of the early iris, and hepaticas came out with their numerous anemone-like blue or pink flowers, peeping out between the delicate tinted young deep bronzy foliage. *Primulas* of various kinds followed and are at present a perfect mass of bloom, many shades and colors are represented ranging from the purest white or palest yellow into the darkest velvety brown and purple. *Pulmonaria maculata* and *P. officinalis*, with their changing purple and pink flowers, are making a good display where planted in large masses, and after flowering the prettily spotted foliage of the first named will be an attraction for all summer. Violets of different varieties were out in full blast by the latter part of April, and are continuing to give a succession of bloom. *Plox subulata*, the white and the pink flowered, were a perfect mass of bloom a week or more ago, and there is hardly another low, ground-covering plant to be found which flowers so freely in early spring and keeps so well covered with bloom for so long a time, at the same time requiring so little attention. *Plox amena* is only a few days later, is of a deeper and more vivid shade in color compared with the pink *P. subulata* and grows somewhat higher, flowers from now to late in summer. It is not so densely covered with bloom as the former but of much longer duration. The *Dicentra spectabilis* used to be a favorite plant years ago, and on account of its early flowers should be planted largely everywhere.

Polemonium reptans is beginning to send forth its pretty pale blue flowers, as are also the earlier varieties of the hardy evergreen iberis, and the patch of *Daphne Cneorum* is a sheet of lively pink from a distance, the plants being full of flowers in all stages with a multitude of undeveloped buds to come out later on. It never suffers the slightest injury from the severest cold and needs no protection in the most exposed position. The *Anemone sylvestre* is sending up its long-stemmed

A CORNER IN STUMPP'S STORE

STUMPP'S PLANT ROOM IN BASEMENT UNDER SIDEWALK.

NEW YORK STORES AT EASTER.

large pure milky white flowers borne well above the dense mass of dark shiny and much divided foliage. This lovely plant can be highly recommended both for beds, the garden or the border, and also as an exceedingly useful cut flower. *Papaver nudicaule* in all colors is beginning to bloom, and where large patches or beds of it are planted is making a grand show. Few plants can compare with this gay colored flower, blooming as it does from early spring until nearly midsummer, when something else planted over or among them should take their place. *Paeonia tenuifolia*, both the double and single form, are also in bloom, the dark colored flowers among the much-divided and lacerated foliage present a

most pleasing appearance in a large bed, and I consider it a most ornamental plant whether in bloom or not, for the foliage in itself is so clean and attractive throughout the season.

Epimedium pinnatum is a very pretty early spring blooming variety with elongated racemes of deep bright yellow, four-petaled flowers, loosely arranged along the erect pointed spike, which attains a height of 10 to 12 inches. The foliage is nearly round with a point and finely serrated on the edges, tripinnate, set on thin and wiry stalks. It attains a height of one and a half feet when well established. The root stock is creeping and travels under ground, forming in time a loose patch of plants admirably

ONE OF STUMPP'S WINDOWS.

SIEBRECHT & WADLEY'S

GREENHOUSES IN REAR OF SIEBRECHT & WADLEY'S STORE

NEW YORK STORES AT EASTER.

adapted either for rock work or to plant among hardy primulas or hepaticas.

Doronicum caucasicum has been in blossom for several weeks, earlier than usual, a very showy border plant when large clumps are planted, the bright yellow flowers 2 inches in diameter, are profusely produced for a month or more, and the plant forms a clean and compact bush. The flowers also sell well in a cut state and are good keepers. *Doronicum plantaginifolium excelsum* has now expanded its first flowers, which are very large, nearly 4 inches across, of a deep shiny yellow color; it is a much taller grower than the foregoing variety, attaining a height of 3 to 5 feet with generous treatment, and will then usually continue to flower until October. A most desirable, elegant and free growing plant. *Doronicum Clusii*, with flowers of a much deeper yellow, of good size and substance, forms a neat compact bush about 2 feet high, blooms from early spring until June generally. All *doronicums* are free growing and easily managed plants, useful in any place and do well in any ordinary garden soil.

Dicentra eximia, with its pinkish drooping flowers, has been out since April 20, and will continue in good shape all summer. This plant deserves to be planted more largely; it is of compact growth with pretty fern-like foliage and may be planted in dry places fully exposed to the sun. It grows to the height of 12 to 20 inches, according to the condition of soil and the exposure. The compact habit and dense growth of foliage commend this plant for an underground or base of taller loose growing plants, such as *Hyacinthus candicans*, the white or very pale flowering *Delphinium sinensis* or the hardy *Gladiolus communis* and others.

Caltha palustris nana fl. pl., in bloom now, resembles a large very double ranunculus, deep golden yellow in color, a most desirable plant, and although the wild single form is found mostly in moist and swampy places, it will do admirably well in comparatively dry borders and in well enriched beds, where it will grow to a height of 10 to 12 inches. The foliage is dark shiny green, roundish and pointed, the brilliant colored flowers are produced up to June, and no garden should be without it.

Fritillaria pyrenaica, a perfect gem, comes into bloom with us in early spring and has been out for some days, though in Europe the flowers do not generally appear until the latter part of May or June. It is perfectly hardy without the slightest protection, and forms a clump or cluster of bulbs if left undisturbed for several years, flowering freely every spring. The large flowers are terminal, borne on erect deep stems, bending over at the tips; they are of a bluish purple on the outside of the petals and yellow tinged with green on the inner side, shaped like a drooping bell two inches or more in depth. The foliage is flag-like, strap-shaped and considerably shorter than the flower stems, which attains a height of 12 to 18 inches.

Globularia trichosantha is now pushing up its light blue flower heads in profusion, a very desirable, free flowering plant for the border, growing to a height of about 8 inches. The leaves are narrow and pointed, lying almost close to the ground, and of a dark glaucous green color. It continues to bloom until mid-summer and does better in partial shade.

Puschkinia (or *Adamsia*) *libanotica* was in bloom at the same time with scillas in early spring. The flowers are produced on loose racemes, in shape they much

resemble those of the scillas, but are larger and pure ivory white with pale blue center stripes down each side of the perianth. It is one of our handsomest small spring flowering plants, and increases rapidly. The foliage is dark green, about 6 inches long, one-half inch wide and in midsummer dies down entirely. The plant thrives well in ordinary good garden soil and if a shaded position can be provided the flowers will last for a long time in perfection, but it does well in any situation.

Rochester, N. Y.

J. B. KELLER.

Aquatics.

The advent of the sacred lotus as a hardy plant has stimulated a great many people to grow aquatics, and they are generally quite successful. For a long time, and even yet to a great extent, there seemed to be considerable hesitation about the supposed trouble and expense, but as a matter of fact the cultivation is extremely easy, provided there is a water supply.

There are a great many beautiful and perfectly hardy species which flower for quite long periods during summer, many of which may be considered sub-aquatics, which are often natives and not at all exacting about a water supply. Like frogs they are amphibious. The *Nelumbium* itself will often spread into moist ground upon which there is no water. The aquatic *Ranunculus* are of the same character, and these latter are a good deal neglected, although such as *R. aquatilis*, *R. pantothrix fluviatilis* are hardy and interesting, and *R. Lyallii* is handsome, but tender at the north. The *Nymphaeas* are naturally floating plants, and the *Nuphars* nearly as much so, yet neither resent a considerable reduction of the water level now and again. As for the buck beans, *Stratiotes*, *Pontederias*, *Sagittarias*, *Butomus*, *Typhas*, blue and yellow iris and several others, they will be content if the soil is wet, and will have no objection to an occasional heavy drink. A water supply is necessary for aquatics, but I wish to point out that a mill race is by no means essential. Anyone who has city water and a hose can manage aquatics easily.

As for the best way to arrange them that also is simple. The trouble is that people want to run a new thing into the ground and do too much; when they succeed with the hardy ones they go for the tender ones before they are well prepared.

With a shrubby background it is not difficult to so arrange aquatics that they will take the place of flower beds; on retentive easily puddled clay soils a shallow pond of circular or other shape is all that is needed in many cases, but if the sub-soil is very poor a barrowful of good rose soil on the bottom will set all to rights in that respect, and I may add that a well manured soil makes an excellent puddle. If a lesser space is imperative the half of one oil barrel which has been burnt out will, if sent to the depth of six or nine inches below the grass, permit of some shelving of the soil towards the rim, and some overflow of water over the saucer shaped depression, in the center of which the tub containing soil, plant and water should be sunk.

Half a dozen oil barrels cost perhaps \$5; cutting in half depends upon who does it. Digging a dozen holes and shelving a wider circumference down to the rim of the tubs may possibly cost another \$5. The soil and the plants also may vary in price, but for an outlay of \$25 upwards it is entirely possible to have a

FLEISCHMAN'S EXTRA STORE.

ALEX. MCCONNELL'S.

NEW YORK STORES AT EASTER.

handsome summer aquatic garden, with every species a feature. For compact growing species of course the tub sunk to the level of the grass is sufficient, but all the *Nelumbiums*, *Nymphaeas*, *Nuphars*, etc., will appreciate the opportunity to spread. It is hardly necessary to go into a list of suitable species; they are abundant, and adapted to all purses and tastes. The hardy kinds are becoming as beautiful as any, but as I have given a dozen beds I may mention a dozen hardy species and varieties as follows: *Nelumbium speciosum* and its white variety, *Nelumbium luteum*, *Nymphaea alba* in its best variety, *N. a. rosea*, *N. tuberosa flavesens*, *N. Marliaca rosea*, of which there are several forms at various prices; and if possible *N. elegans*, of which there are both yellowish white and purplish white, and even bluish forms. I don't know if these are yet in cultivation, but they are natives of New Mexico and Texas, and

have been known in herbariums for a long time. For a *Nuphar*, our own spatter dock is about as good as any—unless a preference is given to the little Scotch *N. pumila*. *Pontederia cordata*, *Sagittaria* in some of its forms—there are native, foreign and double ones—and *Butomus umbellatus*. These are all hardy unless possibly *Nymphaea elegans* prove tender too far north. It is to try that point and hasten the chance of a hardy blue *Nymphaea* that I have mentioned it. *Nymphaea scutifolia* (probably a form of *stellata*) is hardy from Virginia southwards.

JAMES MACPHERSON.

Trenton, N. J.

National Chrysanthemum Society of England.

It is announced that this society, which was instituted in 1846, will hold a grand jubilee celebration in London in Novem-

DARDS

HANFT BROS.

P. OKKERSE.
NEW YORK STORES AT EASTER

her next, in honor of the completion of fifty years of its existence. The celebration will take the form of an immense exhibition of chrysanthemums in which all types of the flower will be represented, a conference of chrysanthemum growers and raisers from all parts of the world, a jubilee banquet, the striking of jubilee medals to be awarded to such persons as have rendered conspicuous service in promoting the improvement of the chrysanthemum, and the preparation and compilation of a complete catalogue of chrysanthemums.

Society of American Florists.

The annual meeting of the executive committee of the Society of American Florists was held at Cleveland, Ohio, on April 28, 29 and 30. There were but three absentees, and a vast amount of very important work was done. In addition to the regular members of the executive committee there were present Mr. E. G. Hill, representing the American Carnation Society, and Mr. J. M. Gasser of the Cleveland Florist Club. Much enthusiasm was manifested by the local members and all indications point to a convention next August which will be second to none in interest and importance. The Army and Navy Hall, which is very conveniently located, has been secured for the sessions of the convention and the trade exhibit will be held in the Central Armory, which is but a short distance from the convention hall, in connection with a grand horticultural display to be given under the auspices of the local club, and for the encouragement of which the executive committee decided to offer several liberal prizes in the name of the national society. On recommendation of the Cleveland Florist Club, Mr. E. H. Cushman was appointed superintendent of the trade exhibit. Several changes were made in the rules governing this exhibition and the manner of appointing judges, which, it is believed, will remove the causes for dissatisfaction which have been experienced in the past.

Among the subjects for discussion at the sessions are the work of the carnation and chrysanthemum societies, the chemistry of fertilizers, commercial law as applied to our business, and overproduction as viewed from the standpoint of producer, wholesaler and retailer. One evening will be devoted to the president's reception, which was such a successful feature of the convention at Pittsburg. On another evening arrangements will be made for a lecture which it is expected will prove as interesting as did that of Wm. Hamilton Gibson last year, and the third evening will be devoted to the public, short addresses on the care of plants being made by competent gentlemen.

A subject that will take up much time at the coming convention is the new constitution and by-laws, into which the executive committee has individually and collectively put a great deal of work, and which as finally approved at the late meeting will be presented to the society for its consideration at the August convention. It provides for a reorganization of the national society, so far as its relations with other existing organizations are concerned, and includes also a provision for life membership. It was decided that in the meantime all members of the S. A. F. now in arrears for dues may upon the payment of the sum of \$2.00 in addition to the regular dues (\$3.00) for the current year, be reinstated as members.

The committee on classification of fire insurance risks reported encouraging

progress, and a new committee was appointed to take up the important matter of statistics of horticultural exports and imports. WM. J. STEWART, Sec.

New York.

In the cut flower market general conditions remain about as reported last week. There is a shortening up of violets, and outdoor lilac and bulbous flowers take the place of the indoor stock. Of the latter there is the usual deluge, but it will not last long. Roses are coming in freely, of excellent color, but averaging very small flowers. Carnations which look fresh and bright sell readily at prices that should be considered fair for the season. There is much stock coming in, however, that looks neither fresh nor bright, and this goes to loss.

W. H. Coulson, superintendent of Thos. W. Weathered's Sons' factory at Jersey City, was almost instantly killed on the night of April 29 by the explosion of a charged cylinder, with which he was experimenting. Mr. Coulson was of an inventive turn of mind, interested in machinery and chemistry, and spent his spare time in study and experimenting, his ingenuity making him an invaluable man to his employers, who also speak highly of his character. He leaves a wife and two children.

Wm. Elliott sold a fine lot of rhododendrons at auction on May 1. A noticeable fact was that although the plants looked equally attractive to the uninitiated, the stock from a well known English grower sold for about four times the price realized for the Dutch stock.

Mrs. C. W. Knight died suddenly at St. Luke's Hospital on Friday, April 24, and was buried on Monday, the 27th, from the same place. Mr. Knight is gardener in charge of the estate of Mr. E. Ladew at Glen Cove.

Mr. J. H. Taylor states that from several Bride houses where the plants are in their sixth year he is cutting more blooms and better ones than from any other houses on his place.

Prof. N. L. Britton of Columbia University delivers an illustrated lecture on the New York Botanical Garden at the meeting of the N. Y. Gardeners' Association at 64 Madison avenue on the evening of May 9.

E. B. Sutton, Jr., of Babylon, is sending an average of 5,000 violets daily, which is an unusual record for May.

Ford Bros. have removed from 131 West 30th street to the store recently vacated by Theo. Roehrs at No. 113.

Hammond & Fitzgerald have opened a wholesale cut flower store at 115 West 30th street.

Jos. E. Rolker has come in from a successful two months' western trip.

Aug. Rolker is unable to attend to business on account of sickness.

H. C. Steinhoff returned from Bermuda last week.

Hanft Bros. have moved from their former place on Broadway to 613 Madison avenue, corner 58th street. It is their intention to open a downtown branch either on Fifth avenue or Broadway in September next.

With the spring fever for gardening some of the fronts of vacant downtown stores prove temporary quarters for a rather peculiar horticultural trade in dormant roses, shrubs, bulbs and seeds. Typifying this class, Mr. Kelly, who as he says "represents the Irish end," of a Greenwich street firm who are "agents for the New York and Holland Nursery Association," offers the "Tuba Rugosin,

P. L. BOGART'S

CHAS. DORAN'S.
NEW YORK STORES AT EASTER.

a bulb sent out first in 1895 at \$96 per dozen," now at three for 25 cents. This bulb much resembles the ordinary tuberose, second size, which has been sold for some time at about \$1 per 100.

At the meeting of the New York Florists' Club on Monday evening, May 11, Mr. E. A. Scidewitz of Annapolis, Md., will read a paper entitled "The drift of the times" (horticulturally speaking).

Buffalo.

Fine weather is prevailing with us, very fine but very dry, only one good shower since the snow went. The heat has begun to tell on carnations and roses, yet I have not heard any complaint of scarcity. Outside tulips have been in their prime the past week, but soon will be over. Business can be honestly called quiet, those who differ with this must be in luck. We are expecting to travel to Wilkesbarre on the 20th of this month to meet the Philadelphia shooters, and will be guided round that anthracite village

by the two well known men who are capable of anything, but whose name is too sacred for mention here. As the writer is not able to get around to interview all the shooters of our team I trust that they will take notice that the 20th is the date and the train is the Lehigh Valley on the night of the 19th. A three round set-to with soft gloves is on the schedule between a heavy weight of Utica, N. Y. and our veteran heavy weight of Buffalo. Fouls allowed, and refreshments between each round. The Buffalo men who have the sense to go must remember they will see two large flower-growing establishments and one of them built right up to date.

The rear guard of the Dutch bulb growers fell on us to-day, but he was a good specimen in the shape of Mr. L. Van Waveren. Mr. Joseph Rolker of New York made a very short visit on Friday last.

A recent visit to the park greenhouses, convinced us that the public will no longer have cause to complain of a

W. BURNS.

HAUSER & SONS.

N. CHRISTATAS.

NEW YORK STORES AT EASTER.

scarcity of flowers in our fine parks. Under the care of assistant park superintendent James Braik a grand stock of all the useful bedding plants has been grown. This is the first year the park has had houses to grow good stuff and well they are filled.

The writer would like to contribute a word or two about our visit to Cleveland last week. He has attended but one executive meeting prior to this one, but he believes that for steady work this will compare favorably with any previous ones. There was much to talk about, and we trust much done that will bear good fruit to our national society. With short intermission necessary for our physical welfare it was one continual session, with only one break, that trolley ride on Wednesday, when we could not refuse the invitation of Mr. Gasser. The trolley and its occupants were a gorgeous sight and from the attention it received it was evident that the average citizen thought it was Gov. McKinley arrived to see the first home game of the local baseball club. The ride was most enjoyable and the stops were duly appreciated. The banquet was elegant and the worthy president of the Cleveland Club, Adam Graham, never acquitted himself better. The great enthusiasm shown by all the local men was very gratifying. It is to be hoped they will get up a good show in August, and it is bound to be an incentive for members of the S. A. F. to attend the convention. Cleveland is a beautiful broad streeted, clean city, always temperate in temperature and an ideal city for a convention.

W. S.

Boston.

The annual May exhibition of the Massachusetts Horticultural Society, which took place on Saturday, 2d inst., was a splendid success. Seldom, if ever have such superb calceolarias and pansies been seen here, and the collections of native flowers exceeded in number and variety all previous efforts at such an early date. The calceolarias came from Mrs. B. P. Cheney and E. L. Converse. The former staged twenty-six plants uniform in size and well-flowered, taking first and second prize for single specimens and first, third and fourth on groups. Mr. Converse's plants showed a novel range of color, one plant duplicating the soft pink and white of *Cypripedium spectabile*, the individual blooms being of enormous size and the luxuriant foliage covering the pot well, but some of the plants had unfortunately got bruised in transit.

One of the most beautiful plants ever shown in this hall was a specimen *Bougainvillea Sanderiana*, a veritable fountain of bloom, six feet across, which well deserved the silver medal awarded it. *Pelargoniums* were shown in good form by the same exhibitor. A perfect specimen in flower of *Boronia elatior*, six feet in height, attracted great attention. This was from Dr. C. G. Weld, who also showed a group of large Indian azaleas, auriculas and streptocarpuses in good colors and variety. Hardy narcissi were shown by Dr. Weld and by the Bussey Institution, and Harvard Botanic Garden staged a comprehensive collection of hardy herbaceous and bulbous flowers, all named. J. S. Fay's pansies were as usual superb. Other attractions were tulips and Testout roses from C. V. Whitten, carnations from Wm. Nicholson, nymphaeas, etc., from Oakes Ames and promiscuous cut flowers from Jas. Comley and Mrs. E. M. Gill. The vegetable

department also showed up well, tomatoes being especially good.

The Gardeners' & Florists' Club held the last regular meeting of the season on Tuesday evening. No program having been arranged, it was a sort of go-as-you-please occasion, the question box sufficing to keep up the interest for an hour and a half and furnish material for an abundance of good-natured discussion. Warren Ewell became, without previous knowledge or intent, the star speaker of the evening. His first duty was to make final report as the chairman of the dinner committee, after which he was duly tendered a vote of thanks. The first query from the question box was in reference to bulbs, and this being Mr. Ewell's special industry he was called upon to respond. His experience in and ideas regarding the tulip industry were given in his usual witty and entertaining manner. Upon request he gave a list of the varieties grown by him for the city trade, but in response to an enquiry as to the most profitable tulip to grow he replied, "The one your customer wants." Mr. Emil Mische, a graduate of the Missouri Botanical Garden at St. Louis, being present, being called upon said a few words in reference to the courses of study and methods of conducting that famous place and promised to talk more at length at one of our fall meetings after he has had an opportunity to compare the work of the Shaw Garden with that of the Bussey Institution. President Cotter and Secretary Dawson were by vote empowered to arrange for the annual strawberry festival in June.

The wholesale cut flower trade has been aroused to feeling of resentment by a statement published in a local contemporary to the effect that the wholesale dealers have been making up retail work for out-of-town undertakers. The wholesalers declare this statement to be false and maliciously calculated to injure their standing with the country trade.

"Ten of 'em for a quarter" is the cry of the street fakir as he holds out a tempting bunch of Brides, Gontier and Perles. This indicates the present condition of the rose market. Carnations fare somewhat better and when of good quality bring reasonable prices. The beautiful dark Cape violets are now coming in.

Out-door spring beauty has received a severe set-back this year such as has rarely if ever been experienced here. Forsythias, wistarias and other early blooming shrubs have had all the blossom buds killed outright and *Spiraea Thunbergii* is killed to the ground. Even the lilacs are in some cases affected.

The display of tulips and pansies on the Public Garden, always a brilliant sight, is better this year than ever before. The arrangement and grouping of colors have never before been so well done.

Daniel Hay, gardener at Faulkner Farms, Brookline, was thrown from his bicycle on May 4, fracturing his skull.

At the May meeting of the Mass. Horticultural Society resolutions on the death of Mr. C. M. Atkinson were presented and unanimously adopted.

Visiting Boston: Geo. C. Watson, Philadelphia; Robt. Hogg, Providence, R. I.; J. Keur, Hillegom, Holland; J. H. Veitch, London, England; and S. Skidelski, Philadelphia.

Pittsburg.

The cut flower trade continues very dull, lilacs, crab-apple and dogwood having the call this week, very much to the detriment of prices on grown stuff. Carnations 25 to 35 cents per dozen as

against 35 and 50 cents last week. Roses, not selected, 50 cents as against \$1, other stock in proportion. The trade in potted plants is increasing. The demand for bougainvillea and hydrangeas in bloom is very good, prices ranging from \$2.50 to \$3.50 for the former and from \$2 to \$3 for good and \$5 for fine specimens of the latter, the regular bedding stock, geraniums, etc., bringing about the same prices as last year.

A visit to Mr. John Bader's greenhouse on Mount Troy, found everything in good shape for the coming plant trade. His stock looks well and the varieties good. Mr. Bader has a large stock of young palms and will grow ferns in variety this season, many more than formerly, and is talking of adding more houses to his extensive plant this summer. Mr. B. has been sick for a short time, but is gradually getting better.

Mr. James Semple, of Bellevue, showed very fine lilies and cacti this week with the full variety of bedding plants. He is very well satisfied with the opening and prospects of this branch of the florists' business this year.

Superintendent Hamilton, of the Allegheny Parks, has all his force putting them in readiness for the annual flower ornamentation, which he expects to surpass former years in its arrangement. In the Phipps conservatories under his charge the principal exhibit at present is the superb collection of fancy-leaved caladiums, comprising 150 distinct varieties, the collection in South Park, Chicago, being the only one in this country approaching it for completeness. The plants are only started enough to give one the true idea of their wonderful beauty; a little later on, when they will have the house they are in to themselves, and displayed without crowding will prove the centre of attraction among the many other wonderful specimens of the floral kingdom to be seen here. Riverview Park, on the outskirts of Allegheny, on one of the highest points in the city, under the management of Director McAfee, is being improved only in the way of roads and grading this year, but will when its natural beauties are taken advantage of, rank among the most desirable parks to be found anywhere. The attractions the present year will be a Zoo and nature's woods, the florist will be in evidence in the near future.

Wm. Loew is again with John Bader and has charge of his stand in the Pittsburg market once more.

Mr. Henry Kroder, with Siebrecht & Wadley, is with us this week. REGIA.

Chicago.

To say the glut continues is a world too mild. Every wholesaler is loaded to the gunwales, and local trade seems to have gone out and died. It is the general opinion that such a period of glut and dullness never before appeared so early in the season. Stock comes in by the wagon load, and there is no possibility of selling it at any price. In fact, there isn't any price.

In roses, some of Reinberg's extra select Testouts bring \$5 and \$6; but nothing else brings over \$3, which is the price for Meteors of the highest excellence. We hear of selected Bridesmaids going for \$4, but \$2 and \$3 will buy the very best; in fact \$2 is a fair price for good roses. How far below this they go no one but a mind-reader can discover, but \$15 a thousand is quoted, and there are painful whispers of half this price. These are the days when the fakirs come in with an air of

haughty confidence, prepared to spend upwards of 75 cents for flowers enough to load a government pack mule, and they go out deeply pained when they run across a wholesaler who will rather send the surplus to the hospitals than give it to men who lower the legitimate trade. Shipping trade is all that keeps business alive now; it is possible that many of the out of town men have pulled out their roses, in view of the heat, hence a scarcity in some localities.

The unusually warm weather, more like July than May, has rushed out spring flowers with astonishing rapidity. *Spiraea prunifolia*, usually in for Decoration Day, is in full bloom. Paonies, old red and white, have arrived simultaneously; as a rule their time of blooming is two weeks apart. They are not expected from the immediate neighborhood till next week, the present flowers being from points a little south. They sell for \$4 a hundred. All the outdoor bulb stuff is rushing in. Valley is plentiful from outside, sells from 50 to 75 cents and \$1, quality varying a great deal. The finest tulips seen are the pure yellow and yellow flamed red from the old Kennicott place. They are a variety peculiar to this place, unnamed, single, and very pure in tint. Some of them are cut with stems 18 to 26 inches long. Some of the fine *Gesneriana* tulips, that sold so well former years, fall flat now. Irises are plentiful and fine, but all this stock is very cheap.

Sweet peas, the best, are held at 50 cents; carnations 75 cents to \$1, fancies, such as Keller and Rose Queen, \$1.25 to \$1.50. Rose Queen held up to \$2 until the latter part of the week. Harrisii move slowly at \$4.

Very little entertaining is done now, and at the few affairs where any decorating has been done there was a tendency to use apple blossoms and similar spring posies, which, though æsthetic, don't help the florist to pay his coal bills.

W. E. Lynch has just moved into much larger and more convenient quarters on the same floor of 59 Wabash avenue as before. His new quarters are on the Randolph street side, in line with Piegras and Winter & Glover. The space is about three times as large as formerly. While moving Mr. Lynch met with a very serious accident. A rack on which he was standing gave way, precipitating him forward. In the fall one hand crashed through a heavy pane of glass, cutting a jagged gash in the forearm, midway between elbow and wrist. It was a dangerous wound, which in a man of less vigorous physique might have resulted fatally, as an artery was severed, and it was half an hour before a physician arrived. However, with the aid of a tourniquet improvised by Mr. Freese, the bleeding was lessened, and though weakened by loss of blood, Mr. Lynch is getting along well. He will be unable to use the arm for some time yet.

Harry Balsley, Detroit, was a recent visitor.

St. Louis.

The market last week didn't show much improvement, although the glut was not so great and prices showed little improvement. Trade in retail circles was a little better, there being lots of funeral work going on, making white stock a little scarce. The fakir had to run from one commission house to another in order to get his stock; two weeks ago he could get it all at the one place. Roses are cheap but not so plentiful as last week, and are very much off in quality. Prices range from \$1 to \$5. Carnations are selling at

from 50 cents to \$1.50 for the best, Day-break is still good but somewhat paler in color. Outdoor grown valley is coming in in large quantities, but sells very low, at \$1. Sweet peas are still plentiful and cheap, 25 cents to 50 per 100 is all they bring. The old dagger fern has made its appearance, and finds ready sale. Good smilax is always in good demand.

Oac wholesale house in this town is doing a very large retail business, even going as far as to take decorations of plants. I think that is going too far. They expect the retail florists to patronize them and take the bread out of his mouth by selling and making up work at retail at wholesale prices. How can a retailer compete with such work as that?

The banquet of the directors of Shaw Garden at the Mercantile Club was elaborately decorated with plants and cut flowers: the work was by Ellison & Tesson.

Mrs. De Donato has opened a floral establishment at 525 Olive street, recently occupied by Wm. Lingenbrink (Ellerd's) who moved across the street on April 31.

J. M. Jordan has returned from Omaha, Neb., where he spend a week to attend the wedding of his son Harry.

North Floral Co. are cutting a fine lot of outdoor Jacques; Mr. North reports that he will cut them by the thousand next week.

Riessen Floral Co. covered itself with glory at the Gerak-Kant wedding last week. The floral decorations at the church and the banquet table were magnificent. The bouquets of the bride and bridesmaids were of white orchids.

Tom Carroll expects to rebuild all of his old houses this summer. Tom reports that he will grow all his carnations in solid ground hereafter. Mr. C. grows carnations exclusively.

The next meeting of the St. Louis Florists' Club will be held at our hall Thursday afternoon, May 14, at 3 p. m. Sweet peas, carnations and roses will be on exhibition. A large attendance is expected.

We bowled again Monday night; it was hot but the boys came just the same. Ten members rolled. Mr. E. W. Gay of Belleville was a visitor and rolled with the boys. This ended the April series of 12 games. Beneke made 2,155 in 12 games and wins the medal. J. W. Kunz was second with 1,957, and Al Bauer third with 1,867. The highest single score of the 12 games was made by Beneke, 218, second, Frank Fillmore, 206; Weber and Kunz tie for third place 205. Next Monday night a new series will begin of 12 games and we hope to see some of the old faces back with us.

J. J. B.

Indianapolis.

Trade since Easter has been dull, only at intervals a funeral order or a wedding. The Public Market flower stand people report sales weaker and less than for some years at this time. The dry weather, which is getting serious, may have a great deal to do with this standstill right in the planting season. Cut flower business is also stagnant, very few receptions and weddings have been on the list, only few prominent funerals having helped to cut the surplus flower stock down. Cut roses are getting weak, carnations smaller on account of the extreme warm and dry spell. Outdoor flowers are passing away quickly. Lily of the valley, generally in its prime May 15 to 20, is past, snowballs and peonies are blooming, philadelphus just coming into bloom. Roses are also heading out fast and

Decoration Day three weeks away. Very likely fewer flowers will be gathered for that occasion, than for some years past. Bulbous outdoor flowers came quick, were finer than usual, but warm weather cut them down quickly.

Sonnenschmidt & Yunge are adding a rose house 100x20 to their extensive place east of the city.

Jno. G. Rathsam, 706 College avenue, will shortly remove to Lexington avenue, taking the old Woodlawn Greenhouses, formerly belonging to L. Schwartling.

G. Lange & Son, having greenhouses on South Meridian street, have started a stand for the sale of flowers in Hunt's drug store, corner Ohio and Pennsylvania streets.

Wm. Lentz, College and Christian avenues, has closed out his stand; the property owner building a block on the place.

B. F. Fohl, formerly having charge of the New York dry goods store's flower department has rented a corner in Weber's drug store, Ohio and Illinois streets.

The Huntington Seed Co. a few days ago executed mortgages to the amount of \$25,000 to preferred creditors, the Capital National Bank being the principal creditor. The owners report that they are nicely treated and under favorable circumstances will come out in good shape, slow collections and backward season with overstock in some lines causing all the trouble.

Bertermann Bros. on June 15 will remove from 37-43 Massachusetts avenue to 85 and 87 E. Washington street (Pembroke Arcade Building). These stores being in the entrance of the Arcade building they will have plate glass window space on three sides, an elegant basement extending 14 feet in under the sidewalk, with all conveniences of a modern store building. Their conservatories and store on Massachusetts avenue will be removed to their property 1374 East Washington street and added to the present greenhouse plant, which is now in the city limits and in a growing part of the city. The place they vacate on Massachusetts avenue was originally started for a florist's stand in 1879 by Lewis Bros. and the improvements and trade bought by Bertermann Bros. in 1883. The property owners were not willing to give an extensive lease, the surroundings also not being suitable for any more expense in improving in the proper way, the move is fully justified and will be beneficial to all concerned.

A new firm is talked of for the cultivation of palms and foliage plants, particulars later.

The Street Car Co.'s Park, Fairview, is in splendid condition, the florist, Mr. Jones, expects to plant out a good many beds this spring, as all water facilities are now ample and the company willing to expend some money on further improvements.

The Public Park Commissioners will ask for an appropriation of \$250,000 for the coming year to make the proposed park extensions and improvements, nothing less will do them if the city wants parks with a big P.

W. B.

San Francisco.

Business is very quiet at present and from present indications is likely to remain so for some time to come. The late warm rains have helped everything outside wonderfully, so that roses are now in their glory. Inside roses, however, are selling fairly well when the quality is good. Some extra fine Testouts are find-

ing their way into the market, also Perles and Bridesmaid. Kaiserin is a very good white out here and seems to be in the public favor all the time. Carnations are rather a hard article to procure just now, especially Portias. Liliun Harrisii is a decided drug this year. There has been an enormous quantity of them grown, and the market is just now flooded with stock. Since the rains last week the violets have commenced on a second crop, and there is quite a lot of Marie Louise to be had. They bring about 75 cents per dozen. Some of the growers have commenced planting out their chrysanthemums now and from what I can learn more 'mums will be grown inside this season than last, and quite a lot less will be grown outside. Pansies are going slowly. We notice some very fine spiraea in some of the stores. Sweet peas are now coming in in earnest. They are of extra fine quality and find a ready sale. We have seen some pots of Cupid in bloom and expect to see some in the florists' windows soon.

Mr. P. O'Hearn, of San Mateo, has rented his greenhouses to his brother John and has accepted a position elsewhere.

Mr. George Draycott resigned his position with D. O. Mills, of Milbrae, last week, and as yet is undecided as to his future movements. It must be said to Mr. Draycott's credit that this famous old place never looked so well as when under his control. He certainly had the finest specimen ferns and palms to be seen in any private place. The Farleyense ferns were indeed wonderful, also the cinerarias, primulas, and cyclamen were as good as could be got. The fern and fruit houses, graperies and palm houses, numbering about fifteen in all, were all a model of neatness and everything showed the care which had been bestowed upon them by genial George.

Mr. Andrew McDonald, formerly with J. A. Donohoe, has entered the employ of M. Lynch.

The annual spring rose show of the California State Floral Society is now on in the Maple Hall of the Palace Hotel and from all accounts will be a success. I shall give a detailed account of it in my next.

W. Atlee Burpee of Philadelphia is expected here in a few days.

The second show of the San Mateo County Floral Society took place in Redwood City, April 29 to May 2. The show was a very great success. On the 29th the queen of the carnival was crowned, which was immediately followed by a grand coronation ball. On the 30th the rose show opened with impressive ceremonies. The hall was very artistically decorated for the occasion. On entering we noticed a very good exhibit of sweet peas by Mrs. Schroeder; considering the earliness of the season this was excellent. Among the varieties shown was Mrs. Gladstone, Stanley, Emily Henderson and Firefly. This took first for the largest and best collection of sweet peas. Mrs. George Ross of Belmont had an excellent exhibit of cut flowers, her pelargoniums being especially good. She also showed some Crimson Rambler rose, but seems to be disappointed in it. We noticed some Paul Neyron nearly as large as a peony. Her roses were especially beautiful. The calla lilies at this show were grand; we noticed many with stems 6 feet long. One thing very noticeable about this show was the absence of professional growers; every year seems that the number of growers exhibiting is rapidly di-

minishing. The only way we can account for this is because amateurs nearly always get the preference over growers at these carnivals. It seems to me that people are looking for quantity instead of quality, and the last few years this has become particularly noticeable. These carnivals are very excellent things, no doubt, but when they have a tendency to run towards a large amount of trashy flowers instead of a limited number of good ones, their evil effects to the florists are apparent. This show closed on the 2nd and was a great success, both in a financial and social way.

The Sunset Seed & Plant Company are making a private exhibition of plants, flowers, seeds, etc., at their store on Sansome St. METEOR.

OBITUARY.

ANDREW S. FULLER.

Andrew S. Fuller, widely known as a writer on agriculture, horticulture and arboriculture, died suddenly at his home, Ridgewood, N. J., May 4. He was born in Utica on August 3, 1828. When a boy he removed with his parents to Barre, in Orleans county, and at the age of 18 went to Milwaukee and began the life of a florist. While in Milwaukee he married Miss Jennie Crippen, and in 1855 they removed to Flushing, L. I., where he became foreman for William Prince, the nurseryman. He stayed there a year, and then with his wife went to Brooklyn, where for nine years he had a garden and raised small fruits. During this time he began writing on horticultural matters. Early in 1860 he went to Ridgewood.

Mr. Fuller was connected with the *Tribune* until the *Weekly Sun* was established, when he became its agricultural editor, remaining in the place for twenty-six years, as long as the publication was continued. He also edited at one time the *Rural New Yorker*, and wrote for the *Agriculturist*, *American Gardening*, and the *Florists' Exchange*, and published various books, including "The Strawberry Cultivist," "The Small Fruit Cultivist," "The Grape Cultivist," "The Propagation of Plants," and "Practical Forestry." His last book, on "Nut Culture," is now in the hands of the publishers, and was to have been issued in about a month.

Mr. Fuller went to different parts of the country at times and bought trees for some persons who knew him and were interested in arboriculture. He made a special study of entomology, and collected a large library, and a cabinet of specimens. He was an authority also on prehistoric American pottery, and had collected specimens of it. He was an enthusiast in anything that related to natural science.

He had no children. Besides his wife there survives him his sister, Miss Elmena Fuller, and his brother, Henry C. Fuller, both of New London, Conn.

MONSIEUR LEON SAY, president of the National Horticultural Society of France and member of the French Academy, died April 21.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

VISITED NEW YORK: Guy Posson of Portland, Oregon; J. E. Northrup.

F. E. McALLISTER & Co. have moved from 22 Dey street to 69 Cortlandt street.

MR. W. ATLEE BURPEE left for California via Sunset Route, Saturday, May 2.

NEW YORK.—C. H. Joosten has moved from 36 Dey street to new headquarters at 193 Greenwich street.

MR. HENRY A. SALZER has been chosen a delegate to the general Methodist Conference at Cleveland, Ohio.

SEED GROWERS in the vicinity of Garden City, Kans., are reported as claiming damages from Messrs. Ferry & Co. for cancelling contracts which had not yet expired.

NEW YORK.—The business of Chas. Schwake at 404 East 34th street was on May 1 merged into a stock company, organized under New York laws with a capital of \$20,000, to be known as the Schwake Seed Co.

THE Rockford morning *Republic* reports that the syndicate of which Hiram W. Buckbee, seedsman, is a member, put in a bid for the government seed order under the name of Landeth & Co. Philadelphia and secured the business.

Morton and the Seeds.

WASHINGTON, May 5.—Congressmen are again after the Secretary of Agriculture, J. Sterling Morton, for the unsatisfactory condition in which their quotas of Government seeds are delivered to them. Each representative is entitled to 15,000 "packets," which have been divided and delivered by the departments in 3,000 packages, each bundle containing five packets, more or less, of different kinds of seeds. But the packages, which are done up in manilla paper and bear mailing tags, have nothing to indicate the character of their contents, so that in sending the seeds to their constituents Representatives have to open every package or send it a pig in a poke.

When the bundles are opened five packets of seeds usually are found, which are marked spinach, watermelon, squash, cabbage, &c., but when it is once opened the package is unmailable, and the seeds have to be repacked and sealed in another wrapper. Congressmen complain that the Department of Agriculture could have labelled each package so as to show the character of its contents without any difficulty or delay, and some of them insist that the Secretary of Agriculture adopted this method in order to annoy them and avenge himself upon them for compelling him to buy the seeds.

At the department it is explained that the resolution requiring the purchase and distribution of seed was passed at such a late date that there has been no time to arrange and label the package.—*N. Y. Sun*, May 6.

Cincinnati.

Business the past week has been good all around, several swell weddings and social events having occurred. The improvement noticed at the end of last week has fairly well held up and prices for good stock have been firm. We hope it will

continue so. Market as a rule has been rather slow this spring; prices are way down. Geraniums are retailed, 4 inch pots, from 75 cents to \$1 per dozen, and other stuff accordingly. Mostly all growers are done planting carnations, and are looking daily for rain. We do not remember of ever having such a dry and warm spring.

Recent visitors: Mrs. Lodder of Hamilton, and Mr. H. Behrens of Middletown. H. SCHWARZ.

Philadelphia.

Those who attended the May meeting of the Florists' Club, held last Tuesday night passed a very social and enjoyable evening. The essayist, Mr. Berry, had been unable to get his paper on forestry ready for this meeting, but promised to be fully prepared for the next. After considerable good natured bantering as to who had best manage the affair it was determined to have a planked shad dinner on the first Saturday in June, to which all members of the club, as well as their wives and sweethearts, were to be invited. Mr. Westcott is chairman of the committee having the matter in charge. Mr. Geo. Watson is another member, and their number was added to by the appointment of Messrs. Robert Craig, Edwin Lonsdale and Robert Kift, so as, Mr. Westcott said, to have some young blood to liven things up a little. Should the weather permit, this occasion will no doubt be a very delightful and most enjoyable event, and the first picnic ever given by the club.

Messrs. John Hackett, Mr. Myers of Myers & Samtman of Philadelphia and C. B. Weathered of New York were elected to membership.

The question "What is there new in bedding plants?" asked by Mr. Lonsdale, brought out quite an interesting discussion. Mr. Craig spoke of the newer French cannas that were driving the older sorts out of the market, owing to their great superiority in form of growth and flower. He mentioned Prima, a yellow with brown spots, as being a novelty of merit, and there were many of this new type that were very far in advance of the older kinds. Crotons were bound to make themselves felt, and there was a great and increasing demand for them. Begonias too were coming plants, as many of the newer fibrous rooted varieties bedded out almost like geraniums and were continually in flower. B. rubra was especially recommended in a partially shaded situation. Acalypha Triumphant, a new red leaved variety, was a most excellent plant, one that colored up well. Vincas rosea and alba, although old, were as satisfactory bedding plants as anything he knew of, and should always be found in a list of available plants for this purpose. Mr. Lonsdale spoke also of cannas, crotons and begonias. Begonia Erfordii he especially recommended, as it was always in flower both in the bed outside, and when transferred to the house it continued to bloom as if it never felt the moving.

He also spoke of the great value of the croton. Mr. Hueter of Girard College was the first to find out its good qualities as a bedding plant about ten years ago, and it is still to be seen in its best in

the college grounds to-day, in fact he believed the best bedding to be seen in America was that planted by Mr. Hueter at the college grounds. Mr. Hueter spoke of his work and said he discovered the virtue of the croton for outside work about ten years ago; he had a few planted and put them outside because he hardly knew what to do with them. He was told it was a mistake, as they would burn up in the hot sun, but he found they seemed to like the sun, and did well, and next season he tried a bed, and now he used them extensively, planting not promiscuously, but in kinds together, so as to get a better effect. A strong growing variety is given the center and a low bushy kind is planted for a border. They needed very little care, no pinching or trimming, as do coleus, an occasional syringing to keep down spider beings sufficient. They were easily propagated in winter, requiring, however, a little more heat than most other bedding plants. He was always glad to see any of the craft and would take pleasure in showing them about the grounds.

Trade is falling off in the stores and the boards are already going upon the house fronts in the fashionable sections of the city. Roses are getting smaller and the price is also falling a trifle as is the case with most of the other stock. There has been a war on the fakirs on Chestnut street and quite a number of these gentry were arrested and all their little stands had to go, although one of them showed a police lieutenant's permission to do business on his block. Charles Thomas, a colored man, has a large street business, employing a lot of boys, and this shut him off Chestnut street where his principal trade lay, but it was in the end a good thing, for now he has without rent the use of the old Baldwin conservatory with a large front on Chestnut above 11th until the property is sold, the owner giving him this privilege.

Faust Brothers of North 26th street were sold out by the sheriff May 4.

The Florists' Gun Club had a return match with the Penn Club of Norristown last Wednesday afternoon at their grounds at Wissinoming. The day was beautiful and the shooting for the most part good. The Penn. Club, however, took the lead at the start and were never headed, winning by 16 points. The score follows, each man shooting at 25 birds.

Florists' Sweet Peas**New Sweet Pea "America"**

Is more distinct and striking than any other variegated Sweet Pea in existence. And is of the large flowering type. Its color is a white ground and through the center of the standard is a wide carmine scarlet blotch veined with fine scarlet lines running toward the edges and showing in the same manner on the wings. The dashing contrast of the heavy scarlet blotch on the white ground makes the blossoms very effective in a mass of cut bloom or when flowering in the garden. It is indispensable for any complete collection of colors in Sweet Peas. Pkt. 15c; 2 for 25c; 5 for 60c; 10 pkts. \$1.00; 100 pkts. \$7.50.

BLUSHING BEAUTY, clear "Daybreak" pink, largest size. Oz. 5c; 1-4 lb. 12c; 1b. 35c; 5 lbs. \$1.50.

COUNTLESS OF RADNOR, clear lavender, very large flower. Oz. 5c; 1-4 lb. 15c; 1b. 45c.

EMILY HENDERSON, pure white, large early. Oz. 5c; 1-4 lb. 12c; 1b. 35c; 5 lbs. \$1.50.

HER MAJESTY, clear bright rose, very fine flower. Oz. 7c; 1-4 lb. 15c; 1b. 45c.

FIREFLY, brightest fiery scarlet, large. Oz. 10c; 1-4 lb. 20c; 1b. 60c.

MRS. ECKFORD, best large yellow. Oz. 7c; 1-4 lb. 18c; 1b. 55c.

MRS. SANKEY, large, white. Oz. 5c; 1-4 lb. 15c; 1b. 40c; 5 lbs. \$1.75.

INVINCIBLE CARMINE, deep crimson scarlet. Oz. 6c; 1-4 lb. 12c; 1b. 35c.

TRUE LOTTIE ECKFORD, white, blue edge, large. Oz. 5c; 1-4 lb. 15c; 1b. 40c; 5 lbs. \$1.75.

For other varieties see our "Book for Florists," sent free to florists.

**AMERICAN FLORIST CO.,
CHICAGO.**

Rochester, N. Y.

In the midst of spring work, all busy preparing for planting out and with the usual demand for spring bedding, the growers in this neighborhood have their hands full at present. In several places carnations and other stock has been planted out, others are just getting at it, and as the weather is continuing warm and pleasant, probably it is best for the young plants to be out in their summer quarters, though usually it is not safe to risk much planting before the middle of the month. The nurserymen are still packing trees and shrubs, but all stock is rather too far advanced in growth to do well, and if such trees are received and planted by the inexperienced, few of them will have a chance to live, still there always will be people who send in their orders at the last minute and are willing to take the risk. Large gangs of men are employed in the nurseries, planting out small stock in order to get it in before the weather gets too hot. Winter propagated evergreens and shrubs of all sorts, grafts of clematis, oaks, Japanese maples, lilacs, pines and other evergreens besides the many thousands of roses grown from cuttings constitute the bulk of the most valuable stock which has to go out into the ground, and considerably more care is exercised in planting this class of ornamental stock than there is in the planting of fruit trees of any description, and only experienced help is trusted with the planting of young ornamental stock.

The cut flower trade is very dull, nothing is going on; even funeral orders are few and far between, but flowers are plenty and the numerous stores are making good displays in their windows, but buyers are scarce. The weather is too pleasant and fine for dinners or parties, which the wealthy class usually arrange before real summer sets in, and they prefer instead a good long ride in the afternoon and evening, entertainments at home are out of the question as long as this fine weather lasts.

The annual report of James Vick's Sons was filed at the county clerk's office in this city, one day last week, showing the capital stock to be \$25,000, liabilities \$71,000 and assets \$44,000. J. B. K.

Toronto.

Weather still quite summer like and everybody busy as bees outside and inside.

The regular meeting of the Horticultural Society this week is to be devoted more especially to pansies.

W. E. Worden has bought a place in Eglinton about three miles out of the city, and is preparing to put up several rose houses.

The new Florists' Directory published by the AMERICAN FLORIST Co. is at hand. It is a most useful little book.

J. H. Dunlop reports business much improved during last week, with many wedding orders. Roses very plentiful, necessitating lower prices to effect quick sales, though best quality of best varieties bring good prices still. Sweet peas much in demand but supply short—violets poor and demand about ceased. Valley good and selling well—carnations very fine but short on Daybreak. Showing some fine white rhododendrons now. E.

SAN JOSE, CAL.—It is Frank E. Bourguignon, and not D. H. Bouguignon, that is connected with the new magazine, the *California Garden*.

IVORY! THE GREAT SUCCESS!

NOTHING IS IN MORE UNIVERSAL DEMAND BY FLORISTS THAN A GOOD, PRODUCTIVE WHITE CARNATION.

In **IVORY** you will have it. Try it and you will have a money maker. It produces as many blooms as Wm. Scott, is as perfect in form as any Carnation yet produced, held by a calyx that never bursts and carried on a long, wiry stem. What more do you want?

Fine plants from soil, \$10 per 100; \$75 per 1000. Stock ready now.

Also fine stock of *all the other leading varieties*. SEND FOR PRICE LIST.

JOS. H. CUNNINGHAM, Delaware, O.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

St. Paul.

Warm sunshiny days have followed the dark wet days of April and business is correspondingly lively.

There has been a good demand for flowers since Easter, but the warm weather brought out an abundance of bloom and prices have taken a tumble. The cream of the stock, however, still brings good prices, and as Decoration Day and commencement exercises are near at hand we do not look for much of a slump in sales before June 15.

Plants are selling well, though the wet weather has delayed planting out. Bedding stock is a little backward, owing to the dark days, but has several weeks yet in which to make up for lost time. Nearly all of the smaller growers have stands at the city market, and all report good sales. The plant trade of the city seems to be done around the market, while a good many cut flowers are also handled at the same place. One party reports a sale of over 1,000 roses at the market in one day recently.

Supt. Mesbauer of the parks has a fine lot of bedding stock this year, and is rushing business as never before.

There is no outside stock in bloom yet. The season is backward, though the trees are now in full leaf.

De Cou & Co., who made an assignment some time since are again in business in the store formerly occupied by Venzke. R. C. Sieger has one end of the store devoted to flowers and plants. As it is centrally and conveniently located, has large show windows and in the heart of the city a good business in the florist's line will undoubtedly be done.

Henry Krinke has a window display of antirrhinum, iris, cannas, chrysanthemums, carnations, etc. His trade seems to increase.

L. L. May & Co. report a very fine business in the seed line. They also have a very fine display of gloxinia and calceolaria. Their shipping trade in the plant line is very heavy.

Chris Hansen is erecting a new rose house 40x100 feet three-quarter span, using 16x16 glass.

Chris Bussjager, a new one in the business, has erected a house 20x80 and has it well filled with bedding plants.

J. L. Johnson, who has been with L. L. May & Co. for four years, has accepted a position with the State Public School at Owatonna, this state.

Recent callers: P. J. Goemans of Hillegom, Holland; J. Rolker of New York, and Mr. Heming, representing F. E. McAlister.

L. L. May & Co. are busily engaged in sending out the government seed order.

Utica, N. Y.

Easter trade was very fair as far as heard from; larger sales of plants are reported, mainly *Harrisii*, *azaleas*, *spiræas*, *genista*, etc. Pans of valley, tulips, hyacinths, etc., were in demand.

The sale of cut flowers was somewhat interfered with by bad weather, but considering everything no one has cause to complain. Prices were about the same as usual, in fact it is out of the question to ask much advance over ordinary rates in a city of less than fifty thousand inhabitants and with over forty establishments selling plants and flowers. "Talk about the life of trade."

The warm weather which followed Easter has had a bad effect on trade and with the exception of some wedding and funeral work it is positively dull.

Roderick Campbell, for 21 years superintendent of Forest Hill Cemetery, presented his resignation on the 20th of April. When Mr. Campbell came here from Brooklyn in 1875 the association had only 90 acres of land. During his administration the cemetery has been enlarged by 150 acres. It has also been laid out on a permanent plan and greatly beautified, so that it is second to none in the state. A handsome conservatory has also been erected. Mr. Campbell leaves the cemetery with the best wishes of many friends. He will engage in the florist business at the corner of Genesee and Highland Avenue. F. J. B.

Little Falls, N. Y.

Walter Bonfield, the florist who disappeared on Wednesday, April 29, has not been found. He was seen at the greenhouse about 10 a. m. on the day mentioned, when he handed a paper to John Spence of New York, who holds a \$600 chattel mortgage on the greenhouses, saying he would be back in a few minutes, as he was going into a nearby store on business. He did not go there, but walked on up the street. He was seen and conversed with two persons after this. Had Mr. Bonfield anticipated leaving the city in the morning or the night before he would naturally have taken his gold watch and \$40 in cash, which he left behind. His indebtedness is said to be about \$2,000, which he could have probably paid all right with the business he was doing but for pressure being brought to bear on him. The friends of Bonfield fear that something has happened to him. It is to be supposed that had he intended going away he would not have left in his working clothes and with no ready money. Mr. Bonfield formerly had charge of the Overlook Greenhouse until he started in business for himself. F. J. B.

I have a surplus stock of **PELARGONIUMS** and **MME. POLLOCK GERANIUMS**, and offer them cheap.

News Notes.

BARRE, VT.—W. L. Draper of Montpelier has opened a branch store here.

SALEM, MASS.—J. H. Punchard has filed a voluntary petition in insolvency.

MONTPELIER, VT.—E. Jacobsen has opened a cut flower store in the E. M. Irish Building.

MASSILLON, O.—Mrs. J. H. McLain contemplates building a new greenhouse on her South street lot.

LYNN, MASS.—Paturel's flower store at 105 Monroe street was damaged by fire on the evening of April 20.

YONKERS, N. Y.—John Fursey has opened a plant, seed and cut flower store at 17 Warburton avenue.

BROOKLYN, N. Y.—Robt. McCullough, formerly in business on Montague street, has opened a cut flower store on Fulton street, near Bedford avenue.

GALESBURG, ILL.—I. L. Pillsbury held a spring opening May 1, 2 and 3. It was very successful, bringing a great many people to the greenhouses, which resulted in a good trade in plants and flowers.

XENIA, O.—The wife of W. P. McFarland died, May 2, of consumption, at the home of her parents here. Mr. McFarland was for some years with E. Hibbard, of Youngstown, and is now located at Akron.

LENOX, MASS.—The Lenox Horticultural Society held its first meeting for the summer season on Saturday, May 2. The meetings will be continued fortnightly with exhibitions of plants and flowers from May until November.

HAGERSTOWN, MD.—The first annual chrysanthemum show of the Washington County Floricultural Society will begin here November 5 to 7 next. The premium list has been printed and copies may be had on application to the secretary, Mr. Newton S. Owen, Hagerstown, Md.

PROVIDENCE, R. I.—The Florists' and Gardeners' Club of Rhode Island had a very interesting meeting on April 24. Messrs. Chappell, Canning and Hazard were appointed a committee to petition the city council for a resolution providing for the licensing of street vendors. Considerable discussion took place as to the advisability of the establishment of a florists' exchange.

Jones, McDuffee & Stratton, Plant Pots and Pedestals

Announcement to Florists.

We desire to announce the dissolution of the firm of Siple Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Grand Rapids, Mich.

The Florists' Club met in the parlors of the Eagle May 5, with an average attendance, Vice-President Cunningham in the chair. Informal discussions were held on seasonable topics. The season is fully three weeks earlier than usual; the summer bedding is well under way. Geraniums, cannas and coleus are already being planted. Crabb & Hunter exhibited a beautiful specimen of the night blooming cereus 14 inches in diameter. F. A. Chapman and J. A. Creelman talked entertainingly. Mrs. Evelyn Arnold advocated the growing of Iceland poppies more extensively, it being in demand as a cut flower.

ROBERT SCOTT & SON, of Philadelphia, lost about 1,200 square feet of glass by hail on the afternoon of May 5. They were insured in the Florists' Hail Association.

WILMINGTON, DEL.—W. H. Vance, 606 E. 7th St., is putting up 5600 feet of glass for commercial purposes. Herman Wolff, late foreman for Jacob Brown, will be superintendent.

MUNCIE, IND.—Mr. Henry Humfeld will soon erect a greenhouse at Frankford.

Rose Notes.

Unless the greatest care is given to ventilating it will be practically impossible to keep the old plants in the benches free from mildew. When the foliage is heavy and luxuriant it is not very liable to be attacked by mildew, but if the plants have become weakened by excessive heat, lack of nutrition or because of too much shade or in fact any other cause, it requires only a chill blast of air or a close damp atmosphere over night to produce enough germs to speedily fill the house. Sulphur should be frequently applied to the steam pipes, and if this is not effective the bellows must be brought into use, and the foliage covered; early in the morning before the ventilators are opened is the proper time to do the work, but to be thoroughly effective the house must be kept closed until the temperature reaches 85°, then ventilation must be given sparingly, and the house kept warm all day. It is doubtful if the sulphur will kill mildew unless we can get the fumes from it, this then is the point to be aimed at when we sulphur a house of roses. I imagine some critic will be saying as he reads this, "Haven't I read the same thing in the FLORIST over and over again? what is the use of writing that which everybody knows?" To which I would reply what is the use of knowing anything if you fail to carry your knowledge out into practice, as I find in going from place to place at this season, that whatever people may know about fighting mildew, they all the same, in a great many cases allow it to get the best of them, it cripples the foliage, makes the flowers unsalable, and the only thing the grower can do is throw them out, and replant. I remember a man who lost his position as foreman and also his reputation as rose grower, because he failed to conquer this enemy of the rose. The same is true of red spider, kept down he can give no trouble, but given a good start and we have lost the race.

If shading the glass has not been done it should be attended to without delay. Syringing and watering must be given their share of time, with an outside temperature of 95° it will not do to spare the water; a good hard syringe in the early morning, and one or two good sprayings overhead in the hottest part of the day, are absolutely essential if we are to cut any salable flowers. Hybrids in benches or boxes should be encouraged to make as

much and as strong wood as possible early in the season, by giving quantities of liquid manure, wood made late in the summer seldom matures, and consequently is of little value. A good liberal mulching would help them at this stage very materially.

The young roses in pots which are to be bedded this summer will demand a good deal of time and attention from now on, it is perhaps hardly necessary to say that they should be kept clean as regards spider, mildew, greenfly and weeds. As soon as it is apparent that they will be benefited by a shift into a larger pot, don't wait a week or two longer until indications of their going wrong compels the shift. Small shifts and frequent may be expensive as regards labor, but they are undoubtedly the safest and best. From first to last roses should be potted firmly. Much of next season's success may depend on the way your young stock is now watered and cared for, the most thorough and trustworthy man in your employ is the one to have charge of the young stock.

Houses intended for summer blooming should be planted now as early as possible, the end of April or very early in May is late enough, unless the houses are to be carried along all through the winter season; in which case very early planting may not be desirable. The varieties previously recommended were Meteor, Kaiserin, Perle and for pink Testout or Bridesmaid. Grafted stock of the latter variety planted early will give good results as a summer rose. Niphetos is a good summer rose for small growers who have a retail trade, but if growing for the wholesale market Kaiserin is the white to grow, it also is by far the most satisfactory ever-blooming rose out of doors that I know of; a hundred plants of this variety planted in good soil mulched and watered properly would produce basketfuls of roses through the summer and fall, just right for funeral or other work.

With the exception of Meteor I prefer solid beds for summer, they require less watering, give a cooler and more uniform temperature for the roots, and produce heavier growth and larger flowers. Thorough ventilation at the roof and side should be provided if possible. After filling the house with the very best soil it is possible to get I have usually sprinkled upon and mixed through it pure ground bone at the rate of 100 to 150 pounds to every hundred running feet, supposing the house is about 20 feet wide, and an equal quantity of wood ashes. If the soil is in any way deficient of manure an addition of 200 pounds of pulverized sheep manure to the same space as given above would enrich the soil very materially. For grafted stock deep planting is very desirable, not so with plants on their own roots, they should be low enough to merely cover the ball with the new soil. I

indorse what Mr. Scott said recently about planting firmly, few people indeed seem to realize the importance of making the soil round a plant firm, I have seen men otherwise clever plant roses so loosely that they would barely bear the pressure of water in syringing. Loose planting is always objectionable and especially so with roses.

ROBT. SIMPSON.

Carnation Notes.

We hear very often mention made and descriptions given of seedlings, new varieties, at this time of the year. Spring is not a good time to judge a new variety. To find its true value as a commercial variety we must make our observations at the beginning and middle of winter. We want winter bloomers, not those that only bloom well in spring. The influence of springtime is very great, and all varieties that never made any show through winter, or only furnished poor and imperfect flowers, will show up in spring, and surprise the owner with their beauty. One feels sorely tempted to overlook their faults, and take this exception for their true nature, when it is only caused by the invigorating springtime; they lack the push and vigor to respond to winter culture. And again, there is too much of the nature of the oldtime carnation in them, for we must not forget that the everblooming or monthly carnation made its appearance only about sixty years ago, and to my experience a very large percentage of the seedlings return to their spring blooming nature, as well as to the single form. The record of those that deserve further trial must be made in fall and winter and not in spring.

I received several communications and sample blooms to convince me that there are pure yellow carnations in existence. I am well convinced of that fact, for I have and have had them myself for years, but none good enough to venture a dissemination. I repeat again that I do not know of any pure yellow in general cultivation, or in the markets anywhere. They hang around in the background, afraid yet to show their faces. I believe a pure yellow would be a great acquisition to our list of varieties, and would prove a great seller. And when besides being a perfect flower it possesses the good qualities required to make it profitable to the grower, the possessor of such a variety may indeed have a gold mine, and could turn the pure yellow flowers into pure golden dollars.

The flowers sent to me came mostly in a spoiled condition, and on two or three blooms we should not base an opinion, that can only be formed by a daily observation for at least one whole season, and on more than one or two plants. Every grower of a new variety should be the judge of his own production, and when it is his honest opinion that it is good, send it out, do not hesitate; a good pure yellow carnation is wanted. This is an opportunity to make money.

What delightful weather, warm, too warm for May, but admirable growing weather. Those that neglected or had not the opportunity to have their young stock out, missed a very great advantage.

Keep the soil stirred now, never let it bake and get hard, keep the surface in a loose, mellow condition. We use the "Gem" hand cultivator, a very handy implement which does the work to perfection, and one man with this cultivator can do as much as five men with the hoe, and do it much better. It needs, once in a while, the use of a hoe in the rows between the plants to destroy the weeds. To keep the surface of the soil always loose and mellow is the greatest safeguard in a dry spell to retain moisture.

Do not overlook your soil in preparation for house culture; if recommendations given in my notes last fall were followed, give that soil attention. It should be turned two or three times from spring until fall. We simply turn it with the plow. Be always careful not to handle that soil when wet. When not rich enough, some manures that may be needed can be worked in with every plowing. To be more specific: We have two patches of soil for that purpose, each about 15 feet wide, running through a field about 300 feet long. When plowed this spring we plowed each patch together in a ridge, so as to have a good furrow on each side. When plowed again we plow them apart, leaving the furrow in the center, and the next time again together. This gives it with each plowing a complete turn, and with a great deal less labor than to do it with the shovel. Let it lay rough just as thrown by the plow, so it is well exposed to wind and weather. This helps to facilitate decomposition of the animal manures as well as the mineral and vegetable. To have a well prepared suitable soil for house culture is very important, it is the foundation and first step to success.

FRED DORNER.

Chrysanthemum Notes.

The chrysanthemum grower now has his hands full, especially if he grows a general assortment of plants, for the other plants are demanding all of his time, and too often the chrysanthemums are left to shift for themselves, and many a failure in the fall can be traced to early neglect. Under no circumstances allow the plants to become so dry that they wilt, for the wood will then become hard and the plants practically worthless. Better by far if they are so often neglected that they reach this condition to throw them away and start a new lot of cuttings. They can easily be struck now if watered plentifully in the bench and not set too closely together. A great many set the cuttings as closely now as they do in the winter, when there is bottom heat, and as much water is not required to make a successful strike as is from now on, and they therefore find that they lose a great many by damping off. After the first of May it is better to set them at least an inch apart in the row, leaving three inches between the rows. This will allow the air to circulate between them. Pot them off as soon as rooted, for it allowed to make any growth in the bench,

they grow spindling and grow hard very quickly.

It is now time to make up one's mind just how we intend growing our plants this year. There is said to be a falling off in the demand for the extra large blooms, and many of the buyers are calling for moderate sized flowers and sprays. The plants for large blooms should by this time be potted up, but there is yet plenty of time to strike the cuttings for plants to be grown for any other purpose.

Some time ago we advised the boxing or flattening up the cuttings from the bench, but after more trial we have gone back to growing them in pots. While they are much more easily cared for in flats, they often get crowded, and in transplanting into the benches the roots get badly broken and torn, and do not take hold nearly so quickly as those planted out in pots. The plants should be watched carefully and shifted up as fast as they need it; if you want success don't say "they will stand that size for another week," but set right to work and give them a shift, and keep them growing for all that there is in them.

ELIJAH A. WOOD.

Azaleas.

The accompanying photograph shows part of an azalea house of Keller Sons in Rochester, N. Y. as it looked the week before Easter. The house is a low old fashioned structure, but answers the purpose; there is no bench in the center of the house, the plants are set directly on the ground, which seems to suit them well enough. Around the sides and ends low benches are erected where the smaller and medium sized plants are placed. The house is kept rather cool, and usually there is no need of forcing the plants to get them in for Easter, but when, like in the present year the date is an early one, a few days in a warmer house will bring them out in good shape. Any of the plants left over, which have to be kept for another year, are trimmed into shape after they are past blooming and if needed get a repotting. Such stock will always flower more profusely than the newly imported plants, although it is very doubtful whether it would pay to keep over a large quantity. About the middle of May all azaleas in this place are taken out into the open air and the pots sunk in the ground. No shading of any sort is used, they get the full sun all day but are well provided with water, both overhead and at the roots and by fall are all well set with flower buds.

J. B. K.

Miscellaneous Seasonable Hints.

By the time these lines will be read my brother florists of the north will be about the bedding out campaign of the year. In our northern cities it is really unsafe to put out such plants as coleus, heliotrope or any plants that suffer with the slightest frost before the 1st of June. While geraniums and many other less tender plants can be bedded out ten days earlier, with the great majority of our patrons, there is a dense ignorance about the hardness of the plants they like to have in their garden, and it is the duty of the reputable florist to enlighten them. All of you doubtless have the same experience every spring. In walks Mrs. Neugarden about June 1, and she wants some coleus, pansies, geraniums, hollyhocks, hardy roses, etc. If the public knew that the proper time to plant hollyhocks and pansies was almost two months earlier than coleus time, how much less a strain

AZALEAS FOR EASTER.

it would be on the florist, for he who does a big plant business has now a most miserable time of it from about the 25th of May to the 10th of June. In fact, what would be a fair two months' work has to be crowded into three weeks. The above is written to impress you with the necessity of getting out all your orders just as fast as the plants can be safely planted out; put off nothing, for the last few days of the month will bring more work than you can get through on promised dates.

There is often a discussion among the florists whether we should charge for planting. There can be no rule or law about this. If there were an understanding between all the florists of a large city that the time taken to plant should be charged for it would be broken in a dozen different places the first day, because there is just where the smaller establishment would get in its work. "Oh yes ma'am, I'll plant 'em, Mr. Compost don't do that." The solution of this question is simply good judgment. Our rule is to say "Yes, if the bed or border is all prepared we will send a competent man to plant," and it pays well to do it. No help is asked for where a little small mixed up purchase is made, but where a good bed of geraniums or foliage plants is asked for it is much to your interest to see that the plants are set out right, and at proper distance. If the flower bed turns out fine you are sure of your customer again, even if you don't belong to the same congregation or won't promise to vote for McKinley. The poor florist is often imposed on, and while not being too stiff-backed it pays to stand on your dignity at the proper time, and always remember that unreasonable people are

no great profit to you. You will have them this year, your neighbor the next, and you will get them again before your hair is much greyer.

I have many times seen a load of plants go off to fill some flower beds, and in half an hour saw the man return with the empty wagon. His mission was to get a pickaxe, spade, rake and perhaps a jack screw to raise a corner of the veranda. Such business as that is what gave rise to that immortal saying which originated in the gardening days of ancient Babylon and is known as "rubbing it in." In such cases charge 50 cents an hour for the man's time, and you will come out all right. Now there is only one right way to put a plant in the ground, let it be either a carnation, a geranium or an *Abies canadensis*. Make an excavation larger than the ball of the plant, put enough earth around the ball to steady it in place, leaving a cup or hollow to receive the water. Finish planting the bed before you water, then a good soaking for each plant, and when the water has disappeared fill in the hollow with the dry earth. This watering is worth a dozen on the surface, and he that does not agree with me in this knows nothing about it. A carnationist who perhaps plants one hundred thousand may say it takes too long. I figured the expense of this careful way on a batch of twenty thousand carnations last year, and found it to be about 50 cents extra cost per thousand over what is too often the plan, just shoving them in and trusting to a rain coming shortly; watering on the surface and letting the sun bake the ground is useless. Tell your customers not to be sprinkling their flower beds every night;

tell them if the weather is very dry to give them a thorough soaking once a week and hoe the beds the next day.

A geranium that will be fashionable in our neighborhood this year is Mrs. E. G. Hill, a salmon pink, immense truss, and most vigorous habit and health. It is by no means new, and is widely distributed, if there be a florist who grows geraniums and has not Mrs. E. G. Hill, get it at once and plant some stock. I have none to sell.

The florists of this country, not all but mostly, do not harden off their bedding plants as is done in Europe. If plants are a few weeks or even a few days exposed to the full sun, and that can be given on all fine days by removing the sash from the frames in which you will have lots of the stock, they will be in much better condition to be bedded out. The larger proportion will be in the greenhouses, but there you can give air all you possibly can day and night and get along with as little shade as possible.

You will soon be filling vases in the cemeteries and veranda boxes. A most useful plant for the center of a vase is *Dracæna indivisa*. It is cheap, easily grown, and improves in the vase every day till fall. In fact when October's chilly blasts arrive it's about all that's left. You can buy them suitable for vases at a very reasonable cost, but you can sow the seed and raise them yourself, although it takes nearly two years to get a plant large enough for the center of a vase; for all that it is not expensive, as it is a plant that will take a back seat whenever you are crowded. Another easily grown plant is *Grevillea robusta*; it stands the drouth and wind which all vase plants have to endure and adds to the appearance of the vase. It is not too late to sow the seed, and that sown now will make fine plants for next year's work.

Don't put *Caladium esculentum* into a vase; its tremendous growing powers soon absorb all the right and title to the locality. It is however, quite a useful plant when used alone in a vase; that is half a dozen or whatever the vase will take, and breaks the monotonous everlasting red geranium and yellow coleus. Many vases are now ordered to be filled with one kind of plant. A pink geranium with an edging of pink ivy leaf geranium is tasty and subdued and in most cases the vases that are filled as above do better and look better than those mixed up. In pink geraniums *Emile de Girardin* and Mrs. Hays are still fine for the purpose. Mrs. E. G. Hill can't be beat. In scarlet *Prokop Daubeck* is fine for vases, and old Ernest Lauth is still one of the very best. Many fine varieties of geraniums which make a beautiful truss in the greenhouse are failures when exposed to the Sahara-like conditions of an iron cemetery vase.

Don't forget to sow a good strain of *primula* before the month is out if you want strong blooming plants next November, and if we get a cold rainy spell the end of this month don't fail to light up your fires if they should be out. Two days and nights of cold and damp will do you more harm than the cost of a car load of coal. Next week I will write about what I know about veranda boxes and what should be in them.

WM. SCOTT.

Narcissus.

The young growth showing flower stem and bud of *Narcissus alba plena odorata* is sent me with word from sender that they get so far and never develop. The enquirer has some years attributed the failure to late frosts, but says this

year that explanation won't do, as they have not been subjected to either frost or drouth.

I am of the opinion that the trouble is slightly the dry weather, and more than that the very hot weather we have had for several weeks. A cool wet season suits it, but hot weather is against it. At the moment when I received the enquiry and sample of "arrested development" I had at my elbow a Dutch bulb grower of many years' experience in Holland as well as this country, and he quite agreed that too warm was the trouble.

WM. SCOTT.

Vinca Rosea, or Madagascar Periwinkle.

At the last meeting of the Florists' Club of Philadelphia I am reported as saying in effect that among new bedding plants likely to be worthy of trial is the "Madagascar periwinkle." This will cause a smile of derision among the older school of florists and gardeners, because, to my own knowledge, this vinca was in cultivation as a summer bedding plant in this country twenty-six years ago—my first acquaintance with this useful plant. When Mr. Craig was called upon to state what he considered of value in flowering plants, among others he stated that the *Vinca rosea* and its varieties were worthy of more extended planting than was now the case. He did not mention it as a new variety; he only referred to it as more deserving of a place in the flower garden than was now accorded to it. When I took occasion to speak upon the subject I asked Mr. Craig if the *Vinca rosea* was not also known as the Madagascar periwinkle. I did this for the benefit of the reporters who were in the hall because I was under the impression that it was just as well known by that name as it was by its more correct botanical name, *vinca*. In the anxiety for trying novelties in bedding plants, for a time some of these old favorites drop out of sight, so to speak. That is the reason, I think, that Mr. Craig referred to it.

In the long years ago we used to endeavor to get the seed well up in January. It takes a strong heat to cause it to germinate, and that is one reason, I think, why it is not more generally grown as a market plant, or for bedding out purposes than is now the case. The seed is generally started too late. In its early existence it is rather slow in making progress, but after it is once established in a 3 or 4-inch pot it grows quite rapidly, especially when the weather becomes settled and warm. This matter is referred to because a person is oftentimes placed in a ridiculous light, and it is too frequently not the fault of the reporter, but of the person who is trying to make a speech without notes, as he has not the faculty of making himself sufficiently understood, nor does he realize how he has laid himself open to ridicule until what he has tried to say appears in print.

EDWIN LONSDALE.

Through American Eyes.

WILLIAM PAUL & SONS, WALTHAM CROSS, ENGLAND.

At this establishment there is to be seen one of the largest collections of camellias to be found anywhere. The plants are many of them very large and include all the best varieties; when in flower they must make a handsome display. In England, as it is in America, this plant is surely losing in popularity, and but little effort is made to raise new varieties or push the sale of the flowers. This firm has made a specialty of raising new varieties of roses

COURT'S MONUMENT, ERECTED BY HIS AMERICAN FRIENDS, BROMPTON CEMETERY, LONDON. THROUGH AMERICAN EYES.

and has sent out a number of hybrid remontants, among them being the well known *Magna Charta*. Two new ones recently sent out, *Duke of York*, a pink China, and *Lorna Doone*, a good large Bourbon, both looked promising.

A number of greenhouses contained grapes and roses in pots being grown to be ripened off for forcing. A house full of *lapagerias* was interesting; they were flowering freely; the house faced north and the plants were plunged and given bottom heat, which treatment was said to produce the best results.

There is also a large nursery containing hundreds of acres filled with all kinds of hardy ornamental evergreens, trees and shrubbery. A novel and beautiful feature is a fine grass covered avenue three-quarters of a mile long and twenty feet wide extending from the office to the boundary of the grounds. This is bordered on both sides, the entire length, with choice specimens of their stock. In addition to the grand landscape effect this array of well grown specimens must be invaluable to the salesman, as no doubt many orders are obtained from visitors who had no thought of purchasing until the beauty of the specimens and their attractive grouping compelled their admiration.

WM. COURT'S MONUMENT.

The monument in memory of the late Wm. Court was erected by his American friends and stands in the family lot in Brompton Cemetery, within a stone's throw of James Veitch & Sons' nursery, where he was propagator and salesman for so many years. Many of the new and rare plants of his time were brought to this country by him, notable among them being the famous *Vanda Sanderiana*. He was respected and esteemed by all who had the privilege of knowing him, and at his death the spontaneous movement among his friends in America resulted in this lasting evidence of their admiration for him.

K.

Herbaceous Plant Notes.

Borders planted to hardy herbaceous plants without the aid of spring flowering bulbs are now also beginning to look bright and gay with colors. In addition

to the plants mentioned in last week's issue, the following have been in flower for some time. *Stellaria Holostea* is in since the latter part of April, and the pure white, star-like flowers are now produced in great profusion and will usually last well until the end of June.

Trolliuses or globe flowers are in bloom early this season. *T. europæus* was the first to come out, and will continue to flower for several months longer, usually until the latter part of August or beginning of September. The lobed or dissected leaves, dark green in color, form a good background for the beautiful yellow globe-shaped flowers, which are so freely produced in nearly all the species. Old clumps attain a height of 1½ to 2 feet, while younger or newly transplanted stock will only grow 10 or 12 inches high. *Trollius asiaticus*, which as a rule produces its flowers earlier than the above mentioned, was a week later this spring with us. The habit and the growth of this plant is much the same as in the first named, but the flower is very distinct, of a decidedly deeper golden yellow, and the stems do not grow quite so high. The flowering time extends from early May throughout June.

Waldsteinia fragarioides, with rather large yellow five-petaled flowers produced in clusters of 3 to 6 on erect stems, slightly bent over at the top, is a desirable plant for the border, doing well in any ordinary soil, and requiring but little attention. Leaves are borne on rather long stems in a compact mass; height of plant 8 to 10 inches, flowering time May and June.

Iris florentina alba, of which the older clumps are now in flower has the erect part of the inflorescence pure white, the falls having a pale lavender tinge on white ground and a bright yellow beard, very fragrant and a large flower.

The pretty and profusely blooming *Viola cornuta*, with long spurred large open flowers, are also out now in white and blue. The latter color is used later on as substitute for violets in the cut flower market, for which purpose they are admirably adapted in shape and color as well as in the perfume.

Centaurea montana is opening its large handsome blue flower heads now, and produces a fine show next to a patch of

GRASS AVENUE IN WM. PAUL & SONS' NURSERIES.
THROUGH AMERICAN EYES.

the golden colored *Alyssum saxatile compactum*; the florets are deeply cut or divided into narrow segments, giving the flower a fringed appearance.

Centaurea montana alba, a white flowering variety, grows a few inches taller than this, and is equally desirable as a border plant.

Ethionema cordifolium, better known perhaps, under the name of *Iberis jucunda*, is a most elegant little plant, blooming from now until the end of June or July in dense little roundish flowerheads of a delicate rosy color with a white center in each little floret. The neat, clean habit and the compact growth, together with the small narrow linear foliage of a glaucous green, and its free blooming quality, is admired by all who see it, but unfortunately it is a rare plant, much more so than the taller *A. grandiflorum*, which blooms later on.

Polygonatum multiflorum you do not meet very often, though it is a very desirable plant; the flowers come out in threes or sixes from each of the leaf axils all along the stem, while the plant is in vigorous growth during the spring months. They are pure white with light green tips, in shape elongated narrow drooping bells, dangling on slender short stems all along the leafy stalk, which attains a height of 2 feet or over. They are easily grown in any rich garden soil in the open border, but are better in a partially shaded position, where they will continue to bloom much longer than when fully exposed to the sun. J. B. KELLER.

Rochester, N. Y.

San Francisco Annual Rose Show.

The annual rose show of the California State Floral Society took place on April 30 to May 2, and that it was an artistic, financial and social success was more than proven by the vast throngs that

crowded Maple and Marble Hall of the Palace Hotel during the exhibition. Exclamations of praise for the varied flowers were heard on all sides, and every variety of blossoms found its group of enthusiastic admirers. The opinions of the judges and public as well is that this spring display is quite the finest ever made by the Floral Society. Of course previous shows may have exhibited larger quantities, but nearly all agree that for quality and variety this one has never been excelled. It is very certain that this exhibition has done a great deal to arouse interest in the California State Floral Society, and for the past few days applications for membership have been pouring in.

Mr. John H. Sievers made a very excellent display of carnations, showing nearly all the good varieties and a great number of seedlings. A great object of interest also was his show of pelargoniums, which is one of Mr. Sievers' specialties. These were indeed a treat and were greatly admired. This class of plants is receiving more than passing attention in California of late years. He also made his usual display of palms and ferns. E. Gill also showed a great number of his grand roses, as also did Mr. F. Ludeman of the Pacific Nursery.

One new feature about the show was the magnificent display of clematis by the California Nursery Company. These were especially well grown blooms and of a great variety. Paul Gallert of Colma showed some extra fine pansies and pelargoniums. Mr. Chas. Abram was there with an extra good display of finely grown decorative plants; some excellent rhododendrons were seen also.

The display of California wild flowers, by Mrs. W. S. Chandler, a prominent member of the society, was excellent. This lady displayed two hundred varieties of our native flora, many of which

were for the first time staged and classified. In the collection were such rare species as *clintonia*, *Calochortus alba*, and three different varieties of water violets, and also some excellent specimens of *nemophila*, commonly called baby-blue-eyes. Mrs. W. H. Weister made a magnificent display of California poppies. Her flowers were unusually large, measuring five inches in diameter.

Another object of much interest to the flower lovers was the new rose shown by C. J. Shatton of Petaluma. The bloom shown was of a delicate white, with just the faintest tinge of blush on the tips of the petals. This unnamed rose attracted much favorable comment and we hope to hear more of it in the future. The inmates of the Old Ladies' Home were the guests of the Society Saturday, and were all presented with bouquets. The following is the list of awards by the judges, to the satisfaction of visitor and exhibitor alike:

Amateurs: Largest and best collection of roses, John Henderson of Berkeley; best 25 varieties, Mrs. S. Stevenson of Alameda; best 12 varieties, Chas. J. Albhorn of Alameda; hybrid perpetuals, Mrs. N. H. Smyth of Berkeley; carnations, largest and best collection, Chas. J. Albhorn of Alameda; best 12 varieties, Chas. J. Albhorn; best collection of cut flowers, Mrs. E. Llewelling of San Lorenzo; clematis, Mrs. E. Llewelling. Pelargoniums, cut blooms, Chas. Albhorn; pelargoniums, plants, Chas. J. Albhorn of Alameda; pansies, L. J. Fenton of San Francisco; Mrs. Crane of San Lorenzo, honorable mention for mantel decoration.

Professionals: Roses, largest and best collection, F. Ludemann of Pacific Nursery; best 25 varieties, E. Gill of Oakland; best hybrid perpetuals, including hybrid teas, E. Gill of Oakland. Best specimen new rose, E. Gill.

Clematis: Largest and best collection,

California Nursery company of Niles. Pelargoniums, largest and best collection, J. H. Sievers of San Francisco. Best collection of foliage and decorative plants, John H. Sievers of San Francisco.

Carnations: Largest and best collection, John H. Sievers of San Francisco; best twelve varieties, John H. Sievers. Pansies, best collection, best collection of cut flowers, and largest and best collection of pelargonium plants, Paul Grallert of Colma; second, collection of foliage and decorative plants, Chas. Abraham of San Francisco; rhododendrons, largest and best collection, F. Ludemann of Pacific Nursery. The California Nursery Company of Niles was awarded a special prize for their fine collection of deciduous flowering shrubbery. METEOR.

New York.

A very meagre audience was present at the meeting of the Florists' Club on Monday evening to listen to Mr. Seidewitz's paper on the drift of the times. The slim attendance was undoubtedly due to the extremely hot weather, and was a convincing proof that the club had done well in voting to suspend the meetings during the summer months. Mr. Seidewitz was listened to attentively and at the close of his talk the various points he had touched upon were discussed with considerable vigor by Messrs. O'Mara, Donlan, Henshaw and others, especially that part referring to the tendencies to exaggeration in horticultural catalogues, which furnished a good opportunity for Mr. O'Mara to rise in defense of the catalogue men. He remarked that the spirit of change is a part of human nature, and that novelty will always be sought. The point is what to do to catch the eye of the people. Catalogue exaggerations are not confined to the United States by any means, there being as conspicuous instances in those of foreign origin. He believed that popular names for meritorious plants are necessary for their dissemination, and that the evolution of the florists' trade in the United States has been in the right direction and our florists as a rule are as honest a class of men as can be found anywhere or in any vocation. Much credit is due to the catalogue men who have done their full share to build up floriculture and from whom the public have gained most of their horticultural education. Mr. J. I. Donlan took the opportunity to call attention to the need of more suitable flower pots in which plants may be offered for retail sales and denounced somewhat sarcastically the use of paper or ribbon adornments on such plants.

A report was made indicating that the trustees of the club are in favor of a fall exhibition, provided a suitable hall can be found and a guarantee fund secured. Mr. O'Mara reported for the committee of conference with a similar committee from the Gardeners' Association on the project for a June show that arrangements had been made with the Children's Aid Society whereby two halls had been secured in the Newsboys' Lodging House in which to hold the exhibition on some Saturday afternoon about middle of June. Mr. Donlan supplemented Mr. O'Mara's remarks with a detailed account of what would be done to interest the children, the object being, he said, to bring the benevolent side of the club's work to the public attention, and thus help to build up an interest in the more pretentious fall show. Two silver cups have already been offered as special premiums, and it was voted that twenty-five of the club's silver med-

als be struck off and placed at the disposal of the committee in charge of the schedule.

The cut flower market has been in a demoralized condition for a week. The warm weather has driven in an enormous supply of both indoor and outdoor flowers, and the demand is very light in all lines. Lilacs, iris and other spring flowering stock is piled up on all sides and does not bring sufficient returns to pay the freight. Roses are so abundant that it is not possible to give quotations on prices that mean anything. From \$2 to \$5 a thousand is the rate at which the great bulk of the stock is disposed of, and it makes no difference what the variety is, American Beauty even having to go with the rest in many cases. Carnations are in rather better shape and the receipts are not so far out of proportion to the demand as is the case with roses.

The D. L. & W. R. R. has put on a special express car for the accommodation of the Madison growers. There came in over this road from the rose growing district on Monday morning of the present week, five hundred and twenty boxes of flowers. Judging from the number of new establishments to be erected in Madison and vicinity this season, next year's record will eclipse the present, and it may yet, if the increase continues, be necessary to give this enterprising community not only a special car but an entire train to itself.

John H. Taylor is enthusiastic over his success with old roses carried over from year to year. Houses of Bride, Bridesmaid and Perle already two or three years planted are to be retained and the young stock which has been growing for the filling of these houses will be sold. On the Brides referred to in last week's notes as being six years old there is a magnificent growth, and not a branch of the old wood remains.

The annual exodus of the fortunate ones to Europe has begun. Thos. W. Weathered sailed on the City of Paris on Wednesday; Ernst Asmus is booked for the Aller on May 30; A. T. DeLaMare will sail on June 3, to be absent six weeks, and J. H. Troy and wife expect to go about the same time.

Long Island has been suffering severely from drouth. The rainfall is from twelve to fourteen inches short of the normal for the past year. In the winter there was very little snow, and now crops are in very bad shape. Growers are considering the introduction of irrigation as the only solution of the trouble. How would it do to borrow St. Isadore's remains from Madrid and test its virtues as a rain maker on this side of the Atlantic?

Prof. Britton's lecture before the Gardeners' Association last Saturday evening attracted a large attendance. He showed a series of colored stereopticon views taken in the N. Y. Botanical Garden. There was an interesting display of plants and flowers contributed by a number of the members.

Mr. Henry Bird will deliver a lecture before the Orange Horticultural Society on June 18, on the Evolution of a Flower.

Mr. Grove P. Rawson will address the New York Florists' Club at one of its fall meetings, probably that in September.

Siebrecht & Wadley are cutting large quantities of unusually large and fine *Cattleya Mossiae*.

C. F. Christianson has moved from his old location on Broadway to a fine store one block below.

Mr. and Mrs. J. B. Nugent, Sr., celebrated the fiftieth anniversary of their wedding on Tuesday evening, May 12. Children and grandchildren and many

friends were present to extend congratulations, and many handsome gifts were brought to commemorate the rare occasion.

Chicago.

The West Park Commissioners seem to have some exceedingly "advanced" ideas as to what constitutes a park. The best authorities all agree that a public park should be a public garden, with restful landscape effects, where residents of a city can go to escape the turmoil of city life and get into closer touch with nature, but this has been branded as a rank error by the ruling majority in the West Park Board. They are expending some \$35,000 for a new barn in Humboldt Park, while 80 acres of that park are unimproved "for lack of funds." The Board was asked for \$25,000 with which to establish an arboretum and nursery which would have been a magnificent addition to the park, educational to the people, and immensely useful in supplying material for the further embellishment of the park, but they could allow only \$3,000 for the purpose, as all other available funds were needed for that precious barn. Landscape architects tell us that a barn has no place in a park, and that when its presence is a necessity it should be as unobtrusive as possible, and screened from view by judicious plantings of trees and shrubs. But in the opinion of the ruling majority of the West Park Board the reverse is true. The ornate barn is the main feature and the park useful mainly in setting off to advantage the architectural beauty of this structure.

In Garfield Park this body of wise men has expended some \$40,000 for a music stand and \$35,000 for a bicycle race track. A suitable music stand could have been built for \$5,000 and the race track has no right whatever in the park. It is an imposition on the people who pay the taxes for the support of the park, and in the mean time there is no money for the improvement of the park as a public garden, which is its only proper function.

In Douglas Park the enlightened gentlemen who compose the ruling majority of the West Park Board have expended \$40,000 upon a swimming school, which has no right whatever in a park, while 40 acres of the park are unimproved for lack of funds.

Evidently the West Park Board's conception of a park is a number of showy buildings with some land around them, having a few trees and shrubs of doubtful quality as a slight redeeming feature and acres of bare pasture, bicycle race tracks, ball grounds, etc. We advise the board to take a few elementary lessons from a recognized landscape artist.

Trade conditions during the early part of this week were the same as for three weeks preceding; a glut unrelieved by any activity of demand. Since cooler weather set in on Thursday conditions have been a little more favorable, and as usual stock is cleaned up more towards the end of the week. City retailers complain greatly of the unexampled dullness, and indeed they have little inducement to buy lavishly. A steady but moderate demand for white stock results from funeral orders, but this is all. Brides are falling off in quality, but will soon be replaced by new crop Kaisersins. Beauties are showing the effect of the heat, many of them being sadly bleached out. They range from \$1.50 to \$2.50 a dozen. Testouts bring the highest price of any of any of the other roses, \$4 to \$6 a hundred; others run \$2 to \$4, the latter figure only

EASTER VIEW IN STORE OF H. G. EYRES, ALBANY, N. Y.

applying to extra select stock. Carnations are the same as last week. Cold storage valley is held at \$3, and is vastly superior to the outdoor article at \$1 to \$2.

Among the outdoor stock peonies and irises are plentiful from Klehm and "The Grove," but the demand is not strong, even for the delicate and extremely fragrant Iris florentina, known to the trade as the "fairy iris." The peonies have been rushed out amazingly, and have lost both size and substance thereby. They are likely to be plentiful at Decoration Day, but it is doubtful whether the same may be said of any other outside stock; in fact it is feared that there will be a great dearth of the cheaper flowers. Cape jasmine from Texas has appeared, and is held at \$1.50 to \$2; a good deal will come in through the South Water street commission men.

In spite of the early season plant trade is very dull; it does not seem to be opening up at all. This is no doubt caused by the fear of a cutting frost; nearly every one last year lost a first planting, and trade is later this year in consequence; without doubt it will come with a rush about the last week in May.

At the meeting of the Florist Club last Thursday evening the matter of a protective association for the retailers was discussed. Only a few of the retailers being present, and these expressing doubts as to the value of such an association, the matter was finally dropped. It was decided to hold but one meeting each month during May, June, July and August. Therefore, the second meeting this month and the other months named will be omitted. The next meeting, which will take place June 11, will be devoted to hardy roses. There will be a number of essays on hardy roses and an exhibition of flowers of same on the same plan as the carnation meeting held some time since. Exhibitions are expected from several distant points in addition to what will be supplied by members of the club. Mr. Harry Bunyard, of Short Hills, N. J., was a visitor at the meeting.

Mr. J. C. Vaughan returned from the east last Sunday. He caught a severe

cold on the return trip and is now confined to the house.

The roses at Jackson Park came through the winter in first class shape. No florist in the vicinity of this city should fail to visit this rose garden during the blooming season next month.

Phil Hauswirth is now one of the great chiefs of the "Indians" of Illinois. Phil has always been very popular among the "Red Men" and he bids fair to soon stand at the head of the organization in this state.

There will soon be a baseball game between teams composed of "Wholesale Florists" and "Red Men." Let us hope the florists will not be scalped.

It is yet undecided whether the Chicago delegation to the Cleveland convention will require two cars or only two sections.

On Sunday, May 17, the first ball game of the season between wholesale and retail florists will take place on the West Side. The intention was to meet at Riverside, but the field being already held by a crop of hay, another battleground was selected. This will be the old race track where the same teams played last year.

Albert Fuchs has resumed business at his old stand, which has of late been operated by Julius Martini.

Visiting Chicago: Harry Bunyard, representing Pitcher & Manda.

Boston.

Boston is still in the same spot, although a returning wanderer would hardly believe it when he strikes that ancient landmark, the Common; there seems nothing left of it but a wilderness of sand pits, and barricades. They are even digging in it on Sunday, bless you! And just to think that these Bostonians of to-day are the descendants of Cotton Mather and others of that ilk. The Common dug up, and the evil work rushed through, not even stopping for the seventh day rest, no wonder the Divine Flower refuses to bloom freely in such a vicinity! Carnations here have been so scarce that large shipments have been coming all the way from Philadelphia. Welch Brothers

have been receiving from that source fifteen to twenty thousand weekly to help out and other firms have also been receiving in considerable quantity. George Sutherland tells me the business keeps quite good. Ever since Easter trade has kept steady and in more than usual volume. It is a rushing time with McCarthy & Co. between cut flower trade and three auctions sales each week. Norton Bros. are busy as usual and in a cheerful frame of mind as to the outlook. The other Back Bay retailers seem to be doing their share, and make a brave show in their big windows, the displays of Delay & Son, Wm. E. Doyle and Doogue & Co. being especially noticeable.

There's at least one man satisfied with his bulb stock this year, and that is John Fee, out Jamaica Plain way. Everything he planted did well, sold for good prices, and sold clean. John's a shining example to the rest of the craft. The seedsmen ought to give him a medal. Wm. E. Bowditch will take a trip to Japan the coming summer and fall. Sam Neil is still to the fore and growing some good roses, but like all the rest of the wealthy boys is growling about prices. Neal Boyle is cheerful and thinks that \$6 a hundred for pinks is not any too much. Some folks are never satisfied. Mike Aylward, is doing his best to keep up with the procession in the rose line. He is severely handicapped with the present range of houses which are now rather the worse for the lapse of time, since they were turned over for commercial use. Another year will probably see the last of them.

Tom Cox is as spry as ever, and would rather talk about horses than flowers; nevertheless it's a pleasure to look through this flourishing establishment which as usual is the pink of perfection in all departments. Lawrence Cotter's is another of the places that are always in excellent shape and a pleasure to look at. Lawrence will grow no more Mermets after this season; Bridesmaid is better. Meteor does well here. I saw some Mrs. Morgan; was told it was a "great thing" and strictly forbidden to give the fact away. So there's a pointer on the strict Q. T. for you. However, my friend Mr. Lonsdale told me the same thing about a month ago and said nothing about keeping it dark, so I guess Lawrence will forgive the breach. Tom Meade has been a sick man all winter; but is now able to again look after things. His crops look well at present.

G. C. W.

Edward Hatch will conduct plant sales at 15 Province street, on May 19, 21, 23, 26, and 28, at 10 a. m.

Pittsburg.

The florists are still complaining about the dullness in the cut flower branch of the business, the majority only experiencing about two good days of business during the week. The trade in bedding stock has only been fair, with a downward tendency in prices; but all are hopeful that the coming two weeks will alter the status of affairs, and without a cold backset, will see the bulk of the stock disposed of. Memorial Day, May 30, is so universally observed here, and more plants being used each succeeding year at that time, will very materially help swell the demand. The quality of the plants now offered this season is very good, above the average.

The National Saengerfest meets here early in June and a large number of visitors are expected, estimate over 150,000. The merchants are commencing to look

up the matter of decorating, and the florists are busy at designing and making estimates for them. This will be quite a boom if all goes as expected. The hall in Exposition building is nearly finished, capacity about 20,000; it is to be elaborately decorated. This with the number of arches, stores and dwellings also to be in holiday attire will make a large amount of business, and as flowers and song are so intimately connected our florists and decorators are very complacently looking forward to the month of June. REGIA.

Toronto.

The Horticultural Society has secured Professor Saunders, Director of the Experimental Farm, Ottawa, to give a lecture at St. George's Hall on Tuesday the 12th. "Ornamental Horticulture for Canada" is the subject of the lecture, and it will be accompanied by lime light illustrations.

The thermometer during the last four days has been hovering about the 90 mark, and has actually beaten the May record, in consequence cut flowers have been altogether too plentiful and could not be kept in condition for any length of time. Many have come to the scavengers. The market and plant trade has been pretty good, and is in full swing now, though there is very likely to be another cold spell yet. It has not been a good spring for planting trees, as the continued mild weather since the beginning of April brought things into leaf so very quickly. Pansies are coming into fashion for spring bedding here very much and are likely to be largely used next year. There are many other plants for this line of bedding which florists would do well to go in for in the future.

There is a deal of educational work in the horticultural line to be done in this city yet, especially amongst those in high places. The mayor (who is one of that kind of people who are always wanting to reform something whether he understands it or not) has lately been paying his respects to the parks and gardens department, and threatening to reform it. Horticulturists, however, and those who understand anything about the subject, although allowing that reforms are desirable and even necessary, do not by any means think that the reforms proposed by the mayor would be improvements. For instance one of his proposed reforms is to sink the parks and gardens into the Works Committee, so that the City Engineer (a good man in his place) instead of a Park Commissioner would direct the management of the parks and gardens. This as the Horticultural Society took occasion to emphatically tell him by means of a unanimously passed motion at its last meeting, would of course be a decidedly retrograde step. The present park commissioner, who is a gardener bred and born and a horticulturist through and through of the kind necessary for his position, has by means of great tact (how few possess this inestimable faculty) in dealing with his committee brought the parks and gardens to a state of perfection to which few if any considering the means at his disposal could have done. Of course perfection has not been reached by a long way, but if the mayor, instead of relegating the parks and gardens to the department of sewers, water works, etc., would give the commissioner more scope, power, men and money he would find that he was reforming in the right direction, and that the parks and gardens would flourish as a green bay tree, making the city more

attractive to live in and to visit than it is at present. Surely it is hard enough now teaching the public proper respect to well kept parks and gardens without the chief magistrate trying to lower them to the position of simple play grounds for children and commons for the masses to roam at will. It may be necessary that some of the parks or parts of them should be set aside for this purpose, but lovers of the beautiful have their rights too and are ready and willing to pay for them and to have them respected. And it is absolutely necessary that a competent horticulturist should be at the head of the parks and gardens system, as other cities and towns are finding out, if improvements in this line are to be made. The Horticultural Society and the Gardeners and Florists Association should fight till their last breath for this. E.

Rochester, N. Y.

The situation in the cut flower market remains about the same as last week, stock is rather plenty and no high prices are obtained. Roses and carnations are showing the effect of the warm spell. We have still a daily supply of fairly good violets here, the late tulips are selling well, especially the *Gesneriana*. Outdoor grown valley is in, but it is inferior to that grown under glass; white narcissus are very good yet in spite of the dry and warm weather. *Pæonia tenuifolia* takes well, wherever it is offered. Lilacs are also abundant, the whites bringing the best prices.

But few decorations have been called for lately and none of them were very elaborate, the store men seldom have a real busy day now, even though the trade in bedding plants is beginning to be rather lively, but prices are by no means satisfactory to the growers. At \$1 per dozen for good geraniums in 4 inch pots there is not much money in them for the retailer either, and in some places equally good plants are offered at the rate of 3 for 20 cents, other stuff is sold equally low. Pansies have dropped down to 25 cents per basket, and are very plentiful at that figure.

Considerable planting of shrubs and trees was done this spring in our parks, the work has been pushed along vigorously by Mr. J. Dunbar, the able assistant superintendent of parks, so that now all the parks are in fine shape and attract the admiration of all visitors, especially in Highland Park, which a few years ago was not expected by the uninitiated to ever be much of an attraction, the undulating surface of the grounds planted here and there in large masses of flowering shrubs, produces a most charming effect, viewed either from an elevation or from a lower point in the ravine, and in some parts these grounds may really be called more of a flower garden than a park. Most creditable work has been done here considering the limited amount of money appropriated for the purpose. Seneca Park with its natural growth of trees and shrubs along the steep banks of the Genesee river below the falls is worth seeing at this time of the year, the almost perpendicular slopes are clothed with verdure in all shades, profusely intermixed just at present with pink, yellow and white blossoms on trees or shrubs of every description, almost biding in most places the rocky irregular surface of the banks of the river nearly down to the water's edge. Nature has here provided us with a beautiful strip of land, which, with but little assistance in widening existing old paths or Indian trails, and the

planting of a number of trees and shrubs in some sections, was transformed into a veritable little paradise, such as no other park in the country can compare with, travelers tell us that nowhere in all the United States are to be found so much natural picturesque beauties condensed in such a limited space and the Rochesterians are grateful to Superintendents Laney and Dunbar for developing the natural scenery of this wild spot in so perfect a manner and in so short a space of time. J. B. K.

San Francisco.

Business at present here is far below what it was this time a year ago. A great number of the flower buying people are out of town attending the flower carnivals in different parts of the state, and their absence is felt severely in this market. The late frosts have injured all outside roses to some extent, thereby creating a demand for good inside stuff. We note that there are some excellent Testouts and Perles now to be had. Mermets and Bridesmaid are of a very inferior quality. Beauties are not at all over-plentiful, while Portia carnations, which for several weeks past have been scarce, are now coming in freely. Some excellent Scotts are now seen daily in the florists' windows. Never were lilies such a glut as at the present time; the quality of them is very fine but all they bring is from 75 cents to \$1 per dozen stems. Violets are coming in in large quantities after the late rains, but do not seem to take well at all, the chief reason being because they do not last any time after being picked. Sweet peas are coming in slowly and are in good demand, the quality of them also being excellent. We note some Cupid in pots in bloom at Mr. Lynch's place. The flowers are of a fine size but the stem is rather too short.

Mr. L. Vaughan of Chicago is in town on his annual visit to the Pacific Coast. Mr. Vaughan reports business as good, and is an interested spectator at the carnivals.

Mr. Fred Reiss, who has been in the nursery business in San Rafael for some time past, has sold his nursery and as yet is undecided as to his future movements.

The flower show and "Carnival of Roses" at San Jose eclipsed the Los Angeles fiesta and every other festival ever held in California. The "Garden City," as San Jose is called, covered herself with glory in this, her initial carnival. The floats were grand and as a general rule the quality of flowers used was excellent. I will give a detailed account of the flower show in my next, as it is claimed that it was one of the finest exhibitions of well grown flowers ever held here.

The spring show of the San Mateo County Floral Society closed on the 2nd and was a great success. The total receipts for the carnival were over \$1,000, which is a very excellent showing for the first time. Mrs. Schraeder received first premium for her collection of sweet peas. Mrs. A. Dond of Menlo Park received first for collection of roses. The wild flower display by the children was one of the very interesting features of the show. The society feels greatly elated over their success, and is already preparing for their annual chrysanthemum show in November.

Mr. Chiffari, the rose grower, had a narrow escape from death the other morning, while his delivery wagon was stopped opposite a florist's on Sutter street the vehicle was struck by a cable car and both the horse and driver were injured.

ERICA MELANTHERA VAR. NIGRESCENS.

Mr. John Jack, who has been inside foreman for the Sunset Seed Co. at Menlo, resigned his position last week and at present is in San Francisco. Mr. Thos. Mitchell, who formerly held that position succeeds Mr. Jack.

Mr. Peter Rock, who has been seriously ill of late, is now himself again and is seen at his post of duty. METEOR.

Cincinnati.

The regular monthly meeting of the Cincinnati Florist Society was held May 9, and called to order by Pres. Gillett. The meeting was well attended; the show was supposed to be a pansy show, and as such advertised in our local papers. Owing to the dry and hot spell which prevailed over this section of the country for the past six weeks pansies suffered a great deal, and our pansy show was therefore a failure. Roses, carnations and orchids made up the show. Mr. H. Sunderbruch made a creditable display of orchids. One specimen plant of *Dendrobium nobilis*, with at least 25 spikes, was much admired, also a plant of the popular *Odontoglossum vexillarium* was well done.

The following are those to whom certificates were awarded: H. L. Sunderbruch, for cross made of purple pansies, finishing touch of cypripedium and adiantum; Farleyense fern, *Dendrobium nobilis* and *Odontoglossum vexillarium*; Scott, Daybreak and McGowan carnations; Bridesmaid, Meteor, Bride and Morgan roses. Hoffmeister Floral Co. for Bridesmaid, Mermet and Perle roses. C. C. Murphy for pansies. Wm. Murphy for Uncle John, Portia, Silver Spray and

Grace Wilder carnations and sweet peas. Magrie & George, valley.

There were 26 entries made. Mr. H. L. Sunderbruch, being fortunate enough to receive the highest number of awards during the year, was consequently entitled to the gold medal. Mr. Giesy of Lockland Lumber Co., in a neat little speech, presented the gold medal to Mr. Sunderbruch, who in turn thanked the society in a most becoming manner.

The committee appointed a month ago to select a suitable place for the meeting of the National Carnation Society reported. The Gibson House and College Hall were selected and approved by all present. College Hall being centrally located will do admirably well for the occasion.

The committee on arrangements for the picnic and outing also reported; Coney Island was chosen. We invite all our neighbor florists to participate on July 23. We expect all our friends from far and near to join with us, and we guarantee them a good time.

After the routine of the regular business Mr. Wm. Murphy read a paper on "Why carnations go to sleep." A lively discussion followed, which made it very interesting to hear the different opinions of various growers. This was one of the best meetings we had this year; they all felt enthusiastic. H. SCHWARZ.

Erica Melanthera.

Our illustration represents a two year old plant of *Erica melanthera* var. *nigrescens* as grown for the New York market. This is the most popular variety, as well as one of the most beautiful, and a num-

ber of growers have been producing it successfully in large quantities in recent years. Mr. Louis Dupuy, the grower of the plant illustrated, writes as follows:

"This variety, among the many which I have tried (some with very little success) has proved to be thoroughly at home here, growing much larger and with more flowers than it does in Europe. Propagated about February, potted in three-inch pots and plunged outside in the summer without the need of any shade whatever, they will by fall, if topping is well attended to, make nice plants. The second year they are shifted into 6 inch pots and left outside as long as weather permits. With proper care they will be covered with buds and can be had for sale from Christmas until Easter.

Cleveland.

There is nothing out of the ordinary to report except the weather, which remains steadily phenomenally warm, or rather, hot. The temperature has been unusually high ever since shortly after Easter, and the effect of it are now very apparent in the forwardness of all outside vegetation. Lilacs in some places are all gone, and everywhere are nearly so. Snowballs, that are often rather green at Decoration, are now in their prime. The same is true of deutzias, while pæonias are swelling very rapidly and will soon be in. May 30 ordinarily finds them barely in, save in the very earliest sorts. Of course the geranium fiend, who tells you how early he set out his plants last year, is loose again, and nearly frantic at the thought of the three weeks that he has already lost this season. Bedding out will shortly be in full swing in good earnest, in fact many florists have made a beginning already.

Cut flower business has been somewhat unsteady for some little time, and begins to droop more and more, with now and then only a little spurt. Quality also is suffering considerably under the influence of the heat.

At the last regular meeting but little business was transacted, the attendance being very light by reason of heat and pressure of outside work now needing attention. A.

Philadelphia.

The weather the past week has been extremely warm, 93° in the shade being registered, it has cooled a little and is now much pleasanter. All kinds of stock suffered and showed plainly the effects of the heat. All flowers are lower in price, the best Beauties go for \$2 per dozen, Brunners \$1 to \$1.50 per dozen. Teas, first choice, \$5 per hundred, all other rose stock is sold for what it will bring, the job lot price being very low. The takirs still manage to hold forth on the sidewalks, but must keep moving. They sell quantities of roses at 25 cents per dozen for very good quality and their Beauties at from 3 to 6 for a quarter certainly look a lot for the money. Carnations are still coming in fairly good in quality; the best now go for \$1.50 and very nice stock can be had for \$1. McGowan still holds the lead for the best all around white, in fact very little else is grown for this market. Sweet peas are now 50 to 75 cents per hundred. Valley is just about done outside and cold storage stock will have the call for the next seven months. Would it not pay to have small cases of 1,000 pips put up for cold storage during the summer and early fall months? Many of the trade can not use a larger quantity during the short time they last.

Herbert Pennock of Goldsboro, N. C., has sent some fine pæonies the past week. Lilac is done and snowballs are in full supply. Mr. Bunting has had some gladiolus which were fine and sold well, more of these flowers should be forced.

Robert Craig has a late house of Lilium Harrisii which should sell well, as they are about the only large decorative flower until the pæonies arrive. G. Anderson has still a fine lot of hydrangeas; they are a lot that have come on since Easter and have helped out many a decoration in the past two weeks.

There has been quite a lot of work for weddings, funerals and banquets, but the transient trade is falling off very fast. The stores are now being bothered with applications for lodgers, the old cripples have to be sent for and after receiving due care and attention are to be returned in the fall rejuvenated and looking like the plants they were when originally sold to the customer. It is easy to bring about a small specimen when enough storage can be charged to substitute a new plant, but with the larger stock it is different, and many a dealer has reason to wish he had never gone into the plant storage business, as while trying to please his best customer he often loses him.

At the semi-monthly shoot of the Gun Club Thos. Cartledge won the medal with 20 points out of a possible 25 and a handicap of 6, making 26 total. The other contestants were G. Anderson, 24, C. D. Ball 21, A. B. Cartledge 20, W. H. Taplin 14, Charles Kreis 14, W. K. Harris 13, Geo. Craig 12.

The regular monthly meeting of the Penna. Horticultural Society will be held in the hall of the College of Physicians, 13th and Locust Sts., May 19, at 8 o'clock.

The Philadelphia Bee Keepers' Association will entertain the society with some very interesting essays, illustrated by lanterns.

Premiums as per schedule of 1896 will be competed for, viz.: Clark premiums for summer flowering plants, Burpee premiums for Cupid sweet peas, Dreer premiums for vegetables and flowers.

DAVID RUST, Secretary.

St. Louis.

There are plenty of flowers of all kinds, and the cut flower trade is exceedingly dull in both wholesale and retail lines, with no indications of immediate improvement. The continuous warm weather with the thermometer mounting into the eighties on several days has had a very bad effect on stock in general and roses in particular.

Monday we had a good rain and some hail; no damage is reported as yet from the hail. A great many of the roses coming in now are badly mildewed. Jacqs. are in great abundance and sell at 50 cents per dozen; other roses, such as Mermet, Bride, Meteor, La France, and Test-out bring \$2 to \$3 per 100 for the best. Carnations are sold at 50 cents per 100, and fancy bring \$1 to \$1.50. Pæonies have made their appearance and bring \$2 to \$4. Sweet peas are still a drug on the market at 25 cents per 100. Outdoor flowers will soon be a thing of the past and Decoration Day will find the market for cheap flowers scarce. Smilax is not selling so well as it has been.

Mr. A. Y. Ellison will leave St. Louis on June 1 to take a position with N. J. Burt & Co., seedsmen of Burlington, Iowa.

After a lingering illness death came to Carl Beyer, Sr., on Tuesday, May 12,

aged 70 years. The family has the sympathy of all brother florists. Mr. Beyer was one of the oldest and best known florists in St. Louis, having been in business here for the last forty years. He leaves two sons and two daughters, all grown. The sons, Robert and Carl, will continue the business.

Mr. A. S. Halstead of Belleville, Ill., has been confined to his bed by sickness last week. He expects to be able to be out in a few days.

Mr. Work, with J. M. Gasser, Cleveland, Ohio, spent Sunday with us. He says that the Cleveland Club is organizing a bowling club that will be hard to beat.

The chrysanthemum show committee had a meeting last Wednesday night at Fred. Weber's store, and from the report of Secretary Schray everything is progressing nicely; prospects are for a successful show.

North Floral Co. will decorate the Grant Statue this year on Decoration Day. Mr. North reports that it will be more elaborate this year than ever before.

The bowlers had a good time Monday night. Frank Fillmore surprised everybody and himself by making 245 in the first game he rolled. This was the largest single score of the night. Fred. Weber rolled the highest three games, making 498. Frank Fillmore was second with 477 and Emil Schray third with 469.

J. J. B.

Lowell, Mass.

The flower beds and the lawns at the parks present at this time a most attractive appearance, and too much cannot be said in praise of Mr. John Oliver, the veteran florist, under whose care work of beautifying the public parks is going on.

Business is about holding its own, the quantity of spring plants, usually disposed of at this season of the year, keeps the florists quite busy. In cut flowers, there is but little being done at present, funeral work is about the only thing in that line to depend upon. The recent death of ex-mayor Jewett furnished Potter & Co. with considerable work.

Mr. J. J. McMannon, has decided to build a range of houses and grow his own flowers and plants. He has now in course of erection four houses, one 100x20 for carnations, one 50x20 for palms and two 50x20 for miscellaneous stock; hot water being the system of heating. Mr. McMannon intends to add to his plant from time to time. The houses are located in Brookside, on the Lowell and Lawrence road, overlooking the Merrimac river.

Mr. John Oliver has thus far rebuilt three houses; he intends to build additional houses during the summer.

HOMO.

Walden, N. Y.

During a visit to Newburgh I took the opportunity of visiting the Smilax King at Walden, a pleasant ride by the surface cars. I found Koffman busily engaged erecting 7 houses 120 feet in length, and in addition to these he has 17 more filled with smilax and Cypripedium insigne. His stock of the latter was a great sight; he undoubtedly has the largest stock in the world, consisting of over 250,000 growths, from which he anticipated cutting some 40,000 or 50,000 flowers next season. He had just unpacked a consignment of 55,000 growths, all in the best health. A. D.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—As headgardener. Best references exchanged. Many years employed by Newport and Lenox families. Apply to F. S. FOLLWELL, 511 North St., Pittsfield, Mass.

As Assignee, I offer for sale a large and valuable stock of choice decorative and greenhouse plants. The business is thoroughly established, and near the thriving city of Tampa, Florida. Will sell in lots to suit purchasers, at private sale, at prices very much below the usual trade rates, or, will accept an offer for the whole stock at half its value.

List will be sent on application.

Address WM. HUNTER, Room 31 1st Nat'l Bank Bldg., Tampa, Fla.

NEW ROSE

"Mrs. PIERPONT MORGAN"

Listen for a moment to what a voice from far off Springfield, Illinois, has to say about our young stock of this rose:

May 4, 1896.
"EDWIN LONSDALE, Chestnut Hill, (Station H), Philadelphia, Pa."

"DEAR SIR:—Box of 'Morgan' rose plants arrived Saturday in good shape. Fine plants. I would like to know how you produce plants of such size in a two (2) inch pot?"

All I can say is that it is all owing to the natural vigor of the variety, and perhaps to some extent to the natural rose growing qualities of our soil.

We have a few more left of the same size. Order early or you may get left, for I do not know of a more profitable variety to grow for cut flowers than MRS. PIERPONT MORGAN.

Don't forget our address:

EDWIN LONSDALE, Station H,
Chestnut Hill, PHILADELPHIA, PA.

FOR SALE. FINE, HEALTHY ROSE STOCK.

Address THE AMERICAN FLORIST CO., Chicago.

Society of American Florists.

The Society of American Florists offers the following first prizes in cash to be competed for at the exhibition to be given by the Cleveland Florist Club, during the time of the S. A. F. convention in Cleveland, August 18, 19 and 20.

For the largest and best collection of plants in bloom, variety and quality to be specially considered, \$50.00.

For collection of decorative plants occupying a space of four hundred square feet, quality and arrangement to be specially considered, \$50.00.

For pair of vases of flowers arranged without artificial support, \$20.00.

For floral arrangement other than funeral design, \$30.00.

Also for collection of new and rare plants a certificate of merit. The judges will be men of acknowledged qualifications, and florists throughout the country are cordially invited to compete, as upon the support extended by the trade on this occasion will depend largely the Society's efforts in this line in the future.

WM. J. STEWART, Secretary.

THE DIRECTORY and reference book for 1896 contains 335 pages, an increase of 64 pages over that of 1894.

W. A. B.—Please send name and address and state character of original inquiry. We receive many inquiries at this office and cannot tell to which one your additional data refers.

THE Sunset Seed and Plant Co., of San Francisco, Cal., has discontinued cut flower growing and that branch of the business will be continued by Mr. Sidney Clack, at Menlo Park, Cal., to whom the Co. has rented a number of its greenhouses. Mr. Clack will continue to sell plants for account of the Co. as before.

Worcester, Mass.

The exceedingly hot spell we experienced, together with the absence of any rain, has had a very bad effect on all outside stuff and blasted all our hopes of having any outdoor blooms to help us out on Memorial Day. Deutzia, valley, myosotis, white lilac, etc., will have blossomed and faded before the 30th, and consequently flowers are going to be very short; all stuff inside is also being pushed too much, and we have a glut of stock now, and no possible way to hold the crop. Trade has kept fairly steady, and good flowers are very plentiful. Violets are played out, but peas and myosotis more than fill the gap. Carnations are still of good quality, but of course this extreme heat won't take long to reduce the size. Roses are also holding well. Prices are a notch lower, but are fairly steady.

A. H. L.

The boxes as they appear when set up for use.

We make them in a sufficient number of sizes, including for violets, to meet all necessary requirements.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

CHICAGO.—J. C. Vaughan has returned from the east.

THE assets of the Sioux City Nursery and Seed Co. are reported to be \$180,000, liabilities \$90,000. E. S. Weatherly is receiver.

INDIANAPOLIS, IND.—Preferences to the extent of \$25,000 were filed by the Huntington Seed Company, the Capital National Bank being the principal creditor. The company's assets will aggregate 40,000, with less than \$30,000 of liabilities. The embarrassment is only temporary, and the business will be continued by the firm.

Government Seed Packets.

The following letter has been issued by the United States Department of Agriculture:

Washington, D. C., May 2, 1896.

This Department having learned that requests have been made upon commercial seedsmen for seed put up in papers similar to those used by the Government and printed in simulation thereof, it appears proper to notify all seedsmen, so far as may be possible, that the Department of Agriculture can not permit the Government seed contractors or any seedsmen to sell seed in packets bearing the name of the Department of Agriculture or any words which might cause the receiver of the package to believe that it was a part of the Government seed distribution.

This Department is taking great pains to have all the seed supplied it for this distribution carefully tested, and it is obviously improper for anyone to represent as Government seed any seed not thus inspected, tested, and paid for by this Department.

No seed can be distributed free of postage through the mails except that delivered upon the order of Members of Congress by the Department of Agriculture or sent out direct from this Department. The act of March 3, 1875, confines the franking of seeds by Members of Congress to those seeds which they receive for distribution from the Department of Agriculture.

CHAS. W. DABNEY, JR., Acting Secretary.

Germinating Power of Cupid Sweet Pea

Regarding the germinating powers of Cupid sweet pea, which is now attracting considerable comment, the writer agrees with W. Atlee Burpee that seed sown in the fall of the above named variety, and also seed sown in the spring months, have germinated much better than those sown in the winter or early spring months. This I know from actual experience on seed farms in California, the home of Cupid. I think that all sowings of Cupid during the past few weeks will prove the above assertion.

METEOR.

Utica, N. Y.

The demand for cut flowers is only moderate. The trade generally seem to prefer trilliums and other outdoor wild flowers, to anything of the florists' creation. This week will see about the last of the Harrisii's, tulips, hyacinths and other inside bulbous stuff, a fact which none seem to regret. The demand for this stock with the exception of the lilies yearly grows less. The extremely dry weather which prevails has greatly interfered with early planting. What carnations and violets are out would be better off in the frames. Most of the out door stuff which usually cuts quite a figure at Decoration Day will be past and roses, carnations and indoor stock will be in demand. Plant sales are backward with the exception of hydrangeas, clematis and other heeled in hardy stuff.

Roman Hyacinths.

Our cable advices say, and we say, this is the time to buy. We can save you money if you will send us your order **at once.**

JOHN GARDINER & CO., Seedsmen,

631 Market St., Philadelphia, Pa.

St. Paul.

The intense heat of the past week has brought out blooms in abundance; quality is poorer and prices are lower. Vegetation has come forward with a rush, and instead of being late the season is now considered early. Everybody is busy in the plant business; inquiries are numerous, sales are good and shipping orders are coming in freely. Already a dearth of cut flowers for Decoration Day is apparent. Out of door stock will all be gone by that time, while roses and carnations will be used up inside if the hot wave is not soon broken. But very little bedding out has been done, though the warm weather would warrant the florist in planting out the most tender plants.

The remaining stock of L. G. Venzke, who recently assigned, will be sold to the highest bidder.

Harry Bunyard was a recent caller; also C. C. Pollworth of Milwaukee.

FELIX.

Hackensack, N. J.

Lehnig & Winnefeld, the carnation growers, are now sending into New York their pot carnations. They make a fine show, as they are a mass of flowers. They use for this purpose Pres. Garfield exclusively. They planted out the last week in April 15,000 plants of Eldorado. Wm. Scott and Uncle John. They look very well. They will build a fine large house this summer to grow their Day-break in, as they have been very successful with this variety, and had great demand for it.

This firm grows very fine cannas, notably a new seedling, Yellow Queen. It grows to the height of three feet and bears a large cluster of strikingly bright yellow flowers. Mr. Winnefeld says cannas do not pay now; they are sold at auction at such low prices that it is impossible to make even a small profit.

S. M. T.

Ridgewood, N. J.

Herbert E. Forbes has grown Lizzie McGowan with much success this winter. He is still picking very good flowers and plenty of them too. The demand for cut flowers is on the increase in this place. Mr. Forbes uses the La France in his local trade and finds it a profitable rose. He also grows Bride and Bridesmaid. He has had to give up growing violets on account of the disease.

H. W. Hales is growing some nice bedding stuff, his trade is local. S. M. T.

Westfield, Mass.

This town will soon have a flower store that promises to compare most favorably with any of the kind to be found in the larger cities through the state. Mr. Geo. Mieliez is remodeling and equipping his store on a modern up-to-date scale. Mr. Mieliez has added a fine conservatory in the rear, immediately adjoining his store. A handsome ice box will soon be placed in position, to replace the old one.

HOMO.

THE only reference list of cannas is to be found in our new directory and reference book. The list is arranged alphabetically and gives name, date of introduction, name of introducer and a brief description.

THE SECOND INTERNATIONAL horticultural exhibition at Dresden takes place May 2-10.

— OF —
FLORISTS,
NURSERYMEN
AND SEEDSMEN

— OF THE —

UNITED STATES AND CANADA,

— AND —

REFERENCE BOOK,

FOR 1896,

IS NOW READY

CONTENTS.

The names and addresses of all the Florists, Nurserymen and Seedsmen in the United States and Canada, arranged alphabetically in States and Provinces, the exact branch of the business each is engaged in being indicated by the following

. . . . KEY

- F** Florists who do a general local trade, having greenhouses and retailing the product of same.
- G** Florists who grow cut flowers or plants for the wholesale market and who do not sell at retail. Almost always within a short distance of a large city.
- R** Retail store florists who have no glass of their own. Nearly always in the large cities.
- D** Wholesale commission dealers in cut flowers.
- N** Nurserymen.
- X** Those who are both Nurserymen and Florists.
- S** Seedsmen.
- Z** Those who are both Seedsmen and Florists.
- A** Those who combine all the branches, viz.: Florists, Nurserymen and Seedsmen.

. . . . ALSO

- A list of Trade Organizations, both National and Local, with names and addresses of principal officers, time and place of meetings and date of organization.
- Statistics regarding Floriculture, the Nursery Industry and Seed Growing from the last U. S. Census report.
- A list of firms in the trade that issue catalogues, with a key indicating the prominence of each branch of the trade in same.
- A list of leading Cemeteries in which attention is paid to Ornamental Horticulture.
- A list of leading Park Superintendents and of the Botanical Gardens of the United States.
- Seasonable Hints for the year about the practical work of the Florist, written by Wm. Scott, giving instructions not only when to do certain work, but how to do it most effectively and economically.
- A complete alphabetical list of Roses in commerce in America, brought up to date and of incalculable value for reference.
- Similar lists of Chrysanthemums, Carnations and Cannas.
- Historical sketches to date of the Society of American Florists, American Carnation Society, National Chrysanthemum Society of America, Florists' Hail Association, American Seed Trade Association and American Association of Nurserymen.
- A list of Leading Horticultural Societies.
- Full and accurate information about Express and Postage rates.

Atlanta, Ga.

I had the pleasure a few days ago of looking through some of the leading establishments of Atlanta. I was utterly surprised at the strides the business has taken since my last visit to Atlanta some eight years ago. Then there were a few so called florists doing business in a half-hearted way, principally in bedding plants and young nursery stock. There was no pretense at cut flower growing, and no stores in the city for the sale of flowers. What a difference there is to-day; Atlanta ranks with any city of equal size in the North in the way of modern florist's establishments, and her three or four cut flower stores are up to the times in every respect.

The West View Floral company has the largest range of glass, and claim to be the largest growers of plants and cut flowers in the South. They conduct a first-class retail store on Peachtree St., besides wholesaling extensively both cut flowers and plants in the South and Southwest. Although the weather had been so excessively hot and dry for that time of the year, everything was looking first-class, and was an eye-opener for a Northern man. What surprised me most was to see the carnations and roses under glass doing so well and looking exceptionally fine for so late in the season. There was not a particle of shading on the glass and Mr. Burford, their foreman, told me they never put any on. It was also interesting to note their mode of watering. Although it was midday and the sun blazing hot one man was kept busy all day with a hose throwing water on the rose and carnation beds.

At the Brookwood greenhouse in North Atlanta everything was in apple-pie order and as clean as a pin. Most of the houses are large modern iron frame structures with all the modern appliances and conveniences. Mr. Seals, late of Nashville, is the manager of this model establishment. The roses at this place were looking exceedingly fine, with no mildew to speak of. The Brides and Bridesmaids that were sent into their store were larger and of finer texture than anything of the kind I have seen in the North at this season of year. They are well pleased with Kaiserin and Morgan—of the latter rose they told me they cut last winter blossoms equal in size to the Beauty and stems almost as long.

There was one house already replanted with roses, also one house of carnations just planted, as they do not put them outdoors. Mr. Grimshaw has charge of their retail store on Decatur St. The day I called he had a large order to decorate the Capital City Club house. It was done exclusively with dogwood blossoms, while the tables were filled with select blooms of carnations and roses.

At the C. A. Dahl houses everything was looking promising with a good crop of roses on for Decoration Day, which is one month earlier than north of Mason and Dixon's line. They do not grow carnations, but are making preparations now to build more houses for that purpose.

George Hinman has just added a fine large house, and is getting things shaped for a larger trade next fall and winter. He has been very successful with the Wootton and says there is no red rose that compares with it in the South.

The above places have all been established in the past few years. I did not find time to visit the older places, but I learned they have all been improved and enlarged since my previous visit.

L. F. DARNELL.

IVORY! THE GREAT SUCCESS!

NOTHING IS IN MORE UNIVERSAL DEMAND BY FLORISTS THAN A GOOD, PRODUCTIVE WHITE CARNATION.

In IVORY you will have it. Try it and you will have a money maker. It produces as many blooms as Wm. Scott, is as perfect in form as any Carnation yet produced, held by a calyx that never bursts and carried on a long, wiry stem. What more do you want?

Fine plants from soil, \$10 per 100; \$75 per 1000. Stock ready now.

Also fine stock of *all the other leading varieties*. SEND FOR PRICE LIST.

GEO. HANCOCK & SON, Grand Haven, Mich.

NEW CHRYSANTHEMUMS.

MRS. W. C. FGAN, }
TIPPECANOE, } 50c each; \$5 per doz.; \$35 per 100.
AMARANTH, }

New Begonia Lillian Harrington.

A cross between Alba and Rubra. Florets and sprays very large and of a deep rose color. The bronze green foliage and large panicles of flowers make it very attractive and desirable. 2½-inch pots, \$10.00 per 100.

Dwarf Scarlet Salvia Kobold.

Dwarf growth, only half the height of Splendens. Its early and free continuous blooming with its dwarf habit makes it one of the best bedding plants, and so much more attractive than the old tall growing Salvia Splendens now in use. 2-inch pots, \$4.00 per 100.

Pandanus Veitchii.

We still have a few plants from 8-inch pots, very fine and good color, at \$3.00 each.

Swainsona Galegifolia Alba.

A most desirable white cut flower, very free. 2-inch pots, at \$4.00 per 100.

Antirrhinum Majus Alba.

The best of the whites for winter forcing, as well as fine bedding plants. Fine stock, 2-inch pots, \$4.00 per 100.

FORGET-ME-NOT

BLUE PERFECTION.

As a cut flower, read what two of the oldest and best known houses of Philadelphia say:

MR. ALBERT KNAPPER:—This season we have worked up quite a little trade on Myosotis, and consider it a good cut flower for the retail florist, which I think will grow more in favor.

SAMUEL S. PENNOCK.

MR. ALBERT KNAPPER:—We take great pleasure in recommending a good article, and can say that your Myosotis is a fine, large, strong flower of a grand color, and the best we have seen for a great while.

CHARLES FOX.

Posts.

Referring to the enquiry of R. H. in regard to wood posts, I would like to ask why he does not use iron posts set in stone, the latter being buried below frost. Buildings are frequently constructed here in that way and there is no heaving by frost if the block of stone is deep enough, and there are no wooden posts to decay in a few years.

Bath, Me.

F. C. CURTIS.

The only posts made of oak which I know to last are the post oak. White oak is not the same. Chestnut posts will outlast all of them with me. The yellow pine full of pitch, which we call here fat pine, lasts better than any other. Some say, if posts are turned upside down they will be more lasting. I do not know, have not had sufficient experience. The party who told me about turning posts the reverse from the way they grew, said that moisture followed the grain and would ruin every post soon.

Anniston, Ala.

F. J. ULBRICHT.

Tightening Leaky Tank.

As to tightening leaky tank, all I have seen so far, including article on page 1090, does not fit my case.

My tank is nearly as wide on top as on the bottom, round, hoops are driven down as far as this will do any good, and an extra stave put in. If a round tank like mine was wider at the bottom than on top the thing would be very easy. Will some one tell me how to doctor my tank?

Anniston, Ala.

F. J. ULBRICHT.

Stopping Leak in a Boiler.

During zero weather last January my boiler sprung a leak over the whole crown sheet at nearly every flue and destruction was threatened. A friend advised me to put a few pounds of rice in the boiler. I did so, the leak stopped, and the boiler did good service until a favorable time for repairs came. This suggestion may be of value to others. Always keep a few pounds of rice on hand.

Royer's Ford, Pa.

R. E. NACE.

LITTLE FALLS, N. Y.—The *Times* of this city, under date of May 4, states that Walter Bonfield, the missing florist, has been seen, and that he has wandered away to avoid meeting his creditors. According to his story he owes only \$1,200. He states his intention was to go away, earn sufficient to meet his obligations and then return and settle up.

SALEM, MASS.—A voluntary petition in insolvency has been filed by John H. Punchard, the florist.

Betscher Bros. have some very fine carnations. Daybreak, Scott, Uncle John, Garfield and Goldfinch are considered the profitable ones. Stock is in excellent condition; thus far not a trace of rust has been noticed.

Uncle John under proper culture is considered the best white at present; Storm King is also very good.

Of the new carnations Meteor is good; Alaska Kobinoor, Rose Queen, Peachblow, etc., hardly up to claims. From over 3,000 seedlings some very fine ones have been selected, notably white and light pinks. Upwards of 2,500 seedlings of this season's sowings are in good condition. Many crosses have also been made with China, Marguerite and other dianthus.

Among other things, an improved Midsummer and fiery scarlet Mirande type are beautiful. Mr. C. Betscher devotes a good portion of time in hybridizing carnations, gladioli, berries, etc., and has been very successful. They expect to give elaborate displays of gladioli in their territory the coming season. A. Y.

THE GENERAL HORTICULTURAL exposition of 1897, held at Hamburg, will be open from May to September. There is an extensive prize list, and the exhibition is expected to be a very notable one.

A. H. HEWS & CO., N. Cambridge, Mass.**Announcement to Florists.**

We desire to announce the dissolution of the firm of Sipfle Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

WEST BROOKFIELD, MASS.—The Horti-
cultural Society held a successful exhibi-
tion of potted plants on Thursday and
Friday, May 7 and 8.

HYDE PARK, MASS.—At a meeting of
the Horticultural Society, on May 5, it
was voted not to hold exhibitions this
year. A committee was appointed to ar-
range for the disposal of the money and
property of the Society, and report at a
future meeting.

NEW BEDFORD, MASS.—The annual ban-
quet of the Gardeners' & Florists' Club
was held in Odd Fellows Building on
Monday evening, May 11. Mr. J. H.
Woodford, chairman of the committee of
arrangements of the Massachusetts Hor-
ticultural Society, was a guest.

Carnation Notes.

It is quite interesting to make a study
of the results and experiences of the past
season, to look over the advantages and
disadvantages we had to contend with.
The former were very few and the latter
many. There are always points that
will come to remembrance in a backward
glance, that may be turned to advantage
for the future. Points where we have
failed, and should strive to rectify the
errors made, and again where we have
been successful. It is well to look for the
cause of failure and success. One season
is not like the other, what may at one
time be beneficial may at another time be
harmful. So only if we learn the real
cause of either failure or success, we can
turn it to advantage in the future and
apply it to circumstances. My scope of
observation is limited to my own place,
but I find always enough to think and
study over, where improvements can be
made.

The worst thing we had to commence
with was the drouth, beginning in April
and lasting nearly all summer. All the
watering helped so far as it kept our
plants alive, growth was very slow. The
best thing we found to do was to give a
thorough watering and then follow right
up as soon as the ground would pulverize
with a thorough cultivating with the
hand cultivator, as recommended in my
last notes. In this way a good watering
will last for a long time. One striking
experience I had relating to soil retaining
the moisture: A piece of ground I intended
to use for bench soil being plowed and
manured the fall before, and again early
in spring, had kept in a moist condition
all summer, while soil two feet from the
border completely dried out. This in-
duced me to give all my grounds a fall
plowing, and so far the indications for
success are very favorable. My soil was
never in a better condition at any time
before, and I feel myself amply repaid for
the fall plowing, and shall not omit it
any more. Our early planted plants at
the present time are better and larger
than they were last year in July.

All of our young stock used for our-
selves last year was from cuttings struck
in March, with the exception of a few
batches of January struck plants we had
on hand yet at planting time. They were
strong and healthy, but the March plants
outgrew them in a short time, and I may
say with the dry weather we had, and
the watering we had to resort to, they

commenced to grow, while the others
stood still. The dry arid atmosphere had
a more retarding effect on the older,
stronger but harder plants, than the
younger and softer. And this year at
this early time the indications point the
same way.

As I have said before at other times, a
carnation plant, from the time the cutting
is rooted, should have an uninterrupted
growth for the whole time of its exist-
ence if we intend to make use of it, and
expect to cut good flowers. But to turn
back again to last year, that long drouth
caused a very severe check on our plants,
and I may say they did not recover from
it until midwinter. It is in our power,
and we may go to the expense of water-
ing, keep the ground moist, and wonder
why our plants do not make any better
growth. We can control the soil, apply
water, but to create the humid atmosphere
so beneficial to vegetation is not in our
reach. The dry air is too severe a draught
on the plants, evaporation through the
leaves too strong a pressure on the roots,
the sap will thicken the formation of new
cells, new growth is impaired, and a sus-
tainable root action made impossible.
Heat and dryness will set a plant at rest
as well as cold. With water we can tide
a plant over a drouth, but often there is
more harm done than good, and how?
With excessive watering we may during
a drouth excite plants into growth, but
beware the results if you are unable to
keep it up; they will receive another check,
rendering them weaker than before.

For these reasons I recommend a thor-
ough cultivating to the depth of about
two inches, a pulverizing of the soil so it
will act as a mulch to retain the moisture;
and this should especially be done after
every rain as soon as the soil is in a con-
dition to do it. If the dryness should be-
come too severe give a thorough water-
ing, and then resort again to cultivating,
after a rain, to make the best and longest
use of that water applied. So in time of
dry hot weather, to keep the plants alive
or sustain them in a slow growth, is far
better than to cause them to make a rush
and run the risk of seeing them fail back
again.

My experience of the past year tells me
that in time of drouth the most efficient
help is cultivating the soil as mentioned,
and resort to watering only in the ex-
treme necessity, and the prudent cultiva-
tor will not wait till the ground is getting
too dry, but have it always in a condition
to meet a dry spell. FRED. DORNER.

Why Carnations go to Sleep.

BY WM. MURPHY.

[Read before the Cincinnati Florists' Club.]

I will give you eighteen reasons why
carnations go to sleep, and then endeavor
to tell you how to grow and handle them
so as to avoid it.

Too much commercial fertilizer used;

allowing the bloom to develop too far before cutting; spraying over the bloom in the houses; want of air—growing in too close an atmosphere; growing in too high a temperature; growing too dry at the roots; gas escaping from leaky flues; great changes in temperature; cultivating too deep in benches; planting too close; planting too deep; cutting the flowers too green; fumigating too strong and often; allowing to wilt before bunching; keeping in damp cellar or ice box before packing; keeping them in rooms lighted by gas or crowded by people; packing hot water in the boxes to keep from freezing; rough handling.

How to grow the carnations so they will not be sleepy: Take good strong cuttings the first of January, break off by pulling down the stem from flowering shoots; drop in water to keep from wilting until trimmed for the cutting bench. Prepare the cutting bench by putting first a layer of gravel or cinders and then four inches of river sand pounded solid and level. Water until it drips through, and the bed is ready for the cuttings. Put the rows 2 inches apart, then settle after pressing and watering again. Have the sides of the bench open underneath the propagating bench with plenty of valves on heating pipes to regulate temperature; keep not over 60° in day and 45° to 50° at night. Don't give too much air the first week or two, for the young cuttings will wilt. But after this time give plenty of air and keep the sand on the wet side, until they begin to root. Then slack off on water, as soon as rooted box in flats, and keep growing and harden off for planting outside.

Begin the preparation of the ground in the fall before by plowing down a good dressing of horse manure, do not harrow but let lay rough all winter to freeze. In the spring as soon as dry enough give another dressing of cow manure, this time plow and harrow and if too soon to plant, plow again at planting time. I plant from the middle of April to 1st of May. I plant my rows 2 feet and 8 inches apart and 6 to 8 inches apart in the rows. After planting follow up the rows and tramp with the feet both sides of the plants; this will keep the moisture up near the roots. Never allow the wind to dry the young plants while planting.

After the first rain or sooner if it should not rain within a week, run the horse cultivator, a very fine one, up and down each side of the rows as close as you can, without pulling out the plants, and I think a roller that would fit between the rows would be a great tool in dry weather. It would keep the ground level and a neater job could be done with the horse cultivator after it, and the soil would never dry out as bad as it does left lying loose. But never use the roller in wet weather. Top the plants as needed and keep the cultivator running at least once a week during the summer.

Commence preparing the soil for the fall before you want to use it, by covering a piece of sod ground with horse manure and plow down. Do this as late as you can in fall so that sharp freezing weather will kill a great many insects. Let it lie rough all winter, and in the spring plow in a good coat of cow manure and bone meal. Keep working over this all summer with the plow, harrow and drag, and by fall it will be ready for the benches. I use 5-inch soil on my carnation benches.

Lifting: This takes two men with sharp spades to do it right, one on each side of the row, pressing the spades together on each side of the plant. Lift

out and shake off the soil, move immediately to the houses to keep from wilting; plant 8 to 10 inches apart. Press the ground firm and level so the water will not run off to one side while watering. The first watering is the most important. Water until you are sure that the whole bench is soaked and running through the bottom; after this shade and spray your houses until the plants have recovered.

Do not keep your shade on the houses too long, for many carnations have been ruined by that. As the season advances fire heat becomes necessary and you can give more water at the roots; keep plenty of air on if you have to fire to do so. Fire, air and water will make bloom. A good day temperature is 65° to 75°, night 56° and some varieties will stand 60° providing you watch the soil that it does not become dry long at a time. Fumigate lightly once a week and keep some sulphur on the pipes, red spider don't like sulphur. If you keep up the temperature that I have given here, the plants will take lots of water.

Cut the flowers in the morning from plants that are not suffering for water. I contend that there are more sleepy flowers from this fault in growing than there are in all others put together. A plant that is in want of moisture at the root has very little sap in the stem; it may not be visible to the eye, but there is a lack of substance in that flower, compared with one that is full of sap produced by plenty of moisture at the roots, if you have your benches well drained and run high temperature day and night we are all liable to err on the dry side. Cut the flowers before fully developed and stand in water in a cool airy place 10 to 12 hours before packing for market. Do not pack ice or moss in the basket, get them in market early in the day. Give good count, don't promise any more to the commission man than you can cut, get a statement once a week from him and there is still a fair living and some money in carnation growing.

Temperature for Various Roses.

What temperature and what special culture is required by the following roses: Belle Siebrecht, Mrs. Pierpont Morgan and Princess Bonnie? W. S. H. & Co. Spokane, Wash.

For Belle Siebrecht and Mrs. Pierpont Morgan I have found 58° to be the best night temperature. Belle Siebrecht is very susceptible to black spot during the summer and fall, and consequently should receive such treatment as is calculated to hold the disease in check; in other respects it may be treated the same as Bride and Bridesmaid. Mrs. Pierpont Morgan has proved more satisfactory when grown in houses heated by steam. The flowers are spoiled very easily by water in the short days of winter; if after syringing the day turns out cold and cloudy so that the flowers remain wet for any length of time they are very liable to become spotted, and in some cases ruined. If steam is used for heating it can be turned into the house

at short notice, the proper temperature can be maintained, and the excessive moisture speedily dried up. Hot water is very much slower to act, and does not create as dry an atmosphere as steam, hence the reason for recommending the latter for this particular variety.

Have had no experience with Princess Bonnie. ROBT. SIMPSON.

Miscellaneous Seasonable Hints.

Two years ago some specimens of veranda boxes were pictured in the pages of the FLORIST from photographs taken in this city (Buffalo). There may become new subscribers whom I can give a hint to. This style of adorning the houses on residence streets has not waned with us, while flower beds on the lawn have to some extent. A good size for a veranda box is 9 inches wide at top, 8 inches at bottom, and 7 inches deep, all inside measure. The length of course is what you choose, but if longer than 6 feet should be made in sections 5 or 6 feet long, and then two men can lift them. If the boxes are large and long and there is much of it, they can be filled at the house, but it is much easier to make a good job of them at the greenhouse, where you have all the materials at hand and waste no plants. The soil should be rich, for long before fall the small amount of soil in the boxes will be a mass of roots and if in a sunny position will want a copious watering every day. If exposed to the hot afternoon sun you can use for the first row of upright plants *Dracæna indivisa*, small plants of *Phoenix canariensis* or *reclinata*, Crozy cannas of the dwarfest kinds, strong growing and free flowering geraniums, *Grevillea robusta*, the handsome and useful fern *Nephrolepis tuberosum* and *exaltata*, and a few coleus, and *acalypha*. Don't put in hydrangeas, for they soon lose their beauty and get shabby. Between this row and the droopers you can sandwich in such plants as variegated geranium, double petunias, *anthericum* (soap plant), *achyranthus*, *centaurea* and other plants of not too strong a growth. For droopers, and these are really the chief beauty of a box, there is a good variety to choose from. Never mind how common they are; it is general effect you are after. The principal plants we use for this purpose are *senecio* (German ivy), *vincas*, *lobelia*, money vine, *lophospermum*, *tropæolum*, ivy geranium, (and many of these are beautiful), plenty of double sweet alyssum, variegated *glechoma*, *Abutilon vexillarium*. Some of the sedums are also good.

If the box is in a position where it gets a little sunshine you can use to good effect many other plants. I have seen boxes look very nice, in fact handsome all summer, where there are no flowering plants used, and where the chief plants were palms, ferns and begonias. Begonia Rex, so little talked of nowadays, looks fine in a box where the sun does not spoil it. It should be needless to say that the surface of the soil between the plants should be covered with a layer of green moss. It looks better before the plants cover the surface, prevents the soil washing off and soiling the box and what is of more consequence, prevents evaporation.

It is difficult to say just what should be charged per foot for such a veranda box as I have described, but it never should be less than 75 cents per foot, and to get well paid it should be worth one dollar. If expensive palms are used it will of course be worth more than the last figure. If you are asked to have the box made for your patrons charge one dollar per running foot for the new box, including

RUSSIAN FLORAL ARRANGEMENTS.

painting and paint the same color as the veranda, and paint thoroughly outside and in. You will likely figure up the price of the plants you use and see that at a fair price the plants amount to quite as much or more than you are getting for the work, but you must remember you have grown a good many of the plants, the droopers especially, without much cost, and in space that was not of great value.

WM. SCOTT.

Notes from St. Petersburg,

We present herewith a number of illustrations of Russian floral arrangements, sent us from St. Petersburg by Mr. M. Gebhardt. They are all from arrangements turned out in the stores of Mr. H. F. Eilers. We also illustrate an Easter egg of lily of the valley as grown by Mr. Eilers. One picture shows the "egg" in bloom and the other makes plain the planting of the wire frame. The frame contains a thousand pips, planted March 2, and it was in bloom April 3.

The last picture shows the interior of a propagating house at Mr. Eiler's establishment. The bed shown contains carnation cuttings and it will certainly seem strange to American eyes to see carnations rooted under plates of glass in the manner indicated. This photograph was taken March 10.

Mr. Gebhardt writes that the Easter trade was very large with St. Petersburg florists. At one of Mr. Eiler's five stores the receipts reached 5,000 rubles and the smallest receipts at any of the stores was 1,000 rubles. All the other florists had large sales in proportion.

He gives us the following data as to quantity and character of the plants and flowers sold at Mr. Eilers' stores at Easter; 1,800 roses in pots, 9,000 cut roses, 50,000 lilies of the valley, 10,000 pot hyacinths, 450 azaleas, 200 syringas, 800 *Deutzia crenata*, 120 *Spiraea astilboidea*, 285 *Funkia undulata variegata*, 3,500 potted tulips, 3,000 potted *Narcissus poeticus*, 900 potted *mignonette*, 350

Primula obconica, 320 wallflowers, 615 *Lilium Harrisii*, 200 adiantums, 1,350 adiantum fronds, 290 marguerites in pots, 590 ferns in variety. Also smaller quantities of other plants such as stocks, carnations, cyclamens, cinerarias, callas, mahernias, orchids, etc. The orchids included 700 blooms of *Cælogynecristata* and 60 *odontoglossums*. There were also over 100 anthuriums, clivias, amaryllis and stove and hot house plants.

We give the above in full as being of interest on account of the very great variety offered.

We shall have some further photographs and notes from Mr. Gebhardt for an early issue.

Aquatic Plants and Water Gardening.

BY WILLIAM TRICKER.

[Read before the Philadelphia Florists' Club.]

Aquatic plants were in cultivation long before orchids; in fact we may believe they were in evidence in the first garden, for in it was found what was pleasant and a river to water the garden withal; and we cannot conceive of a river without aquatic plants. We are all familiar with the bulrushes of Egypt that played such a part in the history of the Israelites' great deliverer. Herodotus and Theophrastus wrote of the lily-rose and the Egyptian bean of the Nile as having a lovely red flower. The sacred lotus has given rise to much controversy amongst the learned. *Nymphæas* were called "lotus," "lotus *nymphæas*" and "nymphars." Much confusion exists at the present time; but when we shall have a water-lily society, every species, variety and synonym will be properly adjusted. The famous and redoubtable Frenchman Des Fontaines, however, was able to throw some light into this chaos. He stated that three distinct varieties were represented on many Egyptian monuments; there were the red lotus (*Nelumbium speciosum*), the white lotus (*Nymphaea Lotus*) and the blue lotus (*N. cœrulea*). What an incentive for a national emblem. This latter species was used in making wreathes and crowns by the florists of Alexandria, which were worn at the festivals of Antinous. These species are with us to-day, whatever their history; and their ancient lineage is one of which nineteenth century florists and gardeners may well be proud. From an early date these flowers have been migratory; being first known in Egypt (though not to be met with at present), and afterward claimed to be natives of both East and West India, China, Persia, Asiatic Russia and America. Certain it is that all varieties of *nelumbiums* or lotus can be naturalized in the United States; and there is no reason why our ponds and swampy grounds should not be crowned with these royal lilies, or that they should not be met with as frequently as in China and Japan, where they are to be seen everywhere.

The cultivation of exotic aquatics in Europe dates back to the year 1792, when the blue lotus (*Nymphaea cœrulea*) was imported from Egypt, and others followed. But these exotics required the protection of a glass structure, which at that early date was an expensive luxury, as compared with our modern structures and other facilities. Then, again, collectors had a hard time to transport such plants even when they found something that to them was priceless; no ocean greyhounds existed in those days to facilitate a speedy transfer to congenial quarters. In 1837, while Schomburgk was travel-

ing for the Royal Geographical Society of London, he not only devised the much disputed Schomburgk line, but he first found the *Victoria Regia* in the river Berbice, in British Guiana. As a botanist he was greatly elated and felt himself rewarded. In the midst of his perilous position calamity was forgotten when he beheld the wondrous scene. But in spite of his noble efforts, he failed to carry this plant or seed to his native land; and the honor of its introduction in Europe was conferred on an English traveler about ten years later.

The successful cultivation of the *Victoria* in England, where it first flowered in 1849, was an incentive to others to cultivate it, as subsequently it was grown in public and private collections in Great Britain and on the continent. Philadelphia has the proud distinction of having grown the first *Victoria Regia*; and I shall be proud to hear it said of water-lilies that Philadelphia leads the world.

With all the improvements of the past half century in greenhouse construction, heating and ventilation and our knowledge of floriculture generally, we are expected to produce better results. Advancement in this particular branch has been tardy till within the past decade, which is marked by rapid strides. Now it is the ambition of all live florists, gardeners and amateurs to possess something in the way of a water garden. Truly this is a vast field to labor in, but knowledge grows with experience. There is ample evidence that these fascinating flowers are captivating all who worship at Flora's shrine; and when we hear such questions asked by novices (for many are puzzled upon making their first acquaintance with these plants in a dormant state), "How shall I plant the banana-like root—shall I plant it horizontally or perpendicularly—which end shall I stick in the ground—should I submerge a potted tuber of *Nymphaea* or not," we conclude there is a lack of knowledge that ought not to exist.

Much has been said and written on the cultivation of aquatics, but I think the greatest good has been accomplished through the medium of our public parks and gardens and a few enthusiastic amateurs. Too much cannot be said for the thoroughness of this class of work as done in the public parks of Chicago, which has afforded object lessons to the world. Here aquatics in all their natural beauty revel as in their native habitat, assisted by natural elements and a skillful artist. Here may it be truly said that "This is an art which does mend nature—change it rather—the art itself is nature." Here, too, is an art worthy of emulation in both public and private, large and small gardens. Truly that which is worth doing at all is worth doing well.

I was recently told, by a casual observer, that the *Victoria Regia* "did not amount to much." "Yes," he said, he had "seen it several times." I felt almost insulted, but simply replied that I did not think he had seen one; and when I depicted a fully developed plant, he admitted that he had not seen such a plant and wondered if that which he had seen was a *Victoria* at all. The skillful hybridizer has added much to this charming class of flowers. The blending of the colors of the tropical and hardy varieties makes it now possible to have, in the open ponds, all the soft tones of color from a pure white, a blush pink, rosy pink, yellow, lilac and crimson. The enthusiasm created in England, France, Germany and the United States has done much to popularize this class of plants, which is now

general. No public park, garden or cemetery is complete without its aquatic garden. And what a marvelous change is effected in the appearance of an unsightly swamp or marshy piece of ground by the introduction of a few aquatic plants! And how many such places are to be seen throughout our land!

The list of hardy plants is a large and varied one, and suited to all localities. Entering the limits of a well kept garden, where occasionally there is a small stream, but where often artificial means

IN BLOOM.

WHEN FIRST PLANTED.

EASTER EGG OF LILY OF THE VALLEY.

have to be resorted to, we find greater shelter and immunity from roving animals and a place where the choicest varieties can be grown while receiving care and attention when needed. Where natural conditions exist and the location is in harmony with the surroundings choose the lowest part of the ground for the water garden, digging out the soil to a moderate depth. This may be regulated by the natural conditions of the soil or the location; perhaps, in some cases, the building of a dam across a small stream may be all that is necessary, but if the soil has to be dug out, is of a clayey nature and will hold water without a cement or concrete bottom so much the better. The depth may be from one to four feet, shallow at the edge and deepening

towards the center, where ice is formed in winter 12 inches thick. Here it will be necessary to have more than 12 inches of water above the crowns of hardy *Nymphaeas*, or they will be frozen, as although classed as "hardy," they will not bear actual freezing. The form of the pond may be either circular, oval, regular or irregular (the latter being preferable), with a bay in one part, a jutting promontory in another, a shelving shore here and a steep bank covered with shrubs at another point. However small the piece of water may be, a little good taste and judicious management will have the best effect. One thing is absolutely necessary—the enclosure must hold water. Nothing is so vexatious as a leaky pond or tank and a shortage of water. A running stream is not always to be commended, although of great benefit if it can be diverted at will. A continuous stream from a spring may lower the temperature of the pond too much, for while this will not affect the hardy varieties the tropical varieties require all the benefit that can be derived from solar heat. This style of water garden may be too elaborate for the greater number who desire to grow aquatics; and recourse must be made to cemented ponds and tubs, as circumstances will permit, or to small ponds or banks built of masonry, or either bricks, stones or concrete, according to existing local conditions. The most satisfactory tanks I've made have been built of bricks and Portland cement. The depth of the tank may be 2 feet to 2½ feet inside when finished. It is advisable to let the tank or pond stand a few days with water or soil and water, as the case may be, before planting, else the young plants will suffer, if they are not killed outright. The plants may be grown in tubs or boxes, or soil may be placed in the bottom of the tank to the depth of 12 inches. In either case use good loamy soil, enriched with thoroughly rotted manure—two-thirds of loam to one of manure—and a light sprinkling of bone dust.

Water lilies and all aquatic plants are voracious feeders and require an abundance of food. Good specimen plants or flowers cannot be grown on a starvation diet. For one plant of the Zanzibar lily a tub (half a kerosene barrel) full of such soil is little enough. This would not be sufficient for a good plant of *Nelumbium*, but a *Nelumbium* can be fed with liquid or other manure, which would be of great benefit; but this treatment will not apply to tubs when submerged in the tank. *Nelumbiums* should not be grown in the same pond or tank as *Nymphaeas* unless there is ample room; and if this is not the case, then division walls should be built so as to confine the rambling roots within bounds. The tubers of *Nelumbiums* should not be planted until vegetation has fairly set in and the conditions are such as to stimulate growth at once.

Nelumbiums can readily be raised from seed, but the plants will not bloom until the second season. Hardy *Nymphaeas* may be planted in April and at any time up to the 1st of September. A good plan, in planting water lilies during summer, in water from 2 feet to 4 feet deep, is to have them established in 4-inch, 5-inch, or 6-inch pots. When turned out of the pots the ball of soil with the roots intact can be dropped in the water at the desired spot; the weight will prevent the plant from floating; and in a short time the leaves will appear on the surface and the roots of the plant will be anchored below. The tender varieties may also be planted this way, save that it is useless to plant after June.

HANDLE BASKET.
RUSSIAN FLORAL ARRANGEMENTS.

To grow a victoria satisfactorily an artificially heated pond is necessary, so that a well established plant may be secured by the 1st of July. Without this means it is not safe to plant out much before this date. Then two months would elapse before the plant attained good proportions. It might produce a flower, but summer would be over, there would be no season in which to enjoy the fruit of your labor, and the plant would be no commendation and no incentive for others to go and do likewise. For a specimen victoria plant a tank 35 feet to 40 feet in diameter is necessary and 3 feet deep. Space for soil may be made of brick work or of plank, say, 1 foot deep and 12 feet to 14 feet square; thus allowing 2 feet of water above the crown of the plant. 100 to 150 cubic feet of soil are required—the same as before mentioned for nymphæas will do—with an addition of more manure or bone meal, about 1 bushel to 150 cubic feet of soil. During spring and early summer the water temperature should be 85°, later, when the plant is matured, 80° is sufficient. The system of heating the water must depend on local conditions and resources. Both steam and hot water, in circulation and running into the tank, have been satisfactorily employed. For several weeks after planting

the space occupied will not be more than 100 to 150 square feet of surface. The best plan with which to economise and husband heat is by fixing a temporary frame with sashes over this space; and by the 1st of July, when it is safe to expose the plant, the frame and sashes may be removed and the depth of water increased. This temporary covering is intended for out-door circulation. Where a tank is built inside a glass structure, the same is not wanted. The frame would also be of great advantage where artificial heat was not used.

It is impossible to make a selection suitable for all places and different persons, while with most persons the hardy varieties are preferable because of their staying or abiding qualities. I would say that while this is quite true, it is also true that no collection is complete without the tender varieties any more than the flower garden is complete without tender plants. The soft shades of white, pink and yellow are met in the hardy varieties of nymphæas, but the deep reds (carmine and crimson) and blue are found only in the tropical ones. True the deeper reds and possibly the blue may yet be counted with the hardy varieties but a few red of recent date are lost sight of on account of their exceedingly high price.

Another point in favor of the tropical varieties is their rapid growth and free flowering quality, and that most of them are very distinct and easy to cultivate, while their price is within the limit of a small pocketbook, and fifty can be purchased for the price of one of the new hardy aristocrats. Amongst those that are within reach of all, that are of easy culture and adapted to almost all purposes, may be mentioned *Nymphaea odorata*, *N. o. gigantea* (white), *N. o. sulphurea*, *N. Marliacea chromatella* (yellow), *N. odorata rosea* (Cape Cod pond lily), *N. zanzibarensis rosea* (pink), *N. z. azurea* (blue), also the Egyptian lotus. These embrace all the leading colors and are deliciously fragrant.

Time will not permit me to give in detail a description of the newer and select tropical and hybrid varieties, but a few words must be said in favor of the night bloomers. They must not be erroneously placed in comparison with the night blooming cereus, whose flowers are of such short duration. The nymphæa flowers open after sunset and remain open until about ten o'clock the next morning. They open on three successive days or nights rather, as the day bloomers open and continue three days. They are also well adapted for cut flower purposes and are to be seen to perfection then; their sparkling brilliancy unequaled by other varieties or, in fact, by a host of other flowers. There is much more that I could say of these flowers, but before closing I must say a few words as to the immediate surroundings of the water garden. Here is the ideal spot for Japanese iris and pæonies; variegated acorus and rushes; *carex* and *cyperus* in variety, including the ancient Egyptian papyrus; giant reeds; bamboos; ornamental grass; sub-aquatic flowering plants; water forget-me-not; callas and calthas; lobelias (cardinal flowers); orchids; ferns and numbers of choice hardy perennial plants. There is also a large number of floating plants and submerged plants. Amongst the latter there are some most beautiful foliage plants, especially the cabombas, myriophyllum and last but not least, *Ouvirandra fenestralis*, the lace leaf plant of Madagascar.

Herbaceous Plant Notes.

Aquilegias or columbines are in their glory at this date, and I may say nearly everybody is familiar with at least some variety of this singular and elaborately constructed flower. Our wild scarlet and yellow columbine, *A. canadense* of the woods is worthy of cultivation among the other varieties, for it is one of the most graceful and free blooming plants, possessing a very peculiar delicacy combined with brilliancy of coloring. Sometimes we find flowers of extraordinary size, as large as those of the *A. Skinnerii*, and frequently they have their long and slender spurs tipped with yellow. The stamens and pistils are lengthened out so as to form a protruding brush in the centre of the flower. It is one of the earliest bloomers and flowers equally well in sunny or shady positions, lasting splendidly until July. Another red-flowered native, *A. formosa*, resembling the above in some respects, is often confounded with it, but can readily be distinguished by its green tipped sepals, the greater height of the plant, growing 3 to 4 feet high, and also blooming much later. It is not so abundantly distributed over the northern states as the other, but being a very pretty species and exceedingly useful, it should be planted in the garden, where it will produce more and larger flowers than

in a wild state. The Rocky Mountain columbine, *A. cerulea*, of rather dwarf growth and with lovely widely opened pale blue flowers and a pure white large cup is probably the most beautiful of the whole genus. When fully expanded the flowers measure over 3 inches across, and the spreading spurs are very long and slender. It is an early bloomer, and continues in good shape well into July, or at times even later under favorable circumstances. The pure white variety of it is surely a favorite with everybody who had occasion to set his eyes on this rare gem, at least such is our experience, for without exception it is the most admired aquilegia on the grounds. The pure yellow flowered *A. chrysantha*, with its long and needle-like spurs, will be a mass of bloom for months to come, and combined with the blue or purple varieties such as *alpina*, *glandulosa*, *olympica* or the blue and purple shades of *vulgaris*, makes a most magnificent show in the border.

The common garden columbine, *A. vulgaris*, comes in many pretty colors, blue or purple of various shades, reddish pink and copper color more or less intense, white and white tinged with red or pink, some with double flowers and some are single, not so large individually but produced in great quantity on branching, erect, stout stems. Sunny positions have been advocated for all columbines, but a long experience in our sunny country has brought out the fact that while the plant does fairly well here when exposed all day to the full sun, the flowers will last much longer when shaded part of the day, especially in midday and afternoon, and I would therefore recommend to plant under the shelter of a large open tree or on the east side of a shrubbery or a hedge. As to soil they are not particular and will thrive most anywhere, although they seem to prefer a light, open and sandy subsoil to a hard and stiff underground. Aquilegias form a mass of pretty foliage, which remains in good health until very late in fall, shading and hiding the ground completely, thereby keeping it cool and preventing the evaporation of moisture to some extent. If planted 15 to 18 inches apart in a patch in the borders or in a bed, lilies of various kinds may be permanently planted in between them, so as to have a continuation of flowers after the columbines are through blooming. *L. speciosum*, some of the tiger lilies or other late flowering sorts may be used for that purpose, *Galtonia* (*Hyacinthus*) *candicans* also looks well when planted in quantity among them, breaking the monotony of an otherwise dull and uniform patch of green, although where only small quantities are planted and the adjoining plants flower after the aquilegias, it may be just as well not to introduce additional flowering plants among them.

In spite of our dry weather the irises are doing splendidly this season, and are flowering in great profusion. Last year's plantings have sent up numerous flower stems and are far ahead of expectations. Whatever caused them to do better than usual I do not know, unless it be the constant deep covering of snow they had all winter up to the 1st of April. The largest patch of German iris we have is planted on rather dry ground, and gets no shade whatever at any time of the day, still the flowers do not get scorched, nor do they dry up very soon or fade in this exposure, still I think it would be better for them if they had a little more moisture and a less drying exposure. A few old clumps are in another border, which is a rather mixed up affair, and should have been replanted and rearranged years ago, but

this latter operation has always been postponed for another season on account of the healthy state of the plants. They are grand at the time of writing, several dozens of flower stems are loaded with large delicately shaped flowers growing up to the height of 2½ feet, showing what this plant will do for us if left alone and undisturbed for some years.

Among other plants in flower just now is *Asphodelus luteus*, which in some places is called *Asphodeline lutea*. The long narrow yellow flowers are very fragrant, and spring from an erect, tall and straight stem around which they are crowded, springing from the axils of the numerous long darker colored bracts, which surround the main stem from bottom to the tops. The flowers are semi-pendent and are produced in succession as the stem elongates. The leaves are awl-shaped, very narrow and long, dark green, and have a central line of a whitish green; it is an old but fine species, good for the border or the shrubbery. In rather deep soil it does best, and when planted and left alone for several years, will attain a height of 3 to 4 feet. Although a native of a warm country we found this plant perfectly hardy without any covering.

Asphodelus ramosus has larger and broader leaves, and as the name indicates, much branched flower stems with white flowers marked with a brown line down the middle of each segment, produced as in the first named from the axils of the bracts, forming long compact racemes 3 to 5 feet high. Asphodels are not grown near as much as they should be; they are effective and may be successfully introduced over *Viola cornuta*, *Polemonium reptans*, *draccephalums* or other dwarf growing plants.

Many other plants are in bloom now; I merely would mention *Lupinus polyphyllus* planted over a bed of the golden *Alyssum saxatile compactum* and looking its best at present. *Thalictrum aquilegifolium* is flowering freely among the golden dwarf *Achillea aurea*. *Linaria dalmatica* with its large yellow flowers produced on long spikes; each plant is surrounded by compact masses of *Draccephalum austriacum*, which also is beginning to send out its deep blue flowers. *Lotus corniculatus* is creeping close to the ground near by, *Alyssum alpestre* is coming on, *Reseda glauca*, *Aethionema grandiflorum*, the Oriental poppies, *Hemerocallis flava* and many others are out in good shape and promising to hold out for a long while. J. B. KELLER.

Rochester, N. Y.

Fern Notes.

PHLEBODIUMS.

This sub-genus of *Polypodium*, which is now included under the latter name by most authors deserves to be kept separate on account of the distinct characteristics of the species by which it is represented. In *P. aureum* we have a most useful fern, bold and effective in appearance, of graceful habit, and of a distinct shade of color. The surface of the fronds is of a glaucous green, with a peculiar shade of metallic blue; which has led to its being called the blue fern by many not well acquainted with fern names. *P. glaucum* is of more slender growth than the above and of a drooping habit. *P. sporadocarpum* is generally given as synonymous with *P. glaucum*, but the variety we grow as *sporadocarpum* is of more erect growth and the rhizomes are not so thickly covered with the woolly scales. Although sometimes recommended as greenhouse ferns, I find the *phlebodiums* succeed much better when grown in a high stove tem-

perature, and unlike many ferns, they will continue to make satisfactory growth throughout the winter provided a high temperature is maintained. They also develop the bluish tint to a greater degree when grown in heat and liberally treated. Few ferns derive so much benefit from the liberal use of manure, which may be either liquid or any good artificial fertilizer applied to the surface; but in using the latter care must be taken not to overdose them. A small quantity and the dose repeated at frequent intervals will be most effective. They may be potted in any ordinary compost, but rough porous soil is preferable, and plenty of drainage should be used.

Young seedlings should be potted singly and later on three may be potted together in larger pots, taking care to have the points of the rhizomes arranged to spread in opposite directions. *P. aureum* shows its character best when grown on to a good sized specimen, making a grand plant for an 8-inch pot, but it is equally useful in a 5-inch pot. With good treatment quite large plants may be grown on in this size. For quite small plants *P. glaucum* is the most useful. I may here mention that *Polypodium glaucophyllum* is quite a distinct fern to the one referred to; the latter having long slender rhizomes, and small oblong entire fronds. A very pretty little fern but of no use for florists' work.

LOMARIA GIBBA.

This useful and distinct fern, though, perhaps, not so popular as it was a few years ago, still finds some admirers, and large numbers pass through our London market, and in the provinces it is still a great favorite. There are now several distinct varieties, though few have as yet been honored with distinctive names. The normal form, which has rather broad and short fronds, pale green, with no color in the stipes (or stalks) is the best, as it makes a very compact plant. The variety with reddish brown stipes makes longer fronds, but is often inclined to make fertile fronds prematurely, and when this happens they rarely make good plants. The variety *platyptera* makes a grand plant, but unfortunately it is difficult to get. I have frequently had a few plants make their appearance among batches of seedlings of the form first referred to though when sowing from spores which appeared to be good. I have never succeeded in raising seedlings, and I find other growers have the same experience.

It requires some care in collecting spores of the *lomarias*, they should be taken from fronds which have matured during the summer or early autumn, and from plants which have been isolated as far as possible from other ferns. Early in the spring is the best time for sowing; I find these make much the best plants, though sometimes later batches will do well. The spores do not germinate so quickly as those of some *pteris* and others, consequently the first seedlings may prove to be weeds. To those accustomed to raising seedlings it is not difficult to recognize the *lomarias* by the small round, dark green prothallia.

In growing on *lomarias* it is most essential to keep them going, if once they get checked they rarely recover and make good plants. The seedlings should be divided and potted singly as early as possible; they succeed best in a warm moist atmosphere, but must not be overwatered at the root. Although in a high temperature they will continue to grow throughout the year, it is better to give them a rest during the winter; if kept

A RUSSIAN PROPAGATING HOUSE.

rather dry and cool for a time, they make a much better start when placed in heat again early in the year and will soon overtake those that have been struggling on in active growth throughout the winter. They do best in a light open compost, and good drainage; by careful attention to watering and a liberal supply of manure after the pots are well filled with roots, quite large plants may be grown in 5-inch pots.

A. H.

New York.

A profound quiet in the neighborhood of the flower stores, retail and wholesale, and as the season advances each day is more and more of a day of rest, until it would seem as though the song "Every day'll be Sunday bye and bye" had reached its realization as far as the flower trade is concerned. Roses got their quietus several weeks ago; carnations held their ground until last week, and then it came on them too with a vengeance. They come in by wagon loads; they go off by wagon loads (city carts), and fortunate indeed is the wholesaler who gets a few dollars in to divide among his carnation growers. Sweet peas are all heaped up also, and quotations are now on a hundred bunches instead of a hundred flowers, white varieties selling best because in smaller supply. Peonies are abundant at present writing, but there is no special call for them, although no more effective flower exists for large decorations; but there are no large decorations. Decoration Day cuts but a small figure in local trade here, and all there is left to hope on is the steamer trade and the June crop of weddings and commencements, which from all accounts will be rather slim this year.

Early in the spring Jas. Weir's Sons erected an iron and glass structure extending out into the area in front of their place of business in Brooklyn. The new building projected considerably beyond the line of the other buildings in the neighborhood, and several of the neighbors applied for an injunction on the ground that it was a violation of the deeds under which the property is held. The suit has been decided in Weir's favor.

A New York Florists' Bicycle Club has been organized to take part in the parade on June 6. Quite a number of the young up-town florists are enthusiastic over the project. The club already numbers about forty. The intention is to parade in uniform, and their wheels will be elaborately decorated with roses and other flowers. Mr. Allie Warendorf is chairman of the committee of arrangements.

Wm. Elliott had one of the biggest auction sales on record last Tuesday, and reached the top notch on quality, quantity and price, geraniums bringing all the way from 10 to 20 cents each. Mr. Elliott reports a gratifying demand for stock of good quality, and says there is no difficulty to dispose of such at remunerative prices, but when rubbish is offered it finds no takers at any price.

The worthy gentleman on Greenwich street, who represents the so-called "New York & Holland Nursery Association," to whom reference was made in our notes of May 9, is still "at it." His latest novelty is the "sinquilis quintilium, 60 shades on one stem." This startling inscription is attached to what appear to be bulbs of *Lilium lancifolium rubrum*.

A. & F. Rolker have been obliged to run special sales every week recently. Last week they had an extra palm sale on

Barclay street, this week Pitcher & Manda's sale, and next week a sale for the Philadelphia growers. Better prices as a rule are realized at these special sales than on the regular days.

On the evening of Friday, 8th inst., Jas. Hart celebrated the completion of his 600 foot range of new houses at Madison with a good time to the workmen and his neighbors. The entertainment was held in the big shed, and about one hundred and fifty were present. Music and dancing were indulged in, and refreshments were served with characteristic liberality.

The Essex Heights Floral Co. have several houses of Scott carnations which are a sight to behold; such a crop of long stemmed buds is seldom seen, and they will be right in the height of bloom for Decoration Day. Mr. Van Reyper has several promising seedlings.

Some of the best white stocks ever seen in the city are being sent in by S. H. Powell of Hempstead. They are on sale at John Young's.

Jas. A. Fraser, formerly with R. L. Merwin & Co., is now representing The Lovett Company of Little Silver, N. J.

Boston.

At last the rain has come and there is great rejoicing over it. The drouth was broken on Tuesday by a copious shower. Such a long period of uninterrupted dry weather at this season of the year has never been recorded here. Crops of all kinds have suffered greatly. Even the large maples on the streets were wilted and drooping, and the grass was brown in many places. Another cause for alarm was the numerous forest fires which laid bare enormous tracts of land and had become almost uncontrollable. Planting will now go on vigorously.

There is but little to record regarding the cut flower trade at present. While not entirely dead it shows but small signs of life, and the great heaps of bleached out roses and sleepy looking carnations which are seen piled up in the boxes of the sidewalk vendors afford convincing proof that the supply is big and the outlet small. The wholesale stores are all badly overstocked and much stock will of necessity go to waste between the present time and Decoration Day.

Decoration Day orders are coming in as freely as heretofore and there is good reason to look for a big demand. This holiday has come to be, in this section, one of the most profitable, if not the most profitable, of the holidays for the general florist. The quantity of plants and flowers used is enormous and buyers as a rule care little for quality in buying flowers for Decoration Day use. The idea is to make as much show as possible, and everything goes.

Last Saturday saw an unusually small display on the exhibition tables at Horticultural Hall. James Comley was the principal contributor, and he showed a handsome collection of ornamental flowering shrubs.

The committee speaks encouragingly of the prospects for a successful June festival as arranged for by the Gardeners' and Florists' Club. The date of the entertainment is not decided upon, but it will be when native strawberries are ripe.

The daily papers are having some fun over the manner in which certain of the city fathers and politicians were fooled into entertaining a bogus "Mayor of Newburgh, N. Y.," who spent a few days here last week. Among the victims mentioned in the list is a prominent member

of the floral craft who acknowledges having given the distinguished (?) guest a drive through the parks and other appropriate entertainment.

Jackson Dawson has been on the sick list for a few days. The short season crowded the Arboretum work into a very brief period and overwork is undoubtedly the chief cause of Mr. Dawson's illness.

No appointment by the Mayor yet and the several candidates for City Forestership are still in the dark as to their prospects.

The New England Florist Co. has been incorporated. Capital \$3,000.

St. Louis.

The demand continues very light and irregular in the cut flower market. Figures are tending downward on everything. Stock has been very abundant during the week, and of exceptionally poor quality, owing to the extremely warm weather. Peonies are selling very slow. Sweet peas are very plentiful, and only the white ones find sale; they bring 35 cents per 100, while the other colors bring only 15 and 20 cents. Red carnations are selling at 50 cents per 100; other colors are sold at from 75 cents to \$1. Roses of all kinds are cheap; the best can be bought at \$2, others at from 50 cents to \$1.

Alfred W. Madsen, with the Chicago Folding Box Co., was a recent visitor.

The funeral of the late Carl Beyer took place on Thursday afternoon from the family residence, 3619 South Grand avenue. The affair was in charge of the Hasendener Post, G. A. R. The floral offerings were very fine; nearly all the florists in St. Louis were in attendance.

The Florists' Club's regular meeting was postponed on account of the death of Mr. Beyer, so that the members could attend the funeral. The next meeting will be held on Thursday afternoon, June 11.

The committee on florists' picnic will hold a meeting at Jordan's Saturday afternoon; Chairman Kunz reports that the picnic will be held at Clifton Terrace the latter part of June.

The Florists' Gun Club have their regular shoot every Sunday morning out at Tesson's place. They expect to send a team to Cleveland this year.

The heavy rain Monday night kept a great many of the bowlers at home, and only eight members braved the storm. Weber rolled high in three games, 495; Kuehn was second with 487, and Beneke third, 466. The highest single score of the night was 197, made by Weber. Some of the boys are talking of changing to some other alley, as this one is not kept in as good condition as at first. They think a change would benefit their rolling very much and make better scores than now. J. J. B.

Philadelphia.

Where shall we have our planked shad dinner is the question of the hour; shall we sail up the river or down? It is a very perplexing question, and has kept both the young and the old blood of the committee having the matter in charge in a quandary for some time. Like the old duke, first they say we'll go up and then it's decided to go down, and at this writing they are neither up nor down. But this will be settled in a few days, and in the meantime encourage a good appetite, for the table is to fairly groan with its weight of this toothsome fish and the various fixings that go along.

The bottom seems to have dropped out and there is scarcely anything left to even remind one of the business there was a week or two ago. Roses, carnations and sweet peas are very plentiful and are to be had at the buyers' figures. The weather, so warm last week, is now so cool that overcoats are almost a necessity, the thermometer registering as low as 50° at night. This cool weather has had a beneficial effect on the stock and it is in better shape. Kaiserin now has stems like Beauties, and it is preferred to the Bride. The best Beauties are now \$1.50 to \$2 per dozen, and teas, first choice, are selling for \$4 to \$5 per hundred. Carnations, extra, are \$1.50, and Christy of Delaware County is away up head, his stock being extra fine. In quantity there is no reasonable offer refused, and many still go to waste. The best sweet pease sell for 50 cents per hundred; they are now in good shape. Several growers have houses planted from which the sash has been removed, and the flowers are a fine color.

W. K. Harris has a batch of *Spiraea compacta*, which makes a nice decorative plant for the season; if he could only furnish a few decorations he would soon sell out.

The Penna. Horticultural Society had a bee meeting last Tuesday evening; there was an illustrated lecture and a paper, both of which were much appreciated. The main lecturer, who was to have spoken of the mission of the bee in the fertilization of flowers, was unable to be present. There were a few dahlias on exhibition, and very pretty flowers they were. A premium had been offered for Cupid sweet peas, but for some germane reason they failed to germinate or show up. The Cupid is all right, however; he has always been a trifle fickle, but this world would be a desolate place indeed without him.

It almost moves us to tears, when at times in looking over the various growers' boxes we notice the horticultural press being used as packing. In these days of the blanket newspaper surely it would be better to put away carefully the horticultural journals, when done with them for the moment and keep them for reference, and use the old newspapers, which can be had for half a cent a pound.

K.

Chicago.

The market this week shows conditions similar to those prevailing for a fortnight past. Prices run about the same, good roses showing a stiffening tendency. There is plenty of cheap stock, and no sale for it, nor is it possible to give any figures that are rigidly held to. In roses Meteor is seen in good quality at \$3; high grade Testout goes above this, but the rank and file goes much below. A few Kaiserins are disputing place with the Brides. Some second crop Brunners from Stielow are fine in color and can dispute places with the Beauties for size; they bring \$1.50 a dozen. Carnations are in many cases very poor, weakened by the heat. Decoration Day prices are to go into effect on the 27th and advance prices are \$4 to \$6 for roses, and \$1.50 to \$2 for carnations.

Peonies are very plentiful, and the ordinary pinks and reds are down to 2 and 3 cents, but the fine "drop whites" have made their appearance, and sell for 50 to 75 cents a dozen. They are very fine, but of course will soon be over. It is said there will be an abundance of peonies for the 30th. Syringa is here, and very pretty and fragrant it is, selling for 25 cents a bunch. Snowballs and lilac are

past, with no mourners. And the Texan gardenias are here—oceans of them—the express companies are unloading them on the wholesalers in an effort to realize the express charges. They are everywhere on the streets, and the cheap restaurants are giving them away. A good many of the flowers are bruised and brown; however, there is no reason why the handsome glossy leaves should not be made into "laurel" wreaths for Decoration Day; they are very lasting and could be bought cheaply, and either with or without a tricolored sash they would be just the thing for cemetery use.

Sweet peas are rather poor in color and texture; they have to be good for 40 cents. Cornflower is little called for, though very good; it sells for 25 and 30 cents. Valley from cold storage is fine at \$3 and \$4. *Coreopsis lanceolata* is seen, but doesn't seem to sell well.

The cold contracted by Mr. J. C. Vaughan on his return from the east developed into a fever that has kept him confined to the house ever since. He seemed dangerously ill at one time but is now much improved, and it is now simply a question of building up and recovering strength.

Visiting Chicago: A. Dimmock, St. Albans, England; George Souster, Elgin, Ill.; A. L. Shriver of the Hoopeston Floral Co., Hoopeston, Ill.

Pittsburg.

The weather has continued very favorable for outdoor operations, and the chances for a frost reduced to a minimum. The demand is steadily increasing for bedding stock, especially in the Allegheny market, where trade has been quite brisk, the facilities there being much better for display of plants, while in the Pittsburg market it has not been quite so lively, but all are hopeful that next week will see a great change for the better. Prices are fair, \$1 to \$1.25 per dozen for geraniums, other stock in proportion. The cut flower trade continues dull, funeral work and a few social functions constituting nearly the whole demand. Stock is very plenty, far too much so and prices range accordingly; carnations are a drug at present at 20 to 25 cents per dozen.

The florists were too busy evidently to attend the meeting of the club on the 14th; very few were there, and as the next regular meeting night is the 28th, and all would then be in the rush for memorial day planting, a special meeting will be held during the week following instead.

Randolph & McClements of the east end have been very busy during the week and have had a large force engaged in decorating the grounds of many of the finest places in that, the most fashionable dwelling portion, of Pittsburg. The season being so advanced brought the demand all at once, and has kept them hustling.

The contract for decorating Exposition Hall and City Hall for the Saengerfest was given out on the 16th, Gustave Ludwig securing the floral part of the decorations. He also secured the decorating of the Froshin Society Club house interior and exterior, and Allegheny Turner Hall.

J. F. Gibbs & Son, Woodville, Pa., report a good demand for plants, they disposing of them near at home, at Carnegie principally. At their stand in Allegheny market under the personal supervision of Mrs. Gibbs their cut flowers are disposed of, and they are one of the few in this line who grow the stock required for this branch of the business.

W. J. Fornof & Bro., of Mt. Troy, just outside city limits, have been showing a

good line of bedding stuff, it is fully equal to anything in the market, and they are getting their share of trade.

Miller Bros. of the 11th Ward, Allegheny, report business with them very fair and are getting their share, but could do more. Their stock is up to standard.

Mr. M. I. O'Brien, Sharon, Pa., Frank Lannp, Wheeling, W. Va. and J. W. Glenn of Kittanning, Pa., were with us this week. REGIA.

Henry A. Gane.

We herewith present to our readers a recent picture of a gentleman, who though not a florist, yet thoroughly interested in the art, and a friend and benefactor to all the profession, has given to us one of the grandest chrysanthemum seedlings ever produced in this country.

Mr. Henry A. Gane was born at Frome, Somersetshire, England, in 1811, spending his boyhood at this place. Arriving at his majority he decided to cast his lot with the New World. He spent some few years in the different New England States and in 1846 established himself in Boston in the book-binding and book-binding supply business, which he continued for thirty years. He early accumulated a competency, and having that innate love for horticulture which could not be appeased surrounded by brick walls purchased a beautiful residence at West Newton, one of Boston's noted suburbs and built thereon a small greenhouse in which to spend his leisure.

When the chrysanthemum was first introduced into this country Mr. Gane was an early purchaser, and became an ardent enthusiast in the culture of the Queen of Autumn. Upon learning the mysteries of cross-fertilization he immediately began to experiment, and a visitor to his chrysanthemum house in the fall will see many beautiful varieties unknown to the commercial world. Some of these seedlings he has shown at the exhibitions of the Massachusetts Horticultural Society and has received the Appleton silver medal for a collection of seedlings and the society's silver medal for Mrs. Jerome Jones. When this variety was first shown there was an immediate call for its dissemination, and he was induced to sell it. The other seedlings he has always given away to his friends; among these which might be mentioned are Golden Ball, which received a certificate of merit by the National Chrysanthemum Society of England; West Newton, awarded a certificate by the chrysanthemum Society of America, and many others which have received notice at various exhibitions.

Mr. Gane is now in his 86th year, and it is a pleasant sight to see him in the fall spending his days among his pets taking notes of the different varieties and their habits.

Buffalo.

We have had nothing but fine warm weather, with only a shower or two, but the public are the best judges and are not led away by the fine weather, and consequently there is no great rush in the plant trade as yet, and won't be till about the 25th. The market is now a great factor in the distribution of plants; like other large cities, as we grow the plant business is largely done at the markets. I believe if the aggregate of all the plants sold at the different markets could be ascertained it would be far in excess of the sales at the greenhouses. And who wants a better business than to supply some of these market people? They will

take a wagon load of one kind and you take your cash and drive home, and no fault found. There is a large class of people who believe and always will believe that they can buy on the market cheaper than at a store or greenhouse. I have known to the contrary in many instances, still it goes.

Trade in the stores is getting dull. Carnations are still coming in plentifully but smaller, and sell at the popular prices of 20 to 25 cents per dozen. There are plenty of roses to fill the demand. What are we going to do for cheap Decoration Day flowers? Lilacs will be entirely gone, and so is outside valley. It will be hard scraping to find material for the poor veteran's resting place.

The writer managed to attend a meeting of the club last Tuesday, but no quorum assembled; too bad, as there were

H. A. GANE.

several matters of importance to come. President Mepsted had a relative who was bound for British Columbia call on him the moment he was starting for the club, so that stopped him; for others it was possibly too warm.

The old Bailey greenhouses are once more to rent. This place has changed hands many times since '79. The last lessee, Mr. Eibers, has given it up for reasons of which I am ignorant.

A few, a very few, it seems, will start for Wilkesbarre to show John Burton and George Anderson how to break up Peoria blackbirds and to learn from Mr. Ben Dorrance how to build and ventilate modern rose houses, and to get from the graceful George Fancourt that good advice, "Bag 'em, me boy, bag 'em."

Mr. Mott was here this week on his monthly call and we have just seen Mr. Dimmock of "old Lannun, you know."

W. S.

Toronto.

The lecture "Ornamental Horticulture for Canada" given by Prof. Wm. Saunders, director of the Ottawa Government Experimental farm under the auspices of the Toronto Horticultural Society, was considering the short notice given of it, a great success. Five hundred invitations were sent out and about two hundred attended; a little more advertising would have no doubt brought out many more. The lecture was most interesting and

enjoyable and the beautiful lime light illustrations showed many well and naturally grown specimens of flowering shrubs, conifers, etc., which we in Toronto had not supposed to be hardy in this part of Canada. Illustrations of the experimental farm in the northwest, of vegetation in British Columbia, and of Rocky Mountain scenery were also given. After the lecture many of those most interested gathered round the professor and questioned him on many points which he was pleased to answer as fully as he could. Let us have some more of these lectures.

The flower market on Saturday was as full as it could stick of plants and flowers, especially the latter. There were literally wagon loads of lilac, Tartarian honeysuckle and such like, besides carnations and roses galore, the supply was so much greater than the demand that prices went all to pieces in the afternoon. I asked one man what he did with all he had left and got the reply, "Oh well! I didn't carry them home again." The weather is still fine and mild and, with the exception of a small shower or two, very dry. The public gardens will probably begin planting out next week unless a cool spell sets in and at present there is no sign of it.

Nothing important has been done in the city parks and gardens question mentioned last week, except that estimates have been reduced somewhat and the mayor has been making himself particularly disagreeable by making nasty remarks concerning the commissioner and his department generally. E.

San Francisco.

There has not been any great change in the condition of the market since last week, except that the great quantities of longiflorum that were coming in last week have shortened up considerably, and consequently the glut is over. Violets seem to be holding out very well, and another thing they seem to be holding their color a little better. Roses are of very fine quality just now, but are not bringing very much. We note plenty of well grown outdoor roses in the windows now. Sweet peas, which one would expect to be coming in rapidly at present as yet have not done so. The demand for them is very good. The cold backward spring helped to keep them from blooming, and in many instances the late frosts killed all the first crop of buds. Carnations are very fine, particularly Scott, Portia and McGowan's. We note a few Dean Hole carnations lately, also Storm King. There seems to be a general complaint that this last named variety is too shy a bloomer to grow profitably. The same may be said of Meteor and Dean Hole.

Mr. Geo. Draycott, late of D. O. Mills' place, accompanied by his wife and son, left for Europe on Saturday. Mr. Draycott will visit his old home in England.

D. M. Ferry of Detroit is here in California attending the great floral carnivals now in progress in all the large cities.

The fine warm weather during the past week is greatly benefiting all growing seed crops and bringing sweet peas into bloom. In many places in Santa Clara where the water laid on the ground for a time during the winter the onions have been completely washed out or destroyed, also the blight is at work in many instances. Lettuce seems to be doing very well and will probably turn out all right, also leeks seem to be in a healthy condition. Cupid sweet pea is growing very well, but is a very slow grower and in all probability a very shy seeder, as the first

crop of blooms fall off and do not go to seed. Asters are growing splendidly.

W. Atlee Burpee of Philadelphia is here looking over growing crops, and also taking a trip through the various seed farms.

Hon. J. Sterling Morton, Sec'y of Agriculture, is here in San Francisco. Mr. Morton is greatly interested in the sugar-beet industry on this coast. Regarding the controversy pertaining to the letters of the seed contract which is now attracting so much attention, Mr. Morton has nothing to say. He claims that the only injustice in the free distribution of seeds is that all the people have to pay for what is given only to a few.

Mr. Gerhard Kolligs has opened up a very pretty flower store at 11 Ellis St.

At the Hobart-Williams wedding this week a large quantity of white orchids were used. Also great quantities of roses, ferns and sweet peas.

The great floral festival of the Santa Clara Rose Society is over, and is pronounced by all as a great success, and the society is to be congratulated in making this, their initial carnival, such a pronounced success. A great floral pavilion was erected in Agricultural Park, where the display of flowers was made. Great quantities of roses, lilies, carnations and sweet peas were seen on all sides. The hall was also very artistically decorated with evergreens and hunting. On Wednesday a great floral procession took place and it was certainly the most elaborate one ever witnessed here. The fiesta closed on Saturday night with a grand ball, and everybody in the city was in mask. A movement is on foot here in San Francisco to try and inaugurate an annual floral carnival similar to our sister cities, and we have every reason to believe it will be successful.

A visit to Mr. David Tuttle's place shows that gentleman to have all his stock in fine order. His ferns are looking in splendid shape, also begonias, palms, etc. Mr. Tuttle's chrysanthemums are growing nicely, and he expects to capture the prizes this year, as he did last fall.

Mr. J. V. Esterhart has been appointed instructor in botany at the University of California at a salary of \$1,200 a year.

A shocking accident occurred to the 12 year old daughter of Louis Becanne, the rose grower of Alameda. The little girl was fatally burned by an explosion of gasoline, near one of the greenhouses. Mr. Becanne has the sympathy of the trade in his affliction.

METEOR.

Rochester, N. Y.

Flowers sell fairly well now, though prices remain low owing to outdoor flowers being very plentiful. Snowballs, deutzia, tamarix, *Pæonias officinalis*, *tenuifolia* and *arborea*, iris, *hemerocallis*, columbines and a host of other things make a great show in the florists' windows. One firm for several days had their store decorated with wagon loads of wild azaleas which, contrary to expectations, remained fresh for a long time and were greatly admired by all visitors. Inter-mixed sparingly with sprays of wild smilax and andromeda branches, one side of the store was a complete mass of bloom, interrupted only here and there by a tall foliage plant or a lofty palm. Not many expensive decorations are called for, funeral designs constitute the bulk of present work, but quantities of outdoor flowers and bunches of carnations, roses or valley for the smaller vases are in order. Flowers are used more than they were a few weeks ago but they are cheap.

The trade in bedding plants is getting

worse every day; prices are away down and nobody can boast of successful spring sales in this line. The weather is excessively dry, so that planting has been stopped by nearly everybody, waiting for the much needed rain.

The unhealthy state of the plant business does not seem to scare new beginners. Mr. Ferd. Tente is starting into the plant business, and one of his contemplated three houses is finished to begin with. He is situated at Hoeltzer street, with about 2 acres of land, and will run a general florist's establishment, not making a specialty of any certain plant for the present until he finds out which article will pay him best.

Mr. Bishop has given up his city store and will devote the whole of his time to his plants and flowers at his well equipped greenhouses on North St. Paul street, where he has been for long years growing roses, carnations and chrysanthemums for the Rochester market.

Chas. E. Krueger also discontinued his store and will grow plants and flowers hereafter in his houses on Monroe avenue or may remove them to move spacious quarters on the outskirts of the city.

J. B. K.

Utica, N. Y.

That carnations have the call in this city can be seen by the fact that whenever two or more members of the craft meet they immediately plunge into a discussion on varieties, rust or bacteriosis. Although they seldom agree on all points, it cannot be denied that these discussions are productive of good. There are still some who hold that rust can be kept in subjection by heavy syringing. This opinion whenever given immediately raises a storm of objections. The following question was propounded at the last conference: "In case the unlimited use of water overhead should be of benefit against rust, what would you do with the bacteriosis bound to be induced by this method?"

The state convention of the G. A. R. which is in session here at present made quite a little flurry in cut flower circles. Several large receptions used stock up closer than for some time past.

A recent visit to J. C. Spencer showed that the fishing trip must have been postponed, as everything was in the pink of condition. A house of McGowan, after producing heavily all winter, was still a sight. While this variety may not be the ideal white, when done as shown by Mr. Spencer it very nearly fills the bill. A carnation house erected last fall is the first in this locality to use butted glass. As a result several have been converted to this style of glazing.

At Baker's establishment business was reported good in some lines, plant trade a little slow, but coming on. At his upper place thousands of young ferns are taking the place of spring stuff as fast as benches are cleared. Pteris in several best sorts for fern dishes, aspidiums, onychiums, adiantums and selaginellas are the varieties grown this year. A bench was being planted with young hydrangeas for growing on under glass. Good success was reported for two years under this treatment, it being claimed that the wood ripened up earlier and set buds much better than outside. They are lifted and potted in the fall in time to rep'ant with carnations. Roses and carnations fill eight houses, from which there is still being cut a large quantity of bloom. A hatch of Buttercup planted on the bench last June is still doing finely.

Bouton d'Or is the best yellow here. This variety propagated early so as to take in large stuff and grown cool is a winner.

Donald McLean says he will not build this year, having erected three houses last fall 75x18 making him about 12,000 feet of glass. This he says will do for the present; his heating apparatus is a model. Reports a good start on the hedging trade.

F. J. B.

OBITUARY.

MRS. W. A. REIMAN.

Mrs. W. A. Reiman, the well-known florist of Vincennes, Ind., died at her home in that city May 13. She had been in frail health for many years, but possessing great energy she continued her business occupations until a week before her death, when physical strength gave way entirely.

Mrs. Reiman was born in Syracuse, N. Y., 45 years ago, coming west upon her marriage to Mr. Reiman, who was a railway conductor. Beginning the cultivation of flowers as a recreation she finally entered the business, succeeding Mr. Balmer. She was very successful, and occupied a prominent position among Indiana florists. Personally Mrs. Reiman was a lady universally esteemed, whose ready benevolence and exemplary life secured friends among all who came in contact with her. Her surviving family consists of her husband and an adopted daughter.

Bath, Me.

J. H. Ramsey & Co. are about to commence building an additional rose house 100x20 feet. This addition will give them a total of 8,000 feet of glass. This firm has met with good success during the comparatively short time it has engaged in the business here.

HOMO.

Jaggs as a Botanist.

"Ordered yer mournin' yet, Jaggs, old boy?" inquired the man who was wandering through the immortelle letters endeavoring to find enough vowels to make "Our lost loved one," while he wished he had persuaded the customer that "Rest" was more appropriate. "I see yer chum the Shah o' Persia went off the hooks last week."

Jaggs dropped into a resting position on the head of a barrel with a disgusted grunt. Being enveloped in the unusual respectability of a brand new bed ticking apron he had been told off by the "old man" to act as retail salesman, and had

just finished a triumphant deal with an old lady who wanted two geraniums, an ageratum and a very prickly cactus all packed within the confines of a black silk shopping bag, this feat being one of the conditions of the sale. He made no answer for a time, until under the soothing influence of a smoke, then began.

"Wot riles me is all this here talk about the refinin' influence of flowers. Looks like it when an old gal comes in and wants to buy 4-inch geraniums for 75 cents a dozen, plantin' thrown in, and then begs a batch o' begonia slips free gratis for nothink, 'cos she does love flowers so. Talk about lovely woman—old Shylock was a bloomin' infant alongside o' some o' my customers."

There was a solemn pause, broken only by the rasp of some very blunt rose shears, plowing their way through a coil of rusty stemming wire.

"It's aggravatin' enough when they don't make no bones o' their meanness. There was old Lady Howard de Redcliffe, the old gal I worked for afore I come to this here bloomin' old desert. Maybe you've heard o' her; she was great on orchids and piety; used to go about droppin' Dissentin' tracts like they was autumn leaves. When she come across one o' the chaps broilin' among the orchids, feelin' like he was in a bloomin' limekiln, like as not she'd give him a regular brimstone tract about the perdition o' strong drink. Well, one day, when I was nailin up peach trees in the orchard house, the ladder slips, and there I was with a broken leg, laid up for nigh on three months. Her ladyship took on terrible when she hear it"—here an appreciative grin was visible among the audience—"because she have to keep on payin' my wages same as if I was workin', and she think a precious sight more o' twenty-one bob a week than I do. One day she marches into my lodgin's and sits down, and says as she unties her bonnet—and a precious scaly old bonnet it was, nigh as shabby as what the Queen wears, and they do say there ain't another respectable widder in London as would wear the bloomin' old bonnet Her Majesty does—she says, 'Jaggs,' she says, 'this accident is most unfortunate. Do you realize as I've got to keep on payin' your wages while you lie here doin' nothink. Now I'll tell you what I'll do—the housekeeper has fifteen pounds of raisins to be prepared for the Christmas puddings, and I'll send them down here for you to stone—you must get very tired of having no amusement.' I says 'It's very kind o' yer ladyship, I'm pertic'lar fond o' raisins.' She give a grunt, but say nothink; then she drop around a few tracts about the blessedness o' misfortune, and shins out."

"And did she send the raisins?" enquired the audience.

"Well, no," returned Jaggs with a grin. She seemed like she hadn't confidence. She told the foreman if I couldn't do nothink else I could paint labels and prick off seedlings, just for a harmless amusement."

"It's a wonder you ever parted from that dear old lady," observed the man who was stemming primulas, and using various sea blessings when the wire sheared the blooms off the stem.

"It is," observed Jaggs, "but when Veitch was just beggin' me to go plant collectin' for 'em in Polynesia I reely hadn't the heart to refuse."

"Come off," old chap," was the general chorus, "You'd make a daisy plant collector."

"That's what Veitch thought," calmly observed Jaggs. "They just make a for-

tun' out o' some o' the novelties I sends back—there was a pitcher plant with pitchers as big as a Mulberry street grower—talk about them nepenthes bein' insectivorous—why, that plant, as they ought to ha' named Jaggsii if a chap ever got his deserts, that there nepenthes lives on live squirrels! I reckon that's why Veitch never sent it out—its living was too expensive. And then the liquid in the pitchers was so uncommon strong that a chap couldn't grow it—without violatin' the excise laws. But it wasn't that that queered me in my collectin'; it was all along o' my runnin' up agen the sacred mronga warakai tree. Ever heard anythink o' that?"

"Not unless it's a first cousin to that there man-eatin' tree of Madagascar," suggested one of the auditors.

"Now don't you think you're funny," observed Jaggs with some asperity. "I fancy if you was to run agen the mronga tree, wavin' eighty-six snaky arms in the air at wonst, and a-swallerin' a full grown native like he was a pill, and only spittin' out his war club, which was full of iron spikes, you'd think there was some curiosities as Nicholson's Dictionary hadn't got onto. I says to myself 'Jaggs, old boy, just capture that tree, keep him in a strong cage like a lion at the Zoo, take him down to the R'val Aquarium, and yer fortun's made.' So I lays my plans, which was to chloroform that there tree with poppy tea—there was any quantity of wild poppies, all the colors o' the rainbow, and bigger than soup plates—it's a wonder they ain't in cultivation—then I'd bind the bloomin' old tree with native hemp, while it was stupefied-like, and get it down to the coast, where I could box it up securely. All went well, but what with the journey and the joltin' blessed if that tree didn't begin to revive. Afore I knew what happened it broke loose, started to swaller natives like they was oysters, and the last I see it was wallerin' in gore. I took to a raft, bein' harassed by the savages till I looks like a pincushion, I was stuck that full o' poisoned arrers, and after driftin' about for over a week without a bite or sup I was picked by a Japanese man o' war and took to Yokohama. Tell you wot, there ain't nothink like plant collectin', if you want to run up agen a lot o' bloomin' freaks."

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By experienced florist. A1 position only. ADIANTUM, care Am. Florist.

Address THE AMERICAN FLORIST CO., Chicago.

Society of American Florists.

RULES RELATING TO THE MANAGEMENT OF THE
ANNUAL TRADE EXHIBITION.

1. The Society of American Florists shall, through the Executive Committee, control all features of the trade exhibition.

2. There shall be appointed annually at the winter meeting of the Executive Committee a superintendent of exhibits. The vice president of the S. A. F. or the local organization in the place where the convention of the current year is to be held shall be invited to recommend such superintendent for election by the Executive Committee, as aforesaid.

3. Said superintendent shall have general charge of all details of the annual exhibition, and shall be under seven days' full service and pay at and during the convention.

4. He shall receive all applications for space and assign the same in the order in which they are received by him. He shall provide and arrange all necessary tables and staging.

5. Judges shall be appointed by the president and secretary at least one month before the exhibition. The president and secretary may appoint substitutes in place of judges who may be absent.

6. The exhibition shall be closed between the hours of 2 and 4 p. m. on the first day of the convention, during which time the judges shall pass on the exhibits, and they shall report promptly to the secretary on the same day. Exhibitors shall be excluded from the hall while the judges are at work.

7. Awards shall be given as follows: Highest, Certificate of Merit; second, Honorable Mention; third, Highly Commended.

8. The judges shall withhold awards on unworthy exhibits.

9. Judges shall be governed by the merits of the article as exhibited and shall state in their report on what special points of excellence awards are based.

10. To case any article or device has received an award at a previous S. A. F. exhibition awards shall cover subsequent improvements only.

11. No award shall be made covering the quality of seeds, fertilizers, paints and other articles of such nature that an intelligent opinion cannot be had without a practical test, but awards for creditable display may be given.

12. Doors of exhibition shall be closed five minutes before the opening hour of each session of the Society, and remain closed during the session.

13. Exhibition to be open not less than two hours before the opening of the morning sessions, to remain open during the day, except during the session hours, and as provided in Sec. 6, and to remain open one hour after the closing of the evening session.

14. Wall space shall be measured four feet in height, and when practicable a table not less than one foot wide shall be added gratis, if desired and applied for with entry.

15. Space desired shall be designated in square feet. A uniform charge of 25 cents per square foot for all space will be made, excepting that all plants and flowers contributed for exhibition purposes only shall be admitted free.

16. Exhibits not in position before 1 p. m. on the first day of the convention may be excluded from the report of awards.

17. No articles exhibited shall be removed until after the close of the last day's session, except by permission of the superintendent of exhibition.

18. Exhibition classes to be arranged as follows: A—Plants; B—Cut Blooms; C—Boilers and Heating Apparatus; D—Greenhouse Appliances, including flower pots; E—Florists' Supplies, including Fancy Earthenware; F—Bulbs and Seeds; G—Miscellaneous.

19. Exhibitors may group their goods together, excepting in the case of living plants and cut flowers. These shall be shown in a separate department from the other classes.

20. All adjustments not covered by rules or published action of the Executive committee shall be referred to that committee.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

The boxes as they appear when set up for use.

We make them in a sufficient number of sizes, including for violets, to meet all necessary requirements.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

OSCAR H. WILL & Co. report business as remarkably good with them, considering the times.

Mr. J. C. VAUGHAN is still confined to the house but is much improved and is rapidly recovering strength.

MR. S. Y. HAINES passed through Chicago on his way to Mt. Clemens, Mich., to recuperate from an attack of his old enemy, rheumatism. He reports a good trade.

NEW YORK.—Since the much-needed rain came there has been a most gratifying improvement in the retail counter and local mail trade in all lines, and if present conditions hold out for a reasonable period the final verdict on the spring trade for 1896 will be much more favorable than anybody anticipated. Secretary Don's circular announcing the fourteenth annual meeting of the Seed Trade Association gives an interesting program of important subjects for consideration and discussion. The meeting will be held on June 9, 10 and 11 at the International Hotel, Niagara Falls, N. Y., where special rates of \$3.50 per day (American plan) for members have been secured.

Catalogues Received.

Jas. Vitch & Sons, Chelsea, London, England, stove and greenhouse plants. H. W. McGinnis, Owensboro, Ky., chrysanthemums; John Laing & Sons, Forest Hill, London, England, new and rare clivias; Detroit Flower Pot Mnty., Detroit, Mich., flower pots.

An Indivisible Contract.

Where a landscape architect and dealer in gardeners' materials submitted an estimate for labor and materials in laying out grounds, specifying the different items of labor, trees, vines, grass seed, etc., giving the price and sum of each item, and also recommended three tons of sheep manure for fertilizing the ground, which he could furnish at \$38 per ton, and his estimate, including the manure, was accepted, the appellate term of the supreme court of New York holds, *Manda vs. Sullivan County Club*, 38 N. Y. Supp. 55, that there was an indivisible contract for the whole work and materials, and that he could not sue separately for the manure without proof of the performance of the whole contract. J. L. R.

THE new directory contains a total of 9,528 names and addresses, of which 5,258 are florists who do a general local trade, having greenhouses and retailing the product of same, 797 are florists who grow for the wholesale market only, 645 are retail store florists who have no greenhouses, 52 are wholesale commission dealers in cut flowers, 1,524 are nurserymen, 543 combine the business of florist and nurseryman, 364 are seedsmen, 248 combine the business of florist and seedsmen, and 97 who combine all three branches of the business.

WHEN writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

ASPAKAGUS Plumosus Nanus, new seed just re-
ceived, \$1.50 per 100; \$3.60 per 250; \$12 per 1000.

Providence, R. I.

The cut flower market is at a standstill, but little, if anything, being done at present in that line. The demand for bedding stock, however, has been brisk and quite encouraging, both the retailers and the growers having all they can do at outdoor work.

A very interesting meeting was recently held by the Florists' and Gardeners' Club. Among other things the question of how to suppress the "street fakir" was taken up and discussed at some length. All agreed that the street fakir must go, but how is he to be banished? It is something to agree upon a point, and it is quite another thing to devise some means of carrying out the point in a satisfactory way. After many interesting opinions pro and con had been fully expressed and considered, it was finally agreed to appoint a committee of three, consisting of Mr. Wm. E. Chappell, Mr. Wm. B. Hazard and Mr. J. B. Canning, who are to consider the best means and ways, and report at the next meeting, to be held during the latter part of this month.

Mr. T. O'Connor's new greenhouses are receiving the finishing touches, Mr. O'Connor expecting to have them completed and in working order before long.

James Hocking of Central Falls is building a 75x20 carnation house.

Mr. J. Leach of Pawtucket is about to commence building an additional carnation house 175x25. One of his old 145x20 carnation houses will be somewhat overhauled and adapted for roses.

J. F. Parks & Co. have dispensed with their Westminster street store, intending to confine themselves to their new store and greenhouses on O'ney street.

Mr. Wm. E. Chappell's bedding stock is the finest he has had for years, while his carnations, considering the season of the year, are really worth seeing. He has one bed of Fisher, about 100 feet long, which yielded him at one crop 1,700 blooms. The average crop, however, is between a thousand and twelve hundred.

NEW ROSE

"Mrs. PIERPONT MORGAN"

Listen for a moment to what a voice from far off Springfield, Illinois, has to say about our young stock of this rose:

May 4, 1896.
"EDWIN LONSDALE, Chestnut Hill, (Station H), Philadelphia, Pa.

"DEAR SIR:—Box of 'Morgan' rose plants arrived Saturday in good shape. **Fine Plants.** I would like to know how you produce plants of such size in a two (2) inch pot?"

All I can say is that it is all owing to the natural vigor of the variety, and perhaps to some extent to the natural rose growing qualities of our soil.

We have a few more left of the same size. Order early or you may get left, for I do not know of a more profitable variety to grow for cut flowers than **MRS. PIERPONT MORGAN**.

Don't forget our address:

EDWIN LONSDALE, Station H,

Tacoma, Wash.

Now since Easter is over the boys are taking considerable interest in the rose show, which is going to be held next month, the leading dailies of the town supporting their undertaking, and the exhibition is going to be a success. The meetings of the club are well attended and interesting.

Hinz, Bohannon, Schank and Nicodet, the leading landscape gardeners, are fully occupied since spring has made its appearance. Private places are well filled with bulbous stock this spring. Supt. E. R. Roberts and his force of men are busy clearing landslides at the park and recapturing the lost monkeys.

Henry Osterhandt returned from an extensive trip through California and Oregon, and has resumed charge of Nelson Bennett's place. LA FRANCE.

Brockton, Mass.

With the rise of temperature during the past week, there has been a marked rise in the sales of spring plants.

Copeland & Cooper's store on Main street has had many extensive improvements. Elaborate counters, handsome show cases, a mammoth ice box of the latest design and pattern, an artistic fountain, incandescent lights, etc., all combine to make the store most attractive.

Dr. C. E. Field of East Bridgewater, a suburb of Brockton, intends to build a 90x16 rose house.

Mr. E. H. Barrows reports a very satisfactory trade all along the line.

Homo.

FORGET-ME-NOT

BLUE PERFECTION.

As a cut flower, read what two of the oldest and best known houses of Philadelphia say:

MR. ALBERT KNAPPER:—This season we have worked up quite a little trade on Myosotis, and consider it a good cut flower for the retail florist, which I think will grow more in favor.

SAMUEL S. PENNOCK.

MR. ALBERT KNAPPER:—We take great pleasure in recommending a good article, and can say that your Myosotis is a fine, large, strong flower, of a grand color, and the best we have seen for a great while.

CHARLES FOX.

Sewed Them On.

Occasionally I find an amusing incident in the *FLORIST*, showing what is sometimes expected of the florist over his counters—all for 25 or 50 cents, which makes the tradesman say to himself, "It's often my experience, and who will be the next."

I will here relate a little incident which occurred in Concord, N. H., just before Christmas, and turns the tables the other way from what we generally find it.

A young lady stepped into a florist's establishment and called for a small piece of mistletoe to wear that afternoon. It was brought forward, and as the lady took it every leaf and berry dropped, leaving the purchaser with only a barren stick for her afternoon's decoration. "And the price, Mr. —?" "Oh! Well give me 50 cents." "How cheap! No, thank you, Mr. —, I don't want anything of the sort. If you have any mistletoe with leaves and berries on it I will take it, otherwise I will look elsewhere." "Well, Miss, I will get some leaves and berries for you, and you can sew them on when you get home. We have been sewing leaves and berries on ours all day" (producing some to verify his statement). The young lady refused to accept the latter offer, even at the greatly reduced price of 15 cents, and turned on her heel, saying "No, thank you, Mr. —, I don't wear kindling wood at any price," and walked out.

The florist said his mistletoe was badly shaken up in transportation, which caused the leaves and berries to drop. Now this is an actual occurrence and certainly shows what some dealers are willing to do by some of their customers. It certainly turns the ridiculous side of the table towards the florist this time, instead of the one who oftentimes seems to know very little of the cost to produce the flowers so much sought for on Christmas days. I feel free to say, it's a most deplorable way to live and expect to do business.

A SUBSCRIBER.

Running to Seed.

"Lisbeth," said Farmer Cornroe, laying aside his weekly paper, "is there any more fly leaves in the bible?"

"Yes."

"An' is all that pokeberry ink gone?"

"Not quite."

"Got er goose quill 'bout the house?"

"I think so; what are you goin' ter do?"

"Goin' to write to New Orleans fur a peck o' that new kind o' Mardi Gras seed that the papers is talkin' so much erbout; want ter try it in the lower bottom field for early pasture.—*Washington Times*."

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Herbaceous Plant Notes.

Last year we had exceptionally and prolonged dry weather all summer, and this spring we are troubled with the same unfavorable conditions in our section, so that many herbaceous plants have not done their best, the flowers not develop- ing to their full size, and fading away be- fore their time is up unless they have been planted in a very favorable position, and in soil that retains the moisture for a long time. But after all there are many of the herbaceous plants which will do well in dry situations without the aid of hose or watering pot, and by referring to notes taken during last season I can safely recommend the following as being per- fectly reliable in dry weather under full exposure to the sun. Phlox subulata and P. amœna grew luxuriantly, the dwarf Saponaria ocyroides produced its pretty lively pink flowers nearly all summer, Helianthemum alpestre and H. mutabile were a mass of pink or white every morn- ing during the entire season, the petals falling off after midday. Silene alpestris with its starry pure white flowers did ex- ceedingly well, as also did the beautiful pink flowered Silene Schafta later on. The hardy evergreen candytufts, both early and late varieties, lasted well. Iberis Jucunda, described in a former number is surely a sun loving plant, and held out for a remarkably long time, also its near relative of taller growth the Ethionema grandiflorum, which produces a most brilliant effect with its large elongated flower heads of lively pink.

Coronilla ibérica and C. varia will cover the ground well, and invariably bloom profusely, Lychnis Lagascea, with its bright crimson flowers, anthemis and the linarias of various kinds delight in dry places. The long tap roots of the callirrhœs will find enough moisture three or more feet below to maintain a vigorous growth. Antennaria margari- tacea and A. tomentosa, the beautifully fringed and finely lacerated Dianthus arenarius and the Cheddar pink, D. cœsius, with its soft pink blossoms are well known to prefer such exposures, the dwarf veronicas, Astragalus hypoglot- tis, Ranunculus amplexicaulis, and R. speciosus have done admirably well. Most of the dwarf campanulas and the delphiniums require very little attention during dry weather, and really flower better on dry land than in moist places. Heuchera sanguinea, which has been nicknamed in this vicinity "crimson lily of the valley," flowers continually with- out any watering. Oenothera glauca and C. Fraserii along with others of that type do the same. The pretty prickly leaved Carlina acaulis really dislikes moisture, and keeps its dark glossy foliage in perfect health. Rose campion and Lychnis chaledonica in variety do not show the effect of dry weather at any time. Hyacinthus (Galtonia) candicans

endures the severest drouth, also Papaver nudicaule and P. orientalis. many of the columbines, thalictrums and the digitalis. Pœonias do fairly well after they are thoroughly established, and have taken a good hold in the soil, but newly planted clumps or patches make but poor growth, and produce small flowers when left with- out water. Daphne Cneorum requires no extra attention after the first year, and flowers rather more profusely in the fall months on the dry places than on moist ground, where the growth is not so short jointed and buds are not set so freely.

Aster bessarabicus and Scabiosa ochro- leuca produce their flowers with the same freedom here as on lower land. Platycodons, with their long fleshy roots, go deep down into the soil in search of moist- ure, and are just the plants for dry places. The German iris seem to depend entirely on the sap stored away in the thick fleshy corms. Hemerocallis of all sorts bloom and grow fine, rudbeckias and heliopsis may not grow exactly to their normal height, but flower very free, and the same may be said of the helianthus in variety. Yucca filamentosa is well known to flourish in dry places, although it does equally well where moisture is supplied.

Of the spiræas the only one that kept on growing in the dry weather on the high ground was S. filipendula, all the rest of the tribe lost their lower foliage and the plants presented a shrivelled ap- pearance. Achillea aurea laid close to the ground, but flowered very freely. Anem- one sylvestre, after flowering kept its dark shiny foliage throughout the sea- son, and the deep rooting A. japonica in its varieties, did as well there as on lower ground. Alyssum saxatile grew finely among a lot of Asclepias tuberosa. Dielytra eximia remained in bloom nearly all summer, and the pretty little Reseda glauca flowered continuously. Stellaria Holostea bloomed well but did not attain its full height. Hieraceum aurantiacum seems to delight in dry ground, and armerias merely show the effects of drouth by their shortened flower stems. Gillenia trifoliata, planted among Anemone syl- vestre was good, Stenactis (erigeron) speciosus held its foliage in good condi- tion and flowered for a long time. Sapo- naria officinalis and the more beautiful deep colored S. caucasica did not show any sign of suffering for want of moisture. Statice latifolia and others are fine plants on such dry borders, and the older clumps of Clematis recta not only flower very profusely but also retain every leaf throughout the season. No doubt the list of herbaceous plants which would flourish in dry and exposed borders might be greatly enlarged, and I do not claim in any way that the plants enumerated com- prise a complete list, but even with those mentioned above we are enabled to plant a very large sized border and give varia- tion and color enough at all seasons.

Very few of the above species and varieties really require to be planted on very dry ground, and would do equally well in lower and moist situations, but experience has proved to us that they will hold their own under adverse circumstances, while others would succumb sooner or later if the needed moisture was not applied in time. J. B. KELLER.

Rochester, N. Y.

Aquatics in Tubs.

Every florist and gardener, amateur or professional, is taking up this topic, either talking, writing or growing aquatics. The aquatic notes in No. 414, May 9 issue, by Jas. MacPherson were very opportune and instructive, but his selection of varieties suitable for planting in tubs showed a lack of judgment and familiarity with our up to date varieties of nymphæas, etc., which any grower would observe by referring to '96 catalogues of nurserymen and others who make a specialty in this line. Suitable species and varieties are abundant, but they are not all adapted for growing in tubs, unless the tubs are submerged in a tank. *Nelumbium speciosum* can be grown very well in a tub but it is necessary to feed the plant well during summer or the leaves will early turn a sickly yellowish green, as well as refuse to grow or flower. *N. luteum* is not so free flowering as *N. speciosum*, and not to be recommended. The white variety of *N. speciosum*, *N. alba grandiflora*, is very unsatisfactory, and does not flower as freely as *N. luteum*; is not as vigorous and is a shy flowering variety, and under most favorable conditions will not produce such strong tubers as any other variety.

Nymphaea alba in its best form is at home in a pond with a stiff muddy bottom; it is a strong grower and needs deep soil and two to three feet of water. *N. a. rosea* or rather *N. sphaerocarpa*, is another species, and entirely distinct, and one of the most unsatisfactory to grow under any conditions if its native habitat is omitted. My experience with it is something similar to *N. gigantea*, the Australian species, but I have yet to find the peculiar traits of the former to successfully handle it, and while we have several varieties that are in many ways superior I'm afraid *N. a. rosea* is likely to be left in the back ground. No form of *N. tuberosa* will submit to the limits of a half barrel; nothing less than a lake will satisfy their voracious appetite. Even then they will take possession of the banks if they are moist. There is but one form of *N. Marliacea rosea*, which is one of the best garden hybrids, *N. alba* being one of its parents, and like that variety is a strong vigorous plant. *N. elegans* is well adapted for tub culture, but has the objection of being neither blue or white, the yellowish white form, *N. gracilis*, is better. The purplish white and the blue is cultivated in Mr. MacPherson's state, and has been for several years.

As to nuphars these are well enough in the Delaware, let them stay there. In ponds where I've seen them growing they have every season been affected with a troublesome beetle, and their appearance is very similar to a bad case of elm tree beetles. I fear no African nymphæa will ever be naturalized in the United States though as an annual some may now claim that it is; other means will and have been adopted, but the object is yet to be grasped.

The following varieties of nymphæa I have grown satisfactorily in tubs, and can be recommended. *Nymphaea odorata*

minor and *N. pygmæa*, white; *N. mexicana*, rich yellow, this variety is far superior to *N. flava*, and blooms profusely. Plants in 3½-inch pots will produce flower. *N. Helviola*, yellow, a hybrid of the pygmæa class, and very floriferous. *N. rosacea*, pink, very similar to *N. odorata rosea*. *N. Laydekeri rosea*, one of the best reds in cultivation, and very distinct, the flowers open a blush pink, changing each day a deeper color, with rich orange stamens. *N. elegans*, mauve or bluish white, stamens yellow tipped light blue. Although the Zanzibar varieties are stronger growers they have points of merit that commend them; they are free flowering and strong growing plants, and if the outer leaves are damaged more or less by getting over the edges of the tubs they are soon replaced, and the plants continue flowering.

The best *nelumbiums* are *N. speciosum*, *N. roseum* and *N. striatum*. Other plants adapted for this mode of culture may be mentioned, such plants as *Limnanthemum nymphaeoides*, *N. indicum*, *N. trachyspermum*, *N. lacunosum*, *Eichhornia crassipes* major, *Limncharis Humboldtii*, *Aponogeton distachyon*, *Trapa natans*, *Brasenia peltata*, *salvinias*, *azollas* and *pistia*, floating plants. Taller plants for centers of tubs, *Cyperus papyrus*, *C. alternifolius*, *C. natalensis*, *Thalia dealbata*, *Acorus japonica* var., *scirpus* in variety, *sagittaria* in variety, *Calla palustris*, *Myriophyllum proserpinacoides*, a grand plant for draping tubs. Several varieties of submerged plants and others might yet be added. W. TRICKER.

Growing Jacqs. at Waban Rose Conservatories.

The illustration No. 1 shows a house of the old favorite rose Jacqueminot in good condition, the plants all ready for their winter's work. In order to get them in this condition it is necessary to begin to prepare them just after they have done flowering. They are then allowed to become a little dry at the roots until they begin to start into new growth, when they are slightly cut back to admit light and air, thoroughly watered and encouraged by judicious feeding to make their growth as quickly as possible. The advantage of this is a long season in which the wood may get perfectly ripened. Some of the canes shown in Fig. 1 were over fourteen feet in length when they had finished their growth. Such large wood must be thoroughly ripened, else blind shoots instead of flowers will be the result.

The mode of ripening must be according to circumstances; that is, whether your roof be of movable sash or stationary. The one shown is a tilting roof. The sashes are hung on centres and can be moved to any angle, an arrangement well adapted for keeping off the heavy fall rains and at the same time admitting plenty of air to the plants.

When the time for starting is again at hand we go through and prune out all weak and otherwise imperfect wood, leaving the well-ripened canes from four

to eight feet long, according to size and condition of wood, then begin at one end of the house and tie, bending all down to a level. The bending equalizes the flow of sap and causes the strong canes to break evenly their whole length, and being on a level all the young growths have an equal share of light. When all are tied down we fork in a generous coat of old manure with a sprinkling of bone flour and wood ashes, then give the bed a heavy coating of green cow manure. This is not spread at once over the bed in the usual manner, but is put in ridges about one foot apart. Put on in this way it is much easier to get the bed thoroughly watered than it would be were the green manure spread over the bed. When put in ridges it gradually washes into the soil, also admits the sunlight, warming the soil and encouraging quicker root action.

When the plants have started nicely (fig. 2) the manure is spread evenly all over the bed, and after a good watering to settle it down is then ready for the roots to take hold of, as they are by this time in active operation. Then with careful watering and other small details properly attended to we have in about fourteen weeks from time of starting, the results shown in fig. 3, and although fig. 4 is not shown here it will be found on the right side of the ledger. If it is not we are apt to do as a great many others do, place the blame on the salesmen or commission man.

ALEX. MONTGOMERY.

Natick, Mass.

Spring Flower Beds.

Year by year we see more and more use being made of tulips, hyacinths, narcissus and low herbs for spring flower beds. The city where I write is not a horticultural center in any sense, and is remarkable for nothing in its gardens except an unusual number of very fine specimen trees, many of which surpass any I have seen in America, yet, there are many thousands more of bulbs planted than were planted ten years ago. I planted the first considerable quantity about then, but now the State House grounds are planted and bulb beds are appearing all over the city. But too many bulbs are apt to prove tiresome, and people want more variety. That variety may be furnished in low growing herbaceous plants. Now, a good many florists may hesitate to recommend these to their customers; they know but little about them, and have no confidence in that little. Let me advise such to experiment with broad rows—much like matted strawberry rows, or with three foot or four foot round beds here and there. There is no form more effective and fitting than a round bed, you can put it anywhere, and it can be easily mown around. A few of the combinations which may be made are as follows, and the most of the plants may be planted somewhat earlier than the earliest obtainable tulips. Where tulips or other bulbs are also used, they should be planted in fours, with a low growing herbaceous plant in the center of the fours. This in Britain is called planting in intersection. Where low growing bulbs are used they often are best used as a broad border, and if intersected at all, it must be with something correspondingly low in growth. The object of this method is not so much a simultaneous display, as a successional one, and it is thus particularly well adapted to the vagaries and variations of our seasons.

If white hyacinths or tulips are intersected with varieties of *Phlox subulata*, or *P. amœna*, and edged with variegated

Fig. 1.

Fig. 2.

Fig. 3.

GROWING JACKS AT WABAN ROSE CONSERVATORIES.

Vinca minor, the tulips and vinca may or may not flower just together but whether they do or not will not matter in the least, such a bed will always look well, and with a proper selection of bulbs will often stand for several seasons. I don't think the plan of lifting every season to make room for summer bedders generally adapted to our conditions. My object is to give a few plants which the trade may supply to people who want a spring display, but little renewal, and not such a great deal of care. *Arabis alba* in intersection with scarlet or yellow or pink tulips, or with any color in hyacinths or narcissus, and edged with a broad edging of *Centaurea nigra variegata*, or variegated *Arabis lucida* or *alba*. The arabis will maybe die out in spots on some soils, so to keep a bed perfect you must keep a stock of compact plants to supply vacancies. Now it is a fact that some people will pay more for an arabis than a geranium or verbena, but these are people who know more about plants than a good many florists. *Adonis vernalis* planted alternately with *Anemone Pulsatilla* through the centre of a bed, and edged with the white Canadian violet studded thinly with white crocus, or striped crocus, will make a brave show in some parts of the country, and be fairly permanent too. *Caltha palustris*, studded rather thinly with *Anemone sylvestris*, and edged with *Erythronium americanum* may be tried in half shady places. *Iris pumila* in a foot or eighteen inch wide edging, may have the center of the bed filled with *Lamium album* and *Lamium maculatum* alternately, or you may fill the center with the white lamium, and stud it thinly with *Pulmonaria officinalis* or *Mertensia pulmonarioides*. Sometimes these will flower together or nearly together, but sometimes not. In any case the bed may be kept neat for a long time. *Sanguinaria canadensis* or the varieties of *Papaver nudicaule* with a broad edging of *Phlox subulata* or *Vinca minor* will also look very well. *Shortia galacifolia* may also be used.

The finer varieties of *Viola pedata*, or indeed any of its varieties cannot easily be overestimated for beauty, and in suitable positions they form a lovely mass of color. Naturally they grow on dry sandy hill sides, and in gardens the beds seem to do best on well drained slopes. This is different from the conditions liked by many other of the native violets, and may account for *V. pedata* being less commonly seen than others, at the north at least. The white phlox and scilla, chionodoxa, puschkinia, and other low bulbs may be used intersected as a border. Then after the violets die down you can sow poppies or eschscholtzia if you like.

Claytonia virginica likes shady moist woodland places, and may be edged or accompanied with any of the native violets which like similar situations. The *decentras* cannot be forgotten; five plants of *D. spectabilis*, edged with a broad band of *D. eximium* may be suggested. They die away early in this region of country, and the beds may be pricked over and sown to mignonette. *Bulbocodium vernum*, fritillarias in several species, hyacinths, tulips, muscari, galanthus and a great variety of narcissus may be used. *Doronicums*, *erysimum*, *Epigaea repens* (in azalea beds), *epimediums*, *Erythronium albidum*, etc., *Helleborus viride* vars., *Paeonia tenuifolia*, *Polemonium reptans*, *saxifraga* in several species, and several others humble in themselves, but making a brave show when mustered into masses, may be gotten together and tested. And get them in fair sized beds,

prove their adaptability to your conditions, keep them fairly well together (not scattered and lost), and infinite combinations will soon suggest themselves.

Trenton, N. J. JAMES MACPHERSON.

Chrysanthemum Notes.

Those intending to grow plants for sale next fall in 6 or 8-inch pots should now begin to start cuttings for that purpose, especially of those varieties that make slow growth, such as Ivory, W. H. Lincoln and Major Bonnaffon. Take as short, sturdy cuttings as can be obtained and avoid those that have become drawn. These should not be placed too closely in the cutting bench, for it is very desirable to get a short bushy plant, when placed on sale, and everything that would prevent them from spindling should be carefully done. Every fall sees large quantities of small plants placed upon the market, grown in 6-inch pots, that stand fully three feet high, the bottom stalks devoid of foliage and having a head of bloom backed by a few weak looking leaves, a veritable disgrace to the grower. We have often wondered when looking at plants of this description, whether it was caused by the neglect of the grower or ignorance, and have come to the conclusion that in some cases it was really the latter, for good plants are as easily grown as poor ones, and will bring in a better return for the space occupied. It is sometimes caused by an avaricious mind, not thinking that a good plant will easily sell for 75 cents or \$1, where a poor plant cannot be disposed of at 35 cents. Start in the beginning by giving these plants plenty of room.

Decoration Day gone by and the plant trade drawing toward a close, it is time to get the plants intended to produce fine bloom into the benches, and it will save a great deal of time if a little planning as regards the setting out be done before actually beginning the work. Make your arrangements so as to set the taller varieties at the north side of the house, so that the shorter ones will not be shaded. The catalogues now give the comparative heights that the different varieties attain, and it is quite an easy matter to map out the benches or houses so that when the plants are in full growth all will get their full share of sunlight.

The cuttings that have become rooted should be potted as soon as possible; don't leave them in the bench until they begin to grow, for they take hold in the soil with more difficulty, and the weak tops wilt and grow hard. Keep all the plants moving as rapidly as possible, and don't let them receive the slightest check. More chrysanthemums are spoiled during the rush of spring work than at any other time of the year.

ELIJAH A. WOOD.

Vinca Rosea.

I would like to introduce myself to Mr. Edwin Lonsdale as one of the old school florists who know and grow the Madagascar periwinkle, which he says will

A 10-INCH POT PLANT BEARING 180 FLOWERS.

CYCLAMENS IN CALIFORNIA.

cause a smile of derision. If so I pity the innocence of those who laugh with contempt at this plant. [It is evident that Mr. Menand misunderstood Mr. Lonsdale's statement. As we read the article, Mr. Lonsdale meant that a statement that the Madagascar periwinkle was a new plant would cause a smile of derision and not the plant itself.—ED.] I have laughed, smiled with heartfelt gratification and warm sympathy for the old things. Old things and old folks have a fellow feeling and I am old. I have yet the old plant with me which I had when I was seven or eight years old, which is eighty-one or eighty-two years ago.

Dear Mr. Lonsdale, your article has caused me to smile, to laugh, to wish to take your hand in mine without asking your permission, which trespass I beg you will excuse for the sake of our plant, our hobby. I have grown many hundreds for forty years or thereabouts, but never from seed, always from cuttings. Occasionally I have picked up some self-sown seedlings. You wonder the plant is not cultivated. I believe you. Then you believe that old good common sense has not departed yet. Yours fraternally,

L. MENAND.

Hot Water Circulation.

"Subscriber" asks how many 2-inch return pipes it is advisable to put on each 2-inch flow. To get the best results it should never have more than two.

To heat a house 100x25 with 2-inch pipe to maintain a temperature of 45° in zero weather in his section of the country, I should advise at least 12 rows of pipes if the boiler power is ample to maintain a good body of hot water. This ought to be sufficient, but I would also advise carrying the pipes across the end farthest from the boiler if a door is located in that end, then carry them to the door posts, using return bends, and I should certainly prefer to a 4 inch main for flow and return across the end nearest the boiler either on

the outside or just inside of the house; if in the latter place them where they can be buried somewhat to keep down the extra heat. From this 4-inch flow pipe carry out six 2-inch flows with reducing tees, allowing each flow to go to the extreme end of the house and across to the door, and return to main 4-inch return, thence direct to boiler, and by placing an angle valve on say three of the flows the heat is very easily controlled in all kinds of weather. Considerable coal can also be saved by doing this, as a much less volume of water has to be heated in mild weather. At the farthest end from the boiler, which should be the highest point in the pipes, a small air cock should be tapped into each return bend, or else an expansion tank should be connected with the pipes of each side of the house at their highest point, to allow all air to escape freely. If the pipes can be distributed somewhat over the body of the house, say four on each side and four through the middle, it will give a much more even temperature all through. In that case they can all be carried on the same grade, which is much preferable to carrying one above the other.

"Subscriber" does not mention how high the house is, or whether there is any glass on the sides, so I have based my calculations on a house built without any glass on the sides, and for a house of ordinary height for the width given. If there is more than 28 or 29 feet of glass surface in its width then it would be better to add one more pipe to above calculation to be on the safe side. JOHN N. MAY.

Cyclamens in California.

He finds that the cyclamen is very easily grown planted out in the open ground and that they will stand some

POT PLANTS IN A CANVAS HOUSE.

PLANTED OUT UNDER A LATH FRAME.

CYCLAMENS IN CALIFORNIA.

frost without injury. But of course he is in California.

Boston.

The past week has been dull beyond precedent for the season. This is the general testimony, especially from the manufacturing towns the complaint is heard, where the effect of long-continued dull times and reduced wages has been severely felt in all lines. In these communities the people spend their money liberally when they have it, the local florists getting their share of the distribution, and they in their turn buying supplies freely in the wholesale centers. The more intelligent wage-earners are good flower and plant buyers and as a class are of much more value to the florist than the ultra-fashionable element is. Plant trade has not materialized as expected. This may be in part due to the extremely dry weather that has prevailed during the spring months and which has made planting a very discouraging pastime.

The season has been a most unfortunate one in another respect. Many of the shrubs and herbaceous plants ordinarily depended upon to make a gay spring display in the gardens are this year flowerless, and fortunate are those that are even alive; when such hardy subjects as mount-

ain ash and forsythias have their bloom completely destroyed little may be expected of rhododendrons and spiræas. Some growers assert that hardy phloxes are killed outright in many places. Shrubs and plants that have bloomed have been inferior on account of lack of rain. The show of lilacs at the Arnold Arboretum, the finest display in the ground and one which was looked forward to with great expectations has fallen short of its promise, the flowers although abundant being stunted and spiritless looking.

The special attraction at Horticultural Hall on Saturday, May 23, was a group of splendid bloomed *Cattleya Mossiæ* and *miltonias* shown by Wm. Thatcher, gardener to John L. Gardner. He received a silver medal for the display. It was prize day for the pæonies but none were staged, probably because they are not yet in bloom. R. and J. Farquhar & Co. showed a bloom of the new canna *Italia*. It was the first flower from a small plant, consequently not a fair specimen from which to form an opinion of the merits of this variety, but its flimsiness of texture was unfavorably commented upon by many. It received a complimentary notice. Messrs. Farquhar also exhibited pretty flowering plants of that grand acquisition, spiræa Anthony Waterer and

of Cupid sweet pea. Complimentary notice was given *Cypripedium arietinum*, a rare native collected at Burlington, Vermont. Jas. Comley and C. Blomberg made their customary promiscuous display.

On Friday evening, May 22, a delegation from the Boston Club, consisting of Pres. Laurence Cotter, P. Welch, W. Ewell and W. J. Stewart visited Providence and were most enthusiastically welcomed and hospitably entertained by the Providence Florists' and Gardeners' Club, which met on that evening. The idea of inviting the Society of American Florists to hold its convention in that city in 1897 has taken firm hold of the Providence fraternity. They are in every way well equipped to carry out such an enterprise, and there is not the least doubt that should the convention go there in 1897 the attendance and enthusiasm will come very close to the high-water mark.

M. H. Walsh sends us from Wood's Holl a bloom from a seedling rose, the result of Testout fertilized with *La France*. The bloom comes from a plant in 4-inch pot from seed sown Feb'y 7, 1896. The flower is full, well-shaped, clear soft pink in color and fragrant.

The Household publishes a story which it credits to the *Boston Transcript*, about plants in a trance. The plants "in a trance" are the dried and painted palms put up by the "prepared plant" manufacturers. The *Transcript* after its many years' service as the recognized organ of the Mass. Horticultural Society, is old enough to know better.

John G. Barker has been dismissed from the position of superintendent of Forest Hill's Cemetery and Wm. J. Hargraves succeeds him.

Toronto.

The Gardeners' and Florists' Association's regular meeting was well attended last Tuesday and although there was not much business on hand an interesting and enjoyable two hours were put in. Mr. Geo. Reeves had a large bunch of his seedling cannas on the table, some of them very good, especially one, a cardinal red. Manton Bros. brought a bunch of very fine *Azalea mollis* grown out doors, it is perfectly hardy with them. Mr. Ewing brought some branches of the double pink hawthorn, of which he has a large old tree in the Normal School grounds, and a bunch of *Aquilegia cœrulea*, a beautiful variety with pale blue petals and pure white cup.

Mr. C. Tidy read a lecture delivered in the east end of London by Col. Halford Thompson on the virtues of Jadoo fibre as a substitute for soil for pot plants. There was a lively discussion on it, and the conclusion reached was that though it might not come much into use for commercial purposes it would be a good thing in cities where suitable potting soil is difficult if not impossible to get by amateurs growing a few house plants.

The following resolution was also unanimously passed, viz: "That this Association views with regret the stand taken by the Mayor with regard to the department of parks and gardens and that as a body of practical men it can assert with confidence that the department is managed as efficiently and more economically than any similar department on this continent and that it hopes to see the commissioner strengthened in his endeavors to bring the parks up to the standard he has in view."

The plant trade has been very good during the last week but the big rush will

be during the two coming weeks when bedding out will become general and it seems likely that a great deal more of it will be done this year than last year. More window and veranda boxes, flower stands, etc., will also be used. A great trade is being done at the market this year, many people (as in Buffalo) imagining that they get plants cheaper there. Amongst the cut flowers I notice large quantities of *Gladiolus Colvillei*, much more than in former years.

The long wanted rain has at last come and though it came on the great Canadian spring holiday, the Queen's birthday, it was very welcome. Grass was getting a very scorched appearance where the hose has not been used. E.

Carter's *Asparagus Plumosus Nanus*.

This plant was grown by Mr. E. H. Carter of Toronto, Ont. He has had it in his possession three years, and although every means were taken to induce it to climb it has never shown the least inclination to do so. It was awarded a certificate of merit at the March meeting of the Toronto Gardeners' and Florists' Association, where it was regarded as a decided acquisition.

Philadelphia.

Although the transient trade seems to have almost entirely disappeared, there are still a few weddings, commencements and funerals, the orders for which prevent things from coming to a complete standstill. Roses and carnations are very abundant, and job-lot prices prevail. Beauties are in fair demand, the top price being \$2 per dozen, with \$1.50 for most of the stock, and from these figures they go down according to grade to \$2 per hundred. The best price for teas is \$4, but very few bring this figure, \$2 to \$3 being the price for the bulk of the stock. Carnations are still in fine condition, but there is not demand for half the stock sent in, and the finest flowers go begging at from 50 to 75 cents per hundred. Outside *Jacqs* are peddled round in great basketfuls at \$2 per hundred, but do not sell well. *Meteors* have the call over them, as they keep much better and are to be had for about the same figure. Sweet peas are plentiful and in fairly good demand at 50 cents per hundred. *Pæonies* are carried around by people in the trade and out of it; from \$2 to \$4 per hundred is the price. They are showy and effective, and find a fairly good market.

Mr. Carre of Mantua, N. J., is sending in a fine lot of cornflower, both blue and white. He has a large bed planted several years ago, and it does splendidly, being scarcely any trouble, but during the early spring producing a lot of flowers that he finds a good demand for at from 50 cents to \$1 per hundred, and all sold through a commission house at that.

Smilax seems to be a bit scarce; 20 cents is asked for quite mean stock. Reid is getting some of good quality from Ohio, which readily brings 25 cents.

Pot roses have not sold well this season for some reason, and it would seem as if the growers would have a lot left over. Some blame it on the Holland stock sold in the large department stores at ruinous prices. Quite a large stock of pot roses at Wanamaker's in 6 to 8-inch pots were offered at 50 cents, and in a few days were in charge of a girl in the middle of a side aisle at half price for your pick.

The meeting of the Florists' Club June 2 should be an interesting one. Mr. Berry

CARTER'S ASPARAGUS PLUMOSUS NANUS.

will read his paper on forestry, the full details of the shad dinner will be given, and matters pertaining to the convention will no doubt also have consideration.

The shad dinner it has finally been decided is to be held at Wissinoming at the grounds of the Gun Club on next Wednesday, June 3, members and their invited guests to take the 1:45 p.m. train from Broad street or go by the 5th and 6th street trolley cars. The afternoon will be taken up by a number of interesting events—shooting by the Gun Club, running, baseball, etc., etc. Dinner will be ready 5 p. m. sharp. There will be music, and if the weather is fine a good time generally may be looked for.

W. K. Harris is on the sick list, having been confined to his bed for several days. He is somewhat better at this writing and hopes to be about soon.

Myers & Co. of this city have a new greenhouse appliance that bids fair to be a great benefit to the trade. It consists of an adjustable clamp T and L malleable iron fitting for one-inch pipe, which can be slipped on a post or purlin and clamped in the desired position. The same fitting has an attachment cast to it to which when used in bench construction the front board or table edge can be screwed, thus making everything strong and rigid. It will soon be in the market, and should be seen by intending builders.

At the monthly shoot of the Gun Club last Wednesday the following scores out of a possible 50 were made: Geo. Craig 27, Chas. D. Ball 44, Thos. Cartledge 32, Ed. Reid 35, Geo. Anderson 42, J. Burton 42, A. B. Cartledge 34. Chas. D. Ball won the medal. K.

New York.

More than usual interest is being taken in the proposed exhibition at the Newsboy's Home, which is to be given jointly by the New York Florists' Club and the New York Gardeners' Society on Saturday, June 20. Many of the large growers and dealers in plants, seeds, etc., have agreed to donate from their surplus stock to be given away to the poor children of the city, in whose interest the exhibition is largely planned. Admission will be free to the public.

Business in the city continues dull,

steamer departures furnishing the only variation from the prevailing monotony. Even Decoration Day will scarcely make a ripple on the surface if indications three days in advance count for anything. There is a noticeable decrease in quantity of roses and carnations coming in, which is a favorable sign. Outdoor lily of the valley and other spring flowers that have glutted the market during the past two weeks have come to an end, but garden roses will show up in a few days and make their share of trouble. The quality of the roses being received at present averages poor.

C. W. Mathison, formerly at 673 Sixth avenue, but for the last two years located at 40 East 43d street, died on Friday last of cancer of the stomach. The funeral was held on May 25 from St. Agnes Church.

A. W. Brabant, dealer in florists' fancy pins at 54 Warren street, made an assignment without preferences on May 20.

A Barclay street plant vendor offers *latanias* labeled in large letters "Shamrock," but they don't seem to sell any better on that account.

Mr. and Mrs. Thos. Young, Jr., will sail for England on the *Etruria* on June 13.

Visiting New York: T. J. Totten, Saratoga Springs; Sam Goldring and H. G. Ayres, Albany; Wm. Griffin, Lenox, Mass.

Pittsburg.

Those florists who are in the plant branch of the trade have been an extremely busy set this week, the continued fine weather, together with the approach of Memorial Day, bringing out purchasers in large numbers, and an immense quantity of plants have been disposed of at fair prices. The demand has been so great that when Saturday night is at hand a great many growers will have no stock on hand, nothing to show but empty houses and frames. There is no improvement noticeable in the cut flower department, everything in that line, as several have expressed it, being abominably dull.

James Dell, 508 Smithfield street, has completed one of the largest, if not the largest, decorations ever put up here. The largest department store here cele-

SOME INDIVIDUAL BLOOMS.
CYCLAMENS IN CALIFORNIA.

brated this week the 25th anniversary of their commencing business, and concluded to have a very unique decoration in honor of that event, and incidentally to be in readiness for the National Sangerfest during week of June 8. The contract was awarded to Mr. Dell, the material to be used being laurel wreathing and pine, the entire fronts of the building on Fifth avenue and Smithfield street being completely covered with pine. To give an idea of the extent of the job I need only mention five carloads of pine and over 6,000 yards

wreathing were required; to wire the building ready for the pine took six days, with six days more to put it on, twenty men being employed on this part each day. The interior decoration of the stores, requiring the services of 15 men, was completed in one day, the twelve immense pillars on first floor were entirely covered or massed, forming only one portion of the decoration. Great credit is due W. B. McCrea, Mr. Dell's assistant, who was personally in charge of the work, and who completed

it without an accident, the business of the establishment being conducted as usual during the whole time.

James Bros., near Wilkiesburg, have had a very successful spring and are well satisfied, having disposed of their whole stock of bedding plants. Their change in location has proved a judicious one, and to judge by the plants offered for sale, the new houses are a success.

Mrs. E. Williams, 1713 Carson street, South Side, has also had a remarkably good trade in plants, even with increased greenhouse facilities, having sold all of the stock grown, with the quality fully equal to any in the market. REGIA.

Buffalo.

Decoration Day is close here and in cheap flowers there is going to be a scarcity. Roses and carnations don't fill the bill entirely on this date. Plant trade is in full swing and no cold weather to check it. There are several hundred thousand geraniums grown round this city and they appear to be all wanted, but several growers have too many without bloom, and the average buyer, in fact the great majority, want to see some flower on when their beds are planted out. Palmer & Son's window was been full of very fine Daybreak carnations of late, fine for this season of the year.

The very latest bit of news of a startling nature is that our worthy Delaware avenue florist, C. F. Christenson, has sold out his aristocratic place. He does not give possession till a year from next July. The price received was enough to make any florist smile, but I am not at liberty to say just what. It is one of the finest residence lots on that beautiful avenue.

On Wednesday last a few Buffalo men journeyed to Wilkesbarre to meet a few Philadelphia shooters. We arrived at an awful hour, 2-30 a. m., but with all that there was a reception committee to meet us at the depot, G. Fancourt, chairman, ably assisted by John Burton and Mr. Lamb of Philadelphia. Even at that unseemly hour there arose an unseemly wrangle between Messrs. Fancourt, Cowell, Burton and Scott about where the sun rose. It was rising sure enough, but as G. F. said, the sun rose in the north in his town. It took the night clerk to decide that it was after all the east. A fine old-fashioned house is the Wyoming Valley Hotel, with the broad Susquehanna at its front door. The shooting was done on the spacious domain of Benj. Dorrance. In our rear and very close were the fine houses of the above named gentlemen, and facing the large establishment of Mr. Fancourt. The noon hour was duly respected by an adjournment to the roomy shed of Mr. Dorrance, where edibles, drinkables and stories went round. The shooting lasted from 10 a. m. to 5 p. m. The Philadelphia team was George Anderson, John Burton, B. Cartledge and C. D. Ball. Wilkesbarre, B. Dorrance, G. Fancourt and two local shots. Buffalo team was Philip Scott, J. H. Rehstock, W. Scott and Prof. Cowell (no good). Philadelphia took both handsome medals, one for the team shoot and the other went to that worthy young man, Mr. Cartledge, for the highest. Aggregate of the day, 99 out of 130 targets. The local men had invited half a dozen local gentlemen to join in the shoot, and if they were not florists they were fine shots and fine men. Mr. Dorrance did not show up in his usual form with the gun; who can be host and shoot too? George Fancourt was most considerate to the visitors and did not display his skill, it was too easy; he wanted double birds, unknown angles.

At the conclusion of the shoot we all moved to the fine residence of Mr. Dorrance, where on his broad veranda an appetising lunch was indulged in. It is needless to say everybody enjoyed themselves very much. Several, including the writer, declared their next honeymoon would be spent in the Wyoming Valley, made famous by Thomas Campbell's immortal Gertrude, as well as the immense coal breakers. If we can't shoot we can appreciate hospitality, and we hope this won't be the last time we shall visit Wilkes-barre.

I almost forgot to say that Mr. Lamb did finely as trap puller. Mr. Cowell was an impartial judge. Mr. Long arrived too late to be good for anything except dinner, and we were all sorry to hear that sickness prevented Mr. W. K. Harris from being with us. W. S.

Swainsona.

The accompanying engraving is from a photograph of a bed of swainsona in one of Mr. J. C. Rennison's greenhouses, Sioux City, Ia. The plants are in a solid bed, were planted September, 1895, and the photograph was taken April 1, 1896.

Mr. Rennison finds the swainsona is one of the more useful and profitable flowers he grows. With him it grows easily and blooms with remarkable freedom and continuously.

Chicago.

The storm that did so much damage in the suburban town to the west seems to have fortunately missed the florists. In response to a note Mr. E. Buettner, Park Ridge, writes: "I am happy to say that the recent cyclone passed us within a thousand yards but did no damage of any account to my place and I have not heard of any other florist in this vicinity being damaged. Had the storm struck us as it did a little west of us I would certainly be out of business to-day. It left nothing standing in its path. The air was thick with houses, barns, trees, sidewalks, horses, cows, fowls, furniture, etc., for a while, and the prairie is strewn with debris." Some little damage was done at Reinberg Bros' place, where an unfinished house was injured, and a few others lost a little glass, but altogether the florists in this vicinity has reason to be very thankful for their escape.

Decoration Day trade proved unexpectedly good. Outside orders were large, and though there were some complaints of city trade it seems to have been better than at first expected. First-class roses were not over plentiful, there being a great many small and mildewed flowers, while the demand was excellent. The usual price was \$4 to \$5, some extra select going for \$6; fine Kaiserin were \$5 to \$6, while extra Testouts went at \$5 to \$7. Naturally there was a fine demand for white stock, and extra white carnations went up to \$2 and \$3. The lowest for good carnations was \$1.50, higher grades \$2 and \$2.50.

The outdoor stock showed up better than was expected. Paeonies were plentiful at much the same prices as last week, the highest being fine "drop whites" at 75 cents a dozen. Irises were still plentiful; there were a few tulips, and in cheapest stock field daisies, clematis, and in fact anything that bore a flower. Cape jasmine was overloaded, like last year; it was quoted at \$1 to \$2, and some of the fine long-stemmed blooms were really worth the latter figure, but there was too much of it. Most of the out of town buy-

BED OF SWAINSONA AT J. C. RENNISON'S, SIOUX CITY, IOWA.

ers showed a disposition to order more freely than last year.

The new hybrid canna Italia is in bloom at J. C. Vaughan's Western Springs greenhouses. In size, richness of color and distinctive shape the flower is all that we could expect; the one weakness is a flimsiness of texture which it probably inherits from flaccida. Whether it would stand the whipping winds of Chicago cannot yet be judged, but surely it will be magnificent as a decorative plant under glass, and will be fine for hybridizing. But this one season will hardly be a fair test of its capabilities outside.

Visiting Chicago: J. L. Schiller, New York; Fred Haupt, Louisville, Ky.; Chas. Treanor, South Bend, Ind.

St. Louis.

Stock is still plentiful and the cut flower trade is dull; had it not been for a few large size funeral orders trade would have been at a standstill, and such a week of wet weather has not been experienced for many months, if not years. It rained all day and all night without any let-up. Thursday, the 21st, at 6 p.m., a great hail storm visited St. Louis, and did great damage in this vicinity to florists; greenhouses by the score were damaged. C. Young & Sons Co. were the greatest sufferers, their loss was 30,729 square feet of glass, 20,608 double thick and 10,121 single thick. Their loss to plants was also great.

R. F. Tesson of West Forest Park, lost 6,000 feet; C. C. Sanders, 45 per cent; Michell Plant and Bulb Co. 65 per cent; Alex Waldhart's loss is about \$70; Mrs. M. Eggeling, 65 per cent; John Hullahan & Richard Frow lost 95 per cent. J. F. Windt and Felter & Brucker's loss is 75 per cent.

City Park Superintendent Pape reports great damage to Forest, Tower Grove, and the smaller parks. The damage at Forest Park alone is \$1,000, and the other parks combined about the same, making a total loss to the city \$2,000. At Shaw's Garden the damage will reach in the neighborhood of \$2,000.

Jordan Floral Co., Mr. Kalisch, Wm. Mitchel, Brinsin & Zimmer and Aug. Kunz were more or less damaged with a few

broken panes of glass. John Kaufman's fine private place was damaged \$500.

The florists in South St. Louis escaped without any damage, as the hail was very light and small down their way. A great many fine trees and fine bedding about the city suffered, had the storm come a few weeks ago the damage would have been greater. As it was all the florists had sold out their market stuff.

Prices are about the same as last week, but with a declining tendency. There are lots of carnations about selling at from 50 cents to \$1 per 100. Roses are about as plentiful as ever, but of very inferior quality. All rose growers seem to be affected with bad cases of mildew, and some of the stock is unsightly as a consequence. Sweet peas have been in good demand, especially white and pink; the price is still 35 cents per 100 for white and pink, other colors 20 and 25 cents per 100.

Decoration Day, which will have come and gone before this issue will be in the hands of our readers, is not looked forward by our city dealers with any great expectations; the demand if there be any will be for the cheaper grade of flowers which will be scarce, as outdoor varieties have already gone out of bloom, or are much damaged by the recent storms.

J. W. Dunford at Central reports that he will build two new houses this summer.

Fred C. Weber made a new and original floral design last week, a scroll of honor on a bell shaped base, standing about 12 feet high. The scroll contained 75 American Beauties, the base was sweet peas.

At the Bowling Club Monday night the first question was "How much were you damaged by the hail," but they came to bowl hail or no hail. Emil Schray was high man in three games, 566; Beneke, second with 511, and Weber third, 479. D. Helwig was high on single game, 239, and Schray second with 214. Next Monday night will end the series of 12 games. J. J. B.

Detroit, Mich.

Though the Mt. Clemens establishment of John Breitmeyer & Sons was in the line of the recent cyclone they fortunately suffered but little damage, though it was

NEPHROLEPIS DAVALLIOIDES FURCANS.

a narrow escape. Their total loss may foot up \$300 and in view of the damage that might have been done they are very thankful to escape with so many small a loss.

Have not heard of any other damage to greenhouses in this vicinity. P.

Nephrolepis Davallioides Furcans.

This admirable fern may be safely recommended as one of those that are well adapted for a retail trade, its beautiful habit, strong constitution and easy culture making it specially noteworthy. A good general idea of this plant may be had from our illustration, though the small size of the photograph unfortunately prevents a distinct outline of individual fronds, by means of which such a plant is more readily recognized. The fronds of *N. davallioides furcans* are bright green in color, the pinnae slightly serrated on the edges and the tips forked or divided into two, four or sometimes more divisions, and the whole frond attaining a length of three to four feet in such a specimen as the one pictured.

While considered a warm house fern by some growers, yet the culture of this nephrolepis is by no means difficult, and it can be handled satisfactorily under much the same conditions as the well-known *N. exaltata*, and like the latter can be grown on quite rapidly during the summer by the following method: Early in the season, preferably in the beginning of April, fill a bench in a house that can be kept at 60° to 65° at night with light but rather coarse soil to a depth of four inches, the soil to be moderately enriched with dry cow manure. If it is convenient I prefer to use a portion of peat in the soil in order to render it more open, but this is not absolutely essential to success, and in some parts of the country is not easy to obtain. In the bed thus prepared plant young stock of the nephrolepis from 3 or 4-inch pots, water carefully and syringe occasionally during warm and bright weather, a moist atmosphere being a

prime necessity in fern growing. The house will of course require to be shaded during the warm season, and ventilated freely in accordance with the weather. If properly cared for under these conditions a rapid growth will be made, and when the time arrives for lifting and potting up the plants in question should be quite large enough to fill 7-inch or 8-inch pans or pots. When lifted the nephrolepis should be kept somewhat close for a few days in order to recover from the shock, and ought not to be offered for sale within one month from the time they were lifted from the bed, for a poorly established plant, full of soft growth to boot, is in no fit condition to be used in the decoration of a store or dwelling.

The propagation of nephrolepis is effected by spores and also by division, most of the species producing a quantity of stolons or runners, from which young growths are thrown up, and which may be separated from the parent plant and potted up as soon as the young crown has made a few roots.

In case the planting out method is not convenient, the nephrolepis can be grown very well in pots, using the same soil and treatment, though the growth will probably be less rapid and luxuriant.

W. H. TAPLIN.

San Francisco.

Business was a little better this week than was expected, although the market is flooded with outside roses, etc., still high-grade roses find a fairly good market. Testout of extra fine quality is to be had now, also Brides, Bridesmaid and Kaiserin are very fine. Mr. Geo. Karmen is sending in some extra fine Perles and Beauties. We note some immense blooms of Paul Neyron in the windows, also, which have been grown out of doors. Violets are going slowly at 75 cents per dozen. The quality is extra fine for this season of the year. Sweet peas are now coming in in earnest, the stems are of good size and the flowers generally at

this season are of fine form. The sorts that seem to be in favor at present are Emily Henderson, Firefly, Blushing Beauty, Countess of Radnor, Primrose, and Lady Penzance, the latter being very beautiful. Blanche Ferry also comes in for its share of popularity. Carnations are very plentiful, especially Portia. They are away down in price, however, although the quality is excellent. Scott heads the list in pink. Grallert brings in good yellow sorts regularly. At John H. Sievers' we note that they still cling to Edna Craig, and they undoubtedly have got the growing of this variety down to a fine point, as the blooms are truly magnificent. Lilies are nearly over, although some are to be seen yet. Auratums are coming along splendidly and soon will be in bloom.

Hon. J. Sterling Morton and party who have been visiting California during the past few weeks have departed for Washington. This was Mr. Morton's first visit to this coast and he was greatly impressed with its numerous advantages.

One of the most noticeable things at the rose show was Mr. Chas. Baker's new Mammoth Marguerite. It is a white seedling raised by Mr. Baker and measures four and one half inches in diameter. It is truly a magnificent thing and is attracting much attention in trade circles here.

Mr. E. W. McClellan has let the contract for his new range of glass at Belmont. The contract price was \$5,000. All the latest improvements will be used in this plant, and the houses will be built in the most substantial manner.

V. H. Hallock, representing Vilmorin-Andrieux & Co. of Paris, arrived here in San Francisco on Friday in the interests of the above named firm.

Mr. A. L. Vaughan of Vaughan's Seed Store, who has not been in good health, seems to be improving in our climate.

Healdsburg held her annual fiesta last week, and, as usual, it was the event of the year in that town. Business was suspended for several days, while the queen of the carnival reigned. A very excellent flower show was held in one of the pavilions, which was a credit to the Floral Society of that city. Santa Rosa, also, not to be outdone by her sister city, held her carnival a short while after, which was also a great success.

The Los Gatos Floral Society held its regular monthly meeting last week and paid up all the debts contracted during their last show. This society is fast becoming one of the strongest on the coast; has a very large membership and is in a very flourishing condition. The affairs of their annual chrysanthemum show was also discussed.

The San Mateo County Floral Society held a meeting last week relative to their annual chrysanthemum show, which is to take place in November. A committee was appointed to draw up a schedule of premiums and an effort is going to be made to try and induce the professional growers to participate.

The next show that will greatly interest the growers and seedsmen here will be the annual sweet pea exhibition to take place in June. This show rivals the exhibition in Springfield, Mass., and is thought by many to be far superior. It is of general interest to the trade here, as it gives them an opportunity of seeing all the novelties before being put on the market, whereby they can judge of their merits as cut flower varieties.

A movement is on foot here now among the business men of the city to institute an annual carnival similar to the ones

held in all the smaller cities of California. This is a very good idea, and the florists should do all in their power to bring about its success, because they will be greatly benefited if such a project is completed. For instance in all the smaller cities where all these floral carnivals have been held there are few if any florists or growers in the city or its vicinity, and the people generally look to their own gardens for their supply, whereas San Francisco being such a large city with all its florists and growers the public generally look to them for their supply of flowers, which they can not grow in their crowded homes. It is to be hoped that this movement will terminate successfully.

Mr. John Jacks did not resign his position with the Sunset Seed & Plant Co. as was reported, but is still at the head of their greenhouses. Mr. Mitchell occupies a similar position with Sidney Clack.

Sunday morning Mr. M. Lynch, Mr. A. L. Vaughan of Vaughan's Seed Store, Mr. V. H. Hallock of Vilmorin-Andrieux & Co. of Paris, Mr. H. C. Hall and James T. Lynch composed a fishing party at Menlo Park, where an excellent day's sport was enjoyed. METEOR.

Cincinnati.

According to the present outlook the coming outing will surpass anything of its kind ever given previously. The outing committee, consisting of Messrs. Jones, Heckman and Ball, have arranged the program. They have spared no time nor money, and promise to one and all a jolly good time. The sale of tickets has been enormous; nearly 1,000 have been sold the past week. The following committee will welcome and entertain visiting florists: J. C. McCullough, B. P. Critchell, H. L. Sunderbruch, F. Huntsman, J. A. Peterson, F. Pentland, E. S. Giesey, Fred Walz, W. Gray, J. Fries and E. A. Porter. The amusement for the day will take place in the following order: Bowling contest, immediately upon arrival at the island; ball game between the store and greenhouse boys 18 years and under; quoits, distance 18 yards; foot race; young ladies' race; girls' race, 14 years and under; sack race; boat race; donkey race. The committees will make their own rules, and all entries must be made with the committee in charge, and if possible a day before that of the picnic. Suitable prizes will be awarded to those winning in the above contests.

Rain came at last, and was very much appreciated. Market and local trade has improved somewhat, but cut flowers have been moving slowly. Planting in our city parks will be completed by Decoration Day, mostly cannas being used this season. Decoration Day orders are coming in as freely as heretofore, and there is good reason to look for a big demand. Outdoor roses and other stock will be scarce. Carnations and sweet peas will be plentiful.

Fire broke out on the night of May 25 in the cellar of Mr. Julius Baer on Fourth street; fortunately it was discovered before it got a start, and the alarm sent in. Damage light, cause unknown.

HENRY SCHWARZ.

Rochester, N. Y.

The bedding out season is at its height just now, everybody is kept busy filling baskets, vases, veranda boxes of all sizes, and laying out or planting flower beds of every description. Sure, it may be considered rather early for this section to plant out coleus, alternanthera and the

like, but we are having such steady warm weather since the beginning of April that people become reckless and demand their beds planted now, although we usually advocate waiting until after Decoration Day with such tender stuff. There seems to be an enormous quantity of everything in this line on hand, for the prices are away below any former years, and the plants are generally of good size and quality. It is true that some stock is being used up very fast, and another week may show a scarcity in one thing or another so that those who held on to their stock may realize better prices later on, still it is astonishing how some growers can afford to sell at such bottom prices and make a living out of it. Good sized specimen plants for lawn or piazza decoration, however, bring fair prices, but sales in such are not very large, and there is plenty of stock in view yet to select from.

In the cut flower market there is no change for the better; the demand is not up to the supply, but roses of strictly first quality are selling well. Unfortunately we never have many of them in the market. Outdoor valley is gone, and what is offered now in this line was held back and has improved in quality. Carnations are plenty except the whites, no violets are to be had, but the dark blue sweet-scented Viola cornuta takes their place here in some of the stores. They are not grown very abundantly as yet, but by all appearances will be plenty another year, for they seem to take well.

A change in the firm of Vick & Hill of Barnard's Crossing has to be recorded, Mr. Ed. Vick stepping out. He will, on his own account, run the retail florist store opened by this firm almost two months ago, the firm assuming all liabilities. J. B. K.

Waterbury, Conn.

While business has somewhat revived during the past week or two, there is still considerable room left for improvement. What has been needed in this section of the country, and needed badly, is rain, the almost unprecedented dry spell during the whole month of April and the fore part of May, having in a great measure retarded the sale of plants. Of funeral work, however, there has been considerable of late, both Mr. A. Dallas and Mr. R. S. Rasmussen having had all they could do.

Mr. Dallas will soon commence building additional houses, each 150x20, of which one is intended for roses and the other one for carnations. Every modern improvement will be introduced and when completed the houses will be models of the kind and will compare most favorably with the best in the state of Connecticut. Mr. Dallas is cutting some fine carnations, as does also Mr. R. S. Rasmussen. Homo.

Springfield, Ill.

The heavy hailstorm which struck our city on the afternoon of the 18th inst. was the heaviest we have had since the memorable one of '78, when there was hardly a light left on the north side of the building all over town. This time only the north side of the city was visited, causing a loss to florists of nearly \$3,500 in broken glass and loss on stock. The hail stones were from the size of hickory nuts to large walnuts, and where it was heaviest covered the ground nearly two inches. George Brinkerhoff lost nearly 9,000 square feet of glass, but his plants were not much hurt; total loss in the neighborhood of \$1,200. David

Wirth's place was badly riddled, losing three-fourths of his total area, or about 8,000 square feet; his stock was considerably damaged. He says \$1,200 will not more than replace it.

A. Claus was not damaged so heavily, being the loser of some 3,000 square feet or about half his total area, with slight loss on plants, amount will be nearly \$400. Carl Rauth, who is near Mr. Claus, lost in the same proportion, and placed his loss at nearly \$300.

H. D. Moss, or Moss & Hey, were heavy losers, having only half a dozen lights left out of nearly 2,000 square feet; their stock was used up badly, too, so they sustained a loss of some \$250 to \$300. L. Unverzagt was the only one on the south side of the city to be touched, loss about 50 lights. Strange to say none of them carried insurance. Quite a quantity of garden stuff and fruit suffered.

A. CAMPBELL BROWN.

IMLS OF THE POTTING SHED

Jaggs and Another.

"Things seem to be goin' jolly wrong in Halrica," observed the little Englishman, as he unfolded his weekly copy of *Reynolds' Newspaper*. "My second cousin was aroamin' around somewheres Pretoria way, last I hears of 'im; I 'ope 'e aint jailed by them there Boers."

"If he is," observed Jaggs, dexterously filling a borrowed pipe with some other man's tobacco, "he's run up agen uncommon good luck. Maybe it's a misfortun' for a chap to be in jail in Africa, but it's a precious sight worse to be out o' jail in Africa."

"I s'pose you made a reg'lar study of Africa, old chap, when you was on the Midway," sympathetically observed someone in the audience.

"I don't pretend to ha' made a study o' nothink," observed Jaggs with dignity, "but a chap wot had my advantages does pick up a bit here and there. Why, when I was sent out to Cape Town on account o' my weak lungs, hein' dangerous to stay another winter in a damp climate, which is the reason I stay in this precious old desert 'stead o' goin' home, I see a bit o' the country, you may be sure. Lor', when I think o' some o' the things I see it just puts me in a cold perspiration now. I aint never told you chaps about the time I went across to Madagascar on a hunt for a blue horchid, have I?"

"Wot was you doin' in Madagascar, if you was sent to Cape Town for weak lungs?" Inquired someone with suspicion.

"I s'pose you fancy a chap can't go nowheres without there's a trolley car goin' right past it," observed Jaggs, sarcastically. "You'd make a precious fine

orchid collector, you would. As I was sayin', orchid huntin' in Madagascar is pretty tough, and if I hadn't run up agen the chief o' one o' they savage tribes wot used to be in the propagatin' range at Slough" —

"Look here, Jaggs," indignantly observed one of the audience, "we all know you aint one to tell a lot o' crams, but when you talk about a Madagascar cannibal propagatin' at Turner's" —

"Cannibal," observed Jaggs, "who's talkin' about cannibals? There aint nothink queer about it; my old chum Jenkins went out to Tamatave indigo plantin', thinkin' he'd like a change, which he got; them savages captured him, and he made himself so solid in the primaries that afore he'd been there a year they made him chief. I reckon they savages thought the chief had gone a little dotty when he rush up to me with tears of joy, and says 'Jaggs, old chap, who won the Derby?'"

"I suppose that was about the narrowest escape you ever had," observed the new young man who didn't know Jaggs.

"Well, I fancy it was a trifle serious, though a thing like that doesn't queer a chap that keeps cool, but the time that there black lion broke my left arm really was serious. You've heard o' them black lions o' Madagascar—well, me and Jenkins was strollin' along one day when I see a plant as was new to me—it was that there enlophiella as was introduced afterwards! First thing I know I hear a crash through the branches of a banyan tree, and over I goes, with the lion on top o' me, takin' hold like he was a tarrier and I was a bone. I can tell you, lions is all very well in Hagenbeck's circus, but a chap don't want to meet 'em in a social way. Howsomever, I aint one to lose my presence o' mind, and as I lie there I happen to think as I had a zinc orchid label in my pocket, one o' them we used to stick in the large cœlogyne pans, a square label, mounted on a stiff wire pointed at the end so's to stick in the moss. Just as that there beast took a fresh grip I draws that label, feels for the exact spot and plunges that wire right up to the label in the beast's heart. Then I faints, and when I come to there was that lion stretched out stiff, while Jenkins, as always was a precious tender hearted chap, was a-washin' the blood off o' me and cryin' like a child."

There was a momentary pause, while the audience sat in an apparently dazed condition; then someone recovered enough to ask Jaggs what became of the lion's skin.

"That there skin went nearly everywhere with me—it was an uncommon fine one too, but I had to sell it at last, bein' in uncommon hard luck, and that there Johnny as bought it goes about tellin' how he killed it himself. If there's one thing as I despise it's a chap as goes around tellin' a lot o' bloomin' crams about things as he hasn't done."

Tightening a Leaky Tank.

Mr. Ulbricht of Alabama can make his tank water-tight by having iron hoops made in two pieces, each piece reaching nearly half way around the tank and having ears with holes in them the size of the bolts used on each end so that the two pieces can be bolted together. This kind of hoop needs no driving up at all, but is put on where it is to stay and can be made to draw the staves as tight together as need be.

Any blacksmith can make them cheap by using old wagon tires. Care should be

taken to get the hoops and bolts heavy enough to use force in drawing the two pieces of hoop together.

Another very good way to stop leaky tanks when the leaks are small is to make cement about the consistency of whitewash and apply several coats with a whitewash brush. When the leaks are large a good coat of pitch with the help of the hoops described above will always stop the leak. RALPH W. MAYER.

Oil for Fuel.

I would like to be put in communication with some of the florists who are using oil for heating their plants, so if they will kindly answer this I will be very grateful to them. B. J. P.

Lock box 121, Swarthmore, Pa.

Catalogues Received.

DON'T put special delivery stamps on
letters addressed to us. Our experience
is that in the majority of cases they delay
delivery instead of expediting it.

THE only reference list of cannas is to
be found in our new directory and refer-
ence book. The list is arranged alphabeti-
cally and gives name, date of introduction
name of introducer and a brief descrip-
tion.

THE reference lists in the new Directory
and Reference book give descriptions and
other valuable information regarding
2,543 varieties of roses, 2,988 varieties of
chrysanthemums, 495 varieties of carnations
and 524 varieties of cannas.

WE HAVE RECEIVED a basket of cape
jasmine blooms from J. M. Weems, Alvin,
Texas. They came in excellent condition,
and were fine blooms, noticeable for the
length of stem with which they were cut,
which added much to their value.

THE PREMIUM LIST of a chrysanthemum
show to be held by the Washington
County Floricultural Society at Hagerstown,
Md., November 5-7 next, is received.
Particulars may be obtained from Newton
S. Owen, secretary, Hagerstown, Md.

AMERICAN GRAPE GROWING AND WINE
MAKING, by George Husmann, fourth edition,
contains a good deal of additional
matter, which adds much to its value.
It is one of the best works of its kind,
and is, in this latest edition, brought
right up to date. Orange Judd Company,
New York, publishers.

THE SCHEDULE OF PRIZES for the first
annual exhibition of roses and garden
flowers, given by the New York Florists'
Club and the New York Gardeners' Society,
is now issued. It is a free exhibition,
to be held at the Newsboys' Home. The
Florists' Club offers 25 silver medals, and
two silver cups are offered. Particulars
may be obtained from the secretary of
committee, J. I. Donlan, 51 W. 28th St.,
New York.

THE new directory contains a total of
9,528 names and addresses, of which
5,258 are florists who do a general local
trade, having greenhouses and retailing
the product of same, 797 are florists who
grow for the wholesale market only, 645
are retail store florists who have no
greenhouses, 52 are wholesale commission
dealers in cut flowers, 1,524 are nursery-
men, 543 combine the business of florist
and nurseryman, 364 are seedsmen, 248
combine the business of florist and seed-
man, and 97 who combine all three
branches of the business.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

The Northrup Braslan Goodwin Co. Fail.

On Thursday, the 28th, at Chicago, the Northrup, Braslan Goodwin Co. made a general assignment in the County court to William F. Fenton. Before the assignment was made the company confessed judgment on the following notes:

Lake Manawa Land Company	\$ 860.61
International Trust Company	20,033.33
Howcroft & Watkins	5,089.33
Samuel W. Goodwin, of Waterville, N. Y.	8,168.42
National Bank of Waterville	12,051.89

The assignment was precipitated by attachments taken out early on the same date by the Madson Seed Co. on stock stored by the firm at Manitowoc, Wis. It is understood that an assignment was also made by the Minneapolis house on the same date. The liabilities of the concern lie mainly with banks and foreign houses, the amounts in open accounts with American houses being small.

Undoubtedly the great shrinkage in all seed values this season and the dull jobbing trade had much to do with the final decision of the house to drop the rather heavy burden of debts which they have been carrying.

Another prominent factor in the case was undoubtedly the loss of the government seed order. The firm had by contract and by purchase placed itself in position, early after the seed appropriation became a law in March, 1895, to supply the department their usual stock at closest prices. The loss of this contract, by what is conceded to have been unfair means, by those best posted, left the firm with heavy stocks to carry over. Undoubtedly had they secured the business it would have kept them on their feet.

While many in the trade have looked upon the N. B. G. Co. as demoralizers in prices, those in best position to know assert that many of the prices made by them have been forced by the strongest competition and that the prices at which they owned seeds on contract justified them in making the rates they did. We have no doubts that the trade will soon find other jobbers on whom the responsibility for cut rates can conveniently be placed, and the never ending war of competition will still go on.

THE "MORON Seed Co." of Chicago is no more. Geo. M. and Russell H. Osgoodby, who conducted it, have been indicted and arrested upon two charges of using the mails for fraudulent purposes and obtaining money on false pretenses.

BOSTON.—It is reported that a new seed firm is about to be formed here.

VISITING NEW YORK: R. J. Farquhar, Boston.

Utica, N. Y.

The cut flower trade is very quiet at present. The quality of stock offered daily grows poorer. With everyone devoting his whole energy to the plant trade it is no wonder that roses grow smaller and weeds larger. There is a scarcity of large plant stock suitable for filling vases of the larger sizes. This seems to happen every year, and is caused by throwing on the rubbish heap all manner of plant stock in the fall to make room

Roman Hyacinths.

Our cable advices say, and we say, this is the time to buy. We can save you money if you will send us your order **at once.**

VAUGHAN'S SEED STORE,

BUIST'S

Wholesale Turnip Seed Catalogue
now ready for the Trade.

The growing of Turnip Seeds is one of the Specialties of our house. If you have not received a copy of our trade prices write for it.

ROBERT BUIST COMPANY, Seed Growers, Philadelphia, Pa.

for anything in the cut flower line. Then as spring draws near instead of having plenty of stock to propagate from everything has to be cut up so close as to leave nothing of any size.

Coal and its price is the all prevailing topic here for the last few days. From present indications we shall pay from 50 to 75 cents per ton more for coal than we did last year, the lowest price if ordered this week being \$4.75 for grate coal, which is the size mostly used by the florists here. And no reduction if you use 10 tons or 500.

At last we have all metropolitan innovations, a department store having taken up seeds, plants and bulbs, flower seeds, two packets for 5 cents; grafted roses, dormant, 15 cents each; lily bulbs, 10 cents each. The public seem to regard this sale as a long felt want, as they flock in crowds to sort over a table full of roses.

The long waited for rains at length arrived; early planted stock of carnations and violets has taken on a new lease of life and is now coming on all right.

F. J. B.

Lawrence, Mass.

J. B. Halley is building an additional rose house 16x50.

C. E. Wingate will soon commence building a carnation house, which will cover 180x40. HOMO.

ELGIN, ILL.—All florists here seem to have escaped damage by the storm.

YOUNGSTOWN, O.—Arthur G. Lewis, well known as a florist for a half century, died on May 15, aged 72 years. He leaves a wife and three children.

Indianapolis.

The May meeting of the Indianapolis Florists' Club was omitted, but few members attending; the hot weather with the rush of the planting season kept too many away.

The cut flower trade during the biggest part of May might be called dead, no life at all. Planting has been brisk since the rains started in. Weather is splendid for growing; it is very warm and sultry in spite of cooling rains. Good geraniums, coleus and alternantheras are scarce in this market. Vincas and other vines are nearly all sold out. Cut carnations are a heavy drug on the market. Roses are poor, being mostly mildewed and weak, with poor color. Shipped stock comes in mostly spotted and damaged. Outdoor flowers are fast blooming out, roses keeping up well, however.

At a prominent railroad man's funeral many well executed floral pieces were received. The body was shipped to Norwalk, Ohio. Mr. John Bertermann accompanied the party, consisting of many prominent railroad officials, and took charge of the flowers. The set designs kept splendidly, while of course bouquets and flat baskets somewhat lost their beauty. On this point I wish to make a few remarks. Much has been said about set floral designs, their uses at funerals and other occasions; the sentiment in the trade seems to have been against them from an artistic standpoint, but I fail to see that the general public has taken up with that idea very much excepting the majority of the upper ten. I take it for granted that a set piece made up in good shape is a delightful sight for most anybody. Much has been said against set pieces at exhibitions; I have taken personal notice and have talked to many in the trade, and our observation was that twenty people admired a design, while one would look at a bed or vase of flowers. Now when you do away with the design feature you will lose patronage; the exhibition will lose its variety and good drawing attraction.

The annual music festival is on this week, but there seems not the same enthusiasm of several years ago; very few flowers are used now, and outside of a few palms and other foliage plants no decorations are used in the hall. The female singers are paid enormous sums; the general impression is that prices in that direction are at their highest limit this season, as many music festivals are operating at a big loss.

A. Pahud has erected an additional greenhouse 100x20 for roses; he reports a big vase trade for Crown Hill Cemetery.

Harry Balsey of Detroit has been around the greenhouses hunting up orders.

The night of the 24th was a terrible one, thunder storms and counter thunder storms, with a continuous display of lightning, an enormous amount of rain, with light hail falling for some time. No damage was done excepting some uprooting of shade trees and other slight damage to roofs and skylights. W. B.

NEW ROSE

"Mrs. PIERPONT MORGAN"

Listen for a moment to what a voice from far off Springfield, Illinois, has to say about our young stock of this rose:

May 4, 1896.
"EDWIN LONSDALE, Chestnut Hill, (Station 11), Philadelphia, Pa.

"DEAR SIR:—Box of 'Morgan' rose plants arrived Saturday in good shape. **Fine Plants.** I would like to know how you produce plants of such size in a two (2) inch pot?"

All I can say is that it is allowing to the natural vigor of the variety, and perhaps to some extent to the natural rose growing qualities of our soil.

We have a few more left of the same size. Order early or you may get left, for I do not know of a more profitable variety to grow for cut flowers than **MRS. PIERPONT MORGAN.**

Don't forget our address:

EDWIN LONSDALE, Station H,
Chestnut Hill, PHILADELPHIA, PA.

CHAS. KOEPPEN, SEDALIA, MO.

THE NEW DIRECTORY
IS NOW READY.

Wilkes-Barre, Pa.

The building operations and general improvements, which Mr. I. G. Marvin had contemplated for some time are now being carried out on an extensive scale. The constant demand for carnations has induced Mr. Marvin to introduce some of the best varieties known and grow them in much larger quantities than heretofore; he has remodeled his houses to suit the purpose and will take up about 50,000 feet of glass with carnations alone. Aside of this he has now in course of erection eight additional houses, each 100x18½, intended for roses. The houses will run east and west, with the short, three-quarter span to the south. Butted glass, concrete floors and walks are some of the features introduced. The entire plant will be heated by steam, two 50-horse power boilers will be placed in position as soon as the boiler house is completed. In addition to the greenhouses Mr. Marvin is also building four dwelling houses, two of which are intended for his help. Mr. B. Shaw, a successful grower and a man of wide experience, will take charge and assist Mr. Marvin in the general management of the business.

Eldridge & Co. have remodeled and considerably improved their store on Franklin street, adding a commodious and attractive conservatory to their store. Mr. Humphrey, of Eldridge & Co. who has been on the sick list, is out and about once again. Bert Cokely, of Scranton, was a recent visitor. HOMO.

Norfolk, Va.

Memorial Day, which was celebrated on Thursday, the 21st, at Norfolk, and on Friday, the 22nd, at Portsmouth, was generally observed, the public turning out en masse to decorate the graves, confederate monument, etc. The demand for cut flowers, memorial designs, plants, etc., at either city, was quite brisk, though the prices realized were somewhat below the average as compared with those of previous seasons. First-class stock in the local market was rather scarce, but in lieu of good stock there was an abundance of outdoor flowers of all kinds and varieties, which the florists utilized to good advantage.

The Tide-Water Floral Co., Harris & Petrie, proprietors, intend adding three more carnation houses, each 100x18, to their plant at Port Norfolk.

Taggart & Wilbur, the veteran florists, are, as usual, enjoying a good share of the local trade and report business as brisk and encouraging. HOMO.

Greenhouse Building.

St. Johnsbury, Vt., C. F. Gibbs, one addition, 25x50, with boiler room.

NEW CHRYSANTHEMUMS.

MRS. W. C. EGAN, }
TIPPECANOE, } 50c each; \$5 per doz.; \$35 per 100.
AMARANTH, }

New Begonia Lillian Harrington.

A cross between Alba and Rubra. Florets and sprays very large and of a deep rose color. The bronze green foliage and large panicles of flowers make it very attractive and desirable. 2½-inch pots, \$10.00 per 100.

Dwarf Scarlet Salvia Kobold.

Dwarf growth, only half the height of Splendens. Its early and free continuous blooming with its dwarf habit makes it one of the best bedding plants, and so much more attractive than the old tall growing Salvia Splendens now in use. 2-inch pots, \$4.00 per 100.

Pandanus Veitchii.

We still have a few plants from 8-inch pots, very fine and good color, at \$3.00 each.

Swainsona Galegifolia Alba.

A most desirable white cut flower, very free. 2-inch pots, at \$4.00 per 100.

Antirrhinum Majus Alba.

The best of the whites for winter forcing, as well as fine bedding plants. Fine stock. 2-inch pots, \$4.00 per 100.

Syracuse, N. Y.

The severity of the weather last winter has been fully attested by the heavy loss in grape vines, pears, peaches, cherries, and plums; in many gardens raspberries and blackberries have been killed to the ground, and the outlook for the fruit grower this season is a very poor one indeed. Shrubbery, too, has suffered considerably. I have seen syringas 10 feet high killed to the ground, and many more tender shrubs have shared the same fate.

Trade has ruled quiet in all departments, the long continued drouth has seriously affected planting out, and many buyers are growing very cautious, not being in too much of a hurry, as many expensive lessons have been bought through the effects of late frosts, but everyone will be in a rush to have their places in shape by Decoration Day. From the orders already in, the prospects are that very little if any stuff will be left over, consequently the florists feel happy.

Louis Guillaume, the East Onondago florist, has rented the Day place; this is one of the pioneer floral establishments in this section, and has been run for some years by Mrs. Hayden.

H. Burt has had great success in forcing strawberries the past winter, and contemplates growing them on an extensive scale next winter. The specimens shown in his store window were very fine and attracted much attention. H. Y.

Worcester, Mass.

Flowers are very plentiful, and the cooler weather we have had has improved the quality immensely, especially in roses and carnations. Trade has been very fair, and considerable funeral work has been turned out. Bedding out is in full swing, and the men handling bedding stuff are very much rushed, as everybody waited for the rain, and now must have their beds planted before Memorial Day.

The display at the horticultural exhibition May 14 was very creditable; notwithstanding the lateness of the call for tulips and hyacinths a very good showing was made. Good pansies, pelargoniums, azaleas and cut flowers in designs and vases made up the balance of the show.

After many weeks of dry weather we got a two days' rain that just saved us from heavy loss to the newly planted carnations. Out of door flowers are all faded; the deutzias all seem to be blasted this year, probably caused by the hard early frosts and the dry spring.

John Speciman paid us a short visit last week prior to his departure for Holland. A. H. L.

News Notes.

ALBION, MICH.—The Dysinger Sisters are making an addition to their greenhouse.

NORRISTOWN, PA.—E. Metcalf opened a flower store in the new borough market on May 5.

KEWANEE, ILL.—Walter and Leroy Hamilton are building a new greenhouse on 3d street.

HARRISBURG, PA.—Mrs. J. Humphrey has opened an attractive flower store at 319 Market St.

PONTIAC, ILL.—F. W. Custer expects to add one or two vegetable houses to his plant during the summer.

LANSDOWNE, PA.—D. T. Conner is building a handsome office and showroom in connection with his range of greenhouses.

ALBANY, N. Y.—Goldring Bros. have removed to their new store, No. 28 North Pearl St., a few doors north of Maiden Lane.

BURLINGTON, VT.—A. W. McIntosh is repairing the greenhouses on the Burton place for immediate use, and expects to erect during the summer several new houses.

FAIRBURY, ILL.—Kring Bros. intend building two or more greenhouses, one for violets and one for roses. They will probably enlarge their vegetable houses also. Milne & Son are thinking of adding another greenhouse to their plant.

MOUND CITY, MO.—R. B. Preston has sold a half interest in his florist business to J. V. Cannell, of Westboro, Mo., and they will add about 2,000 feet of glass this season. They will be in the market for a heater and ventilating apparatus.

ALBION, MICH.—Mr. A. H. Dew has entered into partnership with Mr. H. F. Dew of the Albion Floral Company. The former will have charge of the establishment in this place, 406 Michigan avenue, the latter travels in the interests of the firm.

NEW HAVEN, CONN.—In excavating for the foundation of a new building being erected adjoining the greenhouse of G. A. Dickerman on Chapel St., the contractor dug so close to the greenhouse that the walls fell down, water pipes were broken, and considerable stock destroyed. Mr. Dickerman has sued the contractor for \$1,000 damages.

"SPENCE" HOT WATER HEATER.

" * * * is giving excellent satisfaction. The contractor spared no pains to make the work perfect, and in all details the working of the plant seems as near perfection as possible. * * * We had an opportunity to test the heating capacity in zero weather, and found no difficulty in keeping the temperature high enough. The consumption of coal is no greater than for the old boiler which heated only the greenhouses. I believe the plan of heating all the department buildings from this one boiler will prove an economical one."—From Annual Report State Agricultural College, Fort Collins, Colo.

THE new directory contains a total of 9,528 names and addresses, of which 5,258 are florists who do a general local trade, having greenhouses and retailing the product of same, 797 are florists who grow for the wholesale market only, 645 are retail store florists who have no greenhouses, 52 are wholesale commission dealers in cut flowers, 1,524 are nurserymen, 543 combine the business of florist and nurseryman, 364 are seedsmen, 248 combine the business of florist and seedsmen, and 97 who combine all three branches of the business.

Solid Beds Versus Raised Benches.

At the present time probably 95% of the Tea roses grown under glass in this country are planted upon benches; we must not suppose, however, that 95% of the rose growers of America have tried the various systems or methods of growing, and as a result of careful experimenting have adopted the bench as the best and most satisfactory. It is probably safe to say that at least three-fourths of those who raise roses for the market to-day have begun to do so during the last 12 years, during which time practically all the prominent growers who have taken pen in hand for the benefit of their fellow craftsmen have advocated the raised bench, and new recruits have adopted it as a natural sequence.

It is a fact I believe that the rose bug was mainly responsible for the abolition of the solid bed and the adoption of the shallow raised bench, it had got such a good foot hold on the few establishments then existing and seemed to view with disdain all efforts to eradicate him, that people gladly tore out their old solid beds and replaced them with benches, hoping in that way to completely banish him from the houses. Looking at the rose bug from this stand point it has probably done more for than against the rose, the bench proving to be a much more congenial place than the solid bed of that period, which was generally nothing more than the natural soil raised a few inches and the paths depressed a few inches, with little or no provision for drainage; the result was that the dropping of the water from the plants while syringing daily during the winter soured the soil, interfered with the root action and made it impossible to secure any satisfactory growth, at least during the short days of winter. Anyone changing from such beds to properly constructed benches with pipes for heating underneath were so well satisfied with the result that they have never since wanted to hear any thing said about solid beds.

It may be asked what are the defects of raised benches? Perhaps the expense is the worst fault, not the first cost but the constant expense. It costs \$1.00 per running foot more or less to put up good hemlock benches in the regular three-quarter span rose house, and the average life of such benches is not over 5 years

with considerable repairs during the last three years of their existence. Quite a good deal of valuable time is lost each summer while the benches are being repaired and particularly when new ones are to be put in. As they get old they certainly do not add to the good appearance of the house, and there can be no question that old decaying wood is not a good surface for the roots to spread out upon.

Some of the advantages of raised benches are, good drainage, economy of space, easy of access for cleaning, tying, watering, cutting, etc., makes possible such arrangement of the heating pipes as to evenly distribute the heat all through the house, adaptation to almost any style of house so that each bench may have its full share of light and sun, and above and beyond all the fact that some of the very best roses ever produced were grown on raised benches. Let us now see if as many good points can be claimed for the solid bed and at the same time keep down the list of bad ones. The one great advantage they can claim is permanency. Properly built they cost more perhaps than the very best bench, but they are practically indestructible, consequently cheaper in the end. If their construction is not faulty the drainage is more perfect than is any raised bench. More soil can be used, which while some authorities object to as being detrimental is in my opinion very desirable, especially if the plants are carried over a second year. Equally good results have been obtained in midwinter, and much better in the late spring and early summer; the greater depth of soil and the cooler bottom with more even moisture gives a stronger stem and finer bloom with less tendency to mildew and red spider. There is no hiding place for litter and rubbish such as benches furnish, so the house is liable to be kept cleaner and sweeter on that account. The only serious objection I have to solid beds is the difficulty in spreading the heating pipes, and the extra space that must be given up to walks. No bed should join the outside wall, space must be reserved there for walks and the bulk of the pipes, the balance to be hung along the side of the center path. The regular three-quarter span is hardly suitable for solid beds, the plate on the south side must be a little higher in order to have enough head room, and the one on the north side should be lower to do away with the necessity of raising the beds so very high; five feet from ground line to plate on the south side and six feet on the north is about right.

A house 22 feet wide gives good space for three beds of 5 feet each and four paths, the south one being 30 inches, the two center 18, and the north walk 24. The beds can be raised one above the other six inches so there is little chance to shade each other. A good steep roof on the south side is very desirable in midwinter,

an angle of 40° to 45° has proved to be about right.

The ideal solid bed in my opinion is the one constructed of stone and furnished with pipes for gentle bottom heat. Mr. Taylor, of Bayside, L. I., has been credited with being the first to adopt this style of bed for roses, and they may have been described in these pages more than once, but after a more extended trial they have proved so very satisfactory that they deserve further notice. I have heard of several disappointments, however, where they have been tried, but there has generally been some fault in the construction, or the beds have been kept too warm, so I would urge any one contemplating trying the experiment to make certain that they have everything just right. To simply lay the pipes and cover with soil and plant, expecting to secure a uniform bottom heat is to tempt failure, and it is pretty certain to follow.

In the first place a wall is built around the entire bed, in other words along the two sides of the greenhouse far enough away from the walls to allow for the walks outside of all; this wall may be of brick, or of stone to within six inches of the top and finished off with two courses of brick, or of concrete as may suit the fancy, but should not be made of wood, a good solid bed should not have a particle of wood in it or near it. Next in order is to lay stone ducts or miniature culverts to receive the heating pipes, they should be deep and wide enough to allow a free passage of air round the pipe; if the house is narrow and has only two beds, the flow (2 inch) may run under the center path and the returns (1½ inches) may run down the center of each bed, if there are three beds the pipes may all be in the center of the beds, using 2 inch altogether. The pipes should be 21 to 24 inches below the top of the bed. For bottom heat water is the only thing to use, steam is too intense and cannot be checked off whereas water can be kept moving slowly all the time during the winter. I believe the secret of success depends largely upon maintaining a mild, uniform temperature in the bed; 75° was originally given as the right thing but I have found 62° to 65° very much better, in fact the higher temperature would not answer at all.

The culvert finished the pipes should be screwed together, laid on supports and tested to make sure they don't leak, after which the culvert can be covered with flat stones, the spaces between filled in with stones laid loosely and then the whole bed covered with smaller stone up to within 12 inches of the top of the wall. The walls along the sides of the center walks can now be bricked up and the beds covered with good tough sods turned the grass side up, which will prevent the drainage becoming clogged. If the paths are now nicely cemented we shall have a very nice clean house that cannot possibly be littered up, and which will, everything else being equal, grow as good or better roses than can be produced by any other system.

We have demonstrated that plants on these beds require just as much water in winter and probably more than do raised benches. Grated stock especially seems to revel in the conditions they furnish and I feel certain that carnations would do equally well with roses.

ROBT. SIMPSON.

Eel-Worms Again.

Replying to J. C. D., Minnesota, the roots received were all matted up with eel-worm; it could hardly be expected that a plant would live, much less thrive,

under such conditions. Suggestions have been given from time to time in the FLORIST, both as to their extermination and how to avoid them. Rather than repeat what has been said before more than once I would advise J. C. D. to look up the articles in question. It is too late to do anything for the old plants, but it may be kept out of the houses perhaps the next season if prompt and vigorous measures are adopted. Not a single plant should be set out in the benches that shows signs of it on the roots; it is a tedious job examining all the roots when planting, but not more so than digging up half the plants during the winter and burning them. Try to satisfy yourself as to the source of the eel-worms now affecting your plants; perhaps it came from stock purchased, perhaps from manure, or may be in the soil, and when a decision is arrived at fight the trouble in that quarter.

The sample sent by J. C. D. some months ago showing a white fungous growth were sent to a specialist for microscopic examination, but he has not reported on the matter as yet. Am afraid if the disease is at all malignant the plants will die before the doctor can diagnose the case. Would suggest a spraying weekly with the ammonia solution of carbonate of copper.

ROBT. SIMPSON.

Black Spot.

Some weeks ago a note appeared in the AMERICAN FLORIST regarding black spots found on rose leaves. These spots are found to occur most abundantly after the application of fertilizers, and their occurrence has frequently attracted attention. In several cases well known mycologists have gone so far as to describe new species of fungi on the basis of these structures; but the fact is that they are simply fruiting bodies coming from other fungi which grow on the fertilizer and have the power of projecting their spores at maturity. One of these is *Pilobolus crystallinus*, whose fruit consists of pellucid stalk about the size of an ordinary sewing needle, which is swollen at the top and surmounted by a small black-capped spore case. This fungus has been known to throw its spores accompanied by this black cap to a distance of many feet. There are various species that have similar characteristics. This matter is fully explained in an article by Prof. Farlow in the "Proceedings of the Society for the Promotion of Agricultural Science," 1886, pp. 24 and 25.

S. B. SEYMOUR.

Tea Roses for Bedding—Grape Vines.

Kindly advise me through the FLORIST the best twelve tea roses for summer bedding.

I have some 25 grapes that have been planted 8 years. They do not bear but grow nicely; they are pruned back to three buds each year and fertilized well. About 12 feet on north side is a row of very large spruce, hemlock and larch trees. Do you think they have anything to do with the trouble? O'H.

To ask which are the 12 best tea roses for bedding outdoors, is about as difficult to answer as would be the same question in regard to chrysanthemums; we do not all judge by the same standards, neither does any particular variety do equally well in all soils and climates. I will give you a list of 13 which I would feel safe in recommending to anyone, though it is possible that some of the readers of the

FLORIST may take exception to more than one-half the varieties here recommended. Kaiserin Augusta Victoria, Mme. Caroline Testout, Meteor, Papa Gontier, Marie Guillot, Marie Van Houtte, Bon Silene, Hermosa, Etoile de Lyon, Mme. Bravy, La France, Souv. de Wootton and Duchess de Brabant. Of course this list includes several hybrid Teas, but because of their free flowering robust constitution and perfect blooms I consider them far more desirable as bedders than most of the pure teas.

Think O'H. need not look further for the cause of the unproductiveness of his grape vines; a row of large evergreens growing 12 feet away from the vines would not only cause considerable shade, but also take all the moisture and fertility from the soil. There may be other reasons, but I think this would be sufficient to account for their failure to produce fruit.

ROBT. SIMPSON.

Carnation Notes.

I hear of several noted growers that will experiment this year with under glass culture all summer, to avoid the retarding transfer from field to house. I had occasion before to express my experience in this matter, and will not try it any more, but will nevertheless await the results of others with much interest. I have come to the conclusion that our summers are too hot for an entire culture under glass, and have given the reasons of my failure in former notes, but would recommend making experiments in parts of the country where summer temperature will not run over 85° to 90° in the shade. I acknowledge that if this mode of cultivation could be successfully carried out it would further carnation culture to a great extent.

In connection with the failure of an entire culture under glass, came the next thing, an early transfer from field to house, as has been recommended by many growers. The desire to have early flowers in October and November prompted my experiment with the entire culture under glass. The same is the motive for an early transfer, and I am happy to say I experienced better results. It depends much on what care, what precautions are used to bring the plants as quickly as possible over this interruption of their growing, and cause them to take a good hold of the new soil. It was a comparatively easy matter with us last fall, as the plants just coming through the summer's drouth were small and hard, not much in a condition to wilt easy. They took good hold in a short time, but I was somewhat disappointed as to their early free blooming. The plants were more bent on growing in size to finish their summer's growth, than some to a free blooming state; but this had quite a beneficial effect on varieties inclined to bloom in crops, as they became more constant and steady bloomers. Especially was this the case with Bridesmaid.

Quite different it is with strong plants and softer growth; they require more care, but in their vigorous condition respond quicker to careful treatment. The carnation of 60 years ago, the hardy or garden carnation of Europe, the

GROUP OF CARNATIONS IN POTS.

POTTED STRAWBERRIES WITH POTTED DIGITALIS IN BACKGROUND.

WINTER-BLOOMING STOCKS IN POTS

A ST PETERSBURG EXHIBITION.

parents of our present everblooming type, requires a whole season's growth, and the winter's rest, before they will bloom. Our present ever blooming varieties bloom much sooner, and if their blooming indicates maturity, will in reality mature in three or four months when grown from cuttings; and a good percentage of the seedlings will bloom in the same period from the time of sowing

the seed. This early maturity is the change to the everblooming, monthly or their blooming several times through the season at short intervals. This typical quality wrought by cultivation has become nature, without interfering with their perennial character, but this same quality that has proved in carnation culture the source of profit, is in their early stages of growth a hindrance in

growing to their full size through summer and fall, the same as the hardy garden or mother variety. Their early and constant blooming retards growth, exhausts their strength, hence we resort to pinching the plants back and not allowing them to bloom.

To refer again to the past year's experience, our early housed small plants coming through a severe drouth resumed growth and they bloomed as they would have done in the field under favorable circumstances if allowed to do so. The drouth made our plants six weeks late. The size they should have attained in December was not gained until February. The main crop we expect generally in January and February we had in April and May, and their lateness curtailed our returns considerably.

This, our experience of the past season, shows us again the importance of strong plants to house in the fall, strong plants that have made and matured fundamental growth, have accumulated the stores to begin work as soon as fully established in their new quarters. As regards the transfer from field to house, the quicker this interruption of their growth can be overcome the more favorable are our chances for an early supply of flowers. Now if strong plants are obtainable for an early transfer, we have all the advantages possible, and are far ahead of an entire culture under glass, as I have experienced it. Further my experience of the past season shows me, that even when plants are small, an early transfer is preferable, as my early housed smaller plants gave more satisfaction than the later larger ones, that had the benefit of rains.

There is one point claimed by some advocates of an entire indoor culture; they say they can be better guarded against rust, and are not so susceptible to rust, for it was said the plants grow hardier, not so soft. I doubt this assertion. If means are to be employed of the same nature that gave our field plants such a hardy texture last summer, they will surely stay small too, but I believe will guard against rust, for rust would not have grown on our plants last summer if the spores had been scattered over them by the handful. If a radical rust treatment is intended, if all known means for prevention are to be employed, I believe it can be done best under glass. But with all these preventive measures can they expect to grow as strong sturdy plants as by a fair field culture? If this can be done their point is gained, otherwise I would prefer the strong field grown plants and apply these measures against rust when housed. I say again I await the results of these intended experiments with much interest.

I received an inquiry coupled with a complaint about plants in the field being infested with bacteriosis, and making slow growth. As it was claimed some of the plants came from our place I requested the party to send a few plants for examination. On examination of these and further information I found they were early January struck plants, kept growing in flats, were to all appearance strong plants but hard, and I find my assertion that such plants are not as good as the later struck softer ones, again verified. These plants were breaking nicely but slow, and with the favorable humid warm atmosphere became infested with the bacteriosis, causing the young leaves to cramp and curl. I find the same state among a few batches of early struck plants in our field. Time will soon rectify this, but it tends to show that there is nothing gained in early plants unless

they get shifted to larger pots as they grow on, before planting out.

FRED DORNER.

Carnations on Long Island.

Nothing finer in the line of white carnations can be imagined than Lizzie McGowan as grown by Jerome Suydam at Flatbush. Soil, treatment or whatever it may be—this variety would scarcely be recognized even by its friends. Semstwo feet long and upwards, flowers regular in form and of enormous size, and best of all lots of them. The plants in the field are already nearly as large as those that some growers are glad to take in in fall. Carnation growers miss a treat if they do not go to see this show. Mr. Suydam says "If you want to grow carnations you must take care of them." Very true, but there must be something else besides to make McGowans so much at home. Portia, Mangold, and Daybreak are also fine, Scott is actually up against the glass and a bench of six hundred Bouton d'Or has given big returns.

John Reimels, at Woodhaven, is another most successful grower with Scott and McGowan. Mr. Reimels, like Mr. Suydam, is a recent addition to the flower growing ranks, but as is generally the case with florists who graduate from farming and market gardening he makes a success of it at once without half trying. One thing is certain, plants grown in such places lack nothing in the way of rich food, and possibly this is one of the keys. Portia stands there erect two and a-half to three feet in height. The grub has been giving Mr. Reimels no end of trouble this spring. He is about to erect another carnation house 25x165.

At Dailedouze Bros. everything is looking good, as usual. Eugene says that Helen Keller has brought the top price all through the winter, and has proved one of the most satisfactory carnations in every respect. Scott is great here also. There are some seedlings that promise well. Chrysanthemums will be grown here as extensively as ever, judging by the young stock, which looks unusually large for this date.

Alex Burns does not go in for extra fancy carnations, claiming that flowers of ordinary grade, McGowan especially, give better aggregate results. "They have done well all winter, and I calculate to get big money out of them yet," he says.

Fungus of the Cutting Bench.

My carnations rot off at the top of the ground. They were good healthy cuttings, and did well for several weeks after rooting, but all at once one after another tipped over, and I found them decayed at the top of the ground. I have lost more than 1000 this spring. They have been in a cool place and not watered more than usual. The McGowans seem to be the only kind affected. Night temperature 50° to 55°; they were put from the sand into flats of earth three inches deep.

A SUBSCRIBER.

This disease is undoubtedly a cutting bench fungus or stem rot. I find the sulphate of copper solution very effective for either of these diseases. Plants may be attacked with the cutting bench fungus as long as in the house, and especially if they are crowded together as they generally are in flats. Sometimes it follows the plants out into the field. It is sometimes very strange how fungoid diseases pick out certain varieties, and leave others in close proximity unharmed, while

DISPLAY OF FLORAL ARRANGEMENTS.

A ST PETERSBURG EXHIBITION.

at other times these may be attacked and spare the others. This undoubtedly indicates a weakness of the variety attacked, from some cause or other, but should be traced back to the plants the cuttings were taken from.

FRED DORNER.

Chrysanthemum Notes.

The plants intended for growing large blooms should be planted in the benches as soon as possible. We have always advocated strongly the making of a compost heap, and clearing out the benches and filling in with well prepared soil, but we often hear of growers, who grow good flowers upon soil used first for some other crop, (we however, have never yet seen any of these products). To those who grow upon old soil, we would advise their giving a good liberal sprinkling of bone dust, well shaken in, before planting. There are many florists who say that the use of bone is extravagance, that you cannot possibly get the good out of it in one year because it is so slow in decomposing. A few years ago we were unfortunate enough to meet one of this class, and listened to his arguments. We planted without any bone, but with a liberal supply of manure, and afterwards fed with liquid manure containing a large percentage of nitrogen. We had as beautiful bench of chrysanthemums as one would like to look upon during September. Stems nearly an inch through at the base, bearing large strong leaves of a beautiful glossy green. But when the buds began to grow, and the time came for them to swell, they remained small and when the flowers were fully open we were doomed to a great disappointment, for we hardly had a bloom in the house

fit for the exhibition table. A friend, well posted in agricultural chemistry, paying us a visit, was asked the reason, and upon hearing how we had proceeded in their culture immediately answered that the soil was deficient in phosphoric acid, and since that time we have never tried to economize on bone.

To those not having good means to distribute liquid manure throughout the summer, the better way to prepare the benches is to cover the bottom with an inch of half rotted cow manure, then placing on top about three inches of soil from the compost heap. We say to those not having the means to distribute liquid manure, because we are well aware that many of the more successful growers do not adopt this plan, but simply plant in the soil and begin watering with liquid manure as soon as the plants get well established, weak at first, and gradually increasing the strength throughout the summer until the blooms begin to set. This requires good judgment and an increased amount of labor.

We advised two years ago the packing of the soil as soon as the plants were set. We have done this and have found that sometimes the plants are considerably injured in so doing, the roots often being broken off or damaged so much that the plants have to start and make an entirely new root growth. But if you want to produce a bloom with the necessary depth, it is very important that the plant should be grown in a very firm soil, and we think that we have found a plan, whereby we can accomplish the object in view, and not do any injury. As soon as the soil is placed in the benches tramp it down hard and then set the plants with a trowel, being sure to pack the earth as firm as possible around it without injuring the plant.

The amount of space required by a plant is an oft mooted question among growers, some setting the plants a foot and others four inches apart each way. We set our plants in rows across the bed, the rows being nine inches apart and the plants five inches apart in the row. We have found that this will give us room enough to grow a high grade of flowers and the plants do not crowd. We regard

DECORATED MIRROR.

A ST. PETERSBURG EXHIBITION

this as better than setting the plants equally distant each way, for it enables us, the rows being so much wider, to reach well into the bed to keep the plants tied up without breaking them.

ELIJAH A. WOOD.

A St. Petersburg Exhibition.

We present herewith seven views from photographs taken by our St. Petersburg correspondent at the spring exhibition of the Imperial Russian Horticultural Society last April.

The group of remountant carnations, which was exhibited by K. P. Stinson, received the small gold medal, the second highest prize. The group of strawberries in pots, with potted digitalis in the background, were grown by P. P. Wargunin. The display of floral arrangements was by H. F. Eilers, the decorated mirror in the large picture being the central feature of the group. The group of remountant pot roses was shown by E. A. Beklemishev, and the display of garden tools by Groumeyer & Trautshold.

Herbaceous Plant Notes.

Pyrethrum roseum should be planted largely by every florist; aside from its usefulness in the border as an ornamental plant it is almost indispensable at this time of the year for cut flower purposes. It invariably comes in on Decoration Day when such flowers are rather scarce. The shape and general appearance of this pyrethrum resembles a fair sized and well formed aster; some of them are very double but the single forms are not less attractive and useful. In color they vary from pure white, blush or delicate rose to the deepest and brightest shades of vivid magenta. Many named varieties are offered in catalogues, still for the trade a few good varieties distinct in color and robust in growth will answer, a name is not necessary. Some of the oldest double kinds are still among the best, and have not been improved upon in the twenty-five years or more since their first appearance. They require a deep and rich soil to develop all their flowers to perfection, and should have all the sunlight possible, plants growing in shady positions will

show more or less weakness in the stem and the flowers will not show to full advantage if not in an erect position. All of them are very floriferous, producing good flowers from every growth, however small or weak it may push out early in the season. Their lasting quality can not be surpassed by any other flower, as it will be found perfectly fresh and salable a week after being cut if kept in an ordinary cool temperature. Few florists grow it to any extent, but whoever does finds it to be one of the most profitable crops on his place, requiring very little attention after once being planted. A forking or spading over between the plants in early spring and an occasional hoeing during the summer months is all they demand the first year, and after that a heavy mulching of decayed manure should be administered either in autumn or in early spring. They divide readily and any special variety may be increased rapidly by either division or by cuttings taken early in the season. If any beginner should start with cuttings or small plants and get but small returns the first year, he must not be discouraged thereby, for the following years will surely repay him for his apparent loss of time and labor at the outset. After the flowers are all cut, the remaining stems should be cut down to the ground, not only for the sake of cleanliness but also to induce the plants to form strong new crowns on the root stock. In unfavorable seasons and under good cultivation, a second growth will appear and perfect its flowers in September or October, but as far as my knowledge goes, this second flowering can not be relied upon to a certainty, some years we get a fairly good late crop and at other times without any apparent reason only a few scattered flowers over the patch will be produced.

Everybody admires the herbaceous borders at present, there being such a mass of bright and gay colored bloom all over them, producing the grandest effect and variations which can not possibly be produced by our ordinary so-called bedding plants. The large flowered poppies in orange, scarlet and crimson are remarkably free flowering subjects for the back of the borders, and show to greatest advantage at a distance. Large patches of the smaller flowering *P. audicaule* are elegant material for a more prominent place in front. Hybrid larkspurs, the anemuses and tall spiræas in the back ground are flowering freely. *Helenium Hoopesii* is a most magnificent free bloomer, its deep orange yellow flowers mixed with the blue polemonium forms one of the prominent features in the bed at present. This *helenium* is most desirable as a cut flower where a good deep yellow is wanted.

The columbines are all good yet in spite of the extremely dry weather we have experienced. *Campanula persicifolia*, white and blue, single and double, with their tall stout flower stems full of well shaped large open bells are really beautiful now, the tall *Lychnis chalcidonica* produces its large heads in great profusion, while *L. viscaria plena* is a compact mass of rosy magenta. The pyrethrums on their slender and tall stems are kept in constant motion by the slightest movement of the air, and are a grand sight wherever massed together. A patch of *Achillea aurea* is a sheet of gold with a few plants of the dark velvety blue *Campanula glomerata dahurica* dotted in between here and there. The digitalis in various colors are very attractive in the back of a wide border, and a bed of the dwarf pale blue *Aster alpinus* with clumps of *Hem-*

erocallis flava has been the admiration of every visitor, and is still in perfection. *Inula hirta*, with its bright golden yellow flowers, looks well under a few scattered plants of the pale purplish lilac *thalictrium*, both are in bloom for a long time.

The Chinese *pæonias* are a prominent feature now, the glittering silvery pinks and all the lighter tints are preferred by most visitors. The iris are holding their own yet, among them is *I. g. Victorine* of extra size with very deep shiny velvet purple falls and pure white standards, an exquisite variety, as also is the beautiful lace edged *Mme. Chereau*. *Pentstemon lævigatus* with its numerous delicate tinted pale blue campanulate flowers is out in full bloom, and a few plants of the beautiful large flowering *Inula glandulosa* on a ground work of the deep purple *phyteuma* are sure to be admired by all. *Coronilla varia*, *Centranthus ruber*, *valerianas*, *Saponaria ocymoides*, *Heuchera sanguinea*, the profusely flowering *Æthionema grandiflorum*, *Gillenia trifoliata* and a host of other bright colored flowers add to the gay, vivid coloring in the borders.

Among the pinks of extra free flowering habit we must mention the delicately perfumed *D. cæsius* and *D. arenarius*, both literally cover the ground with their pink and white flowers so beautifully laced and lacerated in the petals. I also should mention the hardy *Gladiolus communis* in red and white, which are exceedingly useful for cutting, and may remain in the ground year after year without replanting. The whites make a fine show when planted among the dwarf *saponaria*, *æthionema* or *phyteuma*, and *G. rubra* looks well above *Iberis coriariaefolia* or *Silene alpestris*, *S. saxifraga* or the lovely pink tinted *S. quadriculata*.

Rochester, N. Y.

J. B. KELLER.

Fern Notes.

NEPHROLEPIS.

This genus does not include a large number of distinct species, but all are useful. There are also a number of garden varieties, among which are some of our prettiest stove ferns. It is only within the last few years that the *nephrolepis* have been grown to any extent for market work, though they have always been recognized as invaluable for the rock-ferneries, also for hanging baskets. Few ferns are so readily propagated or find less trouble in their culture. All may be increased by divisions or from the young plants, which are produced on the long slender rhizomes (or stolons); some may also be raised from spores, but in most instances seedlings vary considerably in character, and often they are no improvement on the original forms; though some very interesting varieties have been added from seedlings. I may mention *N. Bausei*, as an instance; this was raised from *N. pluma*, a plant of which was found to have one frond with deeply lobed pinnae being the parent. Although there is no doubt as to its parentage I find that *Bausei* is not included with *pluma* in the "New List of Ferns."

In the culture of *nephrolepis* it is essential to give them sufficient pot room, and also to place them in such a position that those with the long pendulous fronds may have the best chance of full development; for those with very long fronds it is only when suspended, or placed in an elevated position, that their fronds can properly mature.

Like many other ferns the *nephrolepis* deteriorate with age; and most of them get too thick and bunched to be elegant. To increase the stock those with long rhizomes should be placed where they

will find some suitable material to root into, and young plants will soon begin to spring up. *N. Duffii* does not produce rhizomes, but a number of crowns are formed, and they may be readily divided.

A compost of good fibrous loam, leaf-mould, and sand added, and a little manure may also be used. The compost should be used in a rough state, the more porous and open the better. In growing on young stock they will be found to succeed best in a stove temperature with rather a moist atmosphere, but after they are well developed, they may be gradually hardened off, and will then do well in an ordinary conservatory, or some may be used for decorations in rooms. *N. exaltata* is the most useful for ordinary decorations; there are several different forms of this, but that with the long drooping fronds is the best. This also makes the finest basket fern, and it is this variety which is now extensively grown for that purpose.

N. tuberosa, of more erect habit, is better suited for some purposes. As a pot plant *N. cordata compacta* is one of the most useful, though the fronds are of too dark and somber a hue to become popular with the florists. *N. philippinensis* is another good variety for pots, as it grows freely and makes a compact plant; it also succeeds well in a cool greenhouse. *N. pectinata* is not so hardy, but it is one of the best of the slender growing sorts.

N. davallioides is a grand fern; where plenty of room can be given the fronds will attain to fully six feet long. This is sometimes confused with *N. ensifolia*; the latter has equally long fronds, but the pinnae are shorter and curl backwards. *N. acuta* is generally given as being synonymous with *ensifolia*, but the two as we have them are quite distinct, *acuta* having an almost black rachis and the surface of the fronds have a bluish metallic hue; it is also more erect in habit.

N. davallioides furcans: There are several varieties of this beautiful fern, but none are better than the original form as first sent out by Messrs. Veitch & Sons. To see this in its best character it must be grown on freely from a simple crown, and it is only in the stove that it will thrive well. *N. davallioides multiceps* is a seedling from the above. In this the pinnae are narrower, they are also more forked and most of the fronds terminate in a branching tuft of multifid growths. *N. plumosa* is another distinct variety of the same parentage, though I find it has been attached to *exaltata*. In this the side pinnae are short and narrow, they branch out and form several distinct frondlets, each of which is heavily crested, bearing the fronds down and completely covering the pots.

N. rufescens.—I believe this and *N. Zoltingeriana* are identical; it is more erect in habit than any referred to above. Fronds from 3 to 4 feet long stand nearly erect, it is very distinct in appearance but not so useful as many others. The variety *rufescens tripinnatifida* is a noble fern. Old plants of this rarely mature their fronds properly, but when grown freely from a single crown they will attain to fully 3 feet high. Single plants are very effective, but where a mass is required three or four may be put together.

N. pluma is a deciduous species, the long slender pale green fronds are very effective for summer use. The variety *Bausei* previously referred to has a beautiful feathery appearance. These usually die down early in the autumn. While dormant the soil should be kept sufficiently moist to prevent the underground rhizomes from shriveling.

N. recurvata is probably a garden hybrid, though not entirely deciduous it is inclined to lose its fronds in winter, thus showing some affinity to the above, though in general habit it is more after *philippinense*. *N. Duffii* will about complete the list as far as I am acquainted with them. This slender growing distinct form has never produced fertile fronds as far as I am aware. Though a very distinct fern it is of little use outside the stove, being very tender. It is, however, well worthy of a place in every collection.

A. H.

Boston.

Decoration Day in Boston was all that a florist could wish for. The rain which came a few days previous had given a refreshing touch to all outdoor verdure; the weather was in every way delightful and of the crowds that thronged the cemeteries the individual who did not carry plants or flowers in some shape was a rare exception. Lilacs, lily of the valley and other flowers that are as a rule available for florists' use at this date were all past, and *pæonies*, *deutzias* and *rhododendrons* just a little too late, so the demand was shifted on to the indoor product, and those who had *astilbe*, *stocks* and *lilies* got prices rivaling those realized at Easter.

It was evident early in the week that roses would be in short supply. However, the prevailing demand at Decoration Day having always been for the coarser and more showy flowers little concern was felt by the dealers over the scarcity of good roses, it being accepted that roses at market prices would be a risky investment. As it turned out many more roses and choice stock generally might have been sold. The disposition to make the occasion a universal memorial day was this year more pronounced than ever before, and while the original significance of the observance was not forgotten yet the decoration of the soldiers' graves called for but a fraction of the flowers and plants that were used up in the aggregate. The increased demand was especially noted by florists doing business in the more fashionable sections of the city, and now for the first time Decoration Day met them with a demand which taxed their resources to the utmost. That florists in the less aristocratic neighborhoods had all they could attend to goes without saying. In these localities the windows were heaped with artificial and dried flower designs, but it is a question whether these contrivances, most inappropriate for the spring time, found as extensive a sale as formerly.

On Thursday and Friday morning the cut flower market was thronged with the biggest crowd in its history and the adjoining street was almost impassable with flower wagons. The wholesalers also got their full share of the activity, and at the wind-up all were well cleaned out of stock. As usual there was proportionately more call for colored than for white carnations and roses and better prices were obtained on Thursday than on Friday. The receipts of carnations far exceeded expectations, and prices had to drop as soon as it became evident that there was to be no shortage. A very large proportion of the carnations received, probably thirty per cent. went fast asleep as soon as they got a breath of city air. Nobody could be found, however, who would acknowledge having done any storing. For good blooms the average price was about \$3 per hundred. *Astilbe* sold quickly at \$25 per thousand. *Longiflorum* lilies were scarce and sold for \$10

GROUP OF REMOUNT POT ROSES.

DISPLAY OF GARDEN TOOLS.
A ST. PETERSBURG EXHIBITION.

per hundred and candidums, of which there were a few, brought \$5.

The rhododendrons and azaleas are now in their glory at H. H. Hunnewell's. Mollis azaleas show the effects of the severe winter and many rhododendrons also bear blasted buds, but the Ghent azaleas are glorious beyond description. The conservatory is brilliant with a promiscuous display of choice orchids and flowering plants. Cattleyas, lœlias and gloxinias inside and banks of fuchsias, foxgloves, snapdragons, geraniums, calceolarias and flowering shrubs under the awning. Among the latter are a number of Crimson Rambler roses in bloom which Mr. Harris regards as a great acquisition for this purpose.

The business of W. A. Twombly has been organized into a corporation, W. A. Twombly president and Thos. S. Spurr, treasurer.

Alex Burns of New York has been visiting Boston and called on a number of the local growers.

New York.

The schedule is out for the exhibition to be given by the Florists' Club and Gardeners' Society on June 20, and can be procured (also entry blanks) from the Secretary, Jas. I. Donlan, 51 West Twenty-eighth street, New York City. There are twelve numbers in the nurserymen's and florists' section devoted to cut roses in several classes, herbaceous perennial flowers, flowers for bedding, sweet peas, iris and pœonies, and twelve similar classes are provided for amateurs and private gardeners. The first prize in each case is the club's silver medal and the second a certificate of merit. Mr. G. Amsinck offers a special silver cup for general collection of cut flowers exclusive of roses grown under glass, and Mr. C. Weidenfeld also offers a silver cup for display of roses all classes. *American Gardening* will present a year's subscription to the most unsuccessful amateur exhibitor.

Out of town orders received a slight

stimulus on account of Memorial Day, but in the city little extra work done, the street men showing the greatest activity. Supplies of roses are shortening up now, but carnations are coming in abundantly. There is an unusually large supply of carnations in market this season.

There is no prettier store in Greater New York than R. Jahn's store at 492 Nos rand avenue, Brooklyn. Just now the windows are beautifully dressed with rare plants, including cattleyas, oncidiums and Dendrobium thyrsiflorums in bloom. A fringe of incandescent lights on the sign outside is used with good effect in the evening.

An extra event at the regular meeting of the Flatbush Florists' Bowling Club on last Thursday evening was a snug little dinner party to say farewell and bid *bon voyage* to George Heitmuller, who has been foreman for Mrs. Meissner and is now going to Germany for a short visit. The club presented him with a loving cup. Papa Zeller presided and all had a royal good time.

The news comes from Bayside that Fred Storm is to be married on June 19. Rudolph Asmus is cutting the finest Meteor roses ever seen at this season.

Theo. Roehrs is another of the lucky ones who is booked for a trip to Europe.

Fleischman has got settled in his new store. It is a beauty.

On Decoration Day the employes of Hitchings & Co. played a game of baseball opposite their works at Jersey City. The New York machine shop nine were defeated by the foundry nine of the Jersey City Branch by score of nine to eight. The feature of the game was the excellent playing of Small of the New York team, and Nxon of the foundry team.

Pittsburg.

The growers of bedding stock are taking things much easier this week, for the grand rush culminated on Saturday morning, or rather Friday evening, it having become the custom here for the children of all the public schools to contribute plants on the day before Memorial Day for the decoration of the soldiers' graves in the many cemeteries and graveyards here by the Grand Army on that day. Naturally the owners in other parts of the grounds wish to have their lots looking properly attended to, as large crowds of visitors are in attendance to witness the ceremonies, forcing the bulk of the business to the last week of May. Plants were very plentiful, with the exception of geraniums, many of the growers being unable to supply the demand.

No improvement in the cut flower trade to report, but all are hopeful that this month, with the school commencements and the meeting here of the National Saengerfest, will bring about the much desired increase. The season here is fully three weeks advanced; outdoor stuff that usually blooms in June is almost done, roses especially so, and this will be quite a factor in assisting the cut flower branch.

The parks are beginning to show something of what they will look like later on, as in all of them all the available force is busily engaged in arranging and finishing planting of the flower beds. Mr. Falconer is very busy with the improvements in Schenley Park, road making and landscape work especially; everything is being done in the very best manner possible, as it is permanent improvements that are under way, and nothing but first-class

work is permitted. In the conservatories Mr. Joe Spring oversees that all is in proper shape. In the aquatic houses the various kinds of lilies are commencing to bloom; the *Victoria regia* (grown from seed) has leaves already over 5 feet in diameter and flower buds showing. In the other houses everything is looking well, especially the begonias; they are extremely fine. The manner in which they are grown this year shows what a grand class of plants they are and proves a revelation to most of the visitors. The calceolarias were very good, but are about done blooming. The gloxinias are in full glory and show some extra fine specimens, several of them with grand heads of bloom, with between 40 and 50 flowers open at one time. Lord & Burnham are hard at work at the addition to the Phipps Conservatories; the foundations are almost completed. They expect to have it wholly done in about two months.

The club is to hold a special meeting on Thursday, 4th inst., when it is expected that the matter of going to the convention of the S. A. F. at Cleveland will be considered. Several new names will also be proposed for membership.

The decoration put up by Mr. James Dell, mentioned last week, has by order of the fire marshal been taken down, with the exception of the laurel wreathing outlying the windows and projections, he considering the pine to be too inflammable a material to permit it to stay, covering the entire fronts as it did, and as he is supreme in his department, down it had to come. REGIA.

Philadelphia.

The first annual shad dinner and picnic of the Florists' Club was held at Wissinoming, on the banks of the Delaware, last Wednesday afternoon. We say annual, as owing to the success in every way of this occasion, there is no doubt as to its yearly recurrence hereafter. The attendance of the ladies had no doubt more to do with making the occasion so successful than anything else; nearly all the members brought their wives, and those of them who have not yet entered the blissful state had their sweethearts along. The ladies seemed to take as much interest in the shooting contest as the gunners themselves, and frequently applauded the good shots. W. K. Harris was able to be present, and while a bit shaky is much better, and was able to take his place with the gun. Anderson was in good form, and carried off the honors in the special shoot for the prize offered by the committee for that occasion.

After the shoot the party adjourned to the lawn in front of the club house, and engaged in a wheel barrow wheeling contest; each contestant was blindfolded, and tried to run the barrow to a tree some fifty yards away. It looked very easy, but proved a difficult thing to do. After many ludicrous attempts by various persons the honors were carried off by John Gardner, who made a bee line for the tree, and struck it fairly. The ladies then tried the same barrow on a shorter course, and proved they were able to walk much straighter than the men, as several hit the mark, and finally the prize was awarded to Mrs. Farenwald, who ran the wheel the nearest the center. The sack race was very amusing, and was finally won by George Clark from some fifteen contestants. The fifty yards' race was won by S. S. Pennock from some twenty competitors. The fat men's race was a source of considerable amusement. Messrs. Heacock and Butler ran a dead heat twice, and then on the

third trial Mr. Heacock won by six inches.

After the party had partaken of a very excellent shad dinner the presentation of prizes won was made by Robert Craig; he was in his usual happy vein and kept the party roaring at his apt remarks. Mr. Anderson got a pair of squabs for his good shooting. Mr. Gardner was rewarded for his able wheeling with a clay pipe, while Messrs. Pennock and Clark received two horns with which to shout their victories. Mr. Heacock was presented with a suspicious bottle, but on sampling it nothing stronger than cold tea was found. Mrs. Farenwald, although having no use for them, was obliged to accept a set of false teeth with a whistle attachment for her success with the barrow. After this interesting event the party took the train for home, all expressing themselves as having had a most pleasant afternoon.

We almost forgot to state that the prize for having disposed of the greatest amount of shad in the most graceful manner was awarded to Chairman John Westcott, who did this after he had seen to the comfort of all the others. K.

San Francisco.

Trade during the past week has improved somewhat. The supply is fully equal to the demand, with the exception of sweet peas during the fore part of the week, which were rather scarce, but the last few warm days have brought them into bloom very rapidly. They are bringing \$1.50 per dozen bunches for long stems and \$1.25 for short stemmed. The newer sorts of sweet peas are coming into great favor, particularly Lady Penzance, which is one of the grandest sweet peas in cultivation and is extremely popular in this market. The varieties which are in most demand are Blanche Ferry, Emily Henderson or Blanche Burpee, Firefly, Lady Penzance, Her Majesty and Blushing Beauty. Lilies are rather scarce now, and the demand, too, is small. Roses are generally of excellent quality, but they don't seem to bring very good returns. The outlook for Decoration Day is very encouraging and from present indications the results obtained by growers who have a good stock of sweet peas, carnations, etc., will be very satisfactory.

Some of the wholesale growers are beginning to plant out their chrysanthemums now. At M. Lynch's place work has begun with out door planting of mums. We notice several acres of Semple's asters also planted a few weeks ago, which are looking splendid.

The wholesale men report that not a great deal of flowers were shipped to adjacent cities this Decoration Day. Smilax was rather scarce for Decoration Day also, carnations are splendid in quality now, in fact as fine as ever come into this market. Daybreak, however, is scarce, also good McGowans.

Mr. Smike Parker, forman for Edw. Parsons at San Jose, was a visitor Sunday. Here reports business as encouraging for Decoration Day.

Mr. H. Goertz has established himself in the nursery business at the corner of 24th and Hampshire Sts., intending to make a specialty of floral designs. The firm name will be Golden West Nursery.

Steiger's Pottery, which was burned at San Jose some few years ago, and which since built a fine plant at Baden has gone into the hands of a receiver.

Mr. Curtis Tobey has entered the employ of E. J. Bowen, the seedsman on Sansome St., and has started for a tour

of the Southern States in the interests of the above named firm.

The committee in charge of the proposed fiesta in San Francisco held a meeting in Mills building this week. Mr. W. H. Mills moved that \$50,000 must be subscribed before anything could be done; he further argues that the co-operation of the ladies of this city be also secured, as their combined efforts would contribute largely to the success of the enterprise.

Mr. P. O'Hearn, formerly a carnation grower in San Mateo, has leased his greenhouses to his brother, John, and has accepted a position with D. O. Mills, Esq., at Millbrae.

Alameda is the last city to decide that they shall also have a flower carnival, and various committees have been appointed, and at present writing everything seems favorable to its success.

Mrs. Merriman, who has conducted the Hyperion Gardens at Mountain View for the past few years, has been attached by employes for wages. Mrs. Merriman hopes that this embarrassment will be only temporary, and that she will be able to make satisfactory settlement with all her creditors.

Mr. Jas. Dunham, who so atrociously murdered six persons in San Jose last week was formerly in the nursery business at Chico.

At the last meeting of the Los Gatos Floral Society the *Calochortus alba* was chosen as its floral emblem. The committee on the fall chrysanthemum show are hard at work and hope to make it as successful as former exhibitions.

The *California Garden* which made its debut lately as the only floral magazine published in the state is meeting with great success.

The new range of greenhouses of E. W. McLellan at Burlingame are rapidly assuming shape and soon will be planted.

The past warm days have brought out everything in the seed growing districts. It has rapidly brought the sweet pea into bloom and in a number of instances has burned the bloom also. It has helped everything wonderfully, and is bringing all crops into bloom. METEOR.

St. Louis.

Business is at a standstill in St. Louis at present, owing to recent storms, and to a cyclone which destroyed much property in and about our city. Most of our florists were fortunate enough in escaping the cyclone, as the storm was confined to the southern part of the city; the west end got very little. The following florists were damaged:

W. Schray, \$50; Frank Fillmore, \$20; C. Beyer, \$50; Andrew Meyer, \$200; Chas. Juengel, \$1,000; Max Herzog, \$1,200; Harry Rieman, \$50; Mrs. M. Eggling, \$800; Tom Carroll lost 1,000 feet of glass, and damage to other property will amount to \$400. Houseman Floral Co. lose about \$300.

The damage to Shaw's Garden and our other parks cannot be expressed in dollars and cents. James Gurney, the veteran superintendent of Tower Grove Park and head gardener of Shaw's Gardens is heart broken, and he has cause to be. Mr. Gurney, in speaking of the damage, said it can not be replaced, and the loss is incalculable. It will take three years to make the garden and Tower Grove look a little as they should, but the grand old trees will never hold their heads up again. The wreckage at the parks is enormous, few can realize the damage done to these pleasure resorts. Park Commissioner Ridgely said that it would be impossible for him to express in

LAFAYETTE PARK, ST. LOUIS. AFTER THE CYCLONE

dollars the damage done. In Benton Park 226 trees were leveled to the ground, all the shrubbery, plants and flowers destroyed and the lawns rooted up. The greatest damage in Forest Park was caused by the sudden rise in the River Des Peres. Lafayette Park, which is not under the jurisdiction of the city park commissioner, is a total wreck, and will take 15 years before it assumes its old appearance. In the last two storms the city has suffered losses to its parks aggregating \$6,000. The florists were all lucky in escaping with as little damage as they did.

Decoration Day trade was good for the shipping trade, but locally it did not amount to much. Prices went up a little and good stock is becoming scarce. Good roses bring from \$2 to \$4, carnations \$1 and \$2, white flowers will be in great demand this week owing to great number of funerals caused by the cyclone.

President Jordan of the Hail Association reports the loss by hail that will be paid to C. Young & Son's Co. will be the greatest ever paid by the Association, the amount being a little over \$3,000.

Visitors in town during the cyclone were Martin Reukauf, of Bayersdorfer & Co., Philadelphia, and J. E. Killen, with C. H. Joosten, New York.

Chas. G. Fleckenstein and Ed. Buechel were appointed by the Merchant's Exchange to solicit subscriptions from the florists for the cyclone sufferers.

The next regular meeting of the St. Louis Florists' Club will be held on Thursday, June 11, at 3 p. m. A large attendance is expected, as several essays will be read; this will be a sweet pea meeting and a large number of blooms will be on exhibition.

The spring plant trade has been a disappointment to most of the florists; they report that this has been a bad season for them. Trees and shrubs sold better and helped a great many of them out. Taken

all round the spring trade was about 25 per cent. less than last year.

The bowlers came to bowl Monday night, just as if nothing had happened, this being the last three games of the series. In the 12 games just ended Emil Schray rolled 2002 and wins the medal. Second was Fred Weber, with 1,981, and Kuehn was third, 1833. Frank Fillmore made the highest single score in the series, 245, D. Helwig, second, 239, and Emil Schray third, 214. Next Monday night a new series will begin. J. J. B.

Chicago.

The American Association of Nurserymen will hold its annual convention at the Sherman House next Wednesday and Thursday.

Mr. J. A. Budlong, the Bowmanville florist, started Monday on a bicycle trip to New York. Though quite an old gentleman he spends much of his time on the wheel, often taking such short trips as a run to Milwaukee, Cincinnati, St. Louis or Detroit. The present trip will be the longest he has ever undertaken, and we trust he will meet with no accidents on the way. His son Bert cares for the business during his frequent absences on wheeling trips.

As previously announced, the next meeting of the club will be devoted to hardy roses. There will be an exhibition in addition to essays and discussions. Among out of town visitors will be Mr. W. C. Barry of Rochester, N. Y., who will tell the members his experience with hardy roses at Rochester. As the nurserymen will be in the city attending their annual convention probably many will attend this rose meeting of the club, and certainly all of their number who are interested in the "Queen of flowers." Each member of the club is requested to bring anything of trade interest to the exhibition.

The rose garden on the Wooded Island is in fine bloom, most of the plants having come through the winter finely. It proves a great attraction to visitors. According to one of the daily papers the first rose to bloom was a beautiful "Jack Maynard," which appears a novelty to the horticultural public.

Decoration Day business was excellent all round, and trade has held up well since, this week being quite a busy one. Roses are much improved in quality, and are selling well. Both color and size is improved. Average stock brings \$3, selected \$4 and in some cases \$5. The demand for roses, which is noted all over the country, was hardly expected, yet there was really nothing else to be had. Carnations are not in such brisk demand as roses, but there is no glut; good stock sells for \$1, and fancies, such as Rose Queen and extra whites, for \$1.50.

At Decoration Day there was rather a decline in the price of valley, there being no demand for it, but since then the price has gone again stiffly to \$4, and the latter part of the week the supply was not equal to the demand. Harrison is not seen, but good longiflorum brings \$8. The first auratum made its appearance this week, being unusually early; it brings \$1.50 a dozen. Mr. Swenson of Elmhurst is again cutting that beautiful centauria Marguerite, which was received with such favor last year. It sells on sight at \$1 a hundred. Another thing, a novelty in this market, sent in by Mr. Swenson, is a daisy of unusual size; it is the type of the ordinary ox-eye daisy, but with a smaller center, the ray florets being much wider and longer than the type, slightly twisted, and pure white, devoid of the grayish cast often seen in the common daisy. It appears to be a very good thing and sells for double the price of the ordinary daisy. These, by the way, are now being secured in quantity for the school commencements. They vary greatly in quality, the

best being treated to some field cultivation, including the enclosing of matted rows in a boarding or canvas strip along either side, which results in greater length and straightness of stem, as well as better color. They now sell for 30 cents a hundred. Coreopsis are 40 cents a hundred, sweet peas 30 to 50 cents. Pond lilies from Indiana are sold for 25 cents a bunch.

H. Y. Windheim of the Nebraska Seed Co., Omaha, was in town this week.

St. Paul.

Decoration Day trade was fully up to the average, there being a good demand both for cut flowers and plants. Snowballs were all gone, and there was no outside stock to depend upon. Shipping trade was good. The decorations at the cemeteries, while not elaborate, were plentiful; plants and cut flowers were used in large quantities.

The annual commencements throughout the country towns occur this week and next, and the demand for roses, especially red, is greater than for some time past. There is a general scarcity of stock, and many orders go unfilled. Weddings are also quite numerous, and there is a larger demand for wedding flowers this week than ever before. The florists all have their hands full and more than they can attend to. At this season there is always a dearth of red roses, but our florists do not seem to realize that fact as they should. More red roses could be profitably grown in this vicinity for summer use.

In the plant line sales have been very satisfactory. While the transient trade in this line seems confined to the city market, yet there is a good demand for vases, boxes and beds throughout the city, and as each florist has his own customers cutting is not indulged in to any great extent. Pansies have been selling nearly all season at 25 cents per dozen. In Minneapolis they have been sold as low as 10 cents per dozen, but there the department stores are ruining every branch of the florists' business. May was remarkable for this latitude in that we had no frosts, and outdoor stock has remained untouched. While there has been a great deal of planting out done, much still remains to be done, and it will not all be completed before July.

At the city parks Supt. Nussbaumer has a large force at work, but will hardly complete his work before July 1. Some very artistic carpet bedding is promised in honor of the G. A. R. encampment.

FELIX.

Des Moines, Iowa.

Decoration Day has gone by, and the demand for cut bloom was 30% greater than any former year. The weather being fine a large portion of our people availed themselves of the holiday and attended the decoration. The plant trade was good for a week before, and on Friday all hands were kept busy getting out orders. Prices of cut flowers were not advanced except in some few places. Plants sold at a lower figure than ever before; good pansies sold at 25 cents per dozen and 4-inch geraniums at \$1.50 per dozen, 3-inch at \$1 per dozen. Other stock proportionately low.

At the last meeting of the club a reward of \$25 was offered for the arrest and conviction of any party found stealing or molesting plants in the city. There has been a deal of complaint from customers about the stealing of plants, hence the club took the matter in hand.

Charles McAniff, foreman for W. L. Morris, has resigned and has gone to Springfield, Ill., where he has taken a half interest in the greenhouses on Pasfield street of the South Side Floral Company, which will be devoted entirely to the growing of roses for the wholesale market. We are sorry to lose Mr. McAniff from our club but all rejoice that he has good prospects ahead.

J. T. D. F.

Utica, N. Y.

Decoration Day trade was very fair; the demand for plants was fully equal to former years. More than the usual number of designs were used. A great many of the plants used were furnished by the school children, as is the custom here.

Carnations are the best flowers we are getting now; they seem to stand the extremes of temperature better than any other inside stock. Of all sorts to be seen Wm. Scott is the best. The heavy rains of the past week somewhat retarded spring work in the line of vases, window boxes, etc. Several light frosts also helped to extend the season of planting, a great many orders being given to "Send when it is warm enough."

A plant which is very much in evidence here this spring for use on verandas, etc., is the nephrolepis. They are mostly seen in two sorts, exaltata and tuberosa. A great many people prefer these to rubbers or palms. They seem to thrive on little else but water.

Mr. H. Paddock of the Garden company, Camden, N. Y., was in town looking up stock, as was also J. H. Hay, Oneida, N. Y.

Mr. John Hughes, formerly with L. E. Marquisee, Syracuse, N. Y., but now in charge of the Overlook Greenhouses at Little Falls, reports a large trade; was in town trying to piece out some lines of stock.

F. J. B.

Worcester, Mass.

Our trade for Decoration Day was larger than ever before, and it took some tall hustling to get stuff out on time. About the usual thing, loose flowers, bouquets, baskets, mounds, etc., was about what the people wanted and hydrangeas and other flowering plants sold well.

The three or four cool days last week helped wonderfully in holding the flowers, and though we got no out-of-door stuff at all we handled more stuff than ever before and none of it went begging. Carnations sold for 50 to 75 cents, roses \$1 to \$3, longiflorum \$1, peas 35 cents, stocks 50 cents to \$1; or in other words at regular prices. Weather was fine and stuff was very scarce Saturday morning.

A. H. L.

Cincinnati.

Business this week has shown a decided increase, especially in cut flowers. Flowers of all kinds were scarce on Decoration Day, and therefore sold well, particularly roses. Spring trade is about over and was about the same as in former years; an increase in cannas could be noticed.

James B. Allan, foreman to H. L. Sunderbruch at Rosebank, has gone for a month's vacation to see his folks at Boston, whom he has not seen for 5 years.

Decoration Day trade about the same as last year. Large calls for roses especially. Perles from the south are coming in.

H. SCHWARZ.

ROCKFORD, ILL.—No damage was done to florists here by the recent storm.

Fern Notes.

In the following selection are included those most suitable for growing on as exhibition specimens, or for culture in the stove fernery; though some may also be included among those most useful for choice decorations. Many others may be equally beautiful, but I have made the selection with the idea of giving the greatest variety possible in a limited selection. In trade nurseries it may not be profitable to go in for a large stock of these choicer sorts, but a few well grown specimens will always command a good price, besides helping trade for the more ordinary sorts.

Adiantum Farleyense.—No exhibition group is complete without this lovely maidenhair. In growing on large specimens it is necessary to be very careful to use plenty of drainage, and a rough open compost. I find fibrous loam from which some of the finer soil has been sifted out, used in lumps, with some well rotted stable manure and a liberal supply of sand added is the best compost. When in a healthy state this fern takes a large quantity of water, and I believe failure not infrequently occurs through not attending to this. Though plenty of root room should be given, over-potting must be avoided.

Adiantum cardiophyllum is another which makes a fine specimen, and is an old favorite with exhibitors. It is of easy culture and soon makes a large plant. The pale soft green fronds give a nice contrast, the young fronds also have a very delicate tint. I did not intend to include more than two of a species in this selection, but I think *A. trapeziforme* is worthy of a place, the bold deep green fronds being very effective, and like the above it gives little trouble to the cultivator. Being of rapid growth they require potting on oftener than those of slower growth. Liberal treatment in the way of manure may be recommended.

Microlepia hirta cristata, though rather too tender to be of much service for ordinary decorations, is well worthy of a place in every collection, and it makes a grand specimen for exhibition, the large gracefully arching fronds are just sufficiently tasseled to add to its beauty. It requires stove treatment, and is of very rapid growth. It may be readily increased by divisions, and like most of those of tufted growth it is better when divided up small. When potted in a rich compost and grown under heavy shading it grows very vigorously, but if potted in loam and well exposed to the light the fronds will be of better substance and of a beautiful pale shade of green.

Nephrolepis davallioides furcans.—This makes a grand specimen for exhibition, and it is also one of the most serviceable of the choicer ferns for decorations. Although it requires to be treated as a stove fern, it will last well in a low temperature after the fronds are well matured. When raised from spores it will be found to vary considerably. I prefer to select a good form and propagate from the young plants which spring from the long slender stolons. A few plants placed where they can find suitable soil to root in will soon give a lot of stock. When grown on freely from single crowns they soon make fine plants, but with age they form a dense tuft of crowns, after which they do not make such fine fronds. The best position for growing on the plants is to suspend them from the roof; they will bear a considerable amount of exposure to the sun, but they like a moist atmosphere and a plentiful supply of water. They are also greatly benefited by the

liberal use of manure. The variety N. d. multiceps differs from the type in having narrower pinnæ and well developed fronds terminating in a branching crest of finely cut multifid growths.

Gymnogrammes: Of these the most elegant is *G. schizophylla gloriosa*. This must be grown in suspended baskets or pots to give the long drooping lace-like fronds room for their full development. It is a stove fern, and makes a most elegant specimen, but unfortunately it is very tender and quickly shrivels up if exposed. This is the only viviparous gymnogramme that I am acquainted with; each frond produces a young plant, towards the point, and sometimes they appear on the side pinnæ. The young plants are easily established and make prettier plants than seedlings, which grow more erect, and vary considerably. Of the golden varieties, *G. Lauchana* is the best for growing on as a large specimen, or *G. Alstoni* may be recommended; this has the triangular fronds heavily covered with bright golden farina as in *Lauchana*, and all the pinnules are curled inwards, showing off the golden under surface to advantage. The best silver form is *G. peruviana argyrophylla*. All the gymnogrammes do best when elevated, and the fronds should never be syringed, but they require careful attention to water at the root. A compost consisting largely of peat suits them best, and over-potting must be avoided.

Davallia Mooreana:—A few years ago large specimens of this fine fern might be seen at almost every flower show, but since large specimens have somewhat gone out of fashion it is not often seen. Although it makes such a fine specimen, it is equally serviceable in a small state, and is one of the best of the choicer ferns for decorations. It does not come freely from spores, but I have succeeded in raising some good batches. The spores must be taken just at the right time and sown as soon as they have been sufficiently ripened. In propagating from divisions it is better to frequently divide small plants than to break up large plants, especially where compact plants for 5-inch pots are required. In potting the rhizomes should be kept well above the rims of the pots. Large specimens succeed best in pans about half the depth of ordinary flower-pots; rough peat, fibrous loam, with which may be mixed some sphagnum moss, suits this fern well. I may here mention that there appears to be some properties in this fern which causes irritation to the skin. I have suffered from the effects after handling plants, especially round the eyes.

Davallia Fijiensis plumosa is another which makes a fine specimen. To make a good show plant quickly, several young plants may be used together, if these are arranged in a pan, placing them so that the rhizomes spread out equally, they have a more symmetrical appearance than can be generally obtained by growing on a single plant, except when seedlings are used. The same treatment as for *D. Mooreana* will suit this. In a previous note I referred to the variations of seedlings. It is therefore better to rely on divisions where the true variety is of importance.

Cibotium Schiedei:—This is a general favorite, but cannot be grown where space is limited, as it soon attains to a great size. It can only be propagated from spores, and it is rarely that a large stock is met with in this country. I find this succeeds best when grown in peat and loam in about equal parts, plenty of drainage, and at all times it requires care

in watering; too much moisture at the root being very damaging. Although usually known among the trade under the above name, the botanical authorities class it with *dicksonia*.

Gleichenias:—No collection is complete without this beautiful genus being represented. For growing on into specimens I should select *G. Mendelli*, *G. dlecarpa longipinnata*, or *G. rupestris glaucescens*, either of which make fine specimens. The first named is considered to hold first place, but the last named makes a good plant quickly, being of free growth. Few ferns give more trouble to the cultivator than the *gleichenias*, though when they once find congenial quarters they give little trouble. A cool house or pit with a northern aspect is best. While they will not stand being exposed to the sun, they like plenty of daylight. They may have a little warmth in spring, while they are growing freely, but towards the autumn and during the winter the cooler they can be kept the better. I believe they will stand a few degrees of frost, but I do not think it advisable to let the temperature fall quite to freezing point. The stock may be increased by divisions, young plants divided into say two to four, are better than dividing up old specimens. Rough peaty compost should be used and plenty of drainage given. A dry atmosphere must be avoided, as this will be sure to result in thrips being troublesome.

Platyceriums:—Of these I hardly know which to give the preference to, *grande* or *Stemmaria*; both are grand ferns, the latter has the advantage of being readily increased from root-buds. When grown on a block of peat young plants soon appear, and these start away freely when taken off. *P. grande* can only be propagated from spores, and it is one of the most uncertain of all ferns. I have raised seedlings but have also experienced many failures when I thought I had really good spores. The spores should be sown on broken pots and sphagnum moss chopped up small. The *platyceriums* may be grown on the surface of pots, a stump of wood fixed in the center to stand up about 6 inches, some peat pressed round the wood and the plant fixed with wire to keep it in position until established. Both of the varieties referred to above succeed best in a stove temperature and like a shady position during the summer, but in winter should have all the daylight possible. The *platyceriums* are also very serviceable when grown in pockets formed of virgin cork. For hanging against walls or for suspending on pedestals in groups they are most effective. A. H.

American Association of Nursery Men.

The 21st annual convention of the American Association of Nurserymen will be held at the Sherman House, Chicago, June 10 and 11. A good program is promised and reduced rates have been secured from the railroads.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED:—By good all around man; single. Address W. K. 56 West Randolph St., Chicago.

SITUATION WANTED:—By experienced gardener and florist; English. Thoroughly competent in all branches of greenhouse and outdoor work. Address GARDENER, care American Florist.

SITUATION WANTED:—By florist and gardener; single man, 6 years' experience; first-class references. JOHN EMERSON, care Mr. Scott, Keap Street Greenhouses, Brooklyn, N. Y.

SITUATION WANTED:—By first-class rose, carnation and mum grower and propagator; fully capable of taking entire charge. Don't reply unless you need a hustler. HUSTLER, care Am. Florist.

SITUATION WANTED:—As foreman or manager, by a successful rose grower and general plantman; 12 years' experience; age 36; married; sober and reliable. Address CULIVATOR, care American Florist, Chicago.

SITUATION WANTED:—By florist and gardener, 12 years' experience, 1 year in the country; German, single; private place preferred; would like a steady one. MAX GROEZINGER, 212 Hunter St., Rochester, Minn.

SITUATION WANTED:—By practical all round florist and gardener in the propagating and growing of roses, carnations, violets, mums and general plants; 10 years' experience in England and Germany; age 28, single. Disengaged June 15. Good references. CARL SCHULTZ, 34 Turner St., Grand Rapids, Mich.

SITUATION WANTED:—As foreman; successful in growing roses, mums, carnations, bulbs and general stock; competent to take charge of a large commercial place; 21 years' experience; age 35, married; best of references. Address FRANK BEY, Foreman La Roche & Stahl's, Collingdale, Del. Co., Pa.

WANTED:—Good rose grower. Address at once REINBERG BROS., 51 Wabash Ave., Chicago.

WANTED:—1400 feet good second hand 4-inch cast pipe and fittings; give price. S. WILSON & SONS, Marion, Ohio.

WANTED:—The address or whereabouts of Mr. Carl Skjoldager of Chicago, by JULIUS SCHARFENBERG, Box 97, Highland Park, Ill.

WANTED:—Single man with good experience in growing roses and carnations AT ONCE; good home for the right man. THEO. KLOCKENBERGER, 8341 Mead Ave., St. Louis, Mo.

WANTED:—An Al florist as foreman for a place of 75,000 feet of glass where first-class cut flowers are grown. References required. State wages ROSES, care American Florist.

WANTED:—Immediately, an experienced florist to take charge of a private place; married man preferred; best of references required. Address J. M. STUDEBAKER, South Bend Ind.

FOR SALE:—At half price three greenhouses, stock, boiler, pipes and everything belonging to it, if applied for soon. W. S. P., care American Florist.

FOR SALE:—Very cheap, a lot of extra good second-hand 4-inch boiler tubes, with solder all ready for packing; tubes about twelve feet long. W. H. SALTER, Rochester, N. Y.

FOR SALE:—A bargain; two greenhouses 100 ft. l. ng. in Macomb, Ill., heated with hot water; hotbed sash, tools, wagons, two boxes, a large stock of plants, a good established trade, in a good city; 3 years' lease on the ground free. All for \$1,500. Address J. L. PILLSBURY, Galesburg, Ill.

FOR SALE CHEAP:—Florist business; 5 hon ea. 5000 square feet of glass, the stock ready for spring trade; hot water heating, 2 sheds, dwelling, etc. All in good condition. Rare chance for the right man. To be sold on account of ill health. For particulars address E. TIEDEMANN, O'Fallon, Ill.

FOR SALE:—On easy terms, greenhouse establishment consisting of 6 houses, all stocked and in good order; 12 miles from New York; heated by Wethered hot water system; sizes of houses, one 36x100 three 12x100, one 20x80, one 25x50; 3 acres of land, large dwelling house, large barn, iron windmill and tower, supplying water to dwelling, greenhouses and barn; capacity of tank 300 gallons. Over 10,000 carnations planted in the field. For further particulars, apply to HENRY KRITTBOSCH, Lodi, Berken Co., N. J.

FOR RENT:—For a term of years, my greenhouse plant, containing about 800 feet of glass, steam heated, in a good location in the outskirts of the city, with an established cut flower trade. Some of the houses are planted to roses and cut flowers now, good for another season, and plenty of young plants of the best varieties of roses and other plants to replant. Possession given at once. A good grower with a few hundred dollars can buy into a good business. Address J. D. SEIZER, Cashier Internal Revenue Office, Cleveland, O.

FOR SALE:—5,000 feet glass, 3 houses 81 feet long each, boiler house 45 glass 16x20 boiler for steam, about acre land; carnations in field, one house filled with roses, 60 Sago palms; have other varieties, several hundred mums, and many other flowers, best varieties; houses well built, new. insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

Society of American Florists.**RULES RELATING TO THE MANAGEMENT OF THE
ANNUAL TRADE EXHIBITION.**

1. The Society of American Florists shall, through the Executive Committee, control all features of the trade exhibition.
2. There shall be appointed annually at the winter meeting of the Executive Committee a superintendent of exhibits. The vice-president of the S. A. F. or the local organization in the place where the convention of the current year is to be held shall be invited to recommend such superintendent for election by the Executive Committee, as aforesaid.
3. Said superintendent shall have general charge of all details of the annual exhibition, and shall be under seven days' full service and pay at and during the convention.
4. He shall receive all applications for space and assign the same in the order in which they are received by him. He shall provide and arrange all necessary tables and staging.
5. Judges shall be appointed by the president and secretary at least one month before the exhibition. The president and secretary may appoint substitutes in place of judges who may be absent.
6. The exhibition shall be closed between the hours of 2 and 4 p. m. on the first day of the convention, during which time the judges shall pass on the exhibits, and they shall report promptly to the secretary on the same day. Exhibitors shall be excluded from the hall while the judges are at work.
7. Awards shall be given as follows: Highest, Certificate of Merit; second, Honorable Mention; third, Highly Commended.
8. The judges shall withhold awards on unworthy exhibits.
9. Judges shall be governed by the merits of the article as exhibited and shall state in their report on what special points of excellence awards are based.
10. In case any article or device has received an award at a previous S. A. F. exhibition awards shall cover subsequent improvements only.
11. No award shall be made covering the quality of seeds, fertilizers, paints and other articles of such nature that an intelligent opinion cannot be had without a practical test, but awards for creditable display may be given.
12. Doors of exhibition shall be closed five minutes before the opening hour of each session of the Society, and remain closed during the session.
13. Exhibition to be open not less than two hours before the opening of the morning sessions, to remain open during the day, except during the session hours, and as provided in Sec. 6, and to remain open one hour after the closing of the evening session.
14. Wall space shall be measured four feet in height, and when practicable a table not less than one foot wide shall be added gratis, if desired and applied for with entry.
15. Space desired shall be designated in square feet. A uniform charge of 25 cents per square foot for all space will be made, excepting that all plants and flowers contributed for exhibition purposes only shall be admitted free.
16. Exhibits not in position before 1 p. m. on the first day of the convention may be excluded from the report of awards.
17. No articles exhibited shall be removed until after the close of the last day's session, except by permission of the superintendent of exhibition.
18. Exhibition classes to be arranged as follows: A—Plants; B—Cut Blooms; C—Boilers and Heating Apparatus; D—Greenhouse Appliances, including flower pots; E—Florists' Supplies, including Fancy Earthenware; F—Bulbs and Seeds; G—Miscellaneous.
19. Exhibitors may group their goods together, excepting in the case of living plants and cut flowers. These shall be shown in a separate department from the other classes.
20. All adjustments not covered by rules or published action of the Executive committee shall be referred to that committee.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

The total liabilities will probably amount to between \$200,000 and 220-000.

BOSTON.—There has been some little complaint of seeds not germinating owing to the very dry weather of the past month, but we have had some good showers this week and hope the drouth is broken; it has been so very dry in this vicinity that our market supply has been affected. Grass seeds especially have been very backward in starting and a large area on Boston common that was recently sown down will require replanting.

NEW YORK.—The season is not quite over and sales for May are holding out extremely well, yet it is sufficiently close to the end to sum up in a general way the record of the spring business. To start with, nothing was in short supply. Vegetable seeds were in some varieties overstocked, this being especially true of beans. Beans sold low last fall and many farmers saved over their own seed, the result being that neither wholesale trade nor market men have bought as in former seasons and a big surplus is left over. It was expected that peas might run short, but the reverse was what happened. A good many farmers who have done considerable vegetable raising in the past have turned their attention to hay this year and grass seeds have been selling well. High rents in the vicinity of the large cities are driving a good many of the local vegetable growers and truckers out of the business, and many changes in conditions seem to be in progress. Musk melon and cucumber seed for southern trade has been in big demand. Lots of late corn is still left.

The dry season has interfered greatly with the retail trade. From truckers and farmers numerous complaints are heard of seeds failing to come up. The business started out in a rather peculiar manner. Through March little was done. About April 1st it started in with a rush and continued until about April 15th or 20th, when it stopped short on account of the dry weather. Under ordinary conditions it should have continued for two weeks

Roman Hyacinths.

Our cable advices say, and we say, this is the time to buy. We can save you money if you will send us your order **at once.**

VAUGHAN'S SEED STORE,

CHICAGO: P. O. Box 688.

New York: 14 Barclay Street.

JOBBER OF FLORISTS' BULBS FOR 20 YEARS.

longer. The flower seed trade has suffered least, and this department is reported by all retail seedsmen as away ahead of last year. Between April 1st and 15th it was the best ever experienced. This applies more strictly to counter trade. As to mail trade the less said the better. Mail orders are now 25 cent orders where formerly they were \$1.00 orders. In specialties sweet peas have more than held their own and there is no sign of waning popularity in this favorite flower.

The spring bulb trade, while never heavy in volume, has been satisfactory all round and stock generally cleaned out. This is particularly true of dahlias, of which there were not enough in market to fill orders, and tuberose, of which there was a scarcity of large sizes. The sundries trade has also been good, with the exception of tobacco dust and tobacco stems, which most seedsmen have been obliged to stop handling on account of the stringent laws which require that a record shall be kept of all sales, monthly and yearly reports made and books be open for inspection at all times; too much trouble for the extent of this line.

Orchid Collecting on the Magdalene River.

Mr. J. H. Troy has received an interesting letter from Mr. John E. Lager dated "In Camp, Banks of the Magdalene River, April 27th," from which we select a few extracts as being interesting to our readers, and giving some idea of the boldness with which American collectors are going into this arduous work which until quite recently was promoted only by foreign enterprise.

After stating that he had just finished the collecting and packing of Cattleya Trianae, of which he had already shipped sixty-one large cases to the coast, with nearly one hundred more to follow, a trip which requires three days on mule-back to the river, and then a long trip by raft, Mr. Lager says:

"The varieties have not been picked out, as they are not in flower yet, but not having but one year to dispose of I could not very well lay idle and wait until the latter part of May, when the flowering season commences, then I had another reason, rumors of revolution circulating here on account of some elections which are going on today, and it is said if trouble results it will probably show in May sometime. I hope, however, that I'll be able to get my plants down to the

BULBS

Give us your wants, and will quote you price that will give you a living profit.

WM. ELLIOTT & SONS,
NEW YORK.

coast before, as the first thing done generally, is to lay hold of all kinds of embarkations on the river, and thus stop all communications. I hope to be able to leave here about the 10th or 12th of May, when I go for C. gigas, and thence for C. chocoensis, for which I'll have to traverse almost the entire continent.

"A favor I beg of you is to send me a paper now and then, daily papers as well as horticultural. Mails here are very slow, as in the interior they are transported on men's backs to the different villages, and oftentimes I am far off from any habitation."

Florists' Hail Association.

For once at least the Florists' Hail Association has been a lasting benefit. The following amounts have been paid to St. Louis florists for glass broken by hail during the storm of May 21:

Alexander Waldbart, \$69 80.
C. Young's Sons, \$3,739.86.
Robert F. Tesson, \$893.02.
Chas. Holzborn, \$27.40.
Felter & Breuckner, \$19.25.
Michel Plant & Bulb Co., \$1,109.60.
Jordan Floral Co., \$143 78.

Over 100,000 square feet of glass was paid for. Three St. Louis florists had neglected to pay their 6th assessment, and therefore were unable to receive benefits.

JOHN G. ESLER.

Aquatics.

ED. AM. FLORIST:—Please present my compliments to Mr. Tricker, and say that the dozen aquatics were not intended to be a catalogue of the most profitable or easily grown, and that I will endeavor to be "instructive" again presently.

AMERICAN FLORIST CO.,
CHICAGO.**

Denver, Colo.

Decoration Day trade was good; out of town trade much better than expected. Local trade would have been better had not the weather been so threatening.

The greenhouses of G. B. Connon at Lafayette, Colo., were totally destroyed by hail May 30. Mr. Connon's loss was over \$1,500. He will rebuild at once.

Perry C. Gallup is preparing to build an addition to his University Park range, two new short-span-to-the-south rose houses, each 18x125 feet.

The Colfax Floral Co. is building a large carnation house.

Mrs. R. Mauff is building at Harmon a large asparagus house 25x75 and 20 feet high.

The H. H. Given Co. are commencing to tear down their plant at Lincoln and Alameda avenues, their lease having expired. Most of the material will be moved and erected on the property owned by the company at Arizona and Washington streets, where their Red Leaf Conservatories are situated.

The Colorado Florists' Exchange began business May 20 at 1709 Curtis street, and reports having sold out clean every day up to date. This is the only florists' commission house west of Chicago, and undoubtedly fills a long felt want. The company was formed by ten of the leading growers of Denver and vicinity, and is in fact more of a co-operative association than a commission house. Their plan of operation is as follows: The company is stocked for \$2,000 (paid in) and each member after taking not less than a certain number of shares signs a contract for one year to allow the Exchange to handle exclusively his entire cut, pledging the stock taken and paid for as security for the performance of his contract. Aside from this the exchange is conducted as a regular commission house; florists not stockholders may bring their stock in for sale, paying the usual 15% commission, and participate in all the benefits of the Exchange except that they have no voice in making rules for the conduct of the Exchange, nor in the election of officers, and of course they will not participate in the earnings, which will undoubtedly be quite a tidy sum each year. The officers of the Colorado Florists' Exchange are A. M. Lewis, president and manager; Perry C. Gallup, secretary-treasurer; Lyle Waterbury, Frank Hall and Harrison H. Given, directors.

Mr. Chas. Adams, superintendent of the capitol grounds, has wrought a wonderful change in the appearance of the place during the last six weeks. Although hampered for lack of sufficient help he has in the remarkably short time allowed him succeeded in getting a good stand of grass that will be ready to cut next week, and has also planted several hundred trees and a large number of shrubs, etc., all of which are up and coming. Mr. Adams has displayed ability of a high order in this line, and has agreeably surprised every one by the quick and excellent results obtained by him.

The entire force at the city parks under the efficient management of Supt. A. J. Graham are busy planting out the large amount of bedding stuff grown in the city park greenhouses for park purposes. Mr. Graham reports that they will plant over a quarter of a million plants in the city parks this season.

Mr. A. L. Vaughan was in the city last week.

Portland Cement Joints.

I would like to inquire through the FLORIST if iron pipes put together with Portland cement will give good satisfaction for hot water. Will it answer as well as red lead and oakum if a good space is given for the cement? C. F. G.

If made properly the Portland cement joint will answer for hot water work and will give as much satisfaction in every way as the red and white lead joint.

To make the joint, first, take a piece of rope of any kind, and of sufficient size to make a tight fit, cutting off enough to go around the pipe and lapping over about one inch and drive this rope to bottom of joint with a caulking tool and hammer. Second, press into the joint enough of the Portland cement to make about one inch thick all around, then drive in another piece of rope as before. Repeat this operation until joint is full. Cement should be mixed to the consistency of stiff mortar.

THE AMERICAN EXOTIC NURSERIES,
 SEVEN OAKS, FLA.

Rochester, N. Y.

Decoration Day is past; plenty of cheap bedding stuff was disposed of during the week, cut flowers were very plenty and everybody had a surplus of outdoor flowers. The demand for bouquets and cut flowers for adorning the graves was not so brisk as in former years, but sales in plants of the cheaper grades may be put down as rather lively, although owing to the cutting in prices no florist in town may boast of an increase in cash sales. The weather was delightful and the cemeteries were thronged with thousands of people during the whole of that day and Sunday. Florists were busy planting beds and filling vases, and when night came many of them were glad that the hard and in many instances unprofitable work of the day was past. Most of us are willing to work hard if there is a reasonable profit in sight, but on this occasion with many it was only a question of disposing of stock on hand at any price, or else to keep it on hand and run chances of later sales. However, there will be a demand for bedding stuff up to the middle of June at least, and a good part of the stock left over may be disposed of yet. Otherwise the week passed without special noteworthy event, trade in the stores was only fairly good, but nearly all were kept busy with plant orders and the planting of flower beds.

As we had two successive and very generous rainfalls lately, the early planted stock shows a decided improvement, and the remaining small stock which is to go out has now a better chance than was anticipated. Asters, stocks and other annuals, which may be wanted for cut flowers, will not need to be watered when planted, nor is there any danger of drying up as long as the ground is in so moist a condition as at present; they will take root at once and when dry weather sets in again will be firmly established.

J. B. K.

Toronto.

I am pleased to have to report that just now all those who deal in plants are too busy to talk except for money. A great business is being done; some of the growers are already cleared out of geraniums. A great many people seem to have got on to the fact that Gen. Grant is a good geranium; the demand for that variety has been altogether unprecedented. Prices have kept fairly good excepting in annuals, which have been selling down below cost. Many of the butchers have been doing considerable in the plant line, in fact some of their stores look more like florist stores now that the meat is all kept in the ice safe. Curious combination—flowers and meat.

NEW ROSE

"Mrs. PIERPONT MORGAN"

Listen for a moment to what a voice from far off Springfield, Illinois, has to say about our young stock of this rose:

May 4, 1896.
"EDWIN LONSDALE, Chestnut Hill, (Station H), Philadelphia, Pa.

"DEAR SIR:—Box of 'Morgan' rose plants arrived Saturday in good shape. Fine Plants. I would like to know how you produce plants of such size in a two (2) inch pot?"

All I can say is that it is all owing to the natural vigor of the variety, and perhaps to some extent to the natural rose growing qualities of our soil.

We have a few more left of the same size. Order early or you may get left, for I do not know of a more profitable variety to grow for cut flowers than MRS. PIERPONT MORGAN.

Don't forget our address:

EDWIN LONSDALE, Station H,

R. F. TESSON,

West Forest Park, ST. LOUIS, MO.

ALWAYS mention the AMERICAN FLO-
RIST when writing to advertisers.

Conneaut, O.

Spring trade here has been very good, the sales being far in advance of previous years. The chief call has been for flowering plants, double geraniums being the favorites. Coleus and other foliage plants have never been extensively used, but this year several large beds will be planted with them, which may tend to increase the demand another season. The nights are very cold still, although the mercury does not touch the freezing point, still soft stuff gets badly chilled, and there is a good deal of bedding out yet to be done. For five days previous to Decoration Day a heavy gale from the west prevailed which whipped all the outside flowers to pieces, as a consequence, carnations, roses, and sweet peas were in good demand and sold well. Decoration Day trade was the heaviest known, owing to the scarcity of outside flowers.

Miss E. E. Venen, the leading florist here, intends remodeling her entire plant this summer, and will erect a carnation house 60x20 with office 20x12 in front. Lovers of old-fashioned roses and herbaceous plants would have a great treat just now walking round her place, where roses planted 40 years ago by her late father and still tenderly cared for are in full bloom. H. Y.

Orange, N. J.

Mr. Henry Bird, of Newark, delivered an interesting lecture on "The Evolution of a Flower," in Decker's Hall, on May 18th, under the auspices of the New Jersey Floricultural Society. About 150 persons, including prominent society people were present, and the hall and stage were decorated with a fine collection of orchids, carnations and foliage plants.

The speaker explained the theories of evolution and origin of species as expounded by Darwin, Haeckel, Buchner, Romanes and Drummond, and illustrated his remarks with specimens of animal and vegetable growth, showing how plant life resembles animal life in many characteristics and elucidating probable methods of transition from plant life to animal existence. The lecture was greatly enjoyed by those who were present.

Lenox, Mass.

On Wednesday evening, May 27th, J. F. Huss gave his last bachelor supper. His many friends in Lenox gathered around him in response to an invitation, and were entertained in right royal style. After partaking of a substantial repast, the "health of the bride and groom" was responded in a very hearty manner and suitable remarks were made expressing the sentiments of all present. Songs, recitations and stories were indulged in until the "wee sma' hours" and after singing "auld lang syne" the company dispersed, and the well known sanctum sanctorum never held a more jolly crowd than those who assisted Mr. Huss to bid farewell to bachelorhood. May his future be happy as well as prolific.

News Notes.

EXETER, N. H.—Geo. W. Hilliard is adding two more houses to his range.

BLOOMFIELD, IA., Mrs. T. E. Dote has just started in business as a retail florist here.

MONTPELIER, VT.—W. L. Draper, because of ill health, has leased his establishment to E. Jacobsen for three years.

GLASTONBURY, CONN.—G. H. Hale of the nursery firm G. H. and J. H. Hale has sold his interest to his brother J. H. Hale.

HOBOKEN, N. J.—Kogge Bros. have removed to their new store, 616 Washington street, one block below their old establishment.

TIFFIN, O.—Lewis Ulrich has been awarded the contract for furnishing the Baltimore & Ohio railroad with plants for decorating the parks along the line.

MONTPELIER, VT.—E. Jacobsen has taken a three-years' lease of W. L. Draper's establishment and will take immediate possession. Mr. Jacobsen was in Mr. Draper's employ for some time.

MENDOTA, ILL.—Henry Schweitzer lost nearly all his glass by hail May 24. He reports some of the hail stones as weighing one-half pound. He wishes to ask assistance from his brother florists to help him out of his present difficulties.

CONSHOHOCKEN, PA.—Florist W. S. Harry met with a serious accident while visiting Florist Metcalf's place in Norristown. He accidentally ran against a piece of broken glass, suffering a deep cut in the thigh. It is healing rapidly, but he is still lame.

PORTLAND, ME.—Alex Burns of New York and W. J. Stewart of Boston, were in Portland on Tuesday as guests of J. A. Dirwanger, with whom they have gone to the wilderness of northern Maine fully equipped with all the necessities for successful trout fishing.

NEVADA, OHIO.—The Wyandotte Nursery has changed hands, W. H. Jaqueth retiring and W. J. Johns taking his place; W. M. Shank is general manager. They intend to overhaul the greenhouses and put in a new boiler. They have about 6,000 square feet of glass and will grow cut flowers and all kinds of bedding plants.

Jones, McDuffee & Stratton, Plant Pots and Pedestals

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

A HYBRID SYRINGA (philadelphus) was recently brought into our office by the originator, Mr. D. S. Heffron of Washington Heights. It is remarkable for its short-jointed, stocky growth, thick, leathery, deep green leaves and abundant bloom, produced in thick clusters that bear a striking resemblance to apple blossoms. The petals are clawed and the stamens very abundant. It is a striking thing, very distinct from the ordinary mock orange, and it seems to possess great lasting qualities. We believe this will prove a valuable addition to our garden shrubs. Mr. Heffron's plant was a chance seedling, and is now some five years old.

Carnation Notes.

Pinching back or topping as it is called
in many places is an operation that
requires to be done judiciously as well as
economically. What we want to accom-
plish with it is to prevent the young
plants from blooming and to force them to
form good stools near the ground. A
plant may accidentally get broken off, a
rabbit may have made his meal on some
plants, or the worst of such injuries, the
cut worm comes with his destructive
work. There is only a part of the plant
destroyed, may be half more or less, there
is probably enough of the plant left to
grow out again, and in time make a good
plant, but the part destroyed is a very
important one, just as important as if so
many roots had been destroyed, for that
part may have contained a good many
leaves or most of the leaves. Did you
ever notice the effect of such an injury,
how it keeps the plant back? A glance at
the next uninjured plant will give you a
comparison of the effect of the injury.
Perhaps the near neighbor is a small
plant, in weight perhaps not as much as
the stump left on the other, but it has its
leaves, and you soon will see which will
be the best. Perhaps you will pass it
with the comment: "It has time to grow
out again."

Reckless, careless pinching or topping
comes in effect near these accidental
injuries mentioned. Therefore I say we
must perform this operation judiciously,
at the right time, when it will have no
retarding effect on the growing plant; and
economically; we must not wait until the
young plant has grown beyond the limit
where it should have been topped and
then cut half its growth away. Here is
waste added to the injury.

When is the right time? Before I will
answer this question fully, let us look
into the relations of the leaves to the roots.
Suppose we commence with the cutting
inserted in the sand and kept wet. Clear
sand does not contain any nourishment;
if any it is very little, neither does the
clear water. Nor would the cutting be
able to take up nourishment, but it is able
to take up water at the severed cells at
the cut. The cutting has to depend on
its own strength, on its stored up nour-
ishing elements, a reserve to form new
roots. With the aid of the water these
stored-up nourishing elements take their
natural descending course, the same as in
a normal plant, forming new cells, new
growth; arriving at the cut layers of cells

are formed, what we call callus, and
eventually new roots.

When the rooted cutting, now a new
whole plant, is transferred to the nourish-
ment containing soil, the new roots with
their discriminating power will gather up
food, sustenance for the future growth.
But one must not suppose that the raw
sap as taken up by the roots is in the con-
dition to form new cells, new growth in
its ascending course; no, it has to rise
first into the leaves, where in their broad
expanse under the influence of warmth
and light it will be condensed, refined, put
in the condition to form new cells, new
growth. To do this it has to descend
from the leaves, and in its downward
course between skin or bark and wood, it
adds new layers of cells, new growth to
the body, starts the dormant eyes into
growth, new shoots; descending further
down into the roots it is acting in the
same manner, increasing the body of the
roots and starting out new ones, the same
as it starts out the dormant eyes into
branches above the ground.

This is the normal course of plant
growth. The raw sap rises through the
body more through the outer and
younger layers of cells, the young growth
into the leaves, and descends in its con-
densed form, after furnishing the necessary
part for the upward growth, between
skin or bark and wood, effecting new
growth. Thus we see the importance of
the leaves, and should act judiciously in
removing some. If we deprive the plant
of all its leaves, it will start out, form
new ones again, but not with the aid of
the roots, for they are useless, except to
furnish the necessary moisture to bring
the stored reserve into circulation. Such
a plant is not much better than the cut-
ting in the first place, it has to start from
its own resources until the equilibrium be-
tween roots and leaves is established
again. If we remove part of the leaves
the equilibrium between roots and leaves
is disturbed, and the plant cannot work
in its normal way. So with a reckless,
careless topping we may just prevent or
retard what we intend to accomplish.

Now I will answer the question, when
is the best time to perform this operation
and how it is done best. Suppose the
plants are well established in the field, the
ground is in good condition and well en-
riched. Under these conditions most
varieties will assume their upward growth
to form bud and bloom; but at the same
time the plants will break in their lower
joints. Now if in such a state the heart
of the plant should be pinched out at
once, and not be allowed to grow on.
This is best done by taking hold of the
few leaves in the center and pulling or
bending to the side, breaking it, they snap
off very easy. If a knife has to be used
the plant is surely beyond the time this
work should have been done, and comes
under the category of wasting material.

The sap that it required for the upward growth is directed to the started side branches and enlargement of the body. The side branches will grow on, mature, get ready to bloom, and the same process has to be repeated. Always be careful to do it in time, so the least number of leaves is necessary to be removed. In this way if all is favorable the plant will continue in its normal growth and form stocky well stooled plants. The removal of a few leaves will not cause interruption, the sap is only directed to other channels, already opened for it.

Circumstances may cause deviations. A poor soil and often other circumstances will rather hasten the plant to mature, get ready to bloom, all its strength is consumed in this effort, and nothing is left for its further growth. The eyes in the lower joints will stay dormant, and will not break until the top is removed. Now be careful and leave all the leaves possible, rather resort to a second cutting after the eyes in the lower joints have started; for if the plant in its impoverished condition has to resort to the reserve, where there probably may be very little, very slow progress will be made indeed. Severe dry weather will have the same effect as poor soil. Some varieties will form bushy plants without any topping, they have not the tendency to bloom early. They are the late varieties and often the croppers.

FRED DORNER.

Moving Old Budded Roses.

I have two large Lamarque roses budded with Perle and Niphetos. I am about to move my greenhouses; would it be possible to move these plants successfully? If so, how and when should it be done.

J. F. W.

Moving very large old rose bushes, especially in summer is always attended with considerable risk. I would suggest that J. F. W. keep the plants in question as dry as possible at the root for about a month to bring them into a semi-dormant condition and when he comes to dig them up keep away from the stem on all sides with the spade, at least three feet, removing the soil inside this area with a spading fork to avoid cutting away the fine roots. Dug up in this manner, preserving as many roots as is possible, and doing the work on a cloudy day, protecting the roots from exposure to the air while transferring from one house to the other, planting again as soon as possible in fresh, rich soil, shading for a week, and applying water sparingly at the root, but syringing freely overhead several times a day, there is little danger of dying or even severe suffering from undergoing the ordeal of moving.

ROBT. SIMPSON.

Grubs in Soil.

In soil that I have prepared for my rose house to plant young roses in I find a great number of grub worms just hatching. They appear to be in the cow manure that was piled up with the soil. Will it be safe to put this soil in and plant

roses in it, and if not what can I do to get rid of them grubs if I should use it?

M. E. G.

If the grubs in M. E. G.'s soil are hatched out of the manure they are less to be feared than are those found in the sod, the manure grub is dark in color and is very easily crushed, while the one generally found in the sod has a tough skin and is of a yellowish color; they feed altogether on roots and if taken into the rose bench are pretty certain to cause havoc among the roses. I have seen beautiful houses of roses practically ruined with this pest. The other species feeds chiefly on the manure, but should he happen to strike a rose in his travels he is liable to eat off the roots and go on his way. It is seldom practicable to discard the compost because of the presence of manure grubs in it, in fact it is sometimes impossible to get cow manure free from them. By carefully turning the compost and crushing all in sight, and repeating the turning and picking after it is in the house, it is possible to get rid of most of them. A good sprinkling of air slacked lime on the soil, or one or two waterings with lime water will generally destroy them while they are very small.

ROBT. SIMPSON.

Carrying Over Bride and Bridesmaid.

N. T. F. C., Canada, has a house of Bride and Bridesmaid roses they would like to carry over for another year; plants are small comparatively, and are giving fine bloom at present. If the risk is not too great they would like to grow them right along without any rest whatever. Replying to same I would say that as a rule I do not advocate the carrying of plants over to the second year, I have seen so many failures in doing so, that there appears to be too much risk attending it. With good fresh soil and fine thrifty young stock, there is every reason to expect good success provided proper care is given; not so with carried over plants. I have known one or two growers, however, who have kept in a large part of their stock for two or more years and have almost invariably been successful in doing so. Plants that have bloomed through the winter and all summer without having any rest, are very liable to stand still during the early winter and prove very unsatisfactory; for that reason it has been found best to gradually dry them off, compel them to take at least a partial rest for a period of from four to six weeks during the summer, then thin out, shorten back, mulch and start up. This method of course renders it impossible to cut any flowers during say three months.

Another plan and a very good one if carefully carried out is to lift the plants after cutting away all soft immature growths, retaining a good ball of earth and as much root as possible, and plant immediately into fresh soil. It is a good plan to empty part of a bench, refill with soil, then lift enough to plant the space prepared, and repeat until the whole house is transplanted. Any plants showing disease or lack of vigor must be discarded; they should also be allowed more bench room the second year. Plants lifted carefully, shaded with clay water on the glass for a few days, syringed frequently and kept rather close will not suffer very much and will be in bloom again in a very short time. Perhaps in this case if flowers in the summer are a consideration lifting and transplanting would be the most satisfactory method. The continuous growing method in the

same soil, as suggested, I could not endorse.

ROBT. SIMPSON.

Hybrid Roses.

BY MR. GEO. KLEIN.

[Read before the Chicago Florist Club June 11.]

Hybrid roses are no more profitable for florists; the American Beauty and the Meteor have done away with most all of the forcing of the hybrids. We now grow but very few hybrids for flowers, only for nursery trade. The price ought to range from \$1.50 to \$4 per dozen to be profitable, but these prices are generally not to be had now.

Propagation: They may be propagated in a great many ways, but to propagate them on a large scale I think the best way is to set out Manetti roses in the field two and one-half feet to three feet apart, and 8 inches in the row, and then bud or graft them there. In this way there is but very little handling, and they grow with the least care of any way that I know.

Green cuttings may be propagated in the greenhouse the same as tea roses, and also in the summer in the hotbeds. The hotbed propagation I shall explain as near as possible, as this manner of propagating does not seem to be practiced very much.

We dig out a hotbed about two and a half feet deep, and board up on both sides, making the south side of the hotbed about six inches higher than the north side, and then we put about eighteen inches of fresh horse manure in and tramp it down solid so that the manure begins to heat. On the top of the manure we put six inches of sand, moisten the same, and pack down solid, then we at once place the hotbed sashes over them, so that the heat and moisture will not escape too much. We then proceed to make a frame over the same with common sheeting cloth, which we slant toward the south. This shading ought to be made high enough so that you may work under the same comfortably, and so that no sun may shine on the hotbed except through the sheeting; then we are ready to put in cuttings (if the hotbed windows are clean; if not they must be washed perfectly clean in order to give plenty of light). Cuttings are inserted the same as in the greenhouse. We air them once a day for fifteen minutes, and sprinkle them about once a day, and this we do between ten and eleven o'clock. In this manner they will root in 25 to 30 days, and sometimes require a great deal less time than that. When rooted pot and treat the same as tea roses.

Another way of propagating is to take Manetti roots and root-graft them, in the same way as we root-graft apple trees; this we generally do in February and March. We treat them the same as apple root grafts. These are generally taken from the cellar about April 15, planted in the field and grown two years, by that time making a very large plant.

For forcing the kinds are limited; those that we have most generally used were the Jack, Mrs. Jao. Laing, Magna Charta, Ulrich Brunner, Mme. Gabriel Luizet, Mabel Morrison and Baroness Rothschild. Forcing the roses has been mentioned so many times through our trade papers that I hardly deem it necessary to explain it here. We have grown them in solid beds, benches, pots and shallow boxes. I think that the most profitable way to grow them is in pots during the summer and placed in benches whenever wanted for forcing, but to go into all the details I think I would be taking up too much of your time here.

REMOUNT POT ROSES IN BLOOM FOR THE EASTER TRADE AT THE ESTABLISHMENT OF FREUNDLICH, JR.

NOTES FROM ST. PETERSBURG.

St. Petersburg Notes.

We present in this issue several engravings from photos sent us by Mr. Gebhardt, the titles of which are sufficiently explanatory.

We have now received a note from Mr. Gebhardt, dated May 24, announcing his arrival in Moscow, and stating that he will soon send us some notes and photographs from that city.

The Air and Plant Life.

[We give below some interesting extracts from a paper upon Air and Life, by Henry de Varigny, which originally appeared in the *Revue des Deux Mondes* and were reprinted into the report of the Smithsonian Institution for 1893. We have extracted merely the parts that seemed of interest from a horticultural standpoint.]

Although plants by their respiratory function are exhalers of carbonic acid, they absorb a much larger quantity of it for their nutrition. They absorb this gas and decompose it into its elements, carbon, which becomes part of their tissues, and oxygen, which they restore to the air. Plants are great producers of oxygen.

* * *

True, plants exhale oxygen through their function of respiration. With them also this function may vary in intensity. During germination a large quantity of oxygen is required and we thus understand why so many seeds cannot germinate under water where the supply of oxygen is insufficient, or in compact soils

that are not easily penetrated by air. One seed may demand one-hundredth of its weight in oxygen, another seed will thrive on one-thousandth, but all needs some. Plants also require oxygen during growth; they consume it in large quantities when blooming, at which time chemical operations are so rapid and so intense as to give rise to quite a perceptible production of heat. At every instant in their lives they consume oxygen, and it is for this reason that large quantities are not kept in our dwellings, especially at night, when they produce carbonic acid, oxygen being exhaled only by day. Even when apparently dead, plants still breathe; their separated parts—blossoms, leaves, fruits—inclosed in a vase filled with air, consume oxygen and produce carbonic acid. If placed in a medium devoid of oxygen, death speedily follows.

* * *

Oxygen, the vital and pre-eminently vivifying gas, is also a virulent poison, not only for animals but for plants; for cells as well as for the entire organism. If the tension of the oxygen of the air be raised to a certain degree, or, what amounts to the same thing, if its volume be increased to a certain proportion, that air becomes at once a death-dealing agent. This can be demonstrated in two ways, either by subjecting the animal or plant to an abnormal atmospheric pressure or by placing it in air in which the proportion of oxygen has been artificially in-

creased. In both instances the same phenomena takes place and death soon supervenes. The cause of this is not well known as regards plants, but Paul Bert has shown that animals die in an atmosphere overcharged with oxygen as soon as their blood contains one-third more than the normal proportion of oxygen.

* * *

This poisonous property of excessive oxygen is one of the most curious facts that recent years have brought to our notice, and it is so clear, so marked, that it can be no longer open to doubt.

* * *

Let us take this well-established fact for a starting point: Nitrogenous food is indispensable to maintain life in beings of the higher orders. How can plants that directly or indirectly provide the nutriment of those beings, lay up a supply of nitrogen? The natural answer is, they take it from the atmosphere. But how? That question is one that engrossed the earnest attention of chemists and agriculturists, and in France, notably, Bous-singault, Berthelot, Deherain, and Geo. Ville have devoted considerable time to its study. They ascertained that certain plants obtained nitrogen either in the form of nitrates produced by combination of the nitric acid of the air with substances in the soil, or in the form of ammoniacal vapors. But M. Berthelot several years ago showed that there was another factor in the problem, that the soil doubtless contains microbes endowed with the power of so treating the nitrogen of air that it can be assimilated by plants. This theory has been fully confirmed by two German scientists, Messrs. Hellriegel and Wilfarth, whose most valuable investigations have been recently published. They discovered that certain plants, and especially leguminous ones, possess the property of thriving in soil poor in nitrates, and of taking the requisite quantity of nitrogen from the air by means of special microbes that live on their roots. If the microbes are destroyed, the growth of the plant will be stunted, if they are aided in reaching the roots by means of sprinkling with water in which earth has been kept for a few hours, the plant will at once prosper. Better still, if two leguminous plants are put in sterilized soil, and if, as was done by M. Breal of the Museum, a small quantity of the liquid, charged with microbes that fills the nodes of any thriving leguminous plant, be injected into the root of one of the two plants, it flourishes at once, while the other that was not inoculated remains stunted. There is no controverting this demonstration. The microbes on the roots of leguminous plants are agents through which plants assimilate nitrogen. A new study is open to agriculturists and there is no doubt that other facts of the same purport will be discovered in this unsuspected field of investigation. In our present discussion we need only know that atmospheric nitrogen is retained by plants, and, as we know that nitrogenous food is necessary to higher beings, and that the supply of such food can be invariably traced back to plants, we may conclude that the nitrogen of air is an indispensable agent in animal as well as vegetable life. Though an inert, and at first glance useless gas, it nevertheless performs an essential function in nutrition of all beings. Our legitimate conclusion therefore is that without nitrogen there can be no food, no plants, no life. It is proper to add that plants derive nitrogen not exclusively from air, for nitrates and ammonia also supply some, but these compounds are themselves

drawn from atmospheric nitrogen and our proposition remains true.

* * *

All animals, whether directly or indirectly, feed on plants, and plants take from the soil the greatest part of their mineral elements. Nitrogen and oxygen they take from the atmosphere, but whence do they draw the carbon that is so abundant in their tissues? Two sources of supply are known. Carbonic acid exists in the ground in the shape of carbonates formed by its combination with various substances, and in humus or surface soil composed chiefly of fragments of vegetation dead and decomposed. But inasmuch as humus was not available for the first plants, its carbon cannot be taken into account. The carbonates in the ground seem therefore in accordance with the opinion of Mathieu de Dombasle and a number of agriculturists and chemists who followed him, to be the only purveyors of carbon necessary to plants. Still the experiments of Sprengle, of Sausure and of others, have shown that carbonates were credited with more importance than they really possess, and at a more recent date it has been proved by Liebig that plants thrive well in a soil destitute of carbonates. But whence do they derive their carbon? We now know that they take it from the atmosphere. They possess the property of decomposing the carbonic acid of the air and setting its elements free, releasing its oxygen and retaining the carbon in their tissues. The 41,000,000 hectares of cultivated land in France absorb at least sixty millions of tons of carbon each year. There are, however, two conditions without which this important operation cannot be accomplished; the plants must be supplied with chlorophyll, the green matter which imparts color to the leaves; there must also be solar light, and the temperature must not be too low. As a matter of fact, chlorophyll can only decompose carbonic acid in the light and under certain conditions of temperature; it ceases to operate in cold weather or in darkness, and when it is deficient, when there is a lack of leaves, the plant droops and dies of starvation. For it is a point worthy of our careful notice that the function of chlorophyll is one of nutrition, decidedly distinct from that of respiration, by the operation of which plants, after the manner of animals, absorb oxygen and throw off carbonic acid. These two functions are not equally active, the former being much more so than the latter, although it only operates by day. If it were not so and if the two functions were exactly balanced, it would be impossible for the plant to grow, as it would lose through the one what it gained through the other. It is then chiefly by the medium of the leaves, and in a less degree by the roots, that the carbonic acid of the atmosphere is absorbed, and in any event, that gas must pass through the leaves, the green parts fed with chlorophyll, in order to be utilized by the plant.

* * *

Plants add but little to the supply of moisture in the air if it already abounds; but in dry air they emit enormous quantities. It has been possible to estimate, for instance, that a grove of 500 full-grown, healthy trees emits nearly 4,000 tons of moisture in twelve hours of daylight. Vegetal transpiration is less by night and barely equals one fifth of the evaporation by day.

Cutting Bed Fungus.

In the AMERICAN FLORIST of June 6, page 1200, a case of disease is diagnosed

as fungus of the cutting bench. I doubt very much if it is fungi. Nearly every spring and fall this question appears in floricultural papers. I believe in most cases deep planting is the cause. Carnations root only at the very point of the cutting, never along the stem, hence shallow planting would be natural for such a class of plants. A ficus roots along the stem; you can therefore plant it four feet deep and no trouble will result.

Some years ago I had a lot of carnations unsold late in the fall; they were heeled in a frame and covered from frost. When they were lifted to plant I found many of the stems rotting and discolored from being planted too deep. Another case came to my notice a year ago. I was visiting a florist; he took me to see his carnations, as they were all dying off; he had asked every florist who came to see him what was the cause. There were as many different answers as visitors. Our friend was not satisfied; he put me into the question box. I felt now or never, my prestige was at stake if I did not give a correct answer. I said from appearance I would say too deep planting. My friend gave a long knowing laugh. I thought I had got the butt end of a joke. He said "You are the only man that has given a correct answer. After planting the carnations I thought I would be real good to them and I took the soil from the violet house and put around them." He removed the extra soil and the trouble ceased, showing plainly that was the cause.

A. GILCHRIST.

Chrysanthemum Notes.

After the plants are set in the benches give them a good watering. By this we mean to wet the soil through to the bottom of the benches, and then until the plants have obtained a good hold in the new soil water sparingly, just wetting dry spots. Syringe the plants every pleasant morning, and keep the wood soft and growing.

Many of the growers who raise large quantities of a variety select a few strong plants from those that they are planting out and set them out in the open ground for stock. These they allow to grow as they will during the summer, keeping them headed in a little and lift in the fall, storing them in some pit or cold frame, where they will be safe from freezing until wanted in midwinter. They claim that the plant will give a very much larger quantity of cuttings, and that these will produce a much stronger plant. We do not vouch for this from experience, but upon the word of some of the very successful growers. But one thing is sure, it enables the grower to clean out his benches immediately after the flowers are cut off, there being no time taken in selecting and setting out stock plants.

Should any of the plants get broken off in setting or accidentally after they are set it is better to lift them and set them on the edge of the bench or put in a new plant. The plants around will have made quite a growth before the eyes on

the injured plant get broken out, and when they begin to make their strong growth a few weeks hence they will soon smother the more backward plant.

ELIJAH A. WOOD.

Cattleya Gaskelliana Alba.

At Rochester, N. Y., one of the finest specimens of this superb and chaste orchid is now flowering in the Kimball collection. The plant carries 33 snow white blossoms remarkable for their size, purity and substance. It has been grown most successfully in a glazed pan and resembles a giant bouquet. Crowds of visitors admire it daily. This is one of the easiest cattleyas grown, and thrives well suspended or on the stage. The smallest plants increase much quicker than many other cattleyas, and it blooms as freely as the old *Cattleya labiata*.

A. DIMMOCK.

Herbaceous Plant Notes.

Oenotheras must be mentioned among the best and most ornamental of our hardy plants; they produce their large and brilliant flowers in such profusion all through the summer months. Many of them are fragrant, and they may be used in many places where other plants would not find nourishment enough to sustain life. They grow and flower well in a rather dry border fully exposed to the sun, or they may be planted along the edge of a shrubbery or else in beds by themselves, wherever planted they make a most beautiful show from the latter part of May until September, and will do the same year after year without replanting but may want a thinning out in spring, for they grow and spread considerably when left alone. With few exceptions, most of the perennial species do not attain a greater height than two feet, and usually are compact and dense in growth, sending out numerous stems from a creeping rootstock, and flower profusely from the axils of the leaves as the stem elongates. Yellow in lighter or darker shades is predominating in the family, although white, changing to red or pink as the flowers grow older, is not uncommon. Where very large beds are to be planted with them, it would probably be advisable to introduce some of the taller growing biennial varieties, such as *O. biennis* Lamarckiana or grandiflora for the center or the background of the bed, and for this purpose a few of these should be grown every year to take the place of the old decayed plants. Mixed with veronicas, Delphinium sinensis or Aster bessarabicus a patch in the border looks exceedingly well. Equally good effects may be produced by planting these blue or purple flowers close by or adjoining the yellow *œnothéras*. One of the best yellow flowering varieties is *O. glauca* Fraserii, it is continuously in bloom from the beginning of June to October, and there is hardly another variety which could be compared with it in this respect. The flowers are of a bright yellow, rather large in size, and if some of the species surpass it perhaps in the size of the flower or in a deeper color, the freedom of producing the flowers for such a long time in the hottest months of the year

LILACS IN BLOOM FOR EASTER AT H. F. EILERS'.

ST. PETERSBURG NOTES.

cannot be equalled by the other varieties. It does not grow quite so tall as the ordinary *C. glauca*, and seldom attains a height of more than 12 to 15 inches, while the common one will grow two feet high. *C. fruticosa* will grow from 2½ to 3 feet high, and produces its large pale yellow flowers from June to September. The stems are stout and erect, branching from the middle up to the apex, thus fitting the plant admirably for planting among those of lower and less robust growth.

Of the white flowering species none perhaps is better adapted for beds than *C. speciosa*; it blooms very early in May and lasts well into September. The flowers are very large, 3 to 4 inches across, and very numerous. A bed of it alone or when mixed with pink *saponaria*, *Geum atrosanguineum* or any other plant as fancy may dictate will invariably give satisfaction. It grows a little tall, 2½ feet, but stands up well, as the stems are rather stiff and woody. When the flowers grow older they will turn a pretty pinkish color, and the different shaded blooms on the same stems look very pretty and are a curiosity to most people.

Campanula media is coming on fine, and flowers splendidly this season, the various shades of blue or pink and the whites also are exceedingly handsome now, but they should not be planted without preparation for a succession, because after flowering they become rather unsightly objects in the border if not succeeded by a later blooming robust growing plant of some kind. A few fall flowering asters, *coreopsis*, *heliopsis*, *anthemis* or other things should be planted with them, or if this mixing is objected to, young plants of the campanulas may be planted annually between the older ones, and when the latter are past their best they should be removed entirely to make room for the younger plants, which will in a short time occupy and cover the

ground, leaving no unsightly bare spaces. *Lychnis vespertina alba plena* would make a fine bed all summer either alone or planted in with the taller campanulas, veronicas, delphiniums, aconitums, digitalis, etc. Being a perpetual bloomer it is a decidedly fine and excellent plant for a permanent bed, requiring very little care or attention. A rather rich ground and a full exposure to sun and air suits them best. A large patch of the *Gaillardia grandiflora* looks gay and bright, and will continue in this brightness until hard frosts cut them down in November. As they grow freely and send up a mass of leaves and flower stems, completely hiding the ground under them, there is no need of planting any other flowering or ground carpeting plant between the *gaillardias*, but a few clumps of *boltonias* or fall flowering asters look well among them, and heighten the effect in late fall, when other flowers are scarce.

Astragalus Hypoglottis and *A. H. albus* are in flower for some weeks; they are very free flowering in June and July and cover the ground completely, forming a dense mass of light green only about three inches high. They are good for the edging of a bed or in patches along the front of the borders, with a few plants of *pentstemon*, *adenophora* or other sparsely leaved plants stuck in a good way apart. Such low and compact plants are very useful for covering bare spots in the borders and should be introduced wherever possible. J. B. KELLER.

Rochester, N. Y.

American Association of Nurserymen.

The twenty-first annual meeting of this society was held at Chicago June 10-11, with a large attendance, and much interest was manifested at its sessions. President Silas Wilson of Atlantic, Iowa, opened the first session with an address, in which he touched specially on the ques-

tion of transportation. While the prices realized for nursery stock have been steadily declining for several years, railway tariffs show an increase, and there is also a tendency to lower the weight allowed in carload lots. Mr. Wilson urged the association to take action upon this matter, and as a result of his recommendations a standing committee of five, exclusive of the president of the society (who is a member ex-officio) was appointed, this committee being empowered to take such action as they deem advisable, and to devote their best efforts to the representation of nursery interests to the railways. An appropriation was made from the society's treasury for the purpose of meeting any necessary expenses. Mr. Wilson also touched on the other aims of the society, which, as he said, is not so much a horticultural school as an occasion where nurserymen may meet to cultivate each other's acquaintance and enjoy social pleasures with men of like interests. The reports of secretary and treasurer showed the society to be in a flourishing condition financially.

The election of officers confirmed all the existing officers for another year, no changes being made. After a discussion of various places for the next meeting St. Louis was finally decided upon.

An invitation was received from the West Michigan Horticultural Society, asking the association to travel by boat across the lake to St. Joseph, to be the guests of the society, and to view the fruit-growing places of that section. A number of the members availed themselves of this invitation. An invitation was also received from the Chicago Florists' club for any members interested in hardy roses to visit their club meeting Thursday night, which was devoted to this flower.

The provisional program was varied by a number of interesting discussions. An address by Prof. L. H. Bailey was listened to with marked attention, and received with much applause. When that silver-haired veteran, Robert Douglas, rose to utter a few words he was greeted with a spontaneous ovation, but circumstances prevented him from reading his expected essay on hardness of trees and tree seeds. Prof. Van Deman, Mr. Albaugh, Mr. Jenkins, and Mr. Campbell, of Ohio, and others were on the provisional program, and the impromptu discussions were listened to with deep interest.

There was an exhibition of seedling evergreens, tree balers and other appliances, and lithographs, in connection with the meeting, which came to an end Thursday.

Cleveland Parks.

The evolution of a large city presents many interesting phenomena to the attention of a careful observer, among others the growth and development of a park system. In its earlier stages the inhabitants of a town find sufficient opportunity to enjoy the pleasures of communion with nature without the special resorts for that purpose that a larger municipality finds its good policy to provide for its citizens. Sooner or later, however, the necessity is felt and must be satisfied. In Cleveland the need for many years was not apparent on account of certain local peculiarities that gained for it its widely known appellation—the "Forest City." There was another local characteristic that tended to retard the movement toward better park facilities. This was the straggling character of city growth, and this arose largely from

generosity in the size of building lots, the low price of the same and the consequent ability of many to own their own homes. People were not bived up, pent in between four walls, to the extent that prevailed elsewhere, and the need of "breathing spots" was not of so urgent a character. These conditions have been vastly altered by the rapid growth of the city within the last ten years, and during the last five years or so there has been a great change in the city parks. Prior to that time there was practically nothing of the sort. Now there are upwards of eleven hundred acres of park property belonging to the city.

To properly understand the scope and character of the work done, and yet to do, a few broad facts may be stated here. Cleveland lies upon a deep indentation in the shore of Lake Erie, and upon a level plateau some fifty or seventy-five feet above the level of the lake. The Cuyahoga river—as malodorous as the Chicago river at its best, or worst—divides the city in two. From the valley of the Cuyahoga the ground rises on each side to the plateau aforesaid. At intervals in this plateau the natural waterfall of the region finds its way to the lake by means of creeks varying in size, and that is the course of ages have cut small ravines leading to the lake. Following one of the ravines that lies about four miles east from the center of the city, the better part of the present park system is to be found, and the nucleus of that portion lies here in the two portions known respectively as Wade and Gordon Parks.

Many years ago W. J. Gordon, a wealthy resident of Cleveland, bought a large tract of land lying along the lake shore and intersected by Doan Brook. Here he took up his residence and for many years lived and improved the property according to his own ideas of what a private park should be. And it must be said that his ideas were excellent, while in their carrying out within time, money nor pains were spared. The deep cut valley, with its meandering brook coursing through it, offered splendid opportunities for accentuating its beautiful features. All through the valley roads were made, vistas cleared among the forest trees, plantings made where nature had denied man the beauty that he craved, shrubs and trees not indigenous to the locality were put in, while away up on the level plain overlooking the lake was laid out in great tracts of level green sward that afforded a pleasant variety to the arboreal beauties of the valley.

Along the beach a shore drive was constructed and a seawall built. Thus for many years the work went on. An idea of the amount of patient labor that was bestowed on the grounds may be gathered from the fact that the country for miles around was scoured in search of these granite boulders that one often sees, the relics of a bygone glacial epoch. There are not many transportable ones now to be found within a distance of several miles from Gordon Park; big ones and little ones, all alike if at all movable, have found in the park a permanent abiding place. They jut up out of the hills, lie half buried in the valleys, are built into an artificial cave, and lie by the thousand out of sight in Lake Erie, where they help form a breakwater for the shore drive. There is a tale still current of a huge boulder that broke all the machinery, broke down the wagons and cost much money in lost time—but it reached the park finally. W. J. Gordon is dead, but his park, but little altered from his ideas, freely given to the city,

remains a witness to his good taste and liberality.

There are about one hundred and twenty-five acres in this part of the park system. Following the Doan Brook valley from Gordon Park to Wade Park, the city of Cleveland is the owner of a strip of land that includes the entire width of the valley for a length of about one and one-half miles. On the level ground above the ravine on the eastern side, a magnificent drive has been laid out, generous in width, and with ample provision for pedestrians. The plan also contemplates accommodations for bicyclers. While this boulevard is at present the only connection between the two parks, the completed work will find other drives on the opposite side of the ravine

H. F. EILERS A LEADING FLORIST OF ST. PETERSBURG.

and down in the lower lying levels as well. Wade Park, the present southern terminus of the boulevard, is a gift from Mr. J. H. Wade to the city. It lies directly upon Euclid avenue and includes within its seventy-five acres a considerable part of Doan Brook valley and a generous share of level, high-lying and well-wooded park land. The nucleus of a future zoological garden is also located here. At present it is not of any great extent, but it is being added to from time to time, and when other and more pressing matters connected with the park system are satisfactorily completed this matter will probably receive attention.

South of Euclid avenue and extending parallel with it for many miles easterly runs what is locally known as the "Ridge." This is nothing more nor less than the ancient shore of Lake Erie in prehistoric geological times. It lies high above the plain upon which the city itself is built, and to the east lie many beautiful summer residences of the Forest City's wealthy citizens, the home of John D. Rockefeller being among the number. The park property extends up into this ridge, always following Doan Brook until it reaches a point about six miles from the lake. This ridge property contains about five hundred acres of land, the very finest for park purposes, the most of the natural scenery being much wilder and more rugged than the portion already thor-

oughly improved and lying nearer the lake; but every foot of it is susceptible of conversion into a park property that can hardly be equalled in other cities, and certainly not excelled, all things being taken into consideration. Including Gordon and Wade Parks, Doan Brookway, Newburgh Park, Shaker Heights Park and Ambler Parkway, the entire acreage of this part of Cleveland's park system approximates nine hundred acres. In this are included two fine natural lakes containing about fifty acres. In the western part of the city there are in all about one hundred and seventy-five acres of park property, mostly divided between two parcels of land known as Brooklyn Park and Edgewater Park. The first named has received as yet but little attention. Edgewater Park, located upon the lake shore within about two miles of the center of the city, contains nearly ninety acres and is now being improved according to plans. It will probably be formally dedicated during the centennial celebrations this summer.

Aside from these already mentioned there are several small parks that serve the wants of their immediate neighborhood, but otherwise are of no interest. There is at present little bedding done in any of the parks, but the lack in that respect is not seriously noticed, owing to the very great diversity of character in the property as it stands. It is very likely, however, that when the pressure of work connected with the task of first improvement over so wide a territory is completed the park board will undertake something of the kind; but whether this is done or not the fact will still remain, that Cleveland has one of the finest opportunities for park lands that has ever been within the control of a municipality of its size in the United States, and that the opportunity will be properly improved is the earnest belief of citizens of the "Forest City." A.

Washington.

Decoration Day was all that could be desired so far as the weather was concerned. Thousands of our citizens visited the National Cemeteries about Washington. Arlington never looked more beautiful, and never had such a number of visitors on a similar day.

The flowers furnished from the Public Grounds and Botanic Gardens this season was very limited as compared with former years. The out door flowers, such as philadelphus, deutzias, iris, roses, spiræas, and pæonies were nearly all passed, and as those are the things usually depended upon for decoration, the snow storm of last Thursday destroyed many flowers which would have been used in the decorations. The scarcity of elaborate set pieces usually placed upon the officers' graves by comrades and friends was very noticeable. Many daisies and wild flowers were used. Some of the graves were decorated by a sunburst of daisies (which completely covered them) and a few pieces of asparagus with a few roses furnished the center.

Upon the grave of Admiral Porter was placed a fine flat bouquet of roses and carnations with a center of cattleyas. At the head was an anchor of white cape flowers and a bunch of lilies at the foot. General Sheridan's grave, as usual, was handsomely decorated. At the head was a large swell wreath of ivy leaves, with a large bunch of pale pink carnations at one side. At the foot was a smaller wreath with a bunch of callas. The grave was strewn with roses, lilies and

MR. H. F. EILERS' STORE ON THE NEVSKY PROSPECT
NOTES FROM ST. PETERSBURG

carnations. In the right corner of the lot was placed a cavalry guidon about 5 feet high composed of red immortelles and white cape flowers with a star of red immortelles resting upon it. The staff was wrapped with yellow chenille, below this was a scroll of white cape flowers bearing the words "Loyal Legion" in purple chenille. Opposite was a G. A. R. badge, with eagle and cross, cannons were of yellow immortelles, while the star was of yellow. In a scroll of white cape flowers at top were the words, "Phil Sheridan Post, No. 14," of purple immortelles—while on the bottom scroll were the letters G. A. R. in the same color.

The tomb of Genl. W. Q. Gresham, late secretary of state, was covered with philadelphus flowers; on the center rested a handsome wreath with a card "From the President." President Cleveland had sent it out early in the morning with a request that it be placed upon the grave of his late friend. The wreath was about 4 feet in diameter, composed of roses, carnations, paeonies, swainsona and yellow coreopsis on a base of asparagus. At the head was a large wreath of adiantum with pink and white roses, double deutzia and pansies from the family.

On Surgeon-Genl. Baxter's grave was placed a large wreath of ivy leaves with a bunch of pale pink sweet peas filling the center; the grave being covered with magnolia flowers and wild daisies. Col. and Asst. Paymaster Rucker's grave was marked by a large swell wreath of ivy leaves and a bunch of white roses. At the head was a large bunch of paeonies and

at the foot a bunch of Golden Gate roses.

The tomb of the unknown, where rests the remains of two thousand eleven hundred and over of our heroes, always receives particular attention from the ladies in charge of the decorations. Mrs. Cleveland has never failed to remember this tomb on Memorial day since she first came to the White House. She usually sends a large wreath, this year it was an exact duplicate of the one sent by the President for the Gresham grave. The large tomb which is of gray granite is about 15 feet high, 8 feet long and 5 wide, was covered with a drapery of American flags, about half-way down was a festooning of laurel leaves and flowers. Around the corner posts was a roping of laurel leaves and daisies, while the enclosure was strewn with choice flowers of every kind. On the face of the tomb was placed the wreath from Mrs. Cleveland. On the four upper corners were wreaths of laurel, while on the four lower corners wreaths of ivy leaves, one having pink flowers, one white, one red, and one yellow. Resting against the lower south-west corner was a large wreath of cape flowers, with two bunches of thistle balls, in red, white and blue immortelles were the words "From the ladies of the G. A. R." Against the south end rested a large wreath of ivy leaves with red and white carnations.

On the grave of Inspector Genl. Henry M. Heyl rested a large wreath of white roses on a stand 2 feet high, a cross of white roses and a crown of white carnations edged with asparagus,

At the foot of the grave of Chief Engineer N. B. Clark was a vase 4 foot high made entirely of pink and white carnations the base and arms of small ivy leaves,—the vase was filled with kalmia flowers. The upper half of the bowl of the vase was of white and the lower half of pink carnations. Many of the other graves were tastily decorated by friends, but mostly with wild flowers. A great number of potted plants in flower were used this year, a good number of palms were also used, they being plunged.

Trade has been very quiet, with the exception of a few weddings there is simply nothing doing and our florists have plenty of time to look after the coming winter stock of flowering plants.

The plant trade, which has just closed, has been only fair, some saying it was poor, while others claim it was fairly up to the average. At any rate it was not up to last year. Stock was plentiful and in fine condition, though the prices were much lower. Flowers are plentiful and fairly good for the season. REYNOLDS.

Buffalo.

We are beginning to feel a little less in a hurry than ten days ago, for the bulk of the spring trade is over, and all will concede that the demand for plants to adorn the homes both of the living and the dead has exceeded that of any former season. In some cities you hear it said that people are getting tired of geraniums. In our rural and uncultivated hamlet the geranium is still king as the popular plant for flower beds, vases and what has become this year a perfect fad, a 12 or 15-inch jar or ordinary flower pot filled with a geranium of one color. They are usually stood on the front steps of the house, and look all right. When people deal with the local florist in any line they usually get full value for their money, but when they listen to the tree peddler or lightning rod man there is in about two years weeping and grinding of teeth.

It is little use to tell the state of the flower market; there is plenty for everybody. Decoration was fine and warm, and about three hundred thousand of our people knew what the day meant, and honored the veterans by going to baseball, horse and bicycle races. The other one hundred thousand had all they could do to see that the majority enjoyed themselves.

There were a couple of failures in our business within thirty days, but they were of insufficient magnitude to disturb the quotations on Wall street. Mr. Elbers, who rented the old Bailey place, found that the houses were not adapted to the style of plants he aspired to grow, and he vacated. The old place deserves a mention more than common, for it was there that W. S. first began his commercial life, paying Mr. Bailey one thousand dollars rent for eleven months, not years, and the glass was only three thousand five hundred feet, but that was in the days when we grew plants, and there was not a herd of young aspirants all seeking business on the basis of underselling their neighbors. The other misfortune was the selling out of Mr. Fred Elbers of Banck avenue, a most worthy young man. It appears that he rented the store and one day the floor fell out, or rather down, and he refused to pay rent for the unexpired term of his lease. A lawsuit began, and Mr. E. having the characteristic John Bull fight in him, let them go ahead, but a big lawsuit is coming off within a few weeks, and we all

hope Fred will get what all deserve and an honest man only desires, justice.

Since the election of Mr. E. I. Mepsted to the presidency of our club it has been difficult to get together a quorum, but last night we had a rousing meeting. Mr. Mepsted makes an ideal presiding officer. This was shown early in the evening, for when there was a count made of members present, and it was found that there were 19 present, Dennis O'Connell discovered that Johnnie Milley's bull pup had been counted. The chair declared that anybody or anything who would attend a meeting of a F. C. during the heated term deserved recognition. When it came to good of the society Mr. Mepsted made a 15 minute talk on the general business of the city in our line. He strongly advised all young men as long as they had good wages and steady employment to stick to their jobs. A multiplicity of small establishments and cutting in prices was in his opinion deleterious to the trade, and had a demoralizing effect on everybody. W. A. Adams made some amusing remarks about the use of the bicycle in the business, saying that he had saved at least ten dollars a month in messenger boys by the use of the wheel. Wm. Milley spoke of hanging shelves as a safety valve to overcrowded houses in spring, and while a great help in some establishments you had to be physically gifted to realize their value. S. A. Anderson said while the florist business could be considered one of the the most peaceful and least dangerous it was wise to have an insurance policy against accidents, and related that last winter a 200 pound damsel during a five step fell on the front part of his foot and he was unable to attend to business for 3 days, for which he drew fifty dollars. George Asmus spoke of the great advantage of having shades on a store. The early beginning of the sun's rays did not hurt, but in the latter part of the day it wilted everything. He also added that Buffalo ought to be in the national league and not in a small trumpety combination.

C. F. Christenson gave some sage advice about what to grow. Fuchsias, he said, were entirely gone out of popular favor, and he was going to spend the remainder of his virtuous days in growing maidenhair fern. D. B. Long with his usual sedate style added much to the pleasure of the evening by a most interesting discourse; the whole of his wise words boiled down was that to run a business successfully was to "attend to business" and get no fads in your head. Wm. Belsey contributed what he knew about keeping mildew off roses, and everybody knows how successful he has been. He did not attribute his success so much to careful airing as to careful watering. W. B. is a great man for water and believes that where proper drainage is supplied the majority of us keep our rose beds too dry. There were several other interesting talks worth recording, but I will have to reserve them for your next.

W. S.

New York.

Business is in a condition only to be expected with a most remarkable absence of June weddings and other festivals calling for floral decorations, a general exodus to Europe, and a superabundance of all kinds of stock. Never before has there been such an abundance of outdoor flowers at this season. The exceptionally warm weather has advanced the season by two weeks.

Mr. and Mrs. J. H. Troy sailed by S. S. Aurania June 9 on a visit to the old

country; many beautiful floral designs adorned their state room and quite a large delegation of florists was on hand to wish the ever genial Troy and wife bon voyage.

Harry Bunyard and Dan MacRorie have returned after a long absence.

The monthly meeting of the Florists' Club was held on Monday evening, though the numbers were not large still it was a very representative and enthusiastic meeting, the greatest amount of good fellowship and general good feeling prevailed. There seemed to be an unexpressed regret that those present were not to meet again in a body until the September meeting. In the absence of the president the vice-president, Mr. Samuel Henshaw, presided. Mr. Henry Holbrook and Mr. J. A. Pettigrew were elected to membership. Much enthusiasm was shown in regard to the forthcoming rose show to be held in the Newsboys' Home in this city on June 20. All the members present signified their intention of assisting in every way possible towards making it a success and it was further adopted that one member of the club in each district or village be appointed a committee of one to work up such district in procuring exhibits and donations of plants and flowers for this show. Twenty thousand poor children will attend the exhibition and it is hoped the committee will be able to give each child a small plant and a few flowers. A committee was appointed to invite the mayor of the city to open the exhibition.

Quite a discussion was occasioned on the matter of a fall show, with the result that it was finally decided to hold one, and that the arrangements be left in the hands of the board of trustees, so New York will have a fall show, and a grand one at that.

The forthcoming convention of the S. A. F. was next discussed. It is expected that a very large delegation will go from this city and Messrs. O'Mara, May and Weathered were appointed a committee on transportation.

Mr. O'Mara as chairman of the essay committee, announced that Mr. Grove P. Rawson of Elmira would deliver a lecture before the club at the September meeting. Mr. Rawson may be assured that New York will "be there" to meet him.

W. A. Manda, South Orange, N. J., exhibited a most remarkable group of new roses, seedlings of Rosa Wichuraiana, in foliage and habit exactly like Wichuraiana, but the flowers of one are double white, another double pink, another shell pink and one single pink. They are all beautiful acquisitions, lovely colors and very fragrant. They created quite a sensation and the committee of awards was requested to visit Mr. Manda and report on these beautiful novelties.

JOHN YOUNG.

Boston.

The annual rhododendron show of the Massachusetts Horticultural Society was held Thursday and Friday, the 4th and 5th inst., and the hall was filled to overflowing with the products of the many well known gardeners of the beautiful places in the vicinity of Boston. There were large and magnificent displays of rhododendrons from James Comley, H. H. Hunnewell and Mrs. B. P. Cheney, the latter two not being entered for competition, and smaller displays from S. J. Trepass and John L. Gardner.

Mr. Comley was the most successful prize taker. His display filled the long center table, and very effectively grouped with the handsome trusses were vases of

vari-colored foliage. On one of the side tables the same exhibitor showed some beautiful orchids and a new hydrangea from Japan which was awarded the society's silver medal.

The exhibit of John L. Gardner, Wm. Thatcher, gardener, also contained some prize winners. In this display besides the rhododendrons were noticed some beautiful orchids, paeonies, iris and pyrethrums.

Azaleas mollis was shown by H. H. Hunnewell and Oakes Ames, Carl Blomberg, gardener. In the latter exhibit were also shown orchids, aquatics and native plants. Rea Bros. and the Reading Nursery Co. showed herbaceous plants, and beautifully grown pyrethrums were shown by Dr. C. G. Weld, Kenneth Finlayson, gardener, and C. H. Whitten. The wild flower premiums called out beautiful and rare exhibits from Mrs. P. D. Richards, the Misses Doran and Genevieve Doran.

An exhibit which demanded a great deal of attention was that of M. C. Walsh, gardener for Jos. S. Fay. This filled the right stairway to the upper hall, which was banked with the foliage and blooms of hardy trees and shrubs. Vases of flowers were shown by Mrs. A. D. Wood and Mrs. E. M. Gill, and W. H. Cowing made a large exhibit of iris and Oriental poppies.

The committee of the Gardeners' and Florists' Club, to whom was left the arrangement of the ladies' night, have decided upon June 29 at 8 o'clock as the date and hour, and they have arranged for an entertainment which should be very pleasant and enjoyable to all the members.

Mr. W. J. Stewart is enjoying a short vacation in the woods of Maine, accompanied by Mr. Alex. Burns of New York. They departed with a full line of fishing tackle, and all will be ready for good fish stories when they return with their faces well tanned and sun burned.

L. C. Bobbink of Rutherford, N. J., is in town this week, representing the Horticultural Company, Boskoop, Holland.

E. A. W.

Philadelphia.

Much needed rains have fallen the last day or two and all outside stock is doing nicely. The new crop of sweet peas will soon be here and when they come it is a sure sign of summer.

Business has been a trifle better the past week, in fact some of the boys, notably Graham, have had all they could do. There was the usual number of June weddings and a number of commencements which used up a lot of choice stock. With this extra demand, however, there has been a great plenty of flowers at very low prices. Three dollars a hundred is high now for the best teas. \$1.50 to \$2 per dozen is the best for Beauties. Carnations \$1 for select and there are still some fine Scotts, whites, and Daybreaks although the latter are a bit pale. Some good valley is seen from several growers and sells at from 3 to 4. There are plenty of sweet peas at 50 cents per hundred.

The bedding plant season is about over and there seems to be quite a lot of stock unsold. Either the demand for this class of plants is falling off or else it is on account of the competition, for the principal growers in this line seem to complain of the decreasing business with each recurring season; not only has the demand fallen off, but prices have declined to such a degree that there is scarcely any profit in the sales made. Eight dollars per hundred used to be rock bottom for all plants in 4-inch pots, in fact, one of the largest

gatherings of the local florists was of the growers, some years ago, to fix the price of this same size at \$10 per hundred. This did not last, however, and soon \$8 was by common consent the ruling figure. Now, however, but \$7 is asked and often sales are made at \$6. The smaller plants in 2½ and 3-inch pots are also sold very low; \$4 is high and much of it goes at \$3 and out of pots at \$2, and good coleus were offered in one instance at \$1.50 per hundred out of pots. Roses have not sold well, extra fine stock having to be considerably shaded in price to set it moving. We hope this state of affairs is not general over the country, but if so it might be a good idea to have it talked over at the coming convention and see if it is the fault of the trade or if the public taste is being turned in other directions.

There was quite an addition made to the stock of Beauties last fall and some predicted that there would be too many, but good roses of this variety have had a ready sale the past season and at generally good prices. Almost all those who make a specialty of this rose are now increasing their stock. Mr. Heacock is doubling his supply and Mr. Lonsdale is doing about the same, other growers are also planting largely and it would seem as if there ought to be enough to go around next season.

The semi-monthly shoot of the Gun Club last Wednesday afternoon resulted in another change of the medal, which now reposes peacefully on the manly breast of George Craig. It's Anderson's turn next.

The Pennock Co. of Wilmington are adding a palm house.

Chas. D. Ball and Lemuel Ball are both erecting large additions to their plants, which will be devoted entirely to palms and ferns. This branch of the business does not seem to be affected by hard times and is now enjoying a boom of growing proportions. K.

St. Louis.

Business in the cut flower line improved somewhat last week; several of the West End florists were very busy for weddings, and the down-town florists had lots of funeral work. Stock is not over-plentiful and prices a little stiff for this time of the year. This is the month for school graduates, but very little is expected by the florists, as flowers have been done away with and very few flowers are used now by them. Roses are looking better than they have been; good Brides and Kaisers are bringing \$4 to \$5, others \$2 to \$4. Carnations are small and not as good as they have been; they bring \$1 to \$1.50. Sweet peas are still plentiful and are selling well at 25 cents per hundred for colored and 35 cents for the white. Cornflowers bring 50 cents per 100.

C. Young & Sons Co. received a check for \$3,739.86 from Florists' Hail Association last week, and wish to return thanks to the company for their promptness in paying such a heavy loss. They had lived on their place for 20 years and never had a loss by hail before.

The following firms also wish to return thanks for promptness in paying their loss: Alex Waldbart, Robt. F. Tesson, Chas. Hotzborn, Felter & Brucker, Michel Plant & Bulb Co. and Jordan Floral Co. In paying the above firms the Hail Association paid a total of \$6,002.71.

The cemetery superintendents of the United States will hold their convention here in the fall.

Prof. Wm. Trelease of the Missouri Botanical Garden is on a visit to Bahama Islands, and will return in the fall.

Chairman Kunz of the picnic committee reports that the florists' picnic, owing to hailstorms and cyclones, has been indefinitely postponed.

Monday last south St. Louis was again visited by a heavy downpour of rain and a damaging fall of hail. Chas. Ritter's place, 5717 Michigan avenue, was riddled with hailstones, and every pane of glass was broken. No other report was made of any loss to florists.

C. C. Sanders is building two new houses 125x25 at his new place. Mr. Sanders will move from his old place this summer.

At the Bowling Club Monday night the boys who attended had a good time, and rolled three games. Charlie Kuehn was high man of the night, rolling 548; Emil Schray second with 543. Frank Fillmore made the highest single score of the night, 221. Kuehn was second with 218, and Emil Schray third, 210. Next Monday night we expect a full attendance, and a surprise is in store for those who come.

J. J. B.

OBITUARY.

JEAN PERNET.

This distinguished rosarian died at his home near Lyons, France, March 31, aged 64 years. M. Pernet introduced his first rose to cultivation in 1859, the variety being Mlle. Bonnaire. This was followed by a long list of worthy varieties, teas, hybrids and Noisettes. Among the best known are the favorite Baroness Rothschild, Merveille de Lyon, Caroline Kuster, Charles Rovolli, and Souvenir de Victor Hugo. M. Pernet's business will in future be carried on by his son, M. J. Pernet-Ducher.

Trees and Shrubs Used in the Public Grounds of Boston.

The following list of trees and shrubs used in the public grounds of Boston, prepared from data kindly supplied by Mr. Jackson Dawson, cannot fail to be of great value to planters in other sections of the country. The publication of such lists from various widely separated points was suggested to us by the valuable record sent us by Mr. Tavernier, Chief Engineer of the city of Paris, and which was published in the FLORIST. While the parks of this country are too young to enable us to present so complete a record as would be desirable, it is time that what data is available be gathered together in a form convenient for reference, and that will serve as the foundation for the more complete record that should be enjoyed by the horticulturists of the next generation. The average height at maturity, which is given in each case, will surely be of great assistance in avoiding errors as to the future effect of new plantings.

DECIDUOUS TREES.

FIRST HEIGHT.	HEIGHT IN FEET.
<i>Acer barbatum</i> (saccharinum)	60 to 70
" <i>dasy-carpum</i>	50 to 70
" <i>rubrum</i>	60 to 70
<i>Betula alba</i>	50 to 60
" <i>lenta</i>	50 to 75
" <i>lutea</i>	60 to 75
" <i>nigra</i>	50 to 75
" <i>papyrifera</i>	60 to 70
<i>Carya alba</i>	50 to 60
" <i>porcina</i>	50 to 60
" <i>sulcata</i>	50 to 60
" <i>tomentosa</i>	50 to 60
<i>Castanea vulgaris</i> var. <i>americana</i>	70 to 80
<i>Catalpa speciosa</i>	50 to 60
<i>Diospyros virginiana</i>	40 to 60
<i>Fagus ferruginea</i>	60 to 75
" <i>sylvatica</i>	60 to 80
<i>Fraxinus americana</i>	45 to 65
" <i>quadrangulata</i>	50 to 60
" <i>sambucifolia</i>	50 to 60
<i>Gleditsia triacanthos</i>	50 to 60
<i>Gymnocladus canadensis</i>	50 to 60
<i>Liriodendron tulipifera</i>	75 to 100
<i>Liquidambar styraciflua</i>	50 to 70

<i>Magnolia acuminata</i>	60 to 90
" <i>cordata</i>	60 to 75
<i>Platanus occidentalis</i>	75 to 80
<i>Populus alba</i> and varieties	80 to 90
" <i>balsamifera</i>	50 to 60
" <i>grandidentata</i>	60 to 70
" <i>heterophylla</i>	40 to 60
" <i>moniflora</i>	60 to 70
" <i>nigra</i>	50 to 60
" <i>tremuloides</i>	40 to 60
<i>Prunus serotina</i>	40 to 60
<i>Quercus alba</i>	60 to 75
" <i>bicolor</i>	60 to 70
" <i>coccinea</i>	60 to 70
" <i>imbricaria</i>	60 to 70
" <i>lyrata</i>	60 to 70
" <i>macrocarpa</i>	60 to 95
" <i>palustris</i>	70 to 80
" <i>Prinus</i>	50 to 60
" <i>robur</i> var. <i>pendunculata</i>	50 to 60
" <i>rubra</i>	60 to 70
" <i>tinctoria</i>	65 to 75
<i>Robinia Pseudacacia</i>	50 to 60
<i>Salix nigra</i>	15 to 55
<i>Tilia americana</i>	40 to 60
" <i>europaea</i>	60 to 90
" <i>heterophylla</i>	40 to 50
<i>Ulmus americana</i>	60 to 75
" <i>campestris</i>	60 to 70
" <i>montana</i>	50 to 60
" <i>racemosa</i>	50 to 60

SECOND HEIGHT.

<i>Acanthopanax ricinifolia</i>	30 to 40
<i>Acer platanoides</i>	30 to 40
" <i>Pseudo-platanus</i>	30 to 40
" <i>spicatum</i>	30 to 40
<i>Esculus flava</i>	30 to 45
" <i>glabra</i>	25 to 30
<i>Ailanthus glandulosus</i>	40 to 50
<i>Carpinus betulus</i>	30 to 40
" <i>caroliniana</i>	30 to 40
<i>Carya amara</i>	40 to 50
<i>Catalpa Catalpa</i> (bignonioides)	35 to 40
<i>Celtis occidentalis</i>	30 to 40
<i>Cladrastis tinctoria</i>	30 to 40
<i>Praxinus excelsior</i>	30 to 40
" <i>mandshurica</i>	30 to 40
" <i>potanophylla</i>	30 to 40
" <i>pubescens</i>	30 to 40
" <i>viridis</i>	40 to 50
<i>Juglans cinerea</i>	40 to 50
" <i>nigra</i>	40 to 50
" <i>Sieboldiana</i>	25 to 35
<i>Magnolia Fraseri</i>	25 to 40
" <i>macrophylla</i>	25 to 50
<i>Morus alba</i>	25 to 40
" <i>rubra</i>	25 to 40
<i>Negundo aceroides</i>	30 to 40
<i>Nyssa sylvatica</i> (multiflora)	30 to 50
<i>Populus angustifolia</i>	30 to 40
<i>Prunus Cerasus</i>	30 to 40
<i>Pterocarya fraxinifolia</i>	30 to 40
<i>Pyrus Aucuparia</i>	30 to 35
" <i>baccata</i>	30 to 40
" <i>communis</i>	30 to 50
" <i>Malus</i>	30 to 40
<i>Quercus Cerris</i>	40 to 50
<i>Robinia viscosa</i>	25 to 35
<i>Salix babylonica</i>	30 to 40
<i>Sassafras officinale</i>	35 to 40
<i>Sophora japonica</i>	30 to 40
<i>Ulmus fulva</i>	45 to 50

THIRD HEIGHT.

Advertisements must reach us by Wednesday to secure
insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

Society of American Florists.

RULES RELATING TO THE MANAGEMENT OF THE
ANNUAL TRADE EXHIBITION.

1. The Society of American Florists shall,
through the Executive Committee, control all
features of the trade exhibition.

2. There shall be appointed annually at the
winter meeting of the Executive Committee a
superintendent of exhibits. The vice-president
of the S. A. F. or the local organization in the
place where the convention of the current year is
to be held shall be invited to recommend such
superintendent for election by the Executive Com-
mittee, as aforesaid.

3. Said superintendent shall have general
charge of all details of the annual exhibition, and
shall be under seven days' full service and pay at
and during the convention.

4. He shall receive all applications for space
and assign the same in the order in which they
are received by him. He shall provide and ar-
range all necessary tables and staging.

5. Judges shall be appointed by the president
and secretary at least one month before the ex-
hibition. The president and secretary may appoint
substitutes in place of judges who may be absent.

6. The exhibition shall be closed between the
hours of 2 and 4 p. m. on the first day of the con-
vention, during which time the judges shall pass
on the exhibits, and they shall report promptly
to the secretary on the same day. Exhibitors
shall be excluded from the hall while the judges
are at work.

7. Awards shall be given as follows: Highest,
Certificate of Merit; second, Honorable Mention;
third, Highly Commended.

8. The judges shall withhold awards on un-
worthy exhibits.

9. Judges shall be governed by the merits of
the article as exhibited and shall state in their
report on what special points of excellence awards
are based.

10. In case any article or device has received
an award at a previous S. A. F. exhibition awards
shall cover subsequent improvements only.

11. No award shall be made covering the qual-
ity of seeds, fertilizers, paints and other articles
of such nature that an intelligent opinion cannot
be had without a practical test, but awards for
creditable display may be given.

12. Doors of exhibition shall be closed five min-
utes before the opening hour of each session of
the Society, and remain closed during the session.

13. Exhibition to be open not less than two
hours before the opening of the morning sessions,
to remain open during the day, except during the
session hours, and as provided in Sec. 6, and to
remain open one hour after the closing of the
evening session.

14. Wall space shall be measured four feet in
height, and when practicable a table not less than
one foot wide shall be added gratis, if desired and
applied for with entry.

15. Space desired shall be designated in square
feet. A uniform charge of 25 cents per square
foot for all space will be made, excepting that all
plants and flowers contributed for exhibition
purposes only shall be admitted free.

16. Exhibits not in position before 1 p. m. on
the first day of the convention may be excluded
from the report of awards.

17. No articles exhibited shall be removed
until after the close of the last day's session, except
by permission of the superintendent of exhibition.

18. Exhibition classes to be arranged as follows:
A—Plants; B—Cut Blooms; C—Boilers and Heat-
ing Apparatus; D—Greenhouse Appliances, in-
cluding flower pots; E—Florists' Supplies, in-
cluding Fancy Earthenware; F—Bulbs and Seeds;
G—Miscellaneous.

19. Exhibitors may group their goods together,
excepting in the case of living plants and cut flow-
ers. These shall be shown in a separate depart-
ment from the other classes.

20. All adjustments not covered by rules or pub-
lished action of the Executive committee shall be
referred to that committee.

ALWAYS mention the AMERICAN FLO-
RIST when writing to advertisers.

The boxes as they appear when set up for use.

We make them in a sufficient number of sizes, including for violets, to meet all necessary requirements.

RIST when writing to advertisers.

"The National"

Folding Flower Boxes are the best
and most convenient ever put upon
the market. They are made from
board, manufactured especially for
these goods, and made so as to resist
moisture, thereby keeping the flow-
ers fresh, and the box holding its
shape.

Re Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. RODGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas. The fourteenth annual meeting will be held at Niagara Falls, N. Y., June 9 to 11, 1896.

American Seed Trade Association.

The fourteenth annual convention of the American Seed Trade Association was held at the International Hotel, Niagara Falls, June 9, 10 and 11. The attendance, while a fair average one, was mainly from the Central States, the extreme east and west but little represented. The following is a partial list of members and firms present. Several new members were admitted. An excursion was had on the new lower river electric road.

Messrs. S. M. Pease, Alexander Rodgers, Wm. Meggat, A. L. Don, Jerome B. Rice, T. W. Wood, W. J. Langbridge, Frank Ford, C. L. Allen, C. S. Clark, H. M. Wall, A. J. Brown, J. M. Lupton, Robert George, Everett B. Clark, S. F. Willard, James Vick, W. H. Elliott, Jr., Charles Vick, I. B. Clark, John H. Allan, Howard Earle, S. E. Briggs, W. H. Grennell, E. W. Burt, Rogers Bros., A. C. Kendall, W. J. Mandeville, O. E. Mueller, F. A. Stecher, M. H. Duryea, J. W. Hogg, M. Moorehouse.

The following officers were elected: President, T. W. Wood; vice-presidents, Alex Rodgers and J. B. Rice; secretary and treasurer, A. L. Don; assistant secretaries, M. H. Duryea and S. E. Briggs; executive committee, D. I. Bushnell, W. P. Stokes, S. D. Crosby, S. F. Willard.

The Sioux City Nursery and Seed Co. Failure.

Our cable advices say, and we say, this is the time to buy. We can save you money if you will send us your order **at once.**

VAUGHAN'S SEED STORE,

CHICAGO: P. O. Box 688.

New York: 14 Barclay Street.

JOBBER OF FLORISTS' BULBS FOR 20 YEARS.

TRAVELING SALESMEN WANTED.

Five experienced and competent Seed Travelers wanted. None but those who are thoroughly acquainted with the seed trade, and can show their annual sales, need apply.

Robert Buist Company, Philadelphia, Pa.

MR. E. V. HALLOCK is still in San Francisco.

MR. W. ATLEE BURPEE visited Santa Rosa June 5.

VISITED CHICAGO: J. A. Severens, Ang. Rhotert, J. Horace McFarland.

Toronto.

The monthly meeting of the Horticultural Society was, owing to the busy season I suppose, not very well attended, only thirteen members showing up, and as it takes fifteen to make a quorum there was only an informal talk on various seasonable subjects.

The busy plant season will begin to flag by the end of this week probably. So far as I can hear from extensive inquiries it has been one of the liveliest ever seen while it lasted, and growers are pretty well cleaned out of everything. Of course there are a few grumblers; they are with us always, but there are less than usual.

I hear that Mr. John Cotterill, florist, Deer Park, has bought a place with large solid brick house on the corner of St. Clair avenue and Bathurst street (about a mile west from his present situation), price \$6,000, and that he will move the whole of his plant there during the summer months. Success to him. Times are getting better I should say.

The space before the New Parliament Building promises to look something as it ought to this year. Mr. Wm. Houston has been planting out some large beds in various styles for the Ontario government, one of which, a sub-tropical bed, is especially fine. And Mr. Chambers has been doing likewise on the city part.

Chicago.

To the man who had plenty of good roses this past week would be Christmas every day. The demand was good, but roses that could be considered good, or even passably so, were amazingly scarce. It seemed as if every buyer wanted roses, and nothing else, and the stock coming in was not only very short, but unusually poor. The few good flowers to be obtained went off quickly at \$4 to \$6, and \$3 was realized for some that would ordinarily be viewed with cold disdain. Very fine Meteors are seen; they bring \$5, while Testout and some few other extra select flowers brought \$6. It is likely that \$7 would be paid for some high grade flowers, but the commission men are not disposed to rush prices up to an abnormal height. The present prices are sufficiently unusual for this season of the year.

Carnations were extremely plentiful all the week, and usually very good. But buyers did not want carnations, they insisted on roses, and poor roses sold better than good carnations. Even the humble fakir didn't want carnations, were they ever so cheap, but towards the end of the week he had to take them or nothing, and prices became more settled, varying from 75 cents to \$1.50. There has again been a shortage of lily of the valley, and towards the end of the week the price advanced to \$5. Good quality cornflowers of clear blue and white are in good demand at 40 cents, but there is practically no demand for washed-out and uncertain shades. It is a mistake to allow these poor colors to remain in the bed; they should all be rogued out as soon as they show flower.

Lilium auratum and *longiflorum* is being cut in fine quality by Mr. Northrup; they sell for \$1.50 a dozen. Outdoor candidum is coming in from Michigan. Some fine Canterbury bells are sent in from Elmhurst; they sell readily at 25 cents a bunch. They are cut long, the whole plant being taken. Pink and white sweet peas sell well at 50 cents, but mixed and undecided colors are unsalable.

At the meeting of the Florists' Club Thursday night there was a bright and interesting session, hardy roses being the subject of the evening. Owing to our abnormal weather there was no exhibit, the flowers being all past this week. Mr. Geo. Klehm read a paper, which will be found in another column of this issue. A dozen or more well-known nurserymen, who had been attending the sessions of their association in this city, were present, several of them participating in the discussion, a synopsis of which will appear in our next issue. Among these were Mr. Harrison of the Storrs & Harrison Co., Mr. Malloy of Ellwanger & Barry, Mr. Harlan P. Kelsey of Kawana, N. C., Mr. J. Van Lindley of Pomona, N. C., Prof. H. E. Van Deman, and others.

Mr. H. Weber of Oakland, Md., visited Chicago this week. He brought with him some of his carnations, which were remarkably fine blooms. If Hector and Uncle John would grow as well with everyone as with Mr. Weber there would be no complaint of either. He informs us that his place is on the top of the Allegheny Mountains, and if purchased plants show any signs of rust when he receives them they soon grow out of the disease entirely. Dean Hole, Bouton d'Or and Buttercup were all fine, and the same may be especially said of Minnie Cook and Helen Keller.

Postmaster General Wilson has denied the privileges of the mails to the Standard

EGYPTIAN AND AMERICAN LOTUS.

We have some excellent tubers of *Nelumbium Speciosum* and *Nelumbium Luteum*, which we offer in small or large quantities at lowest prices. Also several of the newer choice and scarce kinds. Now is the most favorable time to plant.

VICTORIA REGIA VAR. RANDI.

Our stock of this regal aquatic is unusually fine and can be recommended as the best for all purposes and localities, with or without artificial heat. We offer strong plants from \$5.00 each upward. Place orders now for immediate or future delivery.

HENRY A. DREER, 714 Chestnut Street, Philadelphia.

30,000 VERBENAS. THE CHOICEST VARIETIES IN CULTIVATION.

Extra fine plants, in bud and bloom, \$2.50 per 100; \$20 per 1000. Rooted Cuttings, \$1 per 100; \$8 per 1000.

NO RUST OR MILDEW.

PACKED LIGHT, AND SATISFACTION GUARANTEED. SEND FOR CIRCULAR.

We are the Largest Growers of Verbenas in the country.

Our plants cannot be surpassed.

J. L. DILLON, Bloomsburg, Pa.

Seed Co. and the Excelsior Seed Co., with headquarters in this city.

Visiting Chicago: Mr. H. Weber, Oakland, Md.; Mr. Z. K. Jewett, Sparta, Wis.; Mr. H. E. Van Deman; Prof. L. H. Bailey; Mr. H. P. Kelsey, Kawana, N. C.; Mr. Harrison of Storrs & Harrison, Painesville, O.; Mr. Malloy of Ellwanger & Barry, Rochester, N. Y.; Mr. J. Van Lindley, Pomona, N. C.

Springfield, Mass.

Trade was good on Decoration Day. Carnations, as usual, were scarce, and outside stuff was at a premium. Roses, in this vicinity, were scarce, but there were enough to be had in New York. Prices were fairly good, but considerably lower than in past years.

Wm. Schlatter & Son, it is said, are going to add another house, this one to be entirely devoted to carnations.

There have been some changes in N. J. Herrick's store. Miss Katherine M. Welch, who has been with Mr. Herrick for quite a number of years, has resigned and gone to her home in Vermont. Also Mr. Standish will leave and is to take a position on the B. & M. railroad. He also has worked for Mr. Herrick for a long time.

Mr. Pielke has bought the greenhouses in West Springfield, leased for quite a number of years to H. Madsen. He expects to take possession the first of July. Mr. Pielke's brother, who has grown stuff for the Peabody Cemetery several years, and will continue to do so, will have charge of the plant. Mr. Madsen has no plans for the future.

Plant trade has been good. Miller had a car load from New York and has had good sale on them. Plants grown around here are plenty, but mostly poor and of bad quality. Some of the best sold well and without trouble.

A manufacturer here has had one hundred window boxes put in his factory filled with geraniums.

The Hampden County Horticultural Society at a meeting last night arranged for the sweet pea show to be held in July, details of which will be learned later.

The Amateur Society is to hold a rose show this week, Friday and Saturday. By the looks of the gardens around town it seems as if there would be quite a showing.

Holyoke's society held their rose show Thursday and Friday. B. M.

MIDDLETOWN, N. Y.—M. Bartholomew has bought out the greenhouses and business of Mrs. Firnhaber, which he has been managing for the past year and a half. He intends adding another house this summer.

Worcester, Mass.

Since Decoration Day trade has been very fair, and with plenty of good flowers and fair prices storemen ought to be in a contented state of mind. Carnations and roses are holding on well and are very fine for this time of the year, outside roses wintered poorly and now are having a hard time of it on account of the rose worms. A few fair flowers are coming in now but rather short stemmed. We have had plenty of rain lately and outside stuff is looking nicely, especially carnations. Nearly all outside planting is finished now and a very fair bedding business is reported.

The regular weekly exhibitions of the Horticultural Society began June 4, and the show was very creditable. The features of the show were the excellent displays of rhododendrons and azaleas made by President O. B. Hadwen, which were awarded firsts in both classes, and the very fine showing of wild flowers made by Arba Pierce for exhibition only. Mrs. S. E. Bennett also had a splendid exhibit and was awarded a first premium. Very keen competition was the rule in all the other classes and the result was one of the best shows of this season. The following firsts were awarded: H. F. A. Lange, 30 vases cut flowers and one vase cut flowers; Edward Hall, pansies; F. A. Blake, begonias; Mrs. S. E. Fisher, 10 vases iris and 24 vases hardy cut flower. Numerous gratuities were awarded. A. H. L.

THE new directory contains a total of 9,528 names and addresses, of which 5,258 are florists who do a general local trade, having greenhouses and retailing the product of same, 797 are florists who grow for the wholesale market only, 645 are retail store florists who have no greenhouses, 52 are wholesale commission dealers in cut flowers, 1,524 are nurserymen, 543 combine the business of florist and nurseryman, 364 are seedsmen, 248 combine the business of florist and seedsmen, and 97 who combine all three branches of the business.

KANSAS CITY, MO.—The Probst Bros. Floral Co. will soon build two new houses 50x100.

CRAWFORDSVILLE, IND.—McDonald & Steele will add two new houses, one 20x100, and one 10x80, steam heating.

NEW ROSE

"Mrs. PIERPONT MORGAN"

Listen for a moment to what a voice from far off Springfield, Illinois, has to say about our young stock of this rose:

May 4, 1896.
"EDWIN LONSDALE, Chestnut Hill, (Station H), Philadelphia, Pa.

"I have sent a box of 'Morgan' rose plants arrived Saturday in good shape. Fine Plants. I would like to know how you produce plants of such size in a two (2) inch pot?"

All I can say is that it is all owing to the natural vigor of the variety, and perhaps to some extent to the natural rose growing qualities of our soil.

We have a few more left of the same size. Order early or you may get left, for I do not know of a more profitable variety to grow for cut flowers than MRS. PIERPONT MORGAN.

Don't forget our address:

EDWIN LONSDALE, Station H,

A. G. PRINCE & CO.,

88 Wabash Ave., CHICAGO,

Cincinnati.

The general run of cut flowers the past week has been moving slowly; had it not been for funeral work the storemen would have cause to complain. Plant trade is about over, and it seems as though the florists around this city are all satisfied with the spring trade this year.

There was quite a gathering in front of Mr. J. Conger's stand in the Sixth Street Market Saturday evening. The attraction was a *Cereus grandiflorus*, one of the well known night blooming cereus, and a grand plant it was, with three open flowers.

Mr. Wm. Bolia of Carthage Pike has rented his greenhouses and stock to Mr. Anthony Fischer, formerly gardener to Alex McDonald. Mr. Bolia has been in poor health the past year, and he thinks rest is what he needs. H. SCHWARZ.

Right to Lop Off Branches of Ornamental Trees on Adjoining Lands.

Trees which stand wholly within the boundary line of one's land belong to him, although their roots and branches may extend into the adjacent owner's land. But the adjacent owner may lop off the branches or roots of such trees up to the line of his land. If the tree stand so nearly upon the dividing line between the lands that portions of its body extend into each, the same is the property in common of the land owners. And neither of them is at liberty to cut the tree without the consent of the other, nor to cut away the part which extends into his land, if he thereby injures the common property in the tree. Such is the law as laid down in Washburn on Real Property. This doctrine has also been accepted by the supreme court of errors of Connecticut. In the late case of Robinson vs. Clapp, 32 Atlantic Reporter 939, this court, however, says that it must be apparent that the very nature of things differentiates such a so-called common interest from an ordinary tenancy in common, either of real or of personal property. In the case of a tree standing upon the dividing line, yielding no fruit, of trifling value for wood if cut, of no value while standing, except for ornament or shade, what relief by any remedy, legal or equitable, provided for ordinary tenants in common, the court asks, can a part owner of such tree, to whom its continued existence is of no advantage, but an injury, obtained? Practically none.

It would really seem to come to this; that each of the landowners upon whose land any part of a trunk of a tree stands has in interest in that tree, a property in it, equal, in the first instance, to, or perhaps rather identical with, the part which is upon his land; and, in the next place, embracing the right to demand that the owner of the other portion shall so use his part as not unreasonably to injure or destroy the whole. That he should have less right to lop those branches extending over his own land than if he owned none of it is unreasonable. The injunction should not extend further than to restrain him from cutting any portion of the trunk and any further cutting of the branches or of the roots than he might lawfully have done had the trunk stood wholly upon the adjoining land, but reaching to the dividing line. If in fact the trunk divides itself, as the tree extends upwards into two or more parts, of similar size, with more of a perpendicular than horizontal extension each of those parts should be regarded as a portion of the trunk.

THE BAMBOO GARDEN, by Mr. A. B. Freeman-Mitford, is not only a valuable addition to our scant information on this class of plants, but a most readable and entertaining volume as well. Mr. Freeman-Mitford studies the bamboos especially in view of their adaptability to garden use. There is no doubt we can add greatly to the variety of our gardens by the use of these plants, but we rarely see any other than *Arundinaria japonica*, commonly called *Bambusa metake*. The author of this book has proved the unsuspected hardiness of many bamboos in England, and it seems likely that similar experimental culture here will give us a number of accessions to American gardens. As a reference book "The Bamboo Garden" will aid us in settling vexed questions in nomenclature, the author's familiarity with Japan and its language enabling him to study the synonyms of Japanese varieties. The book is most agreeably written, its dress is admirable, and it is beautifully illustrated from drawings by Alfred Parsons. (Macmillan & Co., New York, publishers. Price \$3.)

THE SEVENTH REPORT of the Missouri Botanic Garden, recently received by us is a handsome volume of 209 pages, freely illustrated. In addition to the reports of the director and trustees, it contains several scientific papers, and a valuable catalogue of the Sturtevant Preliminary Library.

THE only reference list of cannas is to be found in our new directory and reference book. The list is arranged alphabetically and gives name, date of introduction name of introducer and a brief description.

THE reference lists in the new Directory and Reference book give descriptions and other valuable information regarding 2,543 varieties of roses, 2,988 varieties of chrysanthemums, 495 varieties of carnations and 524 varieties of cannas.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

— OF —
 FLORISTS,
 NURSERYMEN
 AND SEEDSMEN

— OF THE —
 UNITED STATES AND CANADA,

— AND —
 REFERENCE BOOK,

FOR 1896,

IS NOW READY

CONTENTS.

The names and addresses of all the Florists, Nurserymen and Seedsmen in the United States and Canada, arranged alphabetically in States and Provinces, the exact branch of the business each is engaged in being indicated by the following

. . . . KEY

- F** Florists who do a general local trade, having greenhouses and retailing the product of same.
- G** Florists who grow cut flowers or plants for the wholesale market and who do not sell at retail. Almost always within a short distance of a large city.
- R** Retail store florists who have no glass of their own. Nearly always in the large cities.
- D** Wholesale commission dealers in cut flowers.
- N** Nurserymen.
- X** Those who are both Nurserymen and Florists.
- S** Seedsmen.
- Z** Those who are both Seedsmen and Florists.
- A** Those who combine all the branches, viz.: Florists, Nurserymen and Seedsmen.

. . . . ALSO

- A list of Trade Organizations, both National and Local, with names and addresses of principal officers, time and place of meetings and date of organization.
- Statistics regarding Floriculture, the Nursery Industry and Seed Growing from the last U. S. Census report.
- A list of firms in the trade that issue catalogues, with a key indicating the prominence of each branch of the trade in same.
- A list of leading Cemeteries in which attention is paid to Ornamental Horticulture.
- A list of leading Park Superintendents and of the Botanical Gardens of the United States.
- Seasonable Hints for the year about the practical work of the Florist, written by Wm. Scott, giving instructions not only when to do certain work, but how to do it most effectively and economically.
- A complete alphabetical list of Roses in commerce in America, brought up to date and of incalculable value for reference.
- Similar lists of Chrysanthemums, Carnations and Cannas.
- Historical sketches to date of the Society of American Florists, American Carnation Society, National Chrysanthemum Society of America, Florists' Hail Association, American Seed Trade Association and American Association of Nurserymen.
- A list of Leading Horticultural Societies.
- Full and accurate information about Express and Postage rates.

Rochester, N. Y.

The demand for flowers during the past week was somewhat ahead of the last; June weddings are in order and even if no very elaborate decorations are called for there has been a goodly number of them, keeping most of the florists rather busy. Carnations and roses are still plentiful, but few of them are of first quality. Pæonias and out door roses sell well at present, and are really good, having had a refreshing rain about a week ago; other out door stuff is to be had in large quantity at very low figures. An immense lot of white pinks such as Her Majesty and Snow was used up during the week in funeral desigus, some of the pieces were very large, though the prices at this time of the year are not correspondingly high.

Bedding out is still going on and the demand for the plants does not let up yet, at the cemeteries the cutting of prices continues, and as most of the dealers around there have to buy nearly all their stock, it was a mystery to us how they could afford to sell so low, but now we hear that some growers on the outskirts of the city are wholesaling their stock of geraniums in 4-inch pots to these dealers at \$3 per 100 and we do not wonder any longer. Nearly all the larger establishments are trying to keep up a fair price for all their bedding stuff, and would rather not fill an order if the purchaser insists on buying below their usual figures. We may record a decided increase in the sale of French cannas this season, so that the stock of these all over town is dwindling down to the lowest point. Strobilanthes does not seem to take well here as a bedding plant, and whoever of us has worked up a stock is compelled to use them up in window boxes or vases, if he does not want to keep them on his hands; still we hope after another season when the beauty and the good qualities of this plant will be better known, people may perhaps think more favorably of it.

J. B. K.

LEE'S SUMMIT, Mo.—The nurseries of H. G. Graves & Son have been attached on two suits. One was brought by Libbie Withnell for \$3,000 and the other by Jennie E. Graves for \$6,000. The litigation is the result of a dispute over money between members of the Graves family.

COUNCIL BLUFFS, IA.—J. L. McPherson has sold a half interest in his florist business to W. B. Reed, ex-county treasurer. The style of the firm will be McPherson & Reed.

BARABOO, Wis.—A. C. Tuttle, nurseryman, has made an assignment.

Jones, McDuffee & Stratton, Plant Pots and Pedestals

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipple Dopfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

FUNGUS DISEASES OF ORNAMENTAL PLANTS, by Prof. Byron D. Halsted, come to us from the Mass. Hort. Society, whose transactions for 1895 it forms a part. It is an illustrated pamphlet of 24 pages, and ought to be in the hands of every florist. It clearly describes all the familiar fungus diseases, such as rust, spot, anthracnose, etc., and gives the best means for prevention or cure. Formulas of various fungicides are given, with suggestions for their application. Prof. Halsted is doing a very great work for the florist in his investigations, and has already given us great aid in combatting fungus ailments of plants.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

When and How to Plant.

After a good deal of observation, as well as the figures at the end of the year, I am thoroughly satisfied that the time of planting a house of roses has a great deal to do with the size of the season's cut. A great many growers, especially the small ones, do not seem to be observant along this line, or else they fail to profit by past experiences; for we frequently see them planting in June or July for summer bloom, and as late as September or October for winter cutting, and though they admit that the returns from the house failed to cover the expense of fuel during the early winter months, yet they go ahead and repeat the experiment the following season. We have a set of rules which govern our actions in almost all the affairs of life, and some rule should be adopted by every rose grower large or small, as to the date for commencing and finishing the replanting of all the houses; and arrangements should be made ahead to have as much as possible of all other work out of the way, so that we can concentrate all our energies upon the one thing, and push it through to a conclusion as rapidly as possible.

I have occasionally seen a late planted house overtake another that had several weeks' start, but the rule is that late-planting is followed by late cutting, and light cutting, weak short stems, and very often inferior flowers until late spring, when we have too many flowers anyway. I think the more plants we can bench in June the better, but as there is considerable demand for cut bloom all through the month, owing to the closing of the schools and colleges we are reluctant to tear out too large a proportion of the old stock, but we generally have a house here and there that shows signs of giving out about the first of June, and it will be money in the pocket to replace such just as early as possible, and all planting should be finished up as early in July as the size of the plant and the help at our command will permit. Three weeks in July will be worth as much, as far as growth is concerned, as will six in October or November.

When there are several houses to be planted I am satisfied that it is not economy to take the regular greenhouse men to do the mixing at the compost-heap, the carting and wheeling of the soil, etc., and should not be done unless circumstances are such that no other course is

open; they are not accustomed to that kind of work, do not take kindly to it, and if it falls to them to do it their greenhouses are pretty certain to be neglected, and loss ensue. What I mean is that it will pay to hire extra laborers to do the rough work, and use the higher priced, skilled labor in its proper place.

Different places have adopted different methods of carrying in and out the greenhouse soil; some use hand barrows, which two men carry, but it is hard work and slow; others use flats carried by one man, each holding about three shovelful, you can get the house full in time this way but it is a very primitive method. Some houses are arranged with slides on the back or north side of the house through which the soil can be shoveled from the cart and distributed through the house, while a few very enterprising growers have laid miniature car tracks in the house and run in small cars holding about a cartload of soil. These methods all undoubtedly have their good points, but the plan I adopt wherever the houses and benches are adapted to it is the wheel-barrow; if the doors are wide and the benches not too high a house can be emptied and filled more rapidly and economically in this way than any other that I know of. At our place, if all goes well and the day is not too hot, four men with wheelbarrows and one to level off the soil, usually fill a house in from 9 to 10 hours, —size 20x275 feet. A house of this capacity would take five men at least two days if boxes or hand barrows were used.

We hear and read about houses being filled with soil in the forenoon, and the same set of men planting the roses out in the afternoon, but I must confess that I have never been able to finish up work so rapidly. Experience has shown me that young roses never start into growth satisfactorily or give as good results at any time if put out in very rough lumpy soil, and as it is almost impossible to thoroughly pulverize tough sod and fresh manure at the compost heap, unless the soil is very sandy (and in that case it is not fit for roses) I always turn over the soil and break it up by hand after it is in the benches, at the same time mixing in whatever commercial fertilizers are used. Mixing in this manner takes considerable time, probably quite as much as the work of bringing in the soil, but after all it always pays to take all the time that is necessary to do work right. Labor is the costliest item on a florist's place, but wisely directed it gives the largest returns.

As to the best fertilizers and how much should be used to secure the best results, depends altogether upon the character of the soil; some soils require very little bone, others can make use of large doses of it, the same with wood ashes, etc.; the only rational course to pursue is to experiment with different proportions, carefully note the result, and afterwards use the quantity

that experience shows to be the best. I am asked sometimes, what is the proper distance apart to plant roses. I have frequently seen them only 12 inches each way, but unless the soil is very poor, or the treatment faulty, this must prove entirely too close; we usually plant 15 inches each way and find that they get very much crowded, and this season we giving them about one-fifth more room.

It is unfortunate if at planting time we find we have not enough stock of each variety so that we can select only the strongest and best; no plant whose vigor and perfect health can be questioned should ever be planted out, and no matter how carefully we grow our stock we are pretty certain to find some of this class amongst them. I would again emphasize the importance of firm planting; by this is not meant pounding the soil until the ball of earth taken from the pot is squeezed and flattened all out of shape, but that a hole large and deep enough should be made and the plant carefully taken from the pot, the crocks taken out, placed in the hole and held there with one hand while with the other the loose fine soil is filled in, then made firm all round the plant, leaving a smooth even surface. A dry plant should never be set out, and it takes a good deal of watching to prevent it. Very often, it is too much trouble to get a watering pot, and it won't make any difference any way as long as the boss doesn't see. After planting, one good watering round each plant is preferable to watering the whole bench, first, because each plant is then certain to get enough, and further there is no use in keeping the whole mass of soil soaked while it contains no roots, better to hold it on the dry side and insure its keeping sweet as long as possible.

ROBT. SIMPSON.

A Rose Discussion.

Following is a synopsis of the discussion at the last meeting of the Chicago Florist Club, which was devoted to hardy roses, and at which were present a number of the nurserymen then in the city.

In response to a question as to experience with hardy roses in the east, after explaining that her observations dated some six years back, Mrs. E. T. Royle spoke as follows:

"We have had difficulty in the east with Magna Charta, the color not always being perfect. Anne de Diesbach did well in the open field. These plants were not watered, but cultivated so that moisture was held by a dust mulch. The greatest trouble was the prevalence of the rose or cherry bug. Some seasons, however, we were almost entirely free from it. Baroness did well, but was subject to mildew. Paul Neyron was another very satisfactory rose, and that, at the time I speak of, sold very well in the New York market. Flowers of course were cut before they were very far advanced, cut soon after 3 o'clock in the morning. We had very good transportation facilities, so they were in New York by 6 o'clock and were all sold before 8. I really believe in handling in that way a great deal more satisfaction is given to the florist than in the way which they seem to be handled here, lying in the commission house half the day. I also recollect Mabel Morrison was grown, but that like the Baroness was subject to mildew. When the flowers were good it sold well. Marie Baumann and Prince Camille were fine. The Jacq threw out big canes and there never was any trouble with it at all."

Mr. Harrison, of Storrs & Harrison, Painesville, O.: "The system of propagation that we follow mainly is out door propagation in the summer. We fix up our hot bed with enough compost to make the temperature right, then enough sand and insert the cuttings. We ordinarily use one bud, then they are potted out in small rose pots and put in the greenhouse, watered and shaded until they get somewhat established. We prepare a great many by budding in open ground. In that case we procure our Manetti from England or France. The cuttings are all handled in the house in the winter season. The cuttings are pruned by taking out every eye, then in the spring they are planted very shallow. I have a bed in my yard of these budded roses and I do not think there has been a Manetti sucker ever started. We think roses grown in this way are very much stronger than when grown on their own roots."

Mr. J. Van Lindley, Pomona, N. C.: "We have been growing our hardy roses out of doors in a cold frame made something like a hotbed, using manure, then about 4 inches of dirt and then about 4 inches of sand. We shelter it a little during the winter. We put the cuttings in about the last of November, keeping them in the greenhouse until about the first of May when they are put in the open ground. We grow them almost altogether on their own roots."

In response to a question Mr. Molloy, of Ellwanger & Barry, Rochester, N. Y., named the following as the best bedders in his experience: Mrs. John Laing, Marshall P. Wilder, Paul Neyron, Jacqueminot, Mme. Gabriel Luizet, Ulric Brunner, Baron de Bonstetten, Prince Camille and Earl of Dufferin. Some of these varieties are grown on their own roots. We also bud on Manetti stock.

In response to the question, "Why are hardy roses not successful around Chicago," Mr. E. Buettner replied: "They push out their flowers in a hurry and the season opens so late that when it does open it is summer. When roses are in bloom people will buy them." Referring to herbaceous plants he said: "We have grown herbaceous stuff for years. When the people see the flowers on the counter they want the growing plants, but it does not pay to grow plants to sell as a plant."

Mr. A. McAdams: "I think it is our own fault. As to roses I think the example seen at the Wooded Island has done more to encourage the trade than anything else ever could."

Mr. Molloy: "I think the collection of roses on the Wooded Island is one of the best possible advertisements for nurserymen all over the country. We have had numerous inquiries for roses that people have seen growing there."

Harlan P. Kelsey, Kawana, N. C.: "I am not a rose grower. My specialty is native American plants. There are a great many that the florists could use to advantage. Among native roses, for a low growing one the Rosa lucida perhaps is the best and for high work R. Carolina. There are several other varieties but these are the ones that are principally used. I grow entirely hardy plants. We are in the mountains 4,000 feet high. I have seen it 20° below zero twice and it often gets 10° to 15° below. There are numerous native plants the florists could use, such as the American heath and the mountain sand myrtle which is only found in the high mountains, and is one of the best evergreens we have. It is a low evergreen covering the ground. A good example can be found at Asheville

on the Vanderbilt estate, where the approach is covered with this for many hundred yards. In early spring it is covered by a dense mass of white bloom. If not already the largest, the Vanderbilt arboretum will soon be the largest in the world. The collection is supposed to be the finest in the world with the one exception of Kew, and it is Mr. Vanderbilt's desire to make it excel Kew."

Mr. Molloy: "A good single rose for cemetery work, though not an American rose, is the Rosa Wichuraiana. The single rose from Japan, Rosa rugosa, is beautiful in early spring and fall. In fall they present a brilliant sight with their brilliant seed pods. The foliage is magnificent, never being attacked by insects."

Mr. Kelsey: "I consider Wichuraiana the best rose for covering purposes there is. I saw at Dosoris the Wichuraiana trained over a trellis and it must have contained at least 5,000 blooms."

Black Aphis on Roses.

"Subscriber," St. Cloud, Minn., sends specimens of a bug as he terms it, that he has found on his Bridesmaid, Mermets, etc., and would like to know what it is and how to get rid of it. I am happy to tell him that he hasn't got anything very serious or very uncommon; if he had grown many chrysanthemums he would have become acquainted with the little gentleman long before this. The insect in question is the black aphid, or as it is generally called, black fly, and can be exterminated in the same manner as the green species, only his hide seems to be a little tougher, and he can stand more smoke and a stronger smell of tobacco before he succumbs. It is only occasionally that they are to be found upon tea roses, which undoubtedly accounts for "Subscriber's" failure to recognize him.

ROBT. SIMPSON.

Growing Specimen Chrysanthemum Plants

BY EMIL SCHRAY.

[Read before the St. Louis Florists' Club June 11.]

To grow good healthy plants we begin at the bottom, and that is with the cuttings. We always try to get the best and most healthy suckers, taking them from plants grown in pots, or on benches. The suckers are taken out with roots and planted in 2½-inch pots, and when well started the heads are taken off these and rooted in sand in a temperature of about 55°. When rooted they are planted in 2½ inch pots, shifting them from time to time to larger pots, never allowing them to get pot bound, as therein lies one of the secrets of growing good healthy exhibition plants. Plants are placed outside in spring as soon as the weather permits, the sooner the better, the place arranged so that they can be protected any time from severe weather.

Staking and training is attended to when the plants are yet quite young. Great care is taken never to get the plants overwatered; some varieties will

PALM HOUSE OF THE FAURIAN GARDEN
ST. PETERSBURG NOTES:

overcome it, but most of them will not, as they will get sickly, and often suffer from black spot. The black aphid, a very troublesome insect, is kept down as soon as it shows itself by using tobacco dust or tobacco extracts.

In potting pot firm, using good drainage; the soil used is good sod, mixed with one-third rotted manure, a little sand and bone meal in proportion of 1 to 40.

Following is a list of varieties grown and found to make good exhibition plants: Ivory, Minnie Wanemaker, L. Canning, Jos. H. White, W. H. Lincoln, Major Bonnafon, Clinton Chalfant, Inter Ocean, Mrs. Irving Clark, Vivian-Morel.

During the hot dry season plants are syringed twice a day, about 10 a. m. and 4 p. m., which takes the dust off the leaves, greatly benefiting the plants. Owing to an insect which stings the buds and causes the flowers to become misshapen, plants are housed as soon as there is the least sign of them showing buds. When in the house plenty of ventilation is kept on day and night, in cool weather putting on a little fire heat to take off the chill and to keep the flowers dry when in bloom. The plants are not transplanted any more after they show their buds, but are fed with liquid cow manure twice a week, changing off once in a while and giving them soot and char-

coal water, which keeps the plants healthy and gives leaves dark green color. Nitrate of soda has been tried as a fertilizer, but found no good, as it makes the plant grow too rank. Exhibition plants that are to be taken out to the show are kept as dry as possible three days before, as it has been found to harden them, and they keep in better condition throughout the show than if kept wet.

St. Petersburg Notes.

We present herewith engravings from three more St. Petersburg photographs.

The first gives a view in the Faurian conservatories, which supplies the greatest amount of material for the decoration of the various imperial palaces.

The second shows an aisle in one of the palm houses at the residence of General P. P. Durnowo, who has the finest private garden at the capital.

The third illustrates a basket of Eilers, which was included in the group shown in a previous issue. At the left is selaginella, the flowers being narcissus and yellow roses, in combination with dark green, yellow spotted croton leaves. The basket is covered with yellow silk ribbon. It would appear, though, that the narcissus flowers have been robbed of their stems and wires substituted therefor.

Miscellaneous Seasonable Hints.

I have been asked within a few days my advice on how to treat callas during the summer, and from Toledo comes the question, "The best way to make a smilax bed, what should the soil be composed of; what is the best temperature," and finally "how to build a first-class smilax house."

Callas that have bloomed or been growing all winter should have a rest, and that is easily done by laying them on their sides out of doors. About the middle of August shake off all the old soil and start them going again in 5, 6 or 7-inch pots, according to size of bulb. Plunge the pots in some material easy to handle, and before frost they will have made a short stout growth and flower early. If your object was to obtain a plant of great size, which for the commercial florist is not desirable, you could plant them out in rich soil, but they would be an unwieldy size by fall. If you started any little offshoot bulbs in the fall and have them now in 3-inch pots, shift them into a 5-inch and plunge out of doors and keep well watered during the summer, and they will make good strong plants by end of September. There has been little money in the calla for the past few years, principally because *Lilium Harrisii* and *L. longiflorum* are now so inexpensive, and cover all the season that the calla does.

The smilax story has been told many times in your columns. Now is the time to prepare for the bed, for the earlier it is planted in July the more profitable will it be. If you wanted smilax to make the strongest possible growth you would treat it like its edible cousin, the much relished asparagus, but you don't want that; when too vigorous it becomes bare of leaves at the bottom, and does not make a serviceable string. If the greenhouse floor is hard and dry make the bed on the surface; if it is wet make the bottom of plank raised 2 or 3 inches from the ground; six or seven inches of soil is enough for the bed. I have grown smilax in several different soils, and the poorest results were from a light sand. A heavy loam with one-fifth of cow manure will do finely. To be profitable smilax should never have less than a temperature of 60° at night, and as much as you like in the day time. In the great majority of plants the more heat applied the more tender and inclined to wilt will they be, but in smilax this is not the case. With it the more heat the harder it is, providing it is not cut prematurely.

As for "a first-class house for smilax." Most any other plant we grow might have some consideration as to shape and style of house, but smilax will grow in any house. The most unsuitable house would be a three-quarter span with the long span to the south, and neither do I believe in its being in a house that never gets a ray of sunshine. Simply if I were to erect a house for the especial growing of smilax it would run north and south with side walls of 5 feet and the house 20 feet wide. The paths would be three in number, one on each side of the house next the wall and one in the middle. This would leave two beds of 7 feet each, plenty wide enough for convenient working. From October to March smilax is all the better for a light house, but for the hot summer months a shade is not only desirable but necessary.

While on the subject of the asparagus it will be in place to speak of that most useful plant, *Asparagus plumosus nanus*, but where the "nanus" comes in I can't

see. A few years ago I planted a bed of the last mentioned; it was in 8 inches of good soil and the bottom of the bed was plank a few inches from the surface of the house. It grew grandly until about December, when it all turned a silvery light green. On consulting the greatest of eastern asparagus growers his advice was "Never divorce it from mother earth." Next year I lifted the same plants, placed them in a bed of 8 inches of good earth with the bottom mother earth, and have never been without some fine asparagus since. A specialist will supply you with 50 strings when you want it, but he that does a retail greenhouse trade should have a bed of *Asparagus plumosus*; it is not only the long strungs that are useful, but the short growths are always in demand. What can add grace and lightness to a bunch of roses or almost any flower more than a few sprays of asparagus? It does well in a temperature of 55° at night, rich soil and a solid bed. It is a cut and come again crop.

Those of you who are growing *Lilium auratum*, and what is worth more, *rubrum* and *album*, should have them in the coolest house you have with plenty of shade. Those who do not grow these lilies should do so for they fill up a gap when you have neither the calla nor are the true lilies, the *longiflorum*, etc., to be had.

Those who have grown any *pelargoniums* and have kept some for stock should as soon as they are done blooming keep them a little dryer than when they were flowering, and don't be later than the 15th of August in propagating them. Cut them within a few inches of the pot, and they will break out with buds where no buds were visible. I will endeavor to give later on some words of advice about *pelargoniums*.

It is late to give instructions about azaleas, but I know many, like the writer, will have kept his unsold azaleas in the houses up to this date. Shake off all the soil that is not occupied with roots and plant them out in a rich light soil with plenty of room between them, and where they can get plenty of water. When they are well settled in the ground mulch over the whole surface with 2 inches of spent hops or old hotbed manure; it will save lots of waterings. Don't be afraid to clip back any strong growths, and where a plant is not in the best of health clip it back hard. If you think this is rough treatment for the azalea remember how we receive them in the fall, dug out of the beds in Europe and in many cases a three week's journey before they are potted, and yet they come out all right. If the weather is dry and they are planted in a light soil where the water will pass off freely a good watering every week will do, but a good syringing should be given every evening.

There are several florists (and they are more than several, in fact they are in the majority) who forget to plant out a few plants of common things, which may not be of great value, yet you had better have them than go round asking your friends to give you a few cuttings of this and that. Plant out some few of everything for which we have a use, and above all, even if it is late plant out a big lot of the best geraniums. The flowers are useful to you in July and August, and geraniums can't be multiplied like weeds. There must be a good cutting or there can't be a good plant. If you have any hydrangeas left over in 6 or 7-inch pots cut them down to within 5 inches of the pot, shake off some of the soil and repot in suitable size pot and plunge out of doors, and they

will make big plants for next year.

If you have not yet planted out your young spring struck hydrangeas don't delay in putting them out in a rich piece of soil adjacent to the hose, for they like water till August comes, when they will take care of themselves.

Now a word about benches, it matters little whether you are growing roses, chrysanthemums or carnations, don't let your boards be too close together, and if you own the place and are not likely to sell inside of 6 years use 2-inch plank for all your benches. For roses there should not be a space of less than three-fourths inch between a 6-inch plank and for mums and carnations the same. An old bench is little benefited except with a washing off and thorough good white washing with slaked lime, but for new benches there is nothing like a heavy coat of water lime put on with a brush, about as thick as you can get it to spread. Don't take any rest till you see everything well attended to and don't neglect repairs till the fall, when you will be twice as busy as you are now. WM. SCOTT.

Carnation Notes.

The bulletin issued by the New York Experiment Station "Combating Carnation rust," by F. C. Stewart, contains very valuable information. His experiments are very painstaking and in many points conclusive. His recommendations are timely and to the point. This bulletin is in most parts the same as his valuable paper read before the New York carnation meeting, and what he said will appear in this bulletin, with a few additions of which I will say a few words.

In the paragraph "Some popular errors regarding rust," Mr. F. C. Stewart is very positive and decided in correcting some erroneous opinions entertained by many growers, especially as to the supposed spontaneous appearance of the rust, and is very positive the spread of this disease is effected only by the spores or seed, or infected cuttings and plants containing the mycelium, or as we may term it, the roots and runners of the rust plant. Mr. Stewart says, "Rust fungus consists of two portions: (1) a vegetative portion consisting of colorless threads (mycelium) which are found only on the interior of the plant; and (2) a reproductive portion composed of the brown spores found in the pustules just beneath the epidermis of the leaf. The spores are the 'seeds' of the fungus and not the fungus itself." Again he says "No carnation plant can become affected with rust unless it was propagated from a cutting containing the rust mycelium or else comes in contact with rust spores. The theory of spontaneous generation, once vigorously advocated, has been, during the present century, so completely exploded that it is no longer upheld by any scientist in good standing." Mr. Stewart's opinions are given very forcibly, but are nevertheless pertinent and true.

In another part of the same paragraph the author says: "Some florists believe that rust is localized in those parts of the plant where the pustules make their appearance. Upon this theory as a basis

they hope to eradicate the disease by the removal and destruction of the diseased leaves. While such practice is to be commended it can not, reasonably, be expected to effect a cure. The spread of the disease may be checked, but that is all. By the time the pustule appears the mycelium has already spread to the other parts of the plant." In reference to this it would be interesting to hear more of those who made experiments with the arsenic remedy.

Another paragraph, which I heartily endorse, is on controlling rust without the use of fungicides. Far from it that Mr. Stewart or myself would intend to cause a lack in the watchfulness and observation as regards spraying. Mr. Stewart only points out the importance of a careful culture, a culture that will assist the plant in its resistance against rust. Knowing that all the so-called remedies at the best will only effect a check and not entire cure, he advocates such a culture as mentioned the first step in combatting the rust. Here I am again confirmed in my advocacy of applying water only to the soil and not over the plants, to keep the foliage dry, as all fungus spores require water for their germination. Mr. Stewart says: "As far as the control of fungus diseases is concerned, sub-irrigation is the ideal system of watering carnations." I heartily endorse Mr. Stewart's views on carnation rust and commend his bulletin to every florist for a careful perusal.

Rains, moisture-laden air, heavy dews, are very beneficial for plant growth, but it is also beneficial for bacteriosis. Not that it is alarming; plants grow fine at present, but bacteriosis is so much more noticeable than when we have a dryer air, and I would not be surprised if it is not the same with rust. I especially attribute this to the heavy dews at night, rain will roll off the leaves, dew will stick better. Another hint how to treat plants under glass regarding watering.

I admonish again not to let the soil get baked at the surface. Break the crust whenever there is one formed, but be careful not to go any deeper than necessary to do so, that is to the depth from one to two inches; any deeper is rather injurious than beneficial. Roots can not take any hold in loose soil. We only want to break the crust to act the same as a mulch and keep the solid soil underneath from drying out, to keep it in as even a moist condition as possible.

FRED. DORNER.

Adiantum Farleyense.

R. S., Hillsdale, has a lot of *Adiantum Farleyense* that fail to make satisfactory growth. The leaves dry prematurely and have not right shape or color. The plants are growing in the same house with "soft stuff," whatever that may be, and are potted in a mixture of moss compost, broken crocks and sand. This is a little out of my line, and probably the question came to me by mistake, but I will answer R. S. to the best of my ability. In the first place *Farleyense* will not grow under the same conditions as geraniums, heliotrope, etc.; it is a hothouse fern, and to have it do its best must have stove treatment. It should have a night temperature during winter of 75° to 70°, and ten degrees higher during the day, and a correspondingly high temperature during the summer. An abundance of atmospheric moisture is necessary, but the dampness must not settle on the foliage; to prevent this a little steam heat overhead is very helpful. Cool draughts of air striking the plants generally prove

A PRIVATE CONSERVATORY
ST. PETERSBURG NOTES.

very injurious, but the air nevertheless must be fresh and pure; a damp stagnant atmosphere is the worst thing imaginable. The drying up of the young fronds may be caused by the uncongenial atmosphere and surroundings, but is more likely the result of poor root action. Ferns will often continue to throw fronds without any corresponding activity at the root, but such fronds generally shrivel before they are fully developed. While Farleyense is in a small state the soil may be lightened by mixing one-third peat with two-thirds loam and good sprinkling of sand, but as soon as the plant is large enough for a 4-inch pot the compost may be two-thirds good fibrous loam and one-third well rotted cow manure, with a good sprinkling of sand and coarse bone meal, the whole having laid for at least six months to become well decomposed. This is one of the ferns that once stunted seldom makes a good plant; the secret of having fine clean stock is to have fresh vigorous young plants to start with, and with the right treatment they will grow as well as some of the more common kinds. I would advise R. S. to pick his old plants to pieces, and start them up again from single eyes or crowns; put into pots or pans in sand and peat in equal parts, close together like cuttings, and kept in a close frame well shaded;

they will soon start into growth, and should then have a little ventilation, and soon as large enough be potted into very small pots, kept close to the glass in a warm close house, repotted as they need it, and there will soon be a good foundation for a batch of strong healthy plants.

ROBT. SIMPSON.

Uneven Temperature.

I have charge of a set of greenhouses that are built east and west, a shed at both east and west ends. Boiler (hot water) at east end. Houses have a fall of about 8 or 10 inches toward the east. The west end of houses is from 15° to 18° warmer than the east end. The pipes heat all right, but the west end, the end farthest from boilers, is in cold weather always that much warmer. How can I make temperature more even?

Buffalo, N. Y.

S. F.

With houses built as those described by S. F., it is somewhat difficult to maintain an even temperature on all parts of them alike, as the heated air will always draw to the highest point, and particularly when the wind is in the opposite direction. S. F. can somewhat modify these extremes by reducing the number of pipes at the warmest end and increasing in the same proportion at the coolest end.

If the houses have say eight pipes, I should advise reducing them to seven for one-third the length of the house, and add this to the other end in the same proportion. This would make nine pipes at the coolest for one-third the length of the houses, eight pipes for the center one-third, and seven for the warm ends. By such an arrangement of the piping, the temperature can be maintained in ordinary weather within three or four degrees equally all through the houses; though when the wind is in certain quarters it may be necessary to lift the ventilator at the warm end a trifle to keep it equal.

To change the piping as suggested would only require three Y branches and three slip collars or sleeves as they are usually called by hot water fitters, and certainly ought not to be a very expensive job. I should consider that the difference in the value of the product would more than double its cost in one month in severe weather when firing hard, as that is always the most trying time for houses so constructed.

If from any cause it is not practicable to make the changes above suggested, then a covering of fine soil or sand over a portion of the pipes at the warm end will be of considerable benefit in keeping down the extra heat, but this is always an unsatisfactory method and makes an untidy looking ridge or ridges of soil in the houses, and after a little while if not kept in shape, will sink away from the pipes and allow the heat to escape nearly as readily as from the uncovered pipes. In addition to these facts, you are continually burning coal to heat considerable surface to waste, without getting all the benefit that the first suggestion would give. Of course you could also cure the trouble to a great extent by covering some portion of the pipes at the warm end with asbestos, but this would cost as much as changing the pipes and not be as satisfactory.

JOHN N. MAY.

New York.

The windows of the leading up town stores display at present mainly vases of such cut bloom as sweet peas, centaureas and coreopsis, while on the Greek's sidewalk stands American Beauties, Jacqs and Brides occupy the chief space. Very light are the rose purchases made by the fashionable classes of buyers just now, and the agents of the stores buy in like manner at the wholesale establishments these summer mornings. The quality of the buds offered is inferior as a rule, and further the fashionable customer cares less for roses in the month of roses than at any other time. This peculiarity of the fashionable customer deserves passing notice, but is hardly worth the trouble of analyzing.

It is just now, however, that the average rose grower begins to loathe the sight of his old bushes and after an experience of such conditions as prevailed during the first half of June the conclusion to toss them out is easily arrived at so, whisk! out they go, and the young stock for next season is quickly installed in their places. So the past few days have witnessed a remarkable shortening up in the receipts of roses, some shippers having stopped off entirely and others sending dozens where but recently they sent thousands, and there is every probability of good stiff prices on these few, provided the quality is all right, till the end of June at least.

The carnation growers seem loth to part with their old charges and are holding out a little longer than the rose men, although they claim vigorously that \$5

per thousand, which is about outside price realized for good long-stemmed stock, does not pay expense of caring for and marketing. Lily of the valley is really the choicest flower obtainable at present and there is a fair call for a moderate quantity, but buyers seem unwilling to pay prices of former years.

The trustees of the New York Florists' Club met on Saturday last and had a lengthy conference on the matter of the proposed fall show. In accordance with the proposition made by the club they voted to increase their number as a committee by the addition of the following gentlemen: P. O'Mara, A. S. Burns, J. W. Withers, Wm. Plumb, W. A. Manda, Jas. I. Donlan and Henry McCrowe. Another meeting is called for Monday, June 22.

Secretary John Young has just received the medal and three diplomas won by the New York Florists' Club at the World's Columbian Exposition. They are all beautifully gotten up.

Plant auction sales are about finished for the season. Rolker will have a palm sale for the Philadelphia brethren on next Monday, and a combination orchid sale for Siebrecht & Wadley and Pitcher & Manda on the following Thursday, which will about conclude the season with him.

The friends of Robert B. Young will be sorry to learn that he has had a return of his old rheumatic trouble and has been quite sick for some time at his home in Asbury Park.

L. C. Bobbink sailed for Europe for a month's stay, on the 18th inst. per steamer Werkendam. Julius Rochrs goes one week later on the Fuerst Bismarck.

"Pat," well known to frequenters of the auction sales for many years has been doing a good business on his own account selling roses and other nursery stock at a sidewalk stand on Greenwich street.

Boston.

Saturday, June 13, was prize day at Horticultural Hall for herbaceous peonies, aquilegias, oriental poppies and foxgloves. The display of peonies excelled anything ever done before in this line, the collection of T. C. Thurlow, which received first prize, consisting of no less than seventy named varieties, and those from Dr. C. G. Weld, George Hollis, J. S. Fay and others being proportionately extensive, and the blooms of exceptional quality. In George Hollis's collection were included a large number of seedlings. Aquilegias were represented by a number of interesting exhibits, but on poppies and foxgloves there was only one entry each. Carl Blomberg, gardener to Oakes Ames, showed two tanks of hardy nymphaeas and a large display of cut flowers in variety, and James Comley staged a fine exhibit of rhododendrons, kalumias, roses, etc. Hardy perennials from Rea Bros. and shrubs from J. S. Fay were also among the attractions. The most interesting feature was a group of seedling roses shown by Jackson Dawson, consisting of hybrids of Rosa Wichuraiana × Gen'l Jacqueminot and of Rosa multiflora with several other varieties, for which Mr. Dawson was awarded two silver medals. He also received honorable mention for a pretty seedling rose from Boston Belle. There were a good many fine strawberries on exhibition, the Marshall leading as usual in size and attractiveness.

The annual rose and strawberry exhibition of the Massachusetts Horticultural Society will open at noon on June 23 and close at 9 p. m., June 24. If present conditions continue we shall see an exhibi-

tion excelling anything shown for some years past. Frequent rains and much damp foggy weather have given the roses just the right start and the bushes are everywhere in splendid condition.

Ladies' night at the Gardeners' and Florists' Club will occur on Monday evening, June 29, at Horticultural Hall. Music, recitations and refreshments will be provided and the advance sale of tickets indicates that this occasion will be a repetition of the great success of last year and the attendance much larger.

Childrens' Sunday was very generally observed by the churches here on June 14. Considerable decorating was done, but mostly with wild or home garden flowers and an enormous number of potted plants were donated to the little ones.

The New England Florist Co. opened their new quarters at 130 State Street to the inspection of visitors on Saturday, June 13. Refreshments were served and many interested callers were pleasantly entertained and shown over the establishment, which is well furnished and equipped for a printing and publishing business.

The cut flower trade is quiet on all sides and flowers are plenty, especially astilbe and carnations. There are more carnations than the market can possibly consume even at the low price of fifty cents per hundred for long-stemmed blooms. School graduations are now in view, however, and should make quite an inroad on stock coming in. Out door roses are beginning to appear and the quality is better than usual.

Auction sales of plants at N. F. McCarthy & Co.'s have been remarkable successful this season. Even at this late date the sales are well attended and prices are unprecedentedly high, as a rule.

On June 10 Miss Grace M., daughter of H. L. White, Grandview avenue, Somerville, was married to Mr. E. L. Davis.

Cards were received by about a score of the Boston fraternity bearing the pleasing announcement that on Tuesday, June 16, Mr. Jos. Fuller would give an "asparagus party" at his farm in Leominster, to which they were cordially invited. Joe is not only the biggest asparagus grower in the state and the largest florist in his section, but is well known as a jolly companion and generous entertainer, so his invitation was promptly accepted, and June 16 has passed into history as the greatest success on record in the long list of good times enjoyed by the Boston florists. The table was spread under the trees in a pleasant grove, and the ladies of Mr. Fuller's household helped to do the honors, and added greatly to the pleasure of the occasion. After a big feast had been enjoyed by the visitors a call was made for volunteers to wait on the ladies at table, and no funnier sight could be imagined than that presented by such worthies as Ed. Hatch, P. Welch, M. H. Norton, Judge Hoitt and George Sutherland in waiters' aprons. Eljah Wood kept the musical department in order and two pretended colored gentlemen made no end of fun. Messrs. Cox and Edgar presided over a game of "seven-up" on an ingeniously constructed table composed of old bushel boxes, but only for a brief period, for their companions made a sudden onslaught which wrecked completely both game and players. Cheers for Mr. Fuller and the ladies and hearty approval of the manner in which the affair was carried out filled the air as the party at last said good-bye and started on the fifty-mile trip home, all agreeing that they had had the best outing on record. In addition to the Boston delegation

there were present Messrs. Orpet and Meredith from Lancaster, and Mr. Huebner from Groton.

Philadelphia.

The cool weather of the past few days has made flowers, particularly good roses, scarce, and it took considerable hustling on the part of the dealers to get enough stock for their orders. Weddings, funerals and school commencements have been quite frequent the past week, and although for the latter events there has not been as much demand as formerly what there was created quite a little stir, and was very welcome. Prices of stock are about the same as last week, but the quality is not quite so good, as considerable mildew has to go with the roses. Candidum lilies are in from outside and sell for about \$2 per hundred flowers and buds.

Mr. Lukens of Burlington is cutting some fine valley; his is generally good, the other fellows should endeavor to get a leaf out of his book. Robert Craig is about cut out of longiflorums; he had a fine batch of these and sold them all, a few are still coming on for a later crop in a frame outside.

The June meeting of the Penna. Horticultural Society was held last Tuesday evening. A fairly good audience was present to hear Dr. Robert Huey, an enthusiastic amateur grower of roses, read a paper on outside rose growing. It was a very interesting account of his experience with a great variety of roses and was declared to be one of the best papers ever read before the society. The doctor is a great advocate of budded stock, which he finds grows stronger and blooms better than plants of the same varieties on their own roots. He says that failures with budded stock come chiefly from the fact that they are not planted deep enough, the budded portion should be planted at least three inches below the surface and when this is done but very few suckers will appear. Among the best hardy teas he mentioned the Mme. Testout as being most satisfactory. Remarks were made by Messrs. Thilow, Scott, and Bearn, and the thanks of the society tendered to the doctor for his very able paper.

Arrangements were made to hold the first annual exhibition of the American Dahlia Society in connection with the September meeting of the society and a paper will then be read on the history of this interesting flower. The schedule of the Dahlia Society for this exhibition is now ready and can be had on application to the secretary, J. G. Peacock, Atco, N. J.

There is quite a little building going on in this neighborhood and various other additions are hinted at, among them an operation that will cover something like an acre of ground.

J. W. Young of Germantown sailed for Europe, June 8th, for a trip of pleasure and to take a well-earned rest.

W. Hagemann of this city and Wm. F. Gude of Washington left for Europe last Saturday, to be gone for two months.

Eugene Dailledouze was in town last Wednesday. K.

Chicago.

The Illinois Central tracks are being rapidly lowered, and the work of filling in for the new Lake Front Park is progressing in a very satisfactory manner. Though a stupendous work, which will require years for its completion, there now remains no doubt of its ultimate result.

BASKET.
ST. PETERSBURG NOTES:

Superintendent Kanst has planted some 80,000 trees and shrubs at Jackson Park this spring, and all are doing well.

At the annual dinner of the Board of Underwriters of this city, held at Kinsley's this week, very attractive decorations were arranged by Joseph Curran. On the speaker's table the arrangement was red, white and blue, as a compliment to the many New Englanders present, it being Bunker Hill day. The flowers were Portia carnations, swainsona and cornflowers. Cornflowers in various colors were freely used on all the tables, and the result was extremely pleasing.

Business moves along much as it did last week. Roses are not quite so scarce as they were, but there are none too many of the good flowers. Small, hard, off-colored flowers, with weak and mildewed foliage, are of course coming in, but no one wants them; it requires lots of picking over to fill an order for good flowers. Prices keep good; \$4 to \$5 for select stock, first quality Beauties \$2.50 a dozen. Some of the school commencements used up a good many roses, particularly that of Dearborn Seminary, which called especially for Beauties. Good carnations are in demand, the best selling for \$1 and \$1.25. Funeral trade is quite brisk, and there are a good many out of town weddings that keep the shipping trade moving. Valley is still scarce, and holds at \$5.

Outdoor stock is very plentiful. There is an abundance of outdoor candidum lilies, which go very slowly at \$2 to \$3 per hundred. Gypsophila paniculata sells very quickly at 25 cents a bunch; it gives a charming airy effect to made-up work. Coreopsis is plentiful, and very cheap. A few stocks are seen, but they will not sell, being mostly colored; the white would go for funeral work. Sweet peas have appeared from outside; they are down to 25 cents a hundred. Pond lilies, wild rudbeckias and feverfew are plentiful. Mr. Klehm is still cutting peonies. Outdoor shrubs made little impression on the market this year; they were so soon past.

Mr. W. Atlee Burpee of Philadelphia

passed through Chicago this week on his way east from the Pacific coast.

Visiting Chicago: Mr. Thos. B. Meehan, Germantown, Pa.; J. E. Killen, representing C. H. Jooston, New York.

St. Louis.

The regular meeting of the St. Louis Florists' Club was held Thursday afternoon, June 11, with President Fillmore in the chair. The attendance was small and not much of importance was transacted. The committee on chrysanthemum shows reported everything progressing favorably. The essay of Emil Schray on how to grow specimen chrysanthemum plants for exhibition was well received. The meeting then adjourned; the next meeting calls for nomination of officers, and will be held on Thursday, July 9, at 3 p. m.

Business about town is better than it has been, and flower are not over plentiful; this being the week of the republican convention is making things lively for the down-town florists. Asters have made their appearance and sell at \$1 per 100. Roses are looking a little better than they have been and sell at from \$3 to \$4, some extra go at \$5. Carnations are small and bring \$1 and \$1.50. Sweet peas are very plentiful and the price is still 25 cents per 100. Cornflowers are 25 cents per 100 all colors.

A great many of the florists called on chairman Kunz of the picnic committee and asked him not to postpone the picnic, but let's have one, and Mr. Kunz reports that he will call the committee together next Monday night at the Bowling Club and see what can be done in regard to a outing. If interest enough is shown we will have a picnic the second week of July.

Visitors in town this week were George A. Kuhl, Pekin, Ill.; George Kellogg, Pleasant Hill, Mo.; J. Heintz, Jacksonville, Ill.; C. J. Ford, Philadelphia; J. W. T. Deake of the Idlewild Floral Co., the original Santa Claus of North Carolina.

The bowlers bowled again Monday night and some good scores were made, Fred Weber rolled high for 3 games, 634, and Emil Schray was second with 522,

John Kunz third, 511. Fred Weber was also high on single score, 229, and Emil Schray was second with 198. Next Monday night we expect a better attendance as the spring planting is past and some of the old faces will show up again. J. J. B.

Cleveland.

Business has of late been rather quiet in that part of it outside of the plant department. Stock has been coming in in moderate quantities and fair quality for the time of year, but there has been no special demand for it heretofore, although the usual crop of spring weddings has very lately lived things slightly. At two of these the floral decorations were very elaborate and were spoken of in the local press as being the finest from the floral display standpoint of any ever seen here. They were by J. M. Gasser.

A trip through various local establishments finds matters much as usual after the rush of the bedding out season. Most florists report no very material difference from other years either in the quantity or variety of stock disposed of. A few say that there has been a slight increase, but nothing very material on the whole. There seems to be some little stock left with some growers, but no one very large amounts and of no one kind in particular. Cannas seem to have been used somewhat more largely than heretofore, and are probably the only plants that have shown any very marked increase over other years. In prices there does not seem to be much difference from other years. Geraniums sold generally for about a dollar a dozen—the ruling price for years—although a few parties with more geraniums than sense showed a disposition to give charity to the public that in some cases at least was more necessary for themselves, by selling at prices varying from seventy-five to ninety cents per dozen, "if you bring back the pots." If at one dollar per dozen the florist clears ten or fifteen cents, what per cent of profit does he make at seventy-five cents per dozen?

The committee on flower show at the convention next August held a meeting last Monday and appointed a committee to look after subscriptions for the premium list. It is hoped and believed that a very satisfactory showing can be made in this line. The committee is to report at the next regular meeting, at which time a large attendance is expected to hear the report and discuss the same.

A.

Northampton, Mass.

The annual June rose and strawberry show of the Northampton Horticultural Society was held on the afternoon and evening of June 10 and 11. The berries suffered from the heavy rains of the two preceding days, but the display of roses far excelled any of the society's previous efforts. There were many collections of cannas, gloxinias, begonias and other seasonable flowers, and palms and other decorative plants were contributed liberally by Florists Parks, Merwin, Allen and H. W. Field and Mary S. Mann of Florence.

MALDEN, MASS.—E. A. Kelley is preparing to erect an office and salesroom 25x64.

WILMINGTON, DEL.—It is claimed by Mr. Edward Tatnall, the distinguished botanist, that about one-half of all the native plants described in Gray's Botany of the Northern United States are to be found in New Castle County, Del.

Rochester, N. Y.

Excepting on one rainy day in the past week the flower stores had no reason to complain; the demand was good in every line, and the sales compared most favorably with the week before. Ever since June 1 weddings, lawn and tent receptions are of daily occurrence, and while many of these parties may not call for the most expensive flowers and elaborate decorations, there is always the few who have the desire to excel their friends or neighbors in these decorations, and consequently buy more lavishly from their florist. Marriages occurring so very frequently this month, our commission man has cards up in his store announcing that he is prepared to furnish to florists on shortest notice unlimited quantities of Brides and Bridesmaids of all grades for June weddings, but whether this announcement had any effects on the prospective bridegrooms I am unable to say. Roses of all colors were in brisk demand. The cleanest stock in our market comes from Oil City at present. Carnations and sweet peas are very plentiful; the latter do not sell at a very high figure; a few days more and outdoor grown stock will be in around here. Valley is very scarce just now, also smilax and asparagus. The outdoor roses are very fine this year, and their foliage is not so badly disfigured and eaten by slugs and bugs as at other times.

Mr. D. B. Long of Buffalo was in town last week taking orders for Harrisii lilies and other stock.

We have to record the marriage of William Lewis Keller to Miss Helen B. Rauber, late of this city, on the 11th inst. After the ceremonies in church a grand reception and entertainment was given at the home of the bride's parents. The house was most profusely decorated with asparagus, smilax and plants. The mantels and fireplaces were banked with flowers and greenery; only Brides, Mermaids and Bridesmaid roses with adiantums were used here, while orchids formed the principal material used in the table decorations. The lawn, on which a large tent had been erected for the occasion, was handsomely adorned with large palms and bay trees, etc. Miss Lulu Keller, the daughter of J. M. Keller of Bay Ridge, L. I., acted as maid of honor, and performed her various duties to the admiration of all concerned. The groom is the youngest son of J. B. Keller and also the youngest member of the firm J. B. Keller Sons. He has left for a prolonged trip east and south, setting no date for his return, which action is much regretted by the boys, for they had arranged for a surprise of a rather pleasant nature on his arrival home.

J. B. K.

Milwaukee.

Spring trade to this writing has been a very satisfactory one to the florists here. The sale of bedding stock has surpassed any previous spring. June trade so far has been quite brisk, owing chiefly to the numerous weddings in and out of town, and also for commencement exercises. Stock is fairly plentiful, but most of it is poor and unsalable, leaving a shortage of good stock, which commands good prices. N. Zwiefel is cutting some exceptionally fine carnations, and H. Von Oven is doing likewise, and also some fine Beauties.

Bids were opened for the city park last week, and Archie Middlemass was most successful, he receiving the bulk of the

work. John Dunlop also came in for a share of it.

The Florists' Club is already beginning to advertise the fall chrysanthemum show, all members using envelopes upon which the date, etc., of the show is advertised. This is a good and direct way of reaching flower lovers, and is inexpensive.

Recent visitors: Louis Hartung, Two Rivers, Wis.; John Baustead, Racine, Wis.; O. Sylvester, Oconomowoc, Wis.

INCOG.

LANCASTER, PA.—Mr. Franklin Kohr, a prominent carnation grower of Lancaster, was married, June 10th, to Miss Barbara A. Harnish.

PROVIDENCE, R. I.—T. O'Connor has purchased a large estate on Blackstone Boulevard and is now moving his establishment from Hope Street to the new location. Considerable new glass is to be added and when completed it will be one of the finest ranges of greenhouses in the State.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—By experienced florist and gardener; thoroughly competent. References. GARDENER, care American Florist.

OBITUARY.

LOUIS SCIPION COCHET.

Monsieur Louis Scipion Cochet, the
well known rosarian of Suisnes, France,
died at his home there May 27, aged 63.
He was vice-president of the Societe d'
Horticulture de Melun et Fontainebleau,
and of the Section des Roses de Paris, and
a chevalier of the Portuguese Order of
Christ and Ordre de Melusine. M. Cochet,
who was editor of the *Journal des Roses*,
contributed freely to our rose literature,
being, in common with several other
members of his family, greatly interested
in the advancement of this flower. He
leaves a widow and family.

AUGUST ROLKER.

August Rolker, the senior member of
the firm of A. & F. Rolker, New York,
died on June 17, of inflammation of the
heart, aged 52 years. Mr. Rolker was
born in Brooklyn. His father, the late
August Rolker, Sr., established the firm
of August Rolker & Sons, of which de-
ceased was a member until one year ago
last January, when he retired and went
into the plant auction business with his
son, Fred, buying out the interest in the
establishment formerly conducted by
Robt. B. Young. August Rolker & Sons
were originally engaged in a general com-
mission business, but in 1872 they took
up the florist supply business, in which
they were the pioneers, and by their enter-
prize and industry soon made themselves
well known among the florists all over
the country. August Rolker's first great
misfortune was the death of his son, three
years ago, and from that time his health
began steadily to fail. Trips to Cuba
and to Italy were undertaken, but with
no benefit and now the end has come.
Mr. Rolker was a man who was gener-
ally liked and highly respected for his
integrity and old-fashioned upright busi-
ness methods, and his death at the me-
ridian of life is a deplorable event. He
leaves a widow, two sons and one
daughter.

Cincinnati.

The situation in the cutflower market
remains about the same as last week,
stock is rather plentiful and prices low.
Some choice sweet peas are coming in
which wholesale at 25 cents per 100.
Roses sell from 2 to 4 per 100 and carna-
tions from 75 cents to 1.50 per 100. The
flower market on Saturday was very
dull—very few plants were disposed of.
The only thing that could be seen to move
was cannas. One of our growers had a
large sign in his lot of cannas which read
"10 cents each." They were nice and well
grown plants in 4 and 5-inch pots mostly
all in bloom and choice varieties, such as

Mme. Crozy, A. Bouvier, Secretary Stew-
art and others equally as good. At these
figures the lot went off as you may term
it "like hot cakes."

Visiting in town: Mr. Chas. Peters of
Huntington, W. Va., formerly of this city.
H. SCHWARZ.

The Single Pipe System.

In reply to "Subscriber's" inquiry
about single pipe system of heating, I
have nothing new to add to previous
notes. I find everything works all right
under low pressure.

Subscriber inquires about how low top
of boiler must be below greenhouse level.
It doesn't matter where the top of boiler
is so that returns come in at or near
bottom and that that be the lowest point
for all condensed water to return to
boiler. This presupposes that the flows
are tapped at bottom soon after leaving
boiler for above purpose.

I use no check valves and see no use for
them if boiler and pipes are set right. If
subscriber will look up illustrated article
in AMERICAN FLORIST some two years
ago I think the plan will be made clear to
him, or if he will write me I will try to
explain the system as I understand it.
Champaign, Ill. THOS. FRANKS.

HARTFORD, CONN.—The June exhibition
of roses under the auspices of the Con-
necticut Horticultural Society opened on
June 10 at Keney Hall.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

T. W. WOOD, Pres.; ALEX. RODGERS and J. B. RICE, Vice-Presidents; A. L. DON, 114 Chambers Street, New York, Sec'y and Treas.

Mr. W. BROTHERTON is in California.

VISITED CHICAGO: W. Atlee Burpee, Jas. B. Kidd, S. M. Pease, J. L. Uilathorne.

NEW YORK.—S. Y. Haines of Minneapolis, Minn., is in town and expects to sail for Europe, shortly.

THE CONTRACT ORDERS booked by the N. B., G. Co. to the amount of over \$100,000 are about to be sold by order of the court.

GERMAN seed growers report June 1 much damage to growing flower seed plants from drouth and dry easterly winds. Present crop prospects are very poor indeed.

BOSTON.—Four days of continuous rain has put a stop to the drouth for the present; it is so long since we have had a rainy day that this storm was a most welcome surprise. No one seems to speak very enthusiastically of the past season's mail trade, but as a rule counter sales have been very good, and are still holding on remarkably well.

Seeds in California.

In the seed growing districts of the Santa Clara Valley, including Menlo Park and Gilroy, the crops are as a general rule looking excellent, and with few exceptions, there will be a full crop. Onions never looked as well as they do at present. They seem to be entirely free from the blight this year, and as a result they are heading up in grand shape. Salsify also is looking good and some of it is beginning to ripen. Leeks are yet growing and in all probability will be a good crop. Lettuce of early planting is doing well, but in some places late plantings will not be in good shape on account of the warm, dry days. Flower seeds generally have done splendidly, with the exception of nasturtiums, which were killed by the late frosts. The warm days have brought all the sweet peas into bloom, which are now a show, acre after acre of different colors making a beautiful sight at noonday. Asters are doing fairly well. Cosmos and petunias will come out all right.

One of the prettiest sights imaginable is to see a field of Cupid sweet pea. It resembles a field covered with snow. As a general rule this variety is doing very well. A remarkable thing about this variety is that it comes so true and has no inclination to sport away to a different color, nevertheless a new dwarf will be sent out by one of our leading seed houses next year, but it did not sport from Cupid. Beets are doing nicely, also cauliflower and cabbage. METEOR.

San Francisco.

Decoration Day business was very good all around. Immense quantities of sweet peas were disposed of and the prices realized were fairly good. The sweet peas were of excellent quality also, the stems being long and the flowers of fine form and color. We note that the public is rapidly beginning to know a good sweet pea from a deteriorated bloom. The sweet peas that the fakirs are handling are as a general rule small deteriorated

blossoms of an offcolor. Roses are holding their own very well. Beauties are rather scarce. Wm. Hale's old place is supplying the larger out-put of Beauties at present. Testouts are of a very excellent quality and come in for their share of popular favor. Some extra good Perle, Mermet, Bride and Bridesmaid are in, also Cecile Brunner. This little rose is very popular in this market.

The outdoor crop of longiflorums is now coming in in limited quantity. They are excellent and are finding a good market. Carnations are as usual in fine form and the supply is fully equal to the demand. McGowans are not over-plentiful, the same may be said of Daybreak, Scott has caught onto the public favor in this market and with the exception of Portia is the most popular sort we have. The warm days last week have done some damage in some places to the young, soft buds of sweet peas, having burned them completely. Liliun auratum is coming in now and finds a ready market. The quality is excellent.

W. Atlee Burpee, who spent nearly a month in California, has returned to the East accompanied by his wife. Mr. Burpee claims that each year he is becoming more in love with our state and says that hereafter he intends coming to California in search of novelties instead of going to Europe, which heretofore has been the custom of nearly all our seedsmen.

The failure of the Northrup, Braslan, Goodwin Co., of Chicago was severely felt by a number of seed growers in the Santa Clara Valley, who have been growing seed for the above named firm for years.

W. A. Brotherton, representing Jerome B. Rice & Co. of Cambridge, N. Y., is here looking over the growing crops in the interests of the above named firm.

Mr. V. H. Hallock of Queens, N. Y., accompanied by his family, is here also looking over the seed crops generally throughout the Santa Clara Valley in the interest of Jas. M. Thorburn Co. of New York. Mr. Hallock is delighted with our advantages as a seed growing district, and says in time California will lead all as a seed growing country.

Mr. Geo. Ernst of Pelicano & Co. has been seriously ill for the past three weeks.

Mr. Baldocchi of Podesta & Co. has also been on the sick list but is getting along all right again.

Mr. Lester L. Morse of C. C. Morse & Co. was up last week and in company with Mr. Burpee paid a visit to the "Wizard of horticulture," Luther Burbank, at the latter's place in Santa Rosa.

Thos. H. Stevenson of Powell street has opened up a branch store in the Emporium on Market street. Mr. Stevenson has thus secured one of the finest stands in the city. It is right beneath the dome of the building. He is keeping up an excellent stock of roses, carnations and sweet peas. On the right of the entrance he has a fine show of kentias, dracaenas, ferns, begonias and pelargoniums all very artistically arranged. Another thing of which genial Tom is justly proud is his new delivery wagon, supposed to be one of the finest in this country. The sides are all painted with orchids all their natural colorings. Cattleyas, cypripedes, odontoglots and lilies form the most striking group. The harness was made in London, and is the finest that can be bought. Taken as a whole great credit should be reflected on Mr. Stevenson for the enterprising spirit he has shown. The old store on Powell street will be also conducted in connection with this one.

Mr. Sidney Clack reports that everything is moving nicely with him. The stock he is bringing in is of very good quality.

Mr. H. Pottet, the rose grower, is making a number of improvements at his place on the San Bruno road. He is having his houses all renovated and a new system of heating put in which will cost several thousand dollars. Mr. H. Pottet Jr. is again with his father in the position of manager. The houses all will be replanted this summer with young stock of roses, which is Mr. Pottet's great specialty. Carnations are also largely grown here, as also lilies and ferns.

Mrs. Merriman of Mountain View has made satisfactory settlement with her creditors whereby the business will be conducted as before. METEOR.

Toronto.

There is little of interest to note this week. The cut flower trade has all gone to pieces, there are plenty of flowers of course but —. The plant trade is still a little lively but is growing beautifully less all the time. Seedsmen report a very good trade during the late spring and are now looking up the most desirable summer resorts.

The weather keeps just moderately warm with occasional showers, very pleasant, but a violent snow storm is expected on the 23rd inst. (election day).

"Bedding out" is about done and everything appears to have taken hold and to be going right ahead. E.

NEW ROSE

"Mrs. PIERPONT MORGAN"

Listen for a moment to what a voice from far off Springfield, Illinois, has to say about our young stock of this rose:

May 4, 1896.

"EDWIN LONSDALE, Chestnut Hill, (Station H), Philadelphia, Pa.

"DEAR SIR:—Box of 'Morgan' rose plants arrived Saturday in good shape. Fine Plants. I would like to know how you produce plants of such size in a two (2) inch pot?"

All I can say is that it is all owing to the natural vigor of the variety, and perhaps to some extent to the natural rose growing qualities of our soil.

We have a few more left of the same size. Order early or you may get left, for I do not know of a more profitable variety to grow for cut flowers than MRS. PIERPONT MORGAN.

Don't forget our address:

EDWIN LONSDALE, Station H,
Chestnut Hill, PHILADELPHIA, PA.

A. G. PRINCE & CO.,

88 Wabash Ave., CHICAGO.

Denver, Colo.

Mr. Emil Glauber, proprietor of the Montclair Greenhouses, has purchased the flower store at 929 16th street, formerly run by the Denver Flower Co. Mr. Chas. Webb will manage the store for Mr. Glauber. Montclair roses are noted for their excellence.

Mr. J. Walters is preparing to enlarge his range at Harmon by the erection of three houses 18x100 feet, heated by steam. Mr. Walters grows vegetables exclusively.

The Colfax Floral Co. had a very fine night blooming cereus in bloom in their show window June 10 and 11. Five fine flowers opened.

Trade has been rather quiet since Decoration Day, but the general opinion seems to be that it is better than at the same time last year, also that prices are better.

The national convention of the Junior Order of American Mechanics is now in session in this city, and an increased demand for red, white and blue flowers is noticed.

Considerable disappointment was manifested by the local trade at the Capitol commissioners' decision not to appropriate funds for the purchase of bedding plants to ornament the Capitol grounds. The amount needed to properly plant the grounds was \$800, and several of the commissioners were in favor of expending that sum, but at the last meeting of the board it was discovered that so much money had been expended in purchasing brass spittoons and other legislative necessities that out of the quarter of a million dollars or so that the board had at their disposal at the beginning of 1895 there was not enough left to afford anything for the pleasure of the taxpayers.

Supt. Graham is making the city parks bloom like a rose. Mr. Graham is fortunate in having at his back a park board who appreciate his merits as a park maker, and it is to be said to his credit that he justifies the confidence placed in him by getting more and better results for the money expended than ever before in the history of our park system.

Manager Lewis reports that the Colorado Florists' Exchange is keeping up its gait and selling out nearly clean every day. The wholesalers are correspondingly cheerful.

Mr. Chas. Adams, superintendent of the Capitol grounds, having finished all planting and having succeeded in getting a fine lawn started, has laid off all of his force but five men, who will be retained until November 1. The grounds look very trim and neat, and add greatly to the beauty of our really fine Capitol.

There will be no chrysanthemum show in Denver this year, and it is also likely from present outlook that the cut of 'mums will be at least 50% less than last year, which is undoubtedly a good thing, as fine blooms were sold for less than the amount it cost to grow them nearly throughout last season.

The Colorado Florists' Exchange will carry a line of florists' supplies after July 1.

Garden roses are coming in in quantities, and are retailing at 50 cents per dozen.

Wholesale prices for week of June 15 were: Roses \$4 to \$6, carnations \$1.50 to \$2, smilax 20 cents, peas 40 cents per 100, Beauties \$8 to \$25, a 'tiantum \$1.25, mignonette \$3; good roses scarce.

X X X.

REDWING, MINN.—R. and H. N. Swanson have leased the greenhouses of G. W. Humphrey and will take charge at once.

This wooden box nicely stained and varnished, 18x30x12, made in two sections, one for each size letter, given away with first order of 500 letters.

— OF —
FLORISTS,

NURSERYMEN

AND SEEDSMEN

— OF THE —

UNITED STATES AND CANADA,

— AND —

REFERENCE BOOK,

FOR 1896,

IS NOW READY

CONTENTS.

The names and addresses of all the Florists, Nurserymen and Seedsmen in the United States and Canada, arranged alphabetically in States and Provinces, the exact branch of the business each is engaged in being indicated by the following

. . . . KEY

- F Florists who do a general local trade, having greenhouses and retailing the product of same.
- G Florists who grow cut flowers or plants for the wholesale market and who do not sell at retail. Almost always within a short distance of a large city.
- R Retail store florists who have no glass of their own. Nearly always in the large cities.
- D Wholesale commission dealers in cut flowers.
- N Nurserymen.
- X Those who are both Nurserymen and Florists.
- S Seedsmen.
- Z Those who are both Seedsmen and Florists.
- A Those who combine all the branches, viz.: Florists, Nurserymen and Seedsmen.

. . . . ALSO

- A list of Trade Organizations, both National and Local, with names and addresses of principal officers, time and place of meetings and date of organization.
- Statistics regarding Floriculture, the Nursery Industry and Seed Growing from the last U. S. Census report.
- A list of firms in the trade that issue catalogues, with a key indicating the prominence of each branch of the trade in same.
- A list of leading Cemeteries in which attention is paid to Ornamental Horticulture.
- A list of leading Park Superintendents and of the Botanical Gardens of the United States.
- Seasonable Hints for the year about the practical work of the Florist, written by Wm. Scott, giving instructions not only when to do certain work, but how to do it most effectively and economically.
- A complete alphabetical list of Roses in commerce in America, brought up to date and of incalculable value for reference.
- Similar lists of Chrysanthemums, Carnations and Cannas.
- Historical sketches to date of the Society of American Florists, American Carnation Society, National Chrysanthemum Society of America, Florists' Hail Association, American Seed Trade Association and American Association of Nurserymen.
- A list of Leading Horticultural Societies.
- Full and accurate information about Express and Postage rates.

News Notes.

FORT WAYNE, IND.—Herbert W. Bond has started in the business with one new house 18x60.

INDIANAPOLIS, IND.—Bertermann Bros. have removed to Nos. 85 and 87 E. Washington St., where they will have superior facilities.

SABETHA, KAS.—W. C. Machamer, the florist of this place, was killed in the tornado of May 17. His business will be discontinued.

DUNKIRK, IND.—The Dunkirk Floral Co. has been purchased by Jas. R. Johnston, of Sidney, O., who takes possession at once. There are three houses, containing 5000 feet of glass.

IOWA CITY, IA.—Jas. Aldous & Son have received a contract for landscape work for the city amounting to \$3,000. They received this order in competition with other bidders from larger cities.

LOUISVILLE, KY.—The store of E. G. Reimers was entered by burglars the night of June 9 but were frightened away before getting into the safe. They had partly succeeded in breaking the lock.

TACOMA, WASH.—In connection with the three days' rose carnival to be held here June 25—27 will be a fine horticultural exhibition under the auspices of the Tacoma Florists' and Gardeners' Association.

TOPEKA, KANS.—James Hayes is just completing a rose house 125x21, built on walls of solid stone, the north wall about 8 feet high. He is also building between this and the main office a palm house 22x21 feet; butted glass 16x16.

MACOMB, ILL.—Mrs. Caroline Elizabeth Pillsbury, mother of I. L. Pillsbury, died at her home here June 8th, in the 78th year of her age. Funeral services were held in Macomb, the remains being taken to Andover for interment.

BELLAIRE, MICH.—H. B. Deal has sold his greenhouse business to A. E. York, and has entered into partnership with J. H. Deal of the Central Greenhouses of Owosso, Mich. They will build two new houses for roses and carnations, each 70x20.

KANSAS CITY, MO.—Thomas H. Swope, a local capitalist, has given the city a tract of land containing 1,313 acres to be used as a public park. The only conditions are that the city shall have had the land surveyed and the park planned by Jan. 1, 1898, that for ten years the city shall expend \$5,000 a year in improving the park in excess of the salaries of officers or engineers; that the land shall be used as a park for all time and that it shall be called "Swope park."

Society of American Florists.

The Central Passenger Committee, which controls the action of all the trunk lines entering Cleveland, has granted an excursion rate of one and one third fares for the round trip on the certificate plan to all members of the Society of American Florists attending the convention in that city, August 18 to 21, 1896.

WM. J. STEWART, Secretary.

THE Dingee & Conard Company controversy has at last been amicably adjusted by the complainants withdrawing all charges. Mr. Charles Dingee now becomes the possessor of practically the entire capital stock of the concern.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Chrysanthemum Notes.

The plants that were planted out the first of June should by this time have taken a good hold of the soil and commenced to make growth, and will soon have to be tied up. Like the carnation growers those growing chrysanthemums have not as yet seemed to find an ideal way to do this, although many schemes have been advanced. The most economical way is to tie them to strings, which are fastened to wires stretched across the bench and overhead. This plan is adopted by most of the growers who grow in large quantities, for the strings cost but little and can be quickly strung, the top wire being allowed to remain in place all the year round. The greatest objection to this plan is that it does not always keep the stem straight. The strings after being continually syringed and then becoming dry soon grow slack, and the plants move back and forth when being syringed. They consequently get bent on one side or the other, and the string also bending so easily, the stem can not be straightened by such a support. Tying to sticks is by far the easier and best way, for if a stem does perchance get a little crooked it can be tied up straight to the stick and will remain so, even after being cut. But sticks cause quite a little outlay, and when there is only three or four inches of soil the foothold is not strong enough to keep them upright when the heavy foliage and bloom are looking to it for support. In saying that sticks are expensive I know full well that many growers are so situated that they can cut them by the cart load near at home, but if they should sit down and figure up the time that one or two men will take to cut and trim up a thousand sticks they will find that perhaps they could have bought sticks at the sawmill cheaper after all. We this year are tying our chrysanthemums in much the same way that rose growers use the stakes in benches—that is, we run a row of wires the length of and about three feet above the benches, drawing them as tight as we can over each row of plants, and after sticking the stake into the ground as close to the plant as we can without injuring the roots, fasten it by a hair wire to the wire drawn overhead. The hair wire will rust enough by fall so that the stakes can be easily removed. This keeps the stakes perfectly

upright and allows each plant after it has grown up its allotted space.

The plants that are intended for the growing of sprays should be planted out as soon as possible. While these may not require quite as heavily manured soil as those intended for exhibition blooms, yet if a good full spray, that will immediately attract a customer's attention is wanted, don't be stingy with the food that the plant requires. These plants should be set at least eight inches apart in the row and the rows ten inches apart in order to allow the plant to grow six or eight sprays and give the sprays room to develop without overcrowding. As soon as the plant gets established stop it and cause it to break out the side eyes. The best way to do this is by following the directions of Mr. Edwin Molyneux in his book on chrysanthemum culture. We advise just taking out the very tip. The best way we have found to do this is to take hold of the top of the plant with the forefinger and thumb of the left hand and while not pinching it hold it firm and rub the thumb of the left hand over the tip, just breaking out the young growth that is forming. This leaves a soft tender growth at the top that will immediately break out shoots; in the majority of cases these growths will appear, and as soon as they attain the length of about six inches repeat the same operation, and then there will be nine shoots. After these have grown select the six strongest, cutting out the others; if more than six shoots are wanted repeat again, only do not tax the strength of the plant too much and do all the stopping before August 1, for the plants will need all the time after that date to grow a good long stem and finish its flowers. Do not, if it can be prevented, stop the plants by cutting back to the hard wood, for the eyes break slowly and too often the shoots are so weak that they will produce a very poor grade of flowers.

The cuttings for the small plants should be put into the propagating bench as soon as possible, if not already done. As soon as rooted pot off into 3-inch pots, and as soon as established in the pots stop them in the same manner as described in the directions for growing sprays, and as soon as the branches have grown out an inch or so stop them again. Do not be afraid that you are keeping the plants down too short, for if you are careful to only break out to the soft wood, you will find that when you cease stopping them, like a good race horse, that has been held in for the first part of the race, they will bound out and be in at the finish. ELIJAH A. WOOD.

Premature Buds on Chrysanthemums.

S. B. D. inquires: "What is the matter with my plants? They were planted in the benches the 1st of June, and took hold

well, but many now are showing a bud at the top."

The inquirer does not say when the plants were rooted and as there are two kinds of buds that are apt to form at this time of the year, it is quite hard to answer this query. As friend Thorpe used to say: "It is very hard to diagnose a case a hundred or more miles away." If the plants were rooted early in March or before they are very apt to set what the English growers term the May bud, which is a bud that is long vertically and the eyes below simultaneously with its appearance begin to throw out their shoots. This does not amount to anything and should be broken out, and then if the plants are to be grown to one shoot select the strongest (generally the second eye), and cut the others out. This bud is very carefully watched for by the English growers and if it does not make its appearance, which varies with different varieties, at the proper time, the plant is stopped by hand.

The other bud is a round flat bud, its greatest length being horizontal and looks like the terminal bud that forms in the fall. This is very apt to form on Niveus and Vivand-Morel and its sports and seedlings, and seems to be a stopping of all growth. In the opinion of most chrysanthemum growers this is caused by the propagation of the wrong kind of wood, that is from growths that spring out of the hard wood instead of those that come from succulent suckers, but early pot-binding we have also found will bring about the same result. If this is the kind of buds that "S. B. D." has on his plants, the only thing that he can do is to watch until the plant make a soft growth from one of the lower eyes and then cut off the top. Next year be careful to take good soft cuttings and do not allow the plants to get pot bound. Some growers take cuttings of Vivand-Morel very early and then take their cuttings for planting out from these early struck plants, claiming that these plants do not harden off so easily and do not form these buds in June.

ELIJAH A. WOOD.

• Carnation Notes.

It is a pleasure to walk through the carnation field and notice the advanced condition of the plants, as compared with last year at this time. One other noticeable feature is the disappearance of the bacteria so prevalent on the young plant through May and beginning of June. I have at this moment some leaves before me that I had marked as infested with bacteria. But now on some leaves, while I can find the traces of bacteria yet, mostly on the lower side of the leaf, on the upper side the spots seem to be overgrown, healed over, that is I can see no yellow spots by holding the leaf against the light; before, these spots could be noticed by looking down on the leaves on the plant. The present favorable growing weather enables the plant to build up faster than the bacteria can destroy, and as long as the tissues, cell walls, are not totally destroyed, mend the injured places again. The leaves mature faster, grow hard, when the bacteria becomes power-

less. This is the resistance the plant will offer, when enabled to do so. The plant can not prevent the entrance of the bacteria germ but in a healthy matured leaf its life is not an easy one.

Study the advantages and reverses of the field culture, and you will not fail to give your plants the right treatment when you bring them under glass.

We are cutting good flowers yet of most all our varieties in the houses, especially of Mrs. Duhme, Uncle John, Scott, Albertini, Storm King and Bridesmaid; Daybreak is easier hurt by the hot weather. A light shading will help them very materially, and do not fail to give plenty of water; it does not matter much how you apply it now. We have no other work with them now than to water, the support is there, and the benches look the same as in midwinter, scarcely a plant missing, and are in as healthy blooming condition as one can wish for, only the flowers are not as large, and we disbud yet too. We find it pays us very well to give a little attention, for we can sell every flower at paying prices. It appears as if the above named varieties will hold out until forced to throw them out to make room for the young stock.

FRED DORNER.

Deep Planting of Carnations.

In a recent number of the FLORIST Mr. Gilchrist explained one cause of carnations dying in the field and held that it was caused by too deep planting. The writer knows of at least one instance where this article alone was worth many times the price of subscription, the trouble being in a batch of seedlings grown in pots, these were planted too deep and died off rapidly. The field was gone over and the earth removed from the neck of the plants and the owner is convinced that this will save the remainder.

F. J. B.

Through American Eyes.

AZALEAS IN GHENT.

Second only to the palm in commercial importance to the Belgian florist stands the azalea. Nearly every grower has a stock of these plants according to the size of his place and greenhouse capacity to house them in winter, while quite a number of large establishments make a specialty of the azalea and raise them by the acre, confining themselves to the culture of this plant alone. Many are grown under contract by small florists to supply the traveling dealers who take orders in America, England and other European countries. Two and three acre blocks of azaleas were quite common and one grower exhibited with pride his ten acre field filled with fine stock, which he said was the largest collection in Belgium.

The azaleas are all grown planted in the open field in summer in prepared beds, five to six feet wide, of leaf mould and peat. They are watered as a rule twice a day, all by hand, the men carrying large zinc cans with bow handles, one in each hand. These are fitted with a coarse rose that empties very quickly. The American plan with the hose was suggested as an improvement, but the florist said he had to have the men at packing time, and he kept them busy during summer so as to have them in the fall. The water supply is from wells entirely, pumped either by steam, hot air, or by hand, a series of cisterns through the fields are connected with the main tank and the water kept at the same level by gravity, the supply

of water being determined by the number of men watering.

The stock as a rule looked very strong and vigorous, but it could be seen that some growers were more particular than others, keeping their plants pinched back, thus making much more shapely heads. A ten to twelve inch crown was often a much better plant at one place than at another, where though it might measure the diameter it was loose and unshapely and not worth more than half as much.

The ten to twelve and twelve to fifteen inch heads were the most popular sizes and whole beds of such kinds as Mme. Van der Cruyssen, Simon Mardner, Duetsche Perle, Vervaeana and other popular varieties were to be seen.

Large plants were scarce, that is specimens, comparatively few were seen and these were mostly undesirable varieties. Some with several kinds grafted on one plant so as to form rings of color were held at high figures. It would seem as if the good kinds, at least those most popular, were in such demand that there were none left to grow on into specimens.

Azaleas are propagated almost entirely by being grafted on some strong growing stock of such kinds as Finetia, which is raised from cuttings, and when about six months old is ready to receive the graft. This is generally done during the winter months, the plants after grafting being placed in a close frame in a warm greenhouse and in about a month have generally taken and are removed to another house to grow on. These plants when set out in the spring grow rapidly and by fall have a 6-inch crown. In winter the stock is lifted from the field, a good ball of earth coming up with the roots, and placed close together on the tables in the houses, where they are kept in a dormant state but not allowed to freeze. Only the extreme large sizes are potted. The one year plant generally makes a 6-inch crown, the two year ten to twelve and the third year twelve to fifteen.

Azaleas sport a great deal, but do not hold their variation and all new varieties are raised from seed. A very successful raiser of seedlings was Joseph Mardner of Gardenfeldt, Mainz, Germany. Simon Mardner, Pauline Mardner, Duc de Nassau, Deutsche Perle, Bernard Andre and Bernard Andre Alba, all originated with him. The accompanying illustrations show that the Belgians as well as being master hands in raising azaleas also know a thing or two about exhibiting them.

K.

Drainage in Solid Beds.

Replying to F. H. Reshore and the question "Would it be necessary with a sandy soil, to use cobble stone for drainage in solid beds with bottom heat," without the bottom heat the very light sandy soil might answer very well as drainage, but I hardly think it would be perfect; the manure washing down through the soil, in time changes the light soil into comparatively heavy, so while it might prove very satisfactory for a year or two, it might not prove to be good as a permanent bed. Where pipes are used to furnish

AZALEA EXHIBITION AT GHENT, BELGIUM.
THROUGH AMERICAN EYES.

bottom heat, however, the stone becomes an essential. Should they be laid in the sandy soil, there would be no chance for the air to come in contact with them and they would simply bake the material immediately surrounding them and supply comparatively little heat to the rest of the bed. The open stone work furnishes a splendid medium for the circulation of the heated air under every part of the bed, and sooner than put in pipes without the stone work I would omit the bottom heat altogether.

As to the question, "Would it be any better to give slope to the south to the surface of the beds," would say that in my opinion any slope is simply a nuisance; the principle that it affords a better exposure to the sun is all right, but the fact that it makes even watering well-nigh impossible, gives us a balance in favor of the level bed. I think everybody who has tried to water the upper side of one of these sloping beds or benches when the lower side was already too wet will agree that the arrangement is very unsatisfactory.

As to side ventilators, yes, I do believe in them, and would not build a greenhouse in this country without them. The fallacy that side ventilators cannot be used without risking a dose of mildew, if not already exploded should be at once. My own opinion is that a house provided with side ventilation and the same operated by a man of good sense and judgment will be far less liable to attacks of mildew than will plants in a house with ventilation at the ridge only. In the spring, especially, there are days when the sun is very hot, but the wind is so cool that it is not safe to open the venti-

lators wide enough to keep down the temperature to the proper degree, but if we can open the side we get the air, keep down the temperature, and at the same time avoid the cold draft. It pays to have side ventilation, if only used while the house is being emptied, refilled and planted, but we can rest assured that where the air is so hot and stagnant that mankind can scarcely exist, much less work, it is equally uncongenial for any plant whose home is not in the tropics.

ROBT. SIMPSON.

Outdoor Roses.

BY DR. ROBT. HUEY.

[Read before the Penna. Horticultural Society June 16.]

It has been truly said that any soil that will grow corn will grow roses. And just in proportion to the careful preparation and fertilization of the ground will be the crop, stalk and ear. So with roses; they always repay good treatment and they delight in a rich and deep soil. The Hybrid class does better in a heavy loam containing clay; while the Teas, Noisettes, Bourbons, etc., prefer a sandy loam or a much lighter soil than the hardier class. Especial care in both cases should be given to a thorough drainage. Roses abhor wet feet. In preparing my beds I remove the soil, lay it aside, and dig the subsoil out until the pit is fully two feet in depth. The bottom is then loosened the full depth of a pick head; and this is filled in with good loam and sod, well enriched with old and well decomposed manure, all thoroughly worked together and firmed down. The beds may be made of any desired shape, but for roses that

do not require protection a bed four feet wide is very satisfactory. The plants can be placed 2 feet 6 inches apart, each way, by placing them thus. This gives one foot to the outside grass border, the plants get the full exposure to the sun, and the flowers can be gathered without stepping on the bed.

I know that I shall antagonize every one of experience present when I advocate the planting of budded roses; but please remember that I am only giving my own experience. I have had uniformly much greater success with budded roses in the Hybrid Remontant, Hybrid Tea, Noisette and Climbing Tea classes than with roses on their own roots. The pure teas, I think, are not improved by budding. The best budded stock I have yet found was obtained from Ireland; and it has been the uniform testimony of all who have examined them that they are the finest roses they had seen growing out of doors in this section.

The dormant plants can be had by the first week in November; which I think the best time for successful planting. Holes are made for each plant 18 inches wide and deep; the roots carried down to their full length, carefully spread out and packed with fine soil; the graft buried three inches beneath the surface and the soil well firmed in and levelled. It is necessary to plant so deeply to prevent the briar stock from sprouting.

No one should plant budded roses who cannot distinguish the briar, if it appear, or who is too careless to dig down and cut the shoot off clean from the root, rubbing it off smooth to prevent starting again, and doing this always as soon as it is discovered. To my mind this is the

only objection to budded roses, and the little intelligent care required is more than compensated for by the greatly increased vigor of the plants and blooms.

The Tea varieties are planted in beds six feet in width; giving space for three rows two feet apart, with the plants set two feet six inches in the rows. This is done for easy winter protection; which is accomplished with a sectional frame that may be taken down, stored away and used year after year. The frames are made from tongued and grooved white pine fencing, 3 feet high at the back, 2½ at front, 6 feet wide, of any desired length, and covered with ordinary bot bed sash; which is opened every day, more or less, according to the weather, except in rains or snows. Care should be exercised to keep the plants so cool that the buds will not be forced out. Unless the temperature is below 32° the sashes are entirely removed, and in zero weather the upper end is slightly raised to admit air. I have a number of Teas that have been doing excellently in such a bed for sixteen years, and they give me hundreds of fine blooms from May until November, and remain so vigorous that the new shoots come up half an inch in diameter.

The Hybrid varieties are protected with a covering of three or four inches of manure over the entire bed, put on at the first freezing, and the bulk removed in the early spring, before in pruning, and all the short manure remaining worked into the soil. The Hybrid Teas may be thoroughly protected by a sod cut about twelve inches wide and wrapped entirely around the plant. This is filled in with manure, and the remainder of the bed covered with rough manure to a depth of three or four inches.

In pruning the hybrids before the high winds of November the long canes are cut back to about 2½ feet, as by that time all the autumn bloom is over. The remaining leaves are mostly on the upper portion of these canes, and if permitted to remain would allow of so much whipping by the winds that the small feeding roots would be torn and broken. Early in March every cane is cut back to six or eight inches and all weak shoots removed, but no good cane is cut out. If the plant has fifty such, so much the better; there still remains root action quite sufficient to support all possible growth. The reason for not cutting back the entire growth in November is that sometimes the weather is sufficiently warm in early winter to force out the upper buds, which will be destroyed by frosts and the subsequent blooms lost. By leaving the canes sufficiently long these upper buds, if forced out, can be removed without loss, and violent whipping has been prevented.

The climbings Teas are pruned sparingly. Simply cut back over vigorous shoots to the limits of the trellis, and shorten in the laterals to two buds. Reine Marie Henriette and Gloire de Dijon respond very kindly to this treatment and live out of doors for many years. The Noisette classes should also be pruned sparingly. William Allen Richardson and Céline Forestier will endure our winters with slight protection and will well repay a little extra care. Lamarque, Bouquet d'Or, Cloth of Gold, L'Idéale, Triomphe de Rennes, Mareschal Niel and the most glorious Reve d'Or have all perished, with me, during our winters, notwithstanding my repeated efforts to keep them over.

The Bourbon class of which Souv. de Malmaison and Mrs. Paul are the types should scarcely be pruned at all. Merely cut off weak and superfluous shoots.

The Teas should be cut back almost as vigorously as the Hybrids, according to the habit of growth. No absolute rule can be laid down, but the stronger growers may be left at twelve inches and the weak at six.

In the spring the beds are gone over with a digging fork, and the surface stirred to a depth of about three or four inches. Turn under the short manure left after the winter dressing has been removed. Edge the beds and leave the surface (which is an inch or two below the level of the adjoining ground) flat to absorb all the rainfall. The beds are stirred over occasionally, during the summer, with a small and sharp rake to keep down weeds and retain an open porous surface. After the buds are set, liquid manure is prepared from cow yard, and we wait for a promised shower. Just as this begins, each plant gets half a gallon of the water of life poured on the surface, as nearly as possible to the bush, without touching the leaves. This is washed down by the rain and eagerly utilized.

If a less number of very fine blooms be preferred to a greater number of smaller ones and a longer season, then all but the center bud on each shoot should be removed. I usually divide this attention, disbudbing a portion for prize blooms and permitting other plants to retain all that they have set. The latter method gives a longer season of bloom.

Cut back plants require very little summer pruning. The vigorous treatment gives long and strong foot stalks; and when each rose is gathered usually a foot of wood is cut away. So where all the blooms are collected there is no pruning required. Only on those plants where the flowers have remained is any cutting necessary, and the longer stalks are slightly shortened in. The closely pruned roses make such vigorous growth that they are able to resist attacks of insect enemies; the aphid or green plant louse seldom appearing and being easily kept down by syringings with tobacco water. Occasionally the slug appears and is readily detected by a skeletonized leaf. One syringing with an infusion of powdered white hellebore, a heaped tablespoonful in a pail of hot water (water allowed to cool) will usually prove effective.

The rose beetle can best be removed by hand picking, and may be dropped into a can half filled with kerosene—with pleasure to the picker and profit to the roses. The bark louse is usually found on old wood. It may be entirely destroyed, without injury to the plant, by brushing with a solution of corrosive sublimate, 1 grain to each fluid ounce of water, about 1 in 500.

VARIETIES.

The roses that have done best for me are in the Hybrid Remontant class, viz.:

Her Majesty,	La Rosiere,
Susanna M. Rodocanachi,	Charles Lefebvre,
Ulrich Brunner,	Rosieriste Jacobs,
Mrs. John Laing,	Duke of Edinburgh,
Mme. Gabriel Luizet,	Fisher Holmes,
Heinrich Schultheis,	Prince Arthur,
Eugenie Verdier,	General Jacqueminot,
Pride of Waltham,	Francois Michelon,
March. of Londonderry,	Duke of Teck,
Baroness Rothschild,	Magna Charta,
White Barouess,	Marg. St. Amand,
Merveille de Lyon,	Caroline d'Arden,
Mabel Morrisou,	Lady Helen Stewart,
Gloire Lyonnaise,	Marie Baumann,
Jeannie Dickson,	Marie Verdier,
Margaret Dickson,	Annie Wood,
Prince Camille de Rohan,	

There are a number of old favorites still retained, which I would miss greatly, such as Giant of Battles, John Hopper, Cheshunt Hybrid, Dr. Andry, Mme. Isaac Pereire, Paul Neyron, Xavier Olibo, Baron Bonstetten; but they do not all come up to the standard of the former list.

HYBRID TEAS.

La France,	Captain Christy,
Duchess of Albany,	Viscountess Folkstone,
Lady Mary Fitzwilliam,	Belle Siebrecht.
Caroline Testout,	

TEAS.

Comtesse Riza du Parc,	Papa Gontier,
Etoile de Lyon,	The Queen,
Francisca Kruger,	Kaiserin A. Victoria,
Hon. Edith Gifford,	M. Van Houtte, or Gem
Innocente Pirola,	Jules Finger,
Isabella Sprunt,	Duchess de Brabant,
Mme. Lambard,	Mme. Moreau,
Marie Chailot,	Alphonse Karr.
Safrano,	

These have all lived over a number of years and have been very satisfactory.

Of course I do not presume to say that these are the only roses that are worthy of cultivation in this vicinity; there must be many others, and I am earnestly trying to discover them. It is no exaggeration to state that I have grown five or six times the number of roses in the preceding list, and have discarded the greater portion, but I shall probably continue to try every promising rose I hear of until the pruning shears are laid aside.

Rose Notes.

Given good sturdy plants, the same set out properly in good well prepared soil, at the proper season and in the most approved style of house, and our battle is half won; but the old proverb, "Eternal vigilance is the price of success," will still apply, notwithstanding the favorable outlook. Perhaps watering and ventilating are the two items in rose culture that require the closest attention and the best judgment, and which if neglected or performed in an injudicious manner will make impossible complete success. A medium between dry and wet is the best condition in which to have the soil; too dry will tend to stunt the growth and too wet will sour the soil and arrest root action. I have found that in very warm weather frequent sprayings overhead are very beneficial; two or three hours of bright sunshine will generally dry up most of the atmospheric moisture left after syringing, and unless more is supplied the young plants are liable to wilt and suffer in consequence. It is not necessary to give more than one thorough syringing, at the same time watering wherever it may be needed; to simply take the hose through one path and throw water in a fine spray over walks, benches and all takes only a very little time and answers the purpose well. The frequent spraying coupled with an abundance of ventilation is what gives the large, heavy, luxuriant foliage we love to see on our plants, foliage that is almost proof against mildew. By the way, in regard to the latter, I have long since come to the conclusion that too much shade and too little ventilation produce a soft weak growth, and the least change in the atmospheric conditions of the house is followed by mildewed foliage. The fear of mildew and the consequent adoption of precautionary measures are in very many instances solely responsible for its presence. I remember one very clever man who was so terribly afraid of it that he would not allow any ventilation left on the roses during the night under any consideration, and I too remember well the disagreeable odor of the houses early in the morning when entered to open the sash. But this failed to ward off the pest, and sulphur was an indispensable article on that place. So very many men growing roses seem to be laboring under the impression that the rose is an exotic, and will not bear the least cool breath of air, when the fact is that it luxuriates only when given an

AZALEA EXHIBITION AT GHENT, BELGIUM.
THROUGH AMERICAN EYES.

abundance of it. It can be trained up as an exotic, but you'll always need the medicine bottle handy; given natural surroundings, however, it may be as robust and hardy as a geranium. During the early summer the rose house should have from three to eighteen inches of ventilation all night and full ventilation as early in the morning as the outside temperature will permit, and instead of being in danger of mildew you need scarcely give it a thought.

In the rush of planting the weeds must not be overlooked; no matter how our plants thrive the weeds will as a rule grow amazingly, and just as they are allowed to monopolize the space on the benches will the roses in like proportion suffer. They are very objectionable to the eye, impoverish the soil very rapidly and furnish an ideal place for red spider to get a foothold. It is a good plan to stir the surface of a newly planted bed lightly just as soon as the weeds appear and continue stirring once a week; it will be labor saved in the end, will keep the soil in good condition and help to insure strong sturdy growth.

ROBT. SIMPSON.

Lifting Bride and Mermet.

Can Bride and Mermet roses that are to be left in another year be shifted to other benches as successfully as La France and others of that type? Would you prefer to leave them where they are and depend on top dressing and liquid feeding? If shifted would you check them much before doing so? W. S. H. & Co.

Bride and Mermet can be lifted as easily

and will suffer as little as any rose that I know of. The second question can be decided easily by yielding to preference, they are just as liable to do well one way as the other. If lifting is resorted to the "off-crop" season will be very much shorter than would be the case if the plants were rested, pruned, and started up that way. Keeping them dry for a week or ten days, and then soaking and lifting would likely be the wisest thing to do, but is not absolutely necessary.

ROBT. SIMPSON.

Herbaceous Plant Notes.

Large groups of pæonies in a border, or when planted in good sized beds, make a most magnificent show while in bloom, but although their foliage continues in perfect health all through the summer and fall, the absence of flowers for many months from the middle of June to late autumn detracts much of the cheerful appearance of the border, and such a patch would look rather monotonous if not relieved by at least a few taller spikes of flowers coming up between them, therefore it is advisable in most cases to introduce some summer or fall blooming plants, or both in such beds. A large surface of even-colored green without variation in height or foliage must be avoided in the border if possible, every part of it should be made interesting at all times of the year, and the dark green of the pæonies happily serves as a most perfect groundwork for taller growing plants such as lilies of many varieties. The ground being shaded by the dense foliage of the pæonies, the soil is kept cool, and if a mulching of some sort is spread over

it, the moisture in the ground is retained much longer than would be the case without this precaution, and under such circumstances the lilies will always do well.

Lobelia cardinalis will flourish under the same treatment, and the tall spikes of vividly colored flowers above the dark foliage of the pæonias produces a remarkable effect while the flowers last. *Galtonia candicans*, with its pretty bells of pure white, so profusely distributed along the stems of the pyramidal panicles, is not less attractive than the highly colored lobelias, and will do for many years there undisturbed. The bright yellow *heliopsis* in several varieties are charming plants to plant between, but must be taken up and divided every three years or else they would grow to a dense mass, crowding out every other plant, even a pæonia. The tall *Delphinium hybridum*, also is well adapted for planting in between such patches, and the various shades of blue in their flowers, which are produced in profusion on such tall pyramidal spikes, will surely be admired, especially, if the very light and soft blue with white or dark center is predominating.

The boltonias are also excellent for this purpose and the taller growing asters look grand and do well there. Golden rods grow fine among the pæonias and are easily kept in bounds, their feathery inflorescence keeps in perfection for a long time. The tall *Helianthus orgyalis* does not bloom until late in the season, but the stems clothed with their numerous narrow and long, recurved leaves are remarkably graceful during the summer months, contrasting well with the darker and massive foliage of the pæonias, and

when the golden yellow flowers appear in autumn and spread loosely over the bed in all directions it is a sight seldom equalled by any other combination planting in a border.

Aconitums, the purple as well as the yellow ones, may be planted here and there in the patch, and both colors mixed form a grand combination. The free blooming *Helenium autumnale* is one of the best and most showy things we have in fall to enliven the borders and break the monotony of somber green patches. *Coreopsis tripteris* with its brown and yellow flowers on tall and slender stalks is another plant which is admirably adapted for such a place, and *Hibiscus militaris* or *H. moscheutos*, sparingly introduced among the *pæonias*, will brighten the patch in midsummer as well as in the fall.

For immediate effect, in a bed where no provisions have been made for a succession of bloom, we have planted *gladioli* in clumps at intervals of about five feet, preferring the pink and lighter shades, with good results. Beds of hardy azaleas and *rhododendrons* or *kalmias*, which, however attractive they may be in the early part of the season while in full bloom are devoid of flowers in summer and fall, may be interspersed successfully with the same or other hardy flowering plants, and thus be made an interesting and prominent part of the flower garden at all seasons. There is an unlimited quantity of plants to select from, and those mentioned above are only a few of the many which have proved reliable when planted between such masses of compact foliage as *pæonias* are apt to produce under ordinary good treatment.

J. B. KELLER.

Rochester, N. Y.

New York.

Dull times prevail about the flower stores. The funeral of the murdered bank president, Wyckoff, made a call for considerable nice work, in which several of the Broadway florists participated. The much discussed Vanderbilt wedding was expected to use up a large quantity of flowers, but now that the affair has been declared off it transpires that the reports of the number of flowers which had been engaged were greatly exaggerated. Orders are beginning to come to the wholesalers from Saratoga and other popular watering places, and more good stock could be sold at present if it were obtainable. But if there should come a sudden heavy demand for choice stock of any kind it would be met with difficulty, for there is little being received except rubbish. Roses are especially poor and badly mildewed. The two indispensable summer roses, *Meteor* and *Kaiserin*, now come to the front, and he who has a stock of them experiences no difficulty in finding good customers. *Auratum* lilies, *feverfew*, *gypsophila*, *larkspur*, etc., hold forth in enormous quantities at the market, but the listlessness noted elsewhere prevails here too, and the visitor on a hot morning is prompted to tarry at the entrance, half impelled by the tempting poetical announcement displayed by a sidewalk vender:

"This is the very spot

Where fine fruits and lemonade to be got"
in preference to ascending the tiresome flight of stairs. Among the plant growers there is considerable talk of a scarcity of palms in the smaller commercial sizes and prices have advanced from 25 to 35 per cent on some sorts already. It is said that the stock in Belgium is about cleaned out.

The combined show of the New York Florists' Club and New York Gardeners' Society, which took place at the Newsboys' Lodging House on Saturday afternoon, June 20, while making no pretensions as an exhibition, brought out several very nice exhibits, among which that of W. A. Manda was particularly prominent. A hybrid of *Rosa Wichuraiana* with double white flowers and dwarf habit gave promise of becoming a valuable addition in its class. There was a big vase of *Crimson Rambler* from Pitcher & Manda, also a good display of hardy herbaceous flowers. M. H. Walsh and Ferd Boulon both made extensive exhibits of hardy roses, and there were whole tables of sweet peas and promiscuous cut flowers from many other contributors, all of which were fittingly recognized with medals or certificates by the committee. Piled up at one end of the room were bushels of seed packets and bulbs donated by various seed dealers, and in a lower hall were thousands of potted plants which had been sent in with characteristic liberality by florists and gardeners all around. The distribution of these to the poor children who throng the neighborhood was an occasion full of interest and considerable entertainment, lasting for about three hours, at the end of which time the last scrap of green leaf had been cleaned out of both halls. The exercises opened with a few remarks addressed to the assembled children by Judge Jeroloman, who appeared for the mayor of the city, and was introduced by ex-Alderman Morris in his usual felicitous manner. A score of volunteers were soon at work handing out the plants and seeds to the tots who came in all degrees of cleanliness and otherwise, some hatless, some shoeless, some carrying tots nearly as big as themselves, but all wearing the same expansive smile. It was a great day for them, and they behaved as well as could be expected under the circumstances. Out in the street there was a perfect mob of youngsters by the thousand, who pushed and struggled in their eagerness to get into the halls, and it looked for a time as though the wild and excited throng would overwhelm their guardians and serious results follow. That any well-dressed grown person could be guilty of taking away a single plant from such a place and amid such surroundings seems almost beyond belief, but a number of such instances were noted. One finds the "hog" everywhere.

The awards at the show were as follows: Certificates of merit were awarded to Siebrecht & Wadley for display of cut flowers, consisting of garden and greenhouse blooms, among which were some finely grown orchids; to Pitcher & Manda for handsome vase of *Crimson Rambler* rose; to H. Steinhoff, West Hoboken, N. J., for group of choice *gloxinias* in pots; to Henry Miller, East New York, for group of 50 pots of *dahlia Camelliaeflora*; to W. A. Manda (New York Gardeners' Society certificate) for new rose "Manda's Triumph," a hybrid from *Wichuraiana* and an unknown *H. P.*

Silver medals were awarded to Ferd Boulon, Sea Cliff, N. Y., for collection of roses, including some rare old varieties not often seen in this locality; to Pitcher & Manda for display of herbaceous perennial flowers.

In the section open to amateurs only silver medals were awarded to Wm. Anderson for vase of roses arranged for effect and for display of sweet peas; to John Shore for display of hardy herbaceous flowers; to I. L. Powell for display of *pæonies*; certificates of merit to George

Breed for display of Japanese iris, and to Samuel Leuba for display of sweet peas.

In the free for all section two silver cups were awarded, one being given to Geo. B. Winslade for general collection of cut flowers, consisting of 50 vases of stove, greenhouse, and hardy herbaceous blooms; the other to M. H. Walsh, Wood's Holl, Mass., for display of roses. Mr. Walsh's display, which was of fine quality, included 75 distinct varieties.

At a meeting of the trustees and special committee of the New York Florists' Club last Monday it was decided that in view of the great difficulty in providing a suitable hall no distinctively Florists' Club flower show should be given next fall, but it was urged that the individual members should use every effort in making a creditable display at the American Institute Fair, to be held in Madison Square Garden during October.

One of the loveliest spots in New York City is Woodlawn Cemetery. It is on the line of the Harlem and the New York, New Haven and Hartford railroads, and the entrance is well guarded by two florists' establishments—Weimar Bros. on one side of the track, who also have extensive greenhouses at Mt. Vernon, and Wm. Nilsson on the other. On approaching the station the first thing to attract the eye is a representation of a train of cars worked in *echeverias* and *alternantheras* on the sloping grass bank in front of Mr. Nilsson's establishment, the picture being well executed and attesting Mr. Nilsson's skill in this special line of work. Inside the greenhouses and frames one finds at this date but little left of the enormous stock of *echeverias*, etc., which are required for Mr. Nilsson's spring work in the cemetery. He states that he has used no less than ten thousand *echeverias* this season, and other bedding plants in proportion. *Alternantheras* in several varieties are unusually bright colored this season, and are used with brilliant effect in connection with English ivy, *alyssum* and *echeverias* for formal edgings to lots and graves.

The cemetery occupies a beautiful undulating piece of country; the lots are attractively planned, and many large oaks, maples and spruces add to the beauty of the landscape, which is somewhat marred by the many extravagant granite mausoleums, some of which are architecturally grand, others both obtrusive and ugly. On the vaults are seen the names of such men as Gould, Oelrichs, Corbin and Morosini, and in one lot overgrown with myrtle and decorated with American flags lie the remains of DeLong and his unfortunate Arctic companions. There are frequent groups of robust *rhododendrons* and a great many Japanese maples are used with good effect, and seem to thrive all right. Tree box is also extensively planted about the grounds, and there are many handsome specimens of golden yew. Standard *hydrangeas* are very popular, and make a big show later in the season.

Duncan Ross, formerly of the firm of Ross & Millang, wholesale florists, died on June 18 after an illness of one week. Mr. Ross came to Flushing fourteen years ago, where he was in business with his brother, Peter Ross. He afterwards went into the commission business with Frank Millang at 1168 Broadway, New York, with whom he was associated six years. Recently he has been in the real estate business. His age was 47.

George Comatus, a Greek florist at 20 Broadway, Brooklyn, has invoked the aid of the law to remove two street stands conducted by Paraso George

WATERING AZALEAS. GHENT.
THROUGH AMERICAN EYES.

Epitropees, a fellow countryman at 14 and 26 Broadway, on the grounds that they obstruct business. "When Greek meets Greek," etc.

Alex. S. Burns has been notified that a balance of over \$1,100 stands to his credit at one of the savings banks, the accumulation of interest on a small deposit made twenty-one years ago, of which Mr. Burns had no recollection. Not many florists are likely to have this happen to them.

John A. Scollay is building a fine range of houses at Hyde Park for F. W. Vanderbilt, comprising four rose houses 18½x90, one violet house 10x114 and a mushroom house 16x48.

There is double rejoicing at Butler's store on Broadway. A new girl has arrived at Mr. Butler's home, and a new boy at Bennie Ezekiel's.

Two Broadway florists' establishments had the fortune to be selected as subjects for the colored supplement to last Sunday's New York *World*.

John Marshall attended the flower show on Saturday equipped with a thermometer inside his hat, which he consulted frequently.

H. C. Neubrand has sold out his florist store at 181 Columbus avenue.

P. H. Scudder of Glen Head has gone on a fishing trip to the Adirondacks.

Boston.

The annual rose and strawberry show, which was held on June 23-24 at Horticultural Hall, compared favorably with the best of its predecessors, and the quality of the roses went far ahead of those shown last season. Had it not been for the two very hot days, Saturday and Sunday preceding, the roses would undoubtedly have been the best seen here for many years. As it was, a few days earlier would have been a better date for both roses and strawberries.

As before, the largest and best display came from Wood's Holl, and Mr. Walsh again demonstrated his exceptionable abilities as a grower of outdoor roses. The collection comprised an unusually

large number of varieties, and all the favorite sorts were seen at their best. Mr. Walsh's exhibit of outdoor grown hybrid teas was good, and the size and finish of the blooms of such varieties as Pink Rover, Caroline Testout, Aug. Guinoiseau, La France, Cheshunt Hybrid and Kaiserin Augusta Victoria bore strong witness to the favoring weather of Cape Cod.

James Eaton, Jr., Dr. C. G. Weld, Mrs. J. W. Clark, James Comley, W. H. Spooner, Mrs. E. M. Gill and P. Kane were all large contributors also, and helped fill the long tables with splendid blooms. The classes arranged for varieties introduced since the year 1893 were not filled, which was quite a disappointment, as these classes are among the most interesting in the schedule. The Dawson hybrids of *Wichuraiana* and multiflora were again shown and greatly admired, as was also W. A. Manda's *Wichuraiana* hybrid, which received the award of honorable mention.

The orchids were strong rivals for the roses in the public favor, judging by the crowds that incessantly surrounded them. A large group of cattleyas and *lælias* from E. O. Orpet, gardener to E. V. R. Thayer, almost took the breath away from some of the old experts. Seldom, if ever, have such well grown and splendidly flowered specimens of *Cattleya Gaskelliana* been seen here. Especially grand was *C. Gaskelliana virginalis* with its wealth of lovely white blossoms, and a complimentary notice was awarded to an *Odontoglossum crispum*, a lovely form almost pure white.

Wm. Thatcher, gardener to John L. Gardner, was represented by a fine group of *miltonopsis*, *odontoglossums*, *cypripedes*, etc., and hard wooded greenhouse plants in bloom. P. Murray, gardener to W. P. Winsor, a new exhibitor, also staged a good group of orchids; and Wm. Martin, gardener to N. T. Kidder, showed *Schomburgkia tibicinis*, the gaily colored flowers attracting much attention from visitors.

Sweet williams from W. H. Cowing, M. T. Stevens, E. Sheppard & Sons, Oakes

Ames, S. J. Trepas, W. E. Coburn and Dr. Weld were better than ever and showed remarkable diversity of color and markings. Carl Blomberg, gardener to Oakes Ames, was on hand with a tank of hardy *nymphæas*, and filled the front of the stage in the lower hall with a promiscuous display of cut flowers. L. W. Goodell also had a tank of lilies. Rea Bros. showed an extensive collection of hardy perennials. *Coreopsis grandiflora* was commented upon as being a sterling acquisition, and Oriental poppy Silver Queen was also favorably noticed. John Jeffries got a silver medal for a display of Japanese *pæonies* gorgeous to behold.

Strawberries were shown in rather less quantity than on some former occasions, but they were very fine. The Marshall took the highest honors, and there were many promising seedlings shown. W. C. Winters' Muscat and Hamburg grapes were good, one bunch of the latter weighing 6¾ pounds.

Cut flower trade continues somewhat depressed, but roses and carnations are now getting scarcer owing to the general replanting of rose houses and the effect of hot weather on carnations. The annual order for school graduation bouquets has been distributed as usual among a number of the city florists, who will have several hundred bouquets each to make for the celebration, which occurs on June 27. Outdoor roses will be about entirely gone at that time, and the forwardness of the season will make suitable stock for the purpose scarce.

The reunion and strawberry festival of the Gardeners' and Florists' Club will take place at Horticultural Hall on Monday, June 29. Tickets are selling well.

Visiting Boston: P. O'Mara, New York; E. O. Orpet, Lancaster, Mass.; and D. MacRorie, South Orange, N. J.; A. B. Scott.

Philadelphia.

The summer stillness is setting in, so still in fact, as to be almost painful. The hustlers have a great time getting rid of their stock and prices are down to the lowest notch, in fact some say that they can scarcely get car fare out of the returns. Roses are getting poor, especially Maids. Testouts, La France, Meteors, Niphetos and Kaiserin are fairly good and there are a few good Beauties, although they seem to open very easily these days. Carnations are in fair condition. Scotts being of good color and size lead in demand. Valley is good and sells as well as anything. Prices of roses are: teas \$1 to \$3, Beauties \$4 to \$12 per hundred. Achillea, candytuft, sweet peas and pyrethrum help up the assortment. There is plenty of asparagus, smilax and adiantum.

A. Boerner, of Broad St. Floral Emporium, sold his stock and fixtures at public sale last week and now holds the houses and lease, having some five years to run, for a purchaser. This should be a good location, being on Broad St. near South, a good business street. Mr. Boerner has a position as superintendent of construction of a new line of railroad and is anxious to close his business up in the city.

The growers are all busy getting their houses in condition, repairing and planting for the fall trade.

Robert Craig is building a house 150x14 in place of one torn down and is removing three others to make room for more modern structures. He has a fine stock of araucarias, which are now growing rapidly and will make a fine size for retailing by the time the season opens again.

Jacob Becker has just reduced the height of one of his houses by some eighteen inches. To do this he lowered the ridge pole and then cut off the upper end of the sash bars to fit. His stock of roses for summer cutting looks well and he will soon have them on the market. August Lutz is rebuilding one of his houses, putting in lighter strips and larger panes of glass.

Baseball is now agitating the minds of some of the boys. A nine from among the commission men visited the Lansdowne growers recently and while they did not win gave them a good argument. Last Saturday the Chestnut Hill enthusiasts crossed bats with the Craig nine at 49th and Market and were defeated 11 to 14. There is to be another game at Chestnut Hill in the near future and great things in the baseball way are predicted.

John Westcott and Jacob Becker are off to Weirtown for a few days' fishing.

The Gun Club is holding its own in great shape. The members accepted a challenge from the strong Forest Club, who sent a team of five men. Five of the florists' team of ten were selected, and defeated them by a score of 94 to 66, 25 targets to a man. The second five of the florists shooting at the same time also made enough to have defeated them, their score being 76.

At the regular shoot of the club Wednesday last George Craig strengthened his hold on the Donaldson medal by winning it the second time; he is the first member to have this honor. His score was 18, which with his handicap of 6 made 24, enough to win from G. Anderson, the scratch man who made 23; C. D. Ball 17, Thos. Cartledge 12, John Burton 21 and A. B. Cartledge 18. K.

St. Louis.

The season practically ended with the closing of the schools next week, but not with a great rush. Convention week did not bring much to the florists, and what little it did bring was only to the downtown stores. Seven weeks of rain is hard on the growers, and they are all complaining of too much water.

Sunday afternoon we had another small cyclone, which did damage to St. Louis park to the extent of \$200, but no other damage was reported to florists or the other parks.

Replanting has begun in some places; others will follow soon, and this will make stock scarce for a time. Just now stock is in good supply and the only thing sought after is A 1 material, which is hard to obtain, in fact a first-class rose is an unknown quantity. Here and there we may note a small lot of Kaiserin, which is a superb summer rose, or a few fair La France and Meteor; these varieties readily sell at \$2 to \$4. Carnations are light in demand and the price is still \$1; some fancy go at \$1.50. Sweet peas now from the open ground continue to flood the market, and there is practically no market quotation of this flower. There is little or no demand for the rest of outdoor stuff.

It has been announced that all the special prize subscribers of the last year's show have fallen in line again and have renewed their subscription to the chrysanthemum show for '96.

Mr. Henry G. Standen, wholesale florist of Haverford, Pa., was a visitor last week.

The news of the selection of St. Louis for the twenty-second meeting of the American Association of Nurserymen

next June was received with joy by the local nurserymen and florists.

The Jordan Floral Co. will move from their present location, 706 Olive St., July 1 to 822 Olive St., opposite the postoffice and under the meeting hall of the St. Louis Florist Club.

Ellison & Tesson recently made a casket cover which contained one hundred catleyas and two hundred lily of the valley; it was much admired.

The death of August Rolker was read with profound regret by the St. Louis florists; he was well known among us in St. Louis, and all extend their sympathy.

Lafayette Park, recently destroyed by the cyclone, is fast regaining shape. One hundred men are at work remodeling the fine iron fence and carting away the broken trees. Supt. Hunt reports that replanting will begin soon, and he will try and make it look as much like its former self as he can. Those large fine trees will be missed by all.

The Bowling Club was deserted Monday night, owing to a great rain storm, which looked very much as though another cyclone was coming, and the bowlers thought that home was the best place. The picnic committee was to have had a meeting but no meeting could be held, so the scores and the report of the picnic will have to go over until the next meeting, if it don't rain or look like a cyclone.

J. J. B.

Pittsburg.

The Florists' Club held a very interesting regular meeting at their rooms in Allegheny. All were very well pleased with spring trade in plants, several remarking it was the best they had had for several years; prices too were in the main satisfactory. Five applications for membership were filed, and will be acted on at our next meeting. After the transaction of the routine business attention was called to a state of affairs that has become a positive abuse and some of the Allegheny florists claim has become a source of loss financially to them. This abuse consists of the competition in the florists' business by men who are employed by corporations, such as public parks, cemeteries and railroad companies, and who, being under salary and under no expenses, can afford to undersell (and do it too) those who are engaged in the trade as a legitimate business. It was stated that the man who grows flowers at the County Workhouse has frequently undersold the regular florists, and only recently solicited and secured the order for supplying flowers required by the Allegheny organization of the society Daughters of Liberty at a very much lower figure than anyone in the trade could touch, and the man in charge of the Pennsylvania Railroad Company's greenhouses was doing the same thing, also furnishing decorative plants at the houses. It was stated that no one knew of any being sold from the park conservatory, but that city officials or men with political influence could get all the flowers they wanted from the park for nothing when giving a reception or social entertainment; that as the parks belong to all the citizens it is very unfair to those who cannot get them, as well as to every florist. The discussion on the above state of affairs was very animated, nearly everyone taking part in it; instead of adopting the very vigorous resolution that was offered a committee of three, Samuel McClements, Fred Burki and Julius Ludwig, was appointed to investigate the matter and call upon the County Commissioners, railroad officials and

superintendent of park, and endeavor to have the trouble remedied. Several members stated that their business had suffered for two years in consequence of the illegitimate competition mentioned, and that they now proposed to adopt very vigorous measures in trying to put a stop to it if the committee did not secure redress. A committee was also appointed to see about transportation, badge, etc., for the trip to the S. A. F. convention at Cleveland. Messrs. Reineman, Bader and J. Ludwig were appointed a committee to arrange for a club picnic; this will be an innovation on our former ones, as it is proposed that the wives, sisters, cousins and aunts, etc., of the members will be asked to assist us; previously our picnics have been "stag" affairs only. The next meeting of the club on the 25th inst. is intended to have the "social" feature with it. If any visiting florists are in town then they will find it to their advantage to come and see us on that evening.

Mr. M. C. Dunlevy, Carnegie, Pa., reports that his son Harry and his man Paul Andrew have settled with the Gas Line Co. for their injuries, caused by the explosion of gas some time ago. In this case all damages have been satisfactorily adjusted without any suits. Mr. Harry Dunlevy's hands are still very tender from the burns, but will be all right in a short time. Mr. Dunlevy has arranged so as to have all his houses in proper shape for the coming season; his friends hope he has had his share of misfortune, and all wish him success.

The National Saengerfest is over, and I regret the influx of strangers did not improve the florists' business for flowers to any great extent. The cut flower demand has only been fair, but this week has seen several fairly busy; all hope the slight improvement will continue.

Mr. Fred Burki, Bellevue, Pa., reports trade fair. He has been cutting lilies for some time, and his stock is about done. He has been busy clearing out several houses, putting them in order for fall stock, etc. He is cutting a large amount of roses, etc., and keeping up his reputation as one of our most successful wholesale growers; his stock is always classed as A 1.

Mr. James Semple, Bellevue, Pa., is in a happy frame of mind this week; he says his plant trade was fine, very fine indeed, and while he did not sell completely out the stock left is not great enough to worry him any, for the demand still keeps very fair.

Mr. Robert Faulk, who handles Hartman Bros' stock in the market, reports a big trade done in plants in volume, much more than recent years.

J. E. Harrison, with Hoopes, Bro. & Thomas, West Chester, Pa., was with us in the early part of last week. He reports trade only fair in nursery line; collections quite slow.

The past week has shown an improvement in the florists' business, nearly everyone reporting an increase in demand and being busy. School commencements and June weddings have been the principal causes of the improvement, and better prices were obtained for some varieties of flowers, roses particularly.

A large amount of work is being accomplished at the parks this summer. At Highland Park Superintendent Geo. W. Burke has the many improvements well under way, they mostly consisting of construction work. Three bridges of stone, one with a driveway underneath leading from main entrance, affording a convenient route to the new \$125,000

"Zoo" to be erected this season, is only a portion of the work projected; the many new driveways are mostly down to sub-grade now, and curbing, macadamizing and drainage will be the principal work from now on. The floral attractions this year at this park are on a different line from those of last season when the S. A. F. were so pleased with them. There are very few set designs; generally they are scroll patterns, and having the reservoir banks to display on, show up remarkably well, and are generally admired. In the future this park will divide attention with the larger Schenley Park, becoming one of the city's great attractions.

Mr. N. Patterson has not fully recovered from his sickness in the spring, and is now up in Michigan recuperating, and at last accounts was doing well. Mr. Flemm, who is in charge of his store, reports a good trade all this month, in fact busy.

Mr. John Bader, who has been on the sick list since the death of his wife, left this week for Mt. Clemens, Mich. His many friends hope the change will enable him to return fully restored to health.

Mr. Gustave Ludwig displayed some very fine water lilies this week, pink, white and yellow, from Washington, D. C.; the demand was good for them at \$1 per dozen. He also secured the decorating of Turner Hall for the Knight Templars on St. John's day; with several wedding decorations this week he has been full of work.

Mr. O. C. Oehmler, secretary of the club, met with a very severe loss this week in the death of a little daughter two and one-half years of age. All his friends deeply sympathize with him in his trouble, and hope also to hear soon of Mrs. Oehmler's improvement, this having completely prostrated her.

The weather this month has been very rainy and hot, rain nearly every day; everything is growing admirably, but now all are wishing a let up in the rain department, as we are getting a little too much of a good thing.

A very important meeting of the club is called for the 25th; it is hoped the attendance will be good. A social is to be held after the business meeting adjourns.

Mr. Rice of M. Rice & Co., Philadelphia, was with us the early part of the week.

REGIA.

Buffalo.

We have been going along in the same old fashion for the past two weeks; occasional light showers keep the dust off the leaves, but it is decidedly dry, and we need a big and penetrating rain. A drive round the city parks a few days ago showed me that at last we will have good flower beds in our parks. Capt. Braik, our assistant park superintendent, is a gardener from the word go, and knows that there are people in this world who are not highly educated enough to appreciate the sylvan scenery of grass and trees, but can glare with satisfaction on a bed of red geraniums. While it is perfectly proper to teach or lead the masses to a higher education, you must cater to their plebeian taste, or they will get the sulks and won't be led.

Buffalo has been a little overdone with carnations the past two weeks, at least the price they were sold at would lead you to suppose it. Two well-known firms on Main street whose stores are side by side played a game of poker with this beautiful and popular flower; one of them dropped from 40 cents per dozen for the finest grade to 25 cents, then the

neighbor saw him and put up a sign 10 cents. Then the public next day had a chance to buy the best of carnations at five cents a dozen. They have got over it and both are sorry, but it does harm. How easy to drop in price, and how difficult to raise it. The crop of June weddings has not been too abundant, and have not been of social importance enough to make flowers scarce. Wise Bros. of East Aurora are sending in grand carnations, and they realize a price that is gratifying for the time of year.

We had a call this week from Mr. James Kidd of California. When he talks about 300 acres of sweet peas for seed you naturally wilt, but when he says "that's nothing there, a man next to us has 2,000 acres of onions for seed," you feel better and are prepared to believe that Jonah did actually swallow the whale, or vice versa.

Our town is large enough now for Harry Basley to spend a whole week in. The day after his arrival a telegram came to my care with the news that Harry had been appointed a park commissioner of Detroit. I wrote to Mayor Pingree congratulating him on his wise selection, for which I received a most courteous reply from his honor, the world-wide known mayor of Detroit. The office is purely honorary, but it would be well if other mayors would appoint practical men. A florist or perhaps two should be on all park commissions, and would be far more useful to the city than the fossils who too largely are found on the board in every city.

W. S.

Toronto.

The Gardeners' and Florists' Association held its usual monthly meeting last Tuesday. The room was not crowded, but there was a quorum without counting Michael O'Sullivan's bull pup, and an interesting two hours was spent. A committee was appointed to make arrangements for an excursion—probably to the Guelph Agricultural College—sometime early in July. A big crowd should take in this excursion.

Trade has about gone up Salt Creek for the summer.

E.

MACEDON, N. Y.—Miss Edna L. Arnold intends building a greenhouse this summer; it will be devoted to flower growing for local trade.

LOUISVILLE, Ky.—C. A. Waered retires from the firm of F. Walker & Co.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By an all round Scotch florist; 18 years' experience in roses, carnations, palms, ferns and mums. Age 45; married. Address X, care American Florist, Chicago.

SITUATION WANTED—By a first-class florist and gardener; 16 years' experience; married, no children; age 31. Private place preferred. Address E M, care American Florist, Chicago.

SITUATION WANTED—As foreman. A life experience in growing roses, carnations, violets, palms, ferns, mums, and general greenhouse stock, forcing of bulbs, shrubs, etc. References to responsible parties. GROWER, 129 N. Clark St., Chicago.

SITUATION WANTED—By an experienced florist well known in the trade, to take charge of commercial place—wholesale or retail. Thoroughly experienced in roses, carnations and mums. Age 30, single. Address G E B, care Chas. W. Helmers, 329 Fourth Ave., Louisville, Ky.

SITUATION WANTED—As foreman or manager: a first-class grower of roses, carnations, any kind of cut flowers, plants, and propagating. Palms and mums a specialty. Well up in design work and decoration, and fine landscape gardening. German, honest and sober; 5 years on present place. Best of references. EVERGREEN, care American Florist.

WANTED—Good rose grower. Address at once REINBERG BROS., 51 Wabash Ave., Chicago.

WANTED—An all round florist; experience at cut flower work; good salesman; willing to work; single; good habits. Apply with references. GOLD, care American Florist, Chicago.

WANTED—A good all around man, not afraid to work, for roses, carnations, violets and mums, also bedding stock. Must be single. State wages with board. Work all the year round. Give references. Address Box 134, Oconomowoc, Wis.

WANTED—Good florist and gardener to take charge of Scotch gentleman's place. Grounds 3½ acres, garden 1 acre, greenhouse 8x20 feet. All help needed given. Place is very quiet, and only suited to a settled man. Scotchman or Englishman preferred, with good recommendations. Living cheap; climate splendid. A good house, firewood and \$40.00 monthly. Address B. J. FISHER, Ashboro, Randolph Co., N. C.

FOR SALE—An 8 section Carnody hot water boiler in good condition. Address W. H. DRUSE & Co., Beardstown, Ill.

FOR SALE—No. 8 Furman steam boiler, in good condition; will heat 800 square ft. of glass. Price \$250. W. M. LOTT, Warren, Pa.

FOR SALE—Two Hitchings boilers No. 16, been in use about 5 years; in good order. Will sell reasonable. Address Box 201, Wellerley, Mass.

FOR SALE—At half price, three greenhouses, stock, boiler, pipes and everything belonging to it, if applied for soon. W S P, care American Florist.

FOR SALE—2 small greenhouses, size of lot 170x333 feet, east front; 8-room house, barn, etc., water plenty; nice property. For particular address CHAS. J. DIEHL, Norwood Park, Ill.

FOR SALE—Four greenhouse; two 11x75, one 19x75, one 22½x75, and two lots 100 feet front, 123 feet deep, and a good stable. The houses are heated with hot water. Address R 1, care Am. Florist.

FOR SALE CHEAP—Extra good second-hand 3-inch bolt-n tubes, 12 feet long with collars for packing. They take the place of cast iron pipe for hot water at less than half the price. W. H. SALTER, Rochester, N. Y.

FOR RENT—Four nice greenhouses with some stock, retail and wholesale; between two cemeteries; half acre land. Rent \$300 a year, including dwelling, heating, repairing and board for a man. W. PFUND Altenheim, Oak Park, Ill.

FOR SALE—The Anthony Greenhouses, long established, popular, well known greenhouse and cut flower business, well stocked. A bargain. Terms reasonable. Address DEAMUD, care Vaughan's Seed Store, 81 Randolph St., Chicago.

FOR SALE—A bargain: two greenhouses 100 ft. long, in Macomb, Ill., heated with hot water; hotbeds, sash, tools, wagons, two horses, a large stock of plants, a good established trade, in a good city; 3 years' lease on the ground free. Four acres of growing vegetables. All for \$1,500. I. L. PILLSBURY, Galesburg, Ill.

FOR SALE CHEAP—Whole or half interest in a first-class florist establishment, an area of 40 sq ft. of land, with one new greenhouse and hotbeds, also dwelling with barn, in a city of 8,000 to 10,000 inhabitants. Land lies between two streets. Answers received in German, Norwegian or English. For further particulars address CHR. MARXEN, 1236 Sixth St., Beloit, Wis.

"ROSE LEAF" Extract of Tobacco INSECTICIDE!

PRICE: 1 gallon can, \$1.50; 5 gallon can, \$5.00.
Applied either by vaporizing or by syringing. Try it.

cure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

Chicago.

During the past week school commence-
ments kept the florists busy, and stock
moved off very rapidly. The city schools
had largely selected the La France rose
for their class flower this year, but as this
is almost out of cultivation they had to
content themselves with substitutes.
Red roses were mostly in demand;
Meteors and Beauties, but Bridesmaid
sold wonderfully well also. Good stock
was no more plentiful than last week,
much of it being very poor. The prices
averaged the same as last week. Carna-
tions went very well, and some excellent
flowers were seen; in these white sold
better than red. The went for \$1 to
\$1.50 for extra stock.

All the cheaper flowers continue very
plentiful. Asters are not very good in
quality; they sell for \$1 a hundred. Core-
opsis, cornflowers, pond lilies, sweet peas
and candytuft are in abundant supply.
Lilium auratum, very good, sells for \$1.50
a dozen; longiflorum \$1 a dozen. Candi-
dum is very plentiful, and moves slowly
at \$2 to \$3 a hundred. There is little
demand for it, and only the very best
sells. The demand for good quality corn-
flowers has been good ever since the season
opened. Some showy Kämpfer's iris are
seen.

It is, of course, to be expected that next
week there will be a decided drop in the
market. The school commencements are
now over, and trade must drop to the
midsummer level. It will be remembered
that last year the city schools called for
an extra quantity of red roses, Meteor
being the class flower. Local florists
were kept quite busy, and shipping orders
finished up the stock.

Much replanting is going on at present,
which will soon shorten up the stock.
Carnations have continued to hold their
quality usually well this season.

Visiting Chicago: Herman Berkhan,
New York; Edwin M. Haven, South
Haven, Mich.

Rochester, N. Y.

We had very warm weather during the
past week, usually those hot spells are
marked by a falling off in the sales of cut
flowers, but the florists did not have very
dull times, few of them had cause for com-
plaints. The average sales of the week
were certainly good for this time of the
year, and hopes are entertained that this
favorable state of affairs may continue
for a while longer. Still the time is near
when all the help in the stores may take
things easy and enjoy a well earned rest
for a few months. June weddings have
been unusually frequent this year and are
still quite frequent; most of them call for
table, house and church decorations and
prove a source of profit to our florists,

who really deserved this unlooked for
activity in the trade, for since Eastertime
until lately the sales in flowers were
rather below the average. Although cut
flowers are very plenty, all good stock
found ready purchasers at fair prices.
Smilax and asparagus is still very scarce.
Lilium candidum is plenty, L. chalcidoni-
cum and L. tenuifolium are seen here and
there in the windows and sell at sight.
These bright colored lilies should be
grown more largely. Outdoor flowers
come in large quantities and as the
weather has been very favorable for their
perfect development, they are of good
quality and last well. Iris Kämpferi is
especially fine this season, the English
iris also takes well in this city and prob-
ably would in other places, but it does
not bear shipping for any great distance
unless packed with the utmost care.

Another florist's wedding took place
here last week, when Mr. Edwin Wilson
was united with Miss Lilian Thomas on
June 17. The groom is a son of E. Wilson
and has charge of his father's store in
Main street. Congratulations are offered
by all the Rochester florists.

Mr. Harry Balsley, the well known
pottery man of Detroit was a visitor in
town this week, making his usual rounds
among the florists. J. B. K.

PLEASANT HILL, Mo.—Geo. M. Kellogg
has added five new houses 28½x250 with
16x20 glass.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

T. W. WOOD, Pres.; ALEX. RODGERS and J. B. Rice, Vice-Presidents; A. L. DON, 114 Chambers Street, New York, Sec'y and Treas.

VISITED CHICAGO: Edwin M. Haven of the Haven Seed Co., South Haven, Mich.

THE contract orders, representing over \$100,000 in amount, were sold by the assignee of the Northrup, Braslan, Goodwin Co. June 20 to H. H. Harries for \$800.

THE ASSIGNEE of the Northrup, Braslan, Goodwin Co. has disposed of the equity in the claim of that corporation for damages against the Hon. J. Sterling Morton, Secretary of Agriculture. It is stated that the suit will be filed immediately in the U. S. Federal Court at Omaha, Neb., by the Hon. J. N. Baldwin, attorney, of Council Bluffs, Iowa, for Mrs. Georgiana Braslan, the purchaser.

St. Paul.

Trade is settling down to its usual summer dullness and by July 1 will be practically at a standstill. There has been a good demand this month for cut flowers for commencement exercises. Roses have been in great demand, red and white being especially scarce. The usual quota of June weddings has also caused a good demand for flowers, while the usual amount of funeral work has contributed to swell the aggregate sales.

Plant trade has been fairly active and not many first-class plants remain on hand with the growers. There has been less cutting in prices than heretofore. Retail prices have averaged as follows: 4-inch stock of geraniums \$1.25 to \$1.50 per dozen; 3-inch stock 75 cents to \$1.

A larger amount of bedding work than usual has been done in the city, while the usual number of vases and porch boxes being filled has furnished an outlet for otherwise unsalable stock. Outside flowers have been scarce. Some extra fine pæonies were brought in last week and retailed readily at \$1 per dozen. Outside roses are just coming into bloom, but do not cut any figure with the regular trade.

L. L. May & Co. are doing quite an elaborate piece of work at the capital grounds putting in a large number of G. A. R. emblem beds.

Work at the city parks is being rapidly pushed and is nearing completion. A large bed of pansies, and the clumps of pæonies on the hillside now in full bloom are very pretty.

Building operations have already commenced. Chris Hansen has completed his large rose house.

In Minneapolis, Mr. Hartman, of the Lakeside Greenhouse Co., has plans for 3 new houses—two 24x100 and one 17x100. R. Wessling of the same city is also erecting new houses.

The Oakland cemetery association of this city is the thorn in the side of many of our florist friends. Not only have they entered into competition with the florists, but by an obnoxious rule endeavor to compel lot owners to buy from their greenhouses or not at all. We have called attention to this in previous years and have been forcibly reminded of it in the past month. There appears to be no redress, and this nuisance, like the department store, will have to be endured for a time at least.

FELIX.

WE have received from Mr. Peter J. Schuur, Kalamazoo, Mich., a few samples of his celery plants, which seem of excellent quality.

Cincinnati.

Our storemen and wholesale houses complain of dull times the past week. Commencement of our schools had little effect on flowers. Spring trade has been very satisfactory to the florists here; the sale of bedding plants has surpassed any previous year.

Mr. Fred Walz of Cumminsville is very enthusiastic over his collection of seedling cannas, and he has cause to be proud. There are surely some varieties among them that excel any up to date. One grand flower is a cross of Queen Charlotte and Mme. Crozy, color a dark but bright red, with a broad yellow border, flowers very large and with more substance than Crozy. This variety he has named Cincinnati. There are many others equally as good, and at least ten that will surpass any of the standard varieties—these will be heard of later.

Mr. Wm. Mann, bookkeeper for H. L. Sunderbruch, has returned from his two weeks' vacation south, visiting Memphis, Nashville and Louisville. He is at his desk again with his usual smile.

Visiting town: Mr. Kroger, representing Siebrecht & Wadley, New York.

H. SCHWARZ.

Norristown, Pa.

In 1897, Mr. Joseph N. King intends celebrating the 50th anniversary of the establishment of the greenhouses in Norristown. The history of this establishment, though brief, is both interesting and suggestive.

Henry King, Sr., was the pioneer florist in Norristown, Montgomery Co., Pa., removing thence in 1845 from Philadelphia, where he had been employed during the previous seven years, from 1838 to 1845, by Landreth Bros. as foreman in their seed business. Two years later, in 1847, he bought a piece of ground upon which he erected the first greenhouse. This ground has since increased considerably in value, while the improvements made about the place from time to time have fully kept pace with the general progress achieved in all industrial branches during the past half century.

Mr. Joseph N. King still runs and conducts the place started by his father and is naturally very proud of the long and honorable business record maintained by both father and son.

The midsummer dull spell is somewhat ahead of its time this season. Things took a sudden drop and business is almost at a standstill.

HOMO.

Butte, Mont.

Trade still remains good, but florists are expecting a drop any time. The high school commencement took place on the 10th, and as usual everything that was salable was easily disposed of, notwithstanding florists had placed large orders for the occasion. Prices remain about the same, Beauties \$3, common \$1.50, carnations 60 cents; very little demand for garden flowers.

Mrs. D. J. Knox leaves this week on a trip east. The weather thus far this month has been fine, very little snow and rain, quite unusual for this part of the state.

J. H. M.

CINERARIA SEED.
GRANDIFLORA NANA.

This grand strain of Giant-flowering and compact growing Cinerarias is unequalled for size of bloom, richness of colors and symmetry of growth. Extra fine. Trade pkt. 25 cts.; 5 pkts. 10 cts.; 10 pkts. \$1.00.

AUGUST 15.

NEW ROSE

"Mrs. PIERPONT MORGAN"

Listen for a moment to what a voice from far off Springfield, Illinois, has to say about our young stock of this rose:

May 1, 1896.

"EDWIN LONSDALE, Chestnut Hill, (Station 11), Philadelphia, Pa.

"DEAR SIR: Box of 'Morgan' rose plants arrived Saturday in good shape. Fine Plants. I would like to know how you produce plants of such size in a two (2) inch pot?"

All I can say is that it is all owing to the natural vigor of the variety, and perhaps to some extent to the natural rose growing qualities of our soil.

We have a few more left of the same size. Order early or you may get left, for I do not know of a more profitable variety to grow for cut flowers than MRS. PIERPONT MORGAN.

Don't forget our address:

EDWIN LONSDALE, Station H,
Chestnut Hill, PHILADELPHIA, PA.

CRABB & HUNTER, Grand Rapids, Mich.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns.

Utica, N. Y.

The spring plant trade is about over and gone for this year. The volume of business compared very favorably with other years. Geraniums were in short supply and more good plants could have been used. What with school commencements and June weddings the demand for cut flowers is very brisk; in fact too much so for the supply. Roses are scarce and not of the best when they are to be had. Carnations still hold their own and are the best flowers to be had in this market. Specimen plants of hydrangeas are in good demand. What people seem to be looking for is large shapely plants in about 7 or 8-inch pots; for such a good price is obtained.

This city came very near joining the list of those in the hail belt on last Wednesday. Within two miles of the city line hail fell in astounding quantity and of large size. In some places not a single light of glass remains in the south and west sides of the residences. At Ilion, N. Y., the same storm struck the greenhouses of Mrs. Holder, totally demolishing the same. Hakes & Son were also in the path of the storm, but did not suffer so badly. Although no one here lost any glass, it set some of the craft thinking about insurance.

Geo. Boyce, who has the contract for planting the city parks, is busily finishing up the last of the beds.

John Hughes, who has had charge of the Overlook Greenhouses at Little Falls, N. Y., has resigned.

Wm. Mathews the orchid specialist, is rebuilding part of his establishment. He has a magnificent house of cattleyas; thinks they are doing better than ever. A big batch of *Cypripedium Lawrenceanum* lately received are starting to make themselves in good shape. Reports an ever increasing demand for orchid bloom of all descriptions.

F. J. B.

Greenhouse Building.

PETER J. SCHUUR, Kalamazoo, Mich

News Notes.

CHATTANOOGA, TENN.—Chas. H. Dyer has entered the business here with about 2500 feet of glass, intending to do a general retail business.

PITTSFIELD, MASS.—At the meeting of the Gardeners' and Florists' Club on the evening of June 13 it was voted to hold the annual exhibition three days in the early part of November at Central Hall.

YORK, Pa.—The greenhouses of C. E. Smith, at the corner of Jefferson St. and Jackson Ave. are to be moved to the corner of Juniper St., where they will be attached to those already standing at that point.

NEW KENSINGTON, PA.—Mrs. E. M. Turner & Co. is the style of a new firm here. They have built one house for bedding plants, and expect shortly to begin the erection of two 60 ft. houses for cut flowers.

HOLYOKE, MASS.—The annual flower show of the Holyoke Horticultural Society was held on June 11 and 12. It was a very meritorious exhibition, and the attendance was greater than on any former occasion.

PROVIDENCE, R. I.—The annual June exhibition of the Rhode Island Horticultural Society took place on June 17 and 18 at Tillinghast's Parlors; roses and strawberries were the most important features. The displays were well arranged and of unusual excellence, but were smaller in number than usual.

DOVER, N. H.—Henry Johnson, a highly respected citizen of Dover, who built and conducted the rose houses on Garrison Hill for six years, died on Sunday morning, June 14, after an illness extending over two years, aged 68 years. Two years ago on account of failing health he sold out his business to C. L. Howe, the present proprietor. His wife and one daughter survive him.

OWOSSO, MICH.—J. S. Schleider has just finished two houses, each 22x100 feet, with shed 46x16. He has added a tank for water, which is filled from a well 150 feet deep by windmill. The addition is a little distance from old place, both places being run at present, but the intention is to move entirely to new place in time. Business has been exceptionally good, necessitating the increased space.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

State Horticultural Society will be held
at Wiffin, Ga., August 5, 6 and 7. P. J.
Berckmans, Augusta, is president, and G.
H. Miller, Rome, is secretary.

A SECOND SUPPLEMENT to the "Liste
descriptives des chrysanthemes d'hiver,"
by O. de Meulenaere, has just been pub-
lished; it includes the varieties sent out
from 1894 to 1896, in number 1029. M.
de Meulenaere's lists are of special value
because they include so many foreign va-
rieties, of which we hear little in this
country. The list and supplements may
be obtained from the publisher, Ad.
Hoste, Ghent, Belgium.

Herbaceous Plant Notes.

Iris *Kämpferi* or *lavigata* is certainly
one of the most remarkable and showy
species, and blooming at a time when
nearly all others are past, should be em-
ployed largely everywhere. The flowers
of the better varieties are very large,
measuring from 7 to 10 inches across;
their colors are very rich and velvety in
the darker varieties, while the pure white
striped or veined flowers in various shades
of purple, blue or rose are exceedingly
handsome. Unlike the German iris, they
do not perfect the best flowers on very
dry ground, but prefer low or moist
situations, though very good blooms are
produced sometimes in an ordinary good
flower border when fully exposed to the
sun. If massed together in large bold
groups along the edge of a pond, lake or
stream of water, their beautiful flowers
develop to perfection, and when seen from
surrounding elevated ground are simply
gorgeous to look at. At the Riverside
Cemetery in this city may be seen a large
mass of this magnificent iris planted along
the edge of a miniature lake, the elegant
and vivid colors show surprising varia-
tions from a distance. Especially is this
true in the afternoon, when the sun strikes
the bed at an angle, and I have rarely
seen a more cheerful effect created with
such simple materials. Mr. Shepard,
formerly of Chicago, who has been the
superintendent of this establishment for
the last three years, is an able and
thorough horticulturist who evidently
knows where to place a plant so as to
exhibit its beauties to full advantage, and
under his management we may confi-
dently look for the successful development
of the natural beauties in the large tract
of land placed under his care. He is a
firm believer in hardy plants and proposes
to largely introduce them in many of his
shrubberies, and also in beds and borders,
but whatever and wherever he does plant
large masses will be the prevailing feature
of the grounds. After roaming around in
different parts of the as yet unfinished
and partly wild grounds, I had to return
to the colony of iris, viewing it from all
sides, and going up close to it we mea-
sured some of the individual flowers, some
of them were 9 inches across, which is a
remarkable showing, for the plants were
densely crowded and received no extra
care whatever. The six petaled sorts are
preferred by Mr. Shepard, although some
of the three petaled varieties are in my
opinion quite equal to them as long as the
petals are broad and round enough to
leave no spaces in between.

Another of Mr. Shepard's favorites is
the bright flowered *Monarda didyma*,
which continues to flower in such pro-
fusion throughout our hottest months,
and not only effectually covers the lower
edges of shrubberies, but delightfully
enlivens the sombre green with its cheer-
ful and gay flowers. Large masses of

golden rod mixed with tall asters and
Boltonia latissquamæ and *B. asteroides*
are not in bloom yet, but surely will form
one of the greatest attractions when their
time comes, as they are planted in a very
prominent place. This is another instance
of producing a grand effect with few and
common materials, in which art Mr.
Shepard is master.

Among the rarer plants that are in
flower now on our own grounds or have
been in bloom for some week past, may
be mentioned the beautiful and free flow-
ering *Epilobium rosmarinifolium*; the
flowers are produced on long, branchy,
terminal spikes and are a pleasing shade
of reddish pink, of good size, 1½ to 2
inches across, the stamens are of the same
color as the flower. It is a most useful
plant in the herbaceous garden as we
have but few plants of that color in
bloom now, and doing well in most any
situation, though naturally preferring
the low and moist places where the
individual flowers and the spikes attain
very large size, and the growth will be
stronger and taller; it forms a neat com-
pact bush 1½ to 2 feet high when planted
alone, but should be planted in masses or
along the edges of shrubbery. It has been
said that this plant is not very hardy, but
I can say from experience that it is just as
tough as an oak tree with us, planted on
a knoll where no snow covered it in win-
ter and exposed to sun and wind, the plant
did not suffer in the least, and in my
younger days I have grown it on Long
Island also without protection, never
losing a single plant.

Cephalaria tartarica with its large
globose, scabiosa-like flower heads, 2 to 3
inches across is rarely seen here, and I do
not know why this beautiful thing should
be so neglected; in a narrow small border
it may not be in place, for it grows from
4 to 6 feet high and spreads out in pro-
portion, but in a shrubbery or in a large
sized wide border, the elegant primrose
yellow flowers on their long stems show
up to advantage. They continue to send
out these flowers for 2 months or more
and are also most useful and lasting
after being cut, so I do not see why the
plant should be neglected, especially as it
is a most vigorous grower and very
hardy.

Astilbe Thunbergi (not *Spiraea Thun-
bergi*) is now at its best and a most
beautiful object in the border, the growth
and habit I like far better than the old
and well known *A. japonica*, it grows a
little taller and its foliage is somewhat
broader and on longer petioles. The
flowers are disposed on similar stems in
the same way as in that variety, but the
branchlets in the panicles are set farther
apart and are curving and bending over,
giving the spike a looser and more grace-
ful appearance; moreover the upper part
of the stems have a rich reddish color,
which shows to perfection among the

pure white flowers. When massed together, no other astilbe looks so pretty and charming and if we plant a few clumps of the light blue wahlenbergia among them, the patch will not be destitute of flowers for the remainder of the season.

Campanula Van Houttei has been in excellent shape for four weeks now and promises to continue for a long while to come; it is one of the large flowered varieties. The bells are pendulous, dark blue in color and of good substance, wind and sun do not affect them, and I call it a decidedly good form; $1\frac{1}{2}$ to 2 feet is as high as the plant will grow.

Michauxia campanuloides is not a true perennial, but usually will flower for several seasons in succession. As seeds are produced very freely, it is not difficult to keep a stock of it coming on and replace old decaying plants, the same as we do with hollyhocks, digitalis, etc. The flowers are very large, white tinged with blue on the outside, the corolla is divided into eight petal-like segments, which are reflexed like the petals of Lilium speciosum. The flower stem is much branched and very tall, from 3 to 6 feet high, requiring support if planted in exposed positions, nevertheless the plant is very desirable, as the showy flowers are produced for several months in succession and are decidedly ornamental and lasting. The unique shape of them alone should induce us to grow a few of these plants at least, planted among campanula, tall asters, eryngiums, heliopsis or other things, where the under growth will serve as an effective support to the tall flower stems of the michauxia. They are very effective and show their curious flowers to advantage. J. B. KELLER.

Rochester, N. Y.

Carnation Notes.

The question "What are the best measures to prevent an overstock or glut in the market" when drawn from the question box at the New York convention created merriment; and the first answer "Kill off half the growers" elicited still more laughter. Quite a radical way to solve this question. Perhaps the remaining half would be hanged for killing the others, and leave the whole field to whom?

There is another side to this answer that is not quite so laughable, one we meet in our business life, and it will not create any merriment either, rather chagrin. This is the practice of one trying to kill the other by underselling. It generally ends by killing both; one from the blow received, and the other from exhausting himself in dealing out the blows.

This question is like the answer as narrated in one sense ridiculous, and in another a very serious one. In the course of the discussion following, answers were given in a sincere spirit as the question was undoubtedly proposed. The one most taking is to grow more good flowers, and place the rubbish on the manure heap. If every grower would comprehend this better, much could be accomplished in the way of ready sale and better prices. Flowers are considered too

much of a luxury yet, and it is impossible to regulate the demands; producers and consumers alike now prevent an overstock and the fluctuations in prices. We can depend only on the tempting character of our product, the best we can produce, and the influence we can exercise in cultivating the taste of the people. Now undoubtedly a dozen of well grown flowers will have a better influence in cultivating the taste of others than two or three dozen of rubbish. Is not the advice to place the rubbish on the manure heap justified? Better quality, less quantity should be our motto, and we can do much in preventing an overstock. Luxuries have in the course of time, through habit and the influence of civilization, become a necessity. What is in the way of our flowers becoming a necessity?

FRED DORNER.

Rose Crimson Rambler.

It appears at this writing as though the variety of rose heading this item should eventually find a place—and that very soon—in every garden wherever plants are grown in this country. There may be, of course, localities where it may not thrive as well as others, but hereabouts it is a great and a grand success. An enthusiastic writer in a local newspaper stated a short time ago that it was one of the greatest acquisitions to our gardens in modern times; and so far as I have been able to observe, I can endorse every word that was said in its favor. Every strong plant put out this and last spring will be a standing advertisement, setting forth its great merits, for every live florist to take advantage of; so that it will be wise for most florists engaged in doing more or less of a local trade to make preparations for the demand which is sure to come, to lay in a large stock as early as possible, especially in localities where it behaves as it has done hereabouts during last winter and this spring, as it is hardy, healthy, free-flowering and withal the most distinct and useful hardy new plant we have been called upon to admire for the past thirty years or more.

E. L.

Scale on Palms.

I do not find the preparation of cyanide of potassium and sulphuric acid altogether a success as a cure for scale, etc.

Having a number of palms, etc., infested with scale, I thought I would give the remedy a trial. I used a frame 12x6, and having filled this with the plants to be fumigated, a tarpaulin was placed over them, and then the sash to make it perfectly tight. The dose given was two ounces cyanide of potassium, two ounces sulphuric acid and four ounces water. The plants were left in 40 minutes, and then tarpaulin was removed. Everything was apparently all right, but on examining the plants a week later I find quite a number of the kentias, arecas and dracaenas badly damaged, though the majority of the plants came through in good condition. The scale is pretty well destroyed.

I would advise the readers of the FLO-
RIST to exercise care in this matter and try but a few palms at first. E. W. P.

Not having tested the fumes of cyanide of potassium and sulphuric acid combined with water as an insecticide I cannot speak authoritatively in reference to it.

But the vapor thus generated being in all probability a very poisonous and highly corrosive gas, I would advise extreme caution in its use in the case of palms and other fine foliage plants, from the fact that an injury to the foliage of some plants, notably some of the palms, does not always become visible at once, and therefore the treatment might be repeated before the actual effect was known, unless great care was taken.

In the report of Mr. C. L. Reynolds on this method of fumigation as published in the AMERICAN FLORIST of April 25 (page 1049) the time of exposure was apparently limited to 20 minutes, and the condition of the plants was stated to be entirely satisfactory on "the next day."

In the experiment reported by E. W. P. the plants were exposed to the gas for forty minutes, and at the end of that time they appeared to be unharmed, but on examination a week later many of the plants were found to be badly damaged.

This being a matter of much interest to growers, further reports from those who have tested this remedy will doubtless be welcomed by the trade, many of whom are probably in the same position as the writer, inasmuch that we have tested many insecticides, but so far have found none that would thoroughly clean a badly infected plant from scale in one application without injury to the growth.

W. H. TAPLIN.

Glimpses of Los Angeles, Cal.

One day's drive included the newly made west side park of Los Angeles, where palms of every variety surprise the eye of the traveler. Date palms have their long leaves, and broad leaved palms cast great shadow disks on the lawn.

Can we believe them to have grown in these five years! When last we drove up Bonnie Brae there was no tree in sight,—nothing but wild mustard and squirrels broke the monotony of the rolling surface, all brown and seared with the sun heat. Now we find all this beauty and greenness, and elegant homes about us. A lake at our feet and freshness everywhere. Sails skimming away to the other shore and rowboats innumerable.

The Monterey cybess in all forms imaginable, for even here in far west Los Angeles man tries to improve nature's work by clipping off all its dainty beautiful sprays.

As a whole the place is fair to look upon and it seems as though some fairy had waved her wand here, so wonderful and rapid the growth.

Driving out on the Old Mission Road from Los Angeles to Pasadena, we see on the left an avenue of tall trees quite unkept and irregular. But, waiting one moment beneath the shade we are impressed with its beauty. The eucalyptus trees tower far above us, while interspersed pepper trees droop over our heads and soften the view. A grand sweeping curve delights the artist's eye and reminds one of the old avenues of England.

A. G. W.

Lilium Tenuifolium.

The writer exhibited some 15 or 20 plants in bloom of this rather rare lily at

PALMS FIVE YEARS PLANTED.

IN THE NEW WEST SIDE PARK
GLIMPSES OF LOS ANGELES, CAL.

the June meeting of the Pennsylvania Horticultural Society in Philadelphia. The exhibit caused quite a little comment on account of the unusual size of the plants and flowers, many expressing surprise that this lily could be done so well out of doors, and wondering what the method of culture could be. The grower of these lilies, a gentleman in the northern part of the state of New York, sends me, in a private letter, some hints which I copy for the benefit of those interested:

"There does not appear to be any great secret in succeeding with *tenuifolium*. Those I sent to you were field grown. The location is entirely open and sunshiny, and the soil is fine sand. I find that the more sand the better they do. It is one of the hardiest lilies grown provided it is planted where it cannot be drawn out in winter."

Quite a number in this vicinity have tried this lily as a pot plant for winter flowering in a commercial way; but with rather disappointing results so far. If well done, however, I still think it would be an acquisition to our list of winter flowering plants. For a private conservatory or for out of doors it is certainly one of the most charming of all the lily family.

G. C. WATSON.

Fern Notes.

CLIMBING AND SCANDENT FERNS.

Of these there are only a few that may be recommended for florists' work, the most useful of which is *Lygodium japonicum*, which is more generally known in the trade as *L. scandens*, but as the true *L. scandens* is a very inferior fern, and of no value except as a botanical specimen,

care should be taken not to confuse the two. The true *L. japonicum* is much grown for cutting, the long trailing fronds being very useful for various purposes, and more particularly for the "shower bouquets" now so fashionable. This *lygodium* may be raised from spores, or increased by divisions. The seedlings make very pretty pot plants when about three are grown together and trained up on slender sticks. Young plants are very slow to produce spores, but older plants are very prolific; the spores fall out very soon after they are matured and are lost, but if the fronds are taken at the right time, there will be an abundance of the pale yellow dust-like spores fall out after the fronds get dried. With ordinary treatment the spores germinate freely, and come true. I have had a whole batch with very few weeds among them.

Though quite a cool-house fern, it makes more progress in an intermediate temperature. A good, rough compost, which may consist chiefly of loam will be found to suit it well. One important point is to look after the fronds as soon as they begin to run up, and keep them from getting twisted together. Those grown for cutting may be grown on strings; these should be about four feet long. After the climbing fronds have made a good start they will twine round the strings without much further assistance. I have known good strings of this fern sell for 12 shillings per dozen and about three or four may be grown from a 6-inch pot, or when planted out it does well. A great point is to avoid a dry atmosphere or thrips will make their appearance, and they are very destructive when once they get established.

L. dichotomum is a very distinct species with the basal fronds having long deep green pinnæ, but after they begin to run up they are more distant and narrower. It makes a good pot plant when well grown, and is also a fine fern for covering pillars in the stove fernery; the fronds growing to a great length. There are several other very pretty *lygodiums*, but none except those named are of much service for florists' work. The North American species, *L. palmatum*, though very pretty, never does well with us.

Stenochlæna scandens.—This is a fine fern, which spreads very rapidly when once it gets a good start; the bright green pinnate fronds are produced on rather slender rhizomes. Planted in the rock-fernery or where the rhizomes can cling to a moist wall it is most effective. It may also be recommended as a fine fern for suspended baskets. Seedlings make good pot-plants, but when propagated from the rhizomes they are difficult to keep close and compact, as the older rhizomes do not branch out freely. It will grow in any ordinary compost, and requires a stove temperature. Sometimes plenty of spores may be had, but I have grown plants for years without seeing a fertile frond. The fertile fronds have very narrow pinnæ and are rarely produced except on plants several years of age and which have become a bit stunted in growth.

Davallia aculeata is a curiously distinct example of this group; the fronds continue to elongate for an indefinite period, while the rhizomes spread very slowly. There are other *davallias* which may be termed scandent on account of the slender rhizomes spreading rapidly. *D. heterophylla* will spread over a wall rapidly after it gets a good start. *D. pyxidata* is another; the rhizomes grow erect, and when they come against a moist wall they grow more rapidly than under ordinary pot culture.

Some of the polypodiums may also be included among those useful for covering walls. *P. pustulatum*, *P. stigmaticum*, (venosum), and *P. phymatodes* being good examples. There are also several others of similar habit, all of which make fine specimens when grown on old tree-fern stems, which may be covered first with sphagnum moss, with which may be incorporated a little fibrous peat. Stems two or three feet high when well covered are very effective. A. H.

The New Directory.

Those who have been wise enough to secure a copy of the new directory must feel very proud of the excellent showing the trade makes. That much time and money has been expended upon the work is evinced at the first glance, and it is

PELLEA ANDROMEDÆFOLIA (The California Fern) IN A CONSERVATORY

GLIMPSES OF LOS ANGELES, CAL.

alike a credit to the American Florist Co. and the trade generally. Who would have imagined, say ten years ago, that the trade would have assumed such gigantic proportions, and that such a vast area would be covered with glass, while the amount of capital invested is simply astounding. I fear we florists as a rule pay too little attention to such matters, and in speaking of our business to outsiders, do we ever think to ask if they have any idea of the capital invested or the amount of glass devoted to the cultivation of plants and flowers? Yet every one of us should be well posted so that we can talk intelligently upon such an important subject. Then again if we ask concessions from R. R., express or telegraph companies it is very handy to have something in cold type to show them.

The seasonable hints by President Wm. Scott are alone worth double the price of the book, however well a man may be posted, there are small things at times that will escape him, and perchance when he thinks of what should have been done say a month before, he finds it too late to be of service, be it sowing seeds, shifting plants or taking cuttings, whereas a glance over Mr. Scott's hints now and then, there is no likelihood of his forgetting the work to be done. Then again the lists of roses, carnations, chrysanthemums and cannas are most complete and of the greatest value to every florist. A copy should be found in the potting shed of every well-ordered establishment for the benefit of employees, every florist knows how often he is asked for a chrysanthemum say, that he has never heard of and to oblige a customer will spend half an hour hunting through a stack of catalogues to find it, but without success, and as a consequence is mad at the loss of time, whereas if he had a directory at hand a moment's glance would satisfy him that if it was not to be found there, it was never sent out, so wonderfully complete and up to date are the lists.

No one, be he seedsman or florist, should think of sending out circulars or catalogues by the old lists, which I know

to my cost some do, and the amount lost in stamps and catalogues would buy a great many directories, besides the list is so much larger and there are quite a number of new names to be found that should not fail to receive catalogues.

In conclusion, permit me to extend my hearty congratulation, on the completeness of the directory for '96; this may come a little late but it is none the less sincere.

H. YOVELL.

Cleveland.

It has been definitely decided by the Cleveland Florist's Club, to give a mid-summer flower show to be held in connection with the convention entertainments of the centennial commission next August. While it has long been settled that such a flower show would be held, there has heretofore been considerable uncertainty as to the details. There has been a good deal of discussion one way and another, some designing to make the exhibition absolutely free to the general public, the expenses being assumed by the local centennial committee; others wishing to make the affair free only to the visiting florists, charging outsiders an admission fee and the assuming of all financial risks by the local club.

The final settlement is a compromise. It contemplates a small admission fee to the general public, the free list to be controlled by the florists, while the centennial commission furnishes hall and a liberal allowance for good music. It is believed that under this arrangement a very satisfactory exhibition can be furnished by and to all the interested parties. This compact also gives the florists control of a hall for trade exhibit purposes that is not to be surpassed. It is large, airy, well lighted, with plenty of convenient, roomy entrances, good committee rooms, electric lighting and every convenience that could be desired.

The centennial celebrations will also bring many visitors to the city and in every way circumstances seem to point to a most favorable consummation. It

VIEW IN A CALIFORNIA GREENHOUSE.
GLIMPSES OF LOS ANGELES, CAL.

should also be said that the competition is open to all, premium lists being obtainable by application to the club secretary, Wm. J. Leitch, Doan St., Glenville, Ohio, or of Mrs. E. G. Wilson, 606 Jennings Ave., Cleveland. Trade exhibit is in charge of E. Cushman, Euclid, Ohio. While upon convention topics, shooters and shooting clubs will please take notice that the committee on shooting would like to hear from all who desire to participate. They wish to know how many members will attend from each club, and all who have the necessary implement and skill to come prepared to do business with the record. They promise a good time and a hearty welcome. Communicate with S. N. Pentecost, 707 Republic St., Cleveland. Committees on bowling, entertainment and so forth will be heard from shortly.

From pleasure to business is a reversal of the proper order, but it finds its excuse in the small amount of the latter now on hand. Up to the last week, business showed a slight recovery from its previous lethargy, owing probably to the fact that a great many people were winding up their social affairs for the season, paying off their society debts, getting married and otherwise fulfilling the obligations of life. These various matters had a slight tendency to banish the winter of a florist's discontent, and land him in the lap of financial summer, but the little flurry is dying out again and things are once again becoming deadlly dull. We are pretty well supplied with moisture, having had lately a number of very satisfactory rains, so that outside stock, taking the rainfall and early, warm spring into account, shows a very fair condition for the time of year. Sweet peas are just opening outside now with most of the growers. They look very well on the average everywhere. Inside stock like roses and carnations, begins to show up very

poorly; roses, especially, being mostly very small, of poor substance and in many cases badly mildewed. Carnations cut look fairly well, but the plants inside look very poorly in most establishments, Daybreak being usually the worst, and Sweetbriar, McGowan and Scott the best in appearance, usually in the order named. Asters look fairly well outside, though with some they show an aggravating tendency to flower at so small a size as to render the flowers too short stemmed and small for much use. Maybe this early flowering is a wise provision of Mother Nature to get the best of the black aster bug. Some such expedient seems to be very necessary, as otherwise if that soberly attired "cuss" shows his customary annual increase the florist's outdoor crop of aster flowers will soon be exceedingly scanty.

Not much building has so far been done this year. The outlook is not sufficiently encouraging either in sales or prices to justify much of the sort. R. Addicott, formerly gardener for H. S. Blossom, and locally known as a most prolific producer of chrysanthemum seedlings that approach very closely to standard varieties in merit, is about the only exception so far. He has gone into business, putting up a couple of good-sized houses, that will probably be steam heated. A.

Boston.

Although the great avalanche of spring bloom at the Arnold Arboretum has departed Mr. Dawson has yet much that is pretty and interesting to show. His special pets, the wild roses, are about past, but *Rosa gallica* in various forms is still gorgeous with many tinted flowers. *R. Wichuraiana* is yet to come, and the lovely *R. setigera* is fairly loaded with unopened buds. The hybrids from *Wichuraiana* and *multiflora* are especially

interesting, particularly as one listens to Mr. Dawson's enthusiastic pictures of future possibilities in these crosses and the good things which may yet come from persistent work on these lines. The philadelphuses have been very fine this year. Some are still flowering. One of the prettiest late bloomers is *P. microphyllus*, a recent acquisition from the Rocky Mountains, with jasmine-like sweet-scented pure white flowers. *Hydrangea vestita*, the earliest of the hydrangeas, is now in bloom, and buds are showing plentifully on *H. paniculata*. The verges of the drive-ways are brilliant all along with masses of the golden *Genista tinctoria*. Still lovelier in color and form is *Cytisus nigricans*, which is blooming in the nursery, and is well worthy of a place in every garden. The small ponds planted by Mr. Dawson last year already look as though they had always been there, so quickly have the nymphæas, sedges and bog plants made themselves at home. *Myosotis palustris* blooms freely in the low damp spots; the tall magenta-purple spikes of *Lythrum salicaria* make a fine contrast with the odd variegated reeds or juncus, and wild rice takes as kindly to its surroundings, apparently, as though it were on the shores of the Delaware.

The exhibition at Horticultural Hall on Saturday, June 27, was almost a rival for the regular rose show, so perfect were the blooms and so extensive were the displays. Nearly all the contributors to the earlier show were on hand, and such grand varieties as Earl of Dufferin, Her Majesty, Margaret Dickson, May Turner, Rodocanachi, Marchioness of Londonderry, Marie Rady, etc., were shown in perfection, especially by M. H. Walsh and Jas. Comley. Mr. Walsh exhibited again the two seedlings, which were received with much favor at the rose show, Lillian Nordica, a remarkably free blooming sulphur white hybrid from Margaret Dickson and Mme. Hoste, which received a certificate of merit, and a rich dark cross from Pierre Notting and Prince Camille de Rohan, which he has named Jos. S. Fay, and which received honorable mention, besides several other promising seedlings. Mr. Comley showed for the first time Mosella, the so-called Yellow Souper. This rose will have to show up better than it did on this occasion if it is ever to become popular. It would take a wide stretch of the imagination to find any suggestion of yellow in the insipid white blossom exhibited.

The collections of hardy herbaceous flowers from the Harvard Botanic Garden, J. W. Manning and Rea Bros. were a leading feature of the exhibition, and Dr. Weld's campanulas, sweet williams and delphiniums were very handsome, also W. H. Cowing's English irises and J. L. Gardner's Iris Kämpferi.

The annual reunion and strawberry festival of the Gardeners' and Florists' Club on Monday evening was a splendid success. The ladies and children were present in goodly number and the program prepared by President Cotter and Secretary Dawson was thoroughly enjoyed. Misses Gunn, Dawson, Lydon and McSorley and Mrs. P. Welch rendered piano selections and Mabel Grey gave a recitation. There were mandolin solos by Mr. Geo. Barker, banjo playing by Mr. Lydon, and recitations both humorous and pathetic by the club's star performer, Mr. Lawrence Turley. Then followed a collation with no end of ice cream, and after that came dancing, the Virginia reel furnishing an opportunity for some of the older members to show their agility although long out of practice.

Mrs. Samuel Neil and four children sailed for England on June 27 per steamer Cephalonia.

Mrs. Warren Ewell is seriously ill.

Visiting Boston: A. M. Rennie and T. O'Conner of Providence.

New York.

July stillness has settled down on the city flower trade, and those who have not gone already are making preparations to depart in quest of summer recreation. The best that can be said is that trade is better than at a corresponding date last season. Carnations are selling well and prices are maintained fairly all along the line.

D. Y. Mellis sails for a short European trip on July 4; he expects to return in time to serve in the Flatbush bowling team at the Cleveland contest in August. The club's good wishes were expressed by the presentation of a handsome silver cup at the meeting last Thursday.

The Gardeners' Society will give an informal reception at its rooms, 64 Madison avenue, on the evening of Saturday, July 11, at which time the medals awarded at the recent exhibition will be given out. Visitors will be cordially welcomed.

In last week's New York notes it was said that Wm. Nilsson used ten thousand echeverias in his bedding trade last spring. The number should have read seventy thousand.

Theodore Outerbridge of Bermuda is in town.

St. Louis.

The last few days of the week we have been without rain, and the bright weather has made the business a little better with some of the florists; others are still complaining of dull business. There is not an over supply of stock in the market, and the little that comes in is very poor. The greatest stock now at the commission houses is sweet peas, feverfew, cornflowers, larkspur, hollyhocks, balsams and candidum, a few roses and carnations. The few good roses that come in bring \$2.50 and \$3; carnations \$1.25 and \$1, sweet peas 15 and 25 cents per 100, with very little sale for the other stuff. Tesson is cutting about the only Beauties that come in; they are very good and sell for \$10 to \$12.50 per 100.

The picnic committee held a meeting at the office of Chairman Kunz, the picnic will be held about July 22, the location has not been learned as yet; a committee was appointed to look for grounds, consisting of Chas. Young, E. Schray, Fred Weber, R. Beyer, J. W. Kunz and J. J. Beneke. A game of baseball will be played between the wholesale men and the retailers. The subscription lists will be out in a few days and can be found at all the commission houses; a prize has been offered to the commission houses that has the largest list of subscribers. Bowling, quoits, baseball, shooting, running races and jumping will be the features of the picnic.

Alex. Johnson, at Wellston, is building two new houses 50x25.

C. C. Sanders and Tom Carroll are very busy just now with building new houses. Sanders is building new ones, and Carroll is rebuilding his old ones; both expect to be in good shape for the fall trade.

A. L. Vaughan, with J. C. Vaughan, Chicago, is a visitor this week.

Wm. A. Haupt has left the Houseman Floral Co. He expects to go back to New York in a few days.

The next meeting of the Florists' Club

A EUCALYPTUS AVENUE:
GLIMPSES OF LOS ANGELES, CAL

will take place July 9 at 3 p. m.; two essays will be read.

Monday night we had fine weather, and the bowlers were out in full force; 10 members rolled. Fred Weber was high man of the night, rolling 624 in three games; Emil Schray was second, 577, and J. J. Beneke third, 523. Helwig was high on single score, 223, and Weber second, 221. This ended the June series of nine games. Emil Schray again wins the medal, his total being 1,542; Beneke second, 1,470; J. W. Kunz third, 1,414. Fred Weber had the highest single score of the series, 229. Mr. A. L. Vaughan was a visitor to the Bowling Club, and rolled a few games with the boys. Mr. Vaughan has not forgotten how to bowl, as he made some very good scores and asked me as a personal favor not to publish them. Next Monday night the July series begins, and a good crowd is expected. J. J. B.

Philadelphia.

It is scarcely worth while to say anything about the state of business, although it is as good as usual for the season of the year. The weather here is delightful, but the customers are very likely enjoying just as good or better in their country retreats and the efforts of the bureau in this direction avail us nothing. Prices of roses are about the

same as last week, and there is likely to be no further change until the season opens in the fall. The Meteor is now one of the most popular varieties. It seems to do well at all seasons, and while other kinds are plainly showing the effects of long forcing and hot weather, it is now almost as good as in winter. Jos. Kift of Westchester is sending in some good flowers of the hardy white pea; the blossoms are produced in larger clusters than the common sweet peas, and make a very acceptable addition to the summer assortment. It blooms very profusely and should be grown by florists generally, particularly by those who retail their own stock.

Harry Bayersdorfer returned last week from his annual European hunt for novelties. He seems to have been more fortunate than usual, and a look into some of the early importations reveals some very good things. His novelties in artificial foliage combined with fruit and flowers are fine, and there are many new ideas in porcelain flower designs. He reports business in his specialties in Europe to be very good, as most of the manufacturers seemed very well satisfied. He says the only way to do business now is to keep with and a little ahead of the times if possible, and to get novelties one has to go after them and not wait for them to come.

THE FLORISTS' GUN CLUB OF PHILADELPHIA.

The July meeting of the Florists' Club will be largely taken up with Convention matters and the proposition of the National Society looking to the closer connection between the different local organizations and the central body. The idea appears to be a good one and likely to be of mutual benefit.

Building and rebuilding is going on actively in every direction and there is hardly a place in this neighborhood that is not enlarging a house or two, or erecting a new one. It would seem as if there should be by this time a certain form or construction of house that by general consent could be called the standard. So many houses have to be rebuilt after but a few years of service that it would appear as if there was some fault in their construction that might have been remedied had a little more thought and investigation been given the matter before building was commenced.

It takes a good deal to upset W. J. Baker, the Penn Square commission man, but with his wagon it's different and his son narrowly escaped a serious accident in a collision with another wagon which turned his completely over; fortunately there was little harm done beyond a few scratches and a big scare.

It does appear that if the bowling contingent of this village does not get together soon and hump themselves they will make a sorry showing at Cleveland. A new cup would look well in the case along with the others when the new club room is opened next October, and while it is likely to require good bowling it is worth the effort, and we hope the experts will give this matter some thought in the near future. K.

Florists' Gun Club of Philadelphia.

The illustration gives an excellent view of the Philadelphia gunners at their Club House near Wissinoming Station. The photograph was taken just after the genial "Deacon" (W. K. Harris) had won the Donaldson medal for the month, and he was beaming on the whole world like a burst of sunshine. You can see this for yourselves by looking at the end figure on the bench to the left of the picture.

George Anderson, who occupies the other end of the seat, is the captain of the team and looks happier than might be expected, considering that he has a newspaper man to right and left of him. George's great grievance at present is the way his club has handicapped his shooting. Although he is their crack shot it is next to impossible for him to ever win the medal. However he gets his revenge out of them by arguing the fine points of the case with all the ardor of a true descendant of the Covenanters. How those North of the Tweed people do love an argument! They sniff the battle from afar off and glory in the wordy fray. George has already argued more than one of his colleagues into a state bordering on nervous prostration on this handicapping matter.

The other man on the seat in his shirt sleeves is Chas. D. Ball, president of the Gun Club. The tall young man with the soft hat and the blue jersey sitting next to Mr. Ball is the secretary of the Gun Club, Mr. Bart Cartledge. Bart and his father (Thomas Cartledge, who stands behind his son a little to the right in the picture) are both enthusiastic gunners and good shots. Back of W. Harris is another genial member of the Gun Club, Mr. Jno. Westcott, celebrated chiefly because he doesn't shoot. But John makes up for this by his activity in other directions. For one thing, he can catch and eat more fish than any of them and is always ready and willing to challenge any one for a trial of skill in that direction.

John Burton, who stands left of Mr. Harris with a soft hat, a cigar and a smiling countenance, was the ruling spirit in organizing the Gun Club, and was its first president. He divides honors with George Anderson as a crack shot. On the other side of Mr. Westcott is George Craig, a crack bowler on the Phila. team and coming rapidly to the front at the targets. The other figures in the picture were visiting shooters (mostly from the University of Pennsylvania) excepting the one with the gun on his shoulder behind and to the left of George Anderson, who is W. H. Taplin, well known by his frequent contributions on cultural sub-

jects to most readers of the AMERICAN FLORIST. He dearly loves a day at the traps.

Altogether this picture contains a good representation of the Florists' Club gunners of Phila., although some of the enthusiasts were absent the day the picture was taken.

Some may ask: What does all this sporting and recreation among the florists amount to? Perhaps a good answer to this would be to state that these men with their sporting instincts are the cream of the successful men in their line of business, and they have always taken their recreation in fair proportion with their work, and both with the greatest zest. If these men hadn't ordered their lives in this sensible fashion it is questionable if they would have made the same successful business men that they now are. But a better argument to my mind is John Burton's remark, "What's the good of living in this world if you can't have some enjoyment?" What, indeed! Many men's idea seems to be to work like a steam engine for a few years, until they break down with nervous prostration, and then spend the short balance of their miserable lives chasing health easily and foolishly lost; but mighty hard to find again. G. C. WATSON.

Phila. June 18, '96.

[And the gentleman seated next to Mr. Harris is Mr. Watson if we are not much mistaken.—Ed.]

Chicago.

To give a report of the flower market this week would be rather a difficult matter, since, according to those concerned there isn't any market. The choicest select roses do sell, prices for Meteor, Kaiserin and extra Bridesmaid being \$3 to \$4; good Perles also sell, but the low grade roses can only be sold by the armful, for anything they will bring. Good Beauties also are still in demand, the best going for \$2.50 a dozen. But everything is very slow; with last week the active demand ceased entirely, and the extreme heat of the last few days is very detrimental to business. A good deal of replanting is going on now, and the best roses are from new stock, planted last March.

White carnations are in good demand for funeral work; they are not plentiful, and the best bring \$1.50. Sweet peas are an absolute glut; the quantity coming in is tremendous, and there seems really no demand for them. White are quoted at 25 cents a hundred, colored 15 cents. Cornflowers keep a steady demand at 25 cents a hundred. Tiger lilies are quite plentiful and sell for \$6 a hundred stalks; candidum is about past, a few coming yet from Wisconsin and other northern points. Longiflorum is \$1.50 a dozen. The florist really has nothing to look forward to now, except funeral work.

Bassett & Washburn are now grading and otherwise preparing the ground for their new block, which is to comprise 100,000 square feet, built in the most approved style, with all improvements. It is to be devoted to Beauties.

Mr. Washburn and family, accompanied by a party of friends, start this week for Oconomowoc, where they will spend their summer vacation.

Richard E. Evans, a leading florist of Salt Lake City, visited the city and some of its plant growing establishments this week. Mr. Evans reports very satisfactory trade at Salt Lake. He has recently purchased three acres centrally located,

and will build on and otherwise improve the same.

Visiting Chicago: J. A. Evans, Richmond, Ind.

Omaha.

Decoration Day has passed, and we are not at all sorry for it. Both the week preceding and following May 30 were busy ones, but now business has slackened up, and most of the florists are beautifying their own grounds. The volume of spring business was about the same as former years, but the proceeds were not as large, owing to the decrease of from 15 to 25% in retail prices. Three-inch plants brought from 50 to 75 cents per dozen, while 4-inch geraniums sold as low as \$1. With plants there was not a heavy demand for any one variety; plenty of geraniums to be had yet, but alternanthera is a little scarce. The growers all had a larger supply this year than last, as the hail of a year ago damaged a great deal of stock. Spring opened up much earlier than usual, and paeonies, snowballs and most of the outside stock usually relied upon was gone, and what there was was very soft and brought poor prices. The demand for roses and carnations was heavy owing to the scarcity and quality of outdoor stuff.

The demand for cut flowers among the school children for Decoration Day was more noticeable than former years. The bedding and vase work at the cemeteries was also quite heavy. S. B. Stewart, the only local dealer handling the iron reservoir and terra cotta vases, reports his sales heavier this spring than any year previous. Mr. Stewart carries quite a heavy stock of fancy pottery and florists' supplies.

The demand for funeral work the latter part of last week was very good, owing to the death of a very popular railway man. Hess & Swoboda made a bill of lading and A. Donaghoe had a large shield in colors, the emblem of the Union Pacific Railway, with which deceased was connected for a great many years. S. B. Stewart lined the grave and arranged floral pieces after their arrival at the cemetery.

Mr. A. L. Vaughan, with J. C. Vaughan of Chicago, was a pleasant caller last week. Mr. Vaughan has been recruiting on the Pacific coast for several months past, and we are pleased to see him able to attend to business again.

Late visitors: Mr. Roach, with Jerome B. Rice & Co., Cambridge, N. Y.; James B. Kidd, with Sunset Seed and Plant Co., San Francisco; E. Corbin, Grand Island, Nebr.

G. R. H.

Denver, Colo.

A severe hail storm visited Denver the afternoon of the 25th, doing considerable damage to the trees and outdoor stuff, but fortunately breaking but little glass.

Mr. G. B. Cannon of Lafayette, Colo., was in the city June 27 purchasing material for new houses to replace those destroyed by hail recently. Mr. Cannon will build a rose house 18x75 and four houses 100x11 feet each.

The Park Floral Co. is building a large carnation house 50x150, a duplicate of the one they already have.

The Park Commissioners have decided to build a palm house 25x100 at the city park. Work will be commenced on it at once, and it is expected that it will be completed by Sept. 1. Superintendent Graham has finished his planting out at the various parks and everything looks fine, the carpet bedding at the city park

being especially neat. A large group of palms, crotons and other tropical plants planted near the main entrance attracts much attention and is decidedly in good taste. The new lake and mammoth pavilion are nearing completion and will, when finished, add much to the beauty and attractiveness of the park and also (it may be remarked incidentally) much more labor to Supt. Graham's force.

Denver florists are mourning the retirement from business of one F. L. Zeigler, formerly of the state of Washington and recently of Cripple Creek. Zeigler came to Cripple Creek last fall and opened a retail store. Purchasing stock both in Denver and Colorado Springs he became acquainted with the trade and received the usual courtesies. The result is, the Colfax Florist Co. of this city hold his dishonored check for a large amount, the Colorado Florists' Exchange are out several large shipments, which were refused by Zeigler, also a book account of a few dollars. At least one Colorado Springs grower is stuck and probably more. Mr. Zeigler's present whereabouts are unknown.

The Colorado Florist's Exchange has opened up a line of florists' supplies in addition to their regular commission business. Manager Lewis reports business good for this time of the year. The election of officers for the ensuing fiscal year, also the annual meeting of the stockholders of the Exchange will be held 7:30 p. m., July 7.

Mr. Fred Hall of Montclair will sail for England on a short visit to his old home, early in July. Whether he returns married or single is of course a matter concerning no one but himself.

Many large orders were placed for the occasion of the monster reception given Senator Teller July 1. The Senator was lionized socially as well as politically, all Colorado turning out to do him honor. Colorado being a "woman's sufferin'" state the female voters take equal interest in such events with the men folk.

The supply of strictly first-class roses is about equal to the demand, garden roses are not very plentiful, carnations plenty and good. X X X.

West Hoboken, N. J.

Mr. Ernst Asmus is in Europe; he is expected to return about the 15th of August. During his absence the work of preparation for the coming season is being pushed forward by his foreman, Mr. Kuf. The five houses planted with "the new rose" are looking very promising. Mr. Asmus expects to give the trade a surprise next winter. Testout is grown here in large quantity, and at the present time the flowers cut are of good quality and fine color. The greatest trouble is in keeping the color after cutting, as after they have been on ice over night they pale so much.

Belle Siebrecht has done well here and will be planted in a larger quantity for the coming season. Meteor is grown, too, with much success; a number of houses filled with it look very well; both old and young stock. The flowers cut at the present time are of excellent color, only you cannot be sure of cutting good ones, it seems to do best in cold weather. The six houses of Bridesmaid look well and have done well during the past winter. This rose is always in demand. Madame Hoste looks well, but is not much in demand this year. Of course the American Beauty looks well. Other roses grown by Mr. Asmus include Kaiserin, Victoria, Cusin and Bride.

This place is sending in some very fine cold storage valley; the flowers are as hard and good as the best winter stock. Wm. Scott has been the best carnation from a business standpoint. The plants that were planted last August are still flowering profusely and the flowers are large and of a fine color. Storm King did very well, and will therefore be planted in larger quantities for the coming season. Bouton d'Or has not been satisfactory; it did not flower well during the winter and now the flowers are small. Helen Keller has not done well either; half the flowers seem to "go to sleep." Daybreak has proved useful and satisfactory.

Mr. Asmus has erected various new houses this summer and expects to add still more to his extensive plant.

S. M. T.

Cincinnati.

There has been no change in the general run of business the past week. The majority of June weddings and social gatherings are now over and the retail stores have assumed the quiet appearance usual in summer. Our growers are now busy rebuilding and replanting. One of the most artistic floral pieces sent out of this city was an immense ball 3½ feet in diameter, made by Sunderbruch's on June 29, for a wedding at Charleston, W. Va. The design was composed of roses and carnations, with a finishing touch of orchids and maidenhair fern.

Mr. E. G. Hill of Richmond, Ind., was a visitor in this city the past week.

Mr. John Raising of the Cambridge Pottery has been on the sick list, but is up and around again. We are sorry to report the illness of Mrs. Albert Heckman of Covington, her life was despaired of last week, but she is now slowly improving and we wish her a speedy recovery.

H. SCHWARZ.

Syracuse, N. Y.

At the last meeting of the Central N. Y. Horticultural Society R. Bard was unanimously elected secretary in place of H. Youell, resigned. The society has received its World's Fair diploma and medal for fruit exhibit, which was beautifully gotten up.

The anticipated chrysanthemum show was discussed and a look round various places show the boys are right in it, Mr. Phillips is an amateur enthusiast in the 'mum line and by the look of his plants some of the professionals will have to look out, one of his Lincolns is already three feet through and a model.

Trade has been very brisk lately in the cut flower line, exercises, weddings and funeral work have given the florists about all they wanted to do.

Peter Crowe of Utica gave us a call last Saturday; he came to do up one of the boys on the bowling alley, but luck was against him. However, he's a good natured fellow and went home all smiles just the same.

ALPHA.

Harrisburg, Pa.

Considering the season business has been rather brisk than otherwise during the past week or two. Between school commencements, a few weddings, etc., and a fair amount of funeral work, the florists have been kept more or less busy.

The Melrose Floral Co. have removed to their new quarters, 410 Market street, the principal thoroughfare in town. Aside from an attractive and well equipped store, they have also built four houses,

NEW CANNA BURBANK NEARLY NATURAL SIZE.

two of which cover 20x56, one 14x20 and one 12x56 adapted for ferns, smilax, palms, etc.

Mr. J. Schmidt, the pioneer florist of Harrisburg is enjoying good, robust health, notwithstanding his advanced age. Mr. Schmidt is one of those "young" old men who can enjoy a good joke as well as the jolliest of them and who regards the world from the standpoint of the advanced thinker and the practical experienced man.

HOMO.

New Canna Burbank.

This is a new American variety, to be sent out in 1897. It belongs to the

orchid-flowered section, and certainly shows an advance over any other yellow we are acquainted with. The flower is boldly formed, measuring 5 to 6 inches across its spread, outer segments 2 to 2½ inches across; color a deep pure yellow, the lip and throat splashed red. The outer segments are entirely free from any red, and there is much less red in the flower than in Italia, which more nearly approaches it than any other variety. But the Burbank has several points of advantage over Italia, and not the least of these is its substance; the flowers are firm in texture, and borne in a much larger spike than Italia. After a spike is

cut the buds continue to open. The foliage is green, ovate-lanceolate, extremely thick and leathery; growth not quite so tall as Italia. If we may judge from appearances, this variety will be a good bidder, owing to its vigor and substance; it will be carefully tested this summer. Its parentage is *Canna flaccida* and *Mme. Crozy*. It was originated by Luther Burbank of Santa Rosa, Cal., and will be introduced by J. C. Vaughan, the spike of bloom figured being photographed at his Western Springs establishment.

Toronto.

School commencements and such like
gave a little spurt to business last week,
and made things lively for a while, but
now they are over there is very little to
look for until the commencement of next
season.

Several changes have taken place lately.
Mr. W. Tidy has left the Yonge street
store. Mr. F. Burfitt has left the store
and greenhouses on Wellesley street, and
Mr. W. Tidy has taken hold of them. Mr.
C. Tidy still holds the fort on King street.

The weather keeps very dry; there was
a short heavy shower on Sunday, but its
effect was not visible 24 hours after; a
good steady rain is badly wanted.

Now that the dull season has begun it
may be possible for one to visit one's
neighbor a little more perhaps, and I
hope soon to be able to give a few notes
on whatever the neighbors about here
have worthy of mention. E.

Pittsburg.

The club meeting on the 25th of June
was well attended and very interesting.
The committee appointed at the previous
meeting, to enquire into several alleged
abuses, declined to act on it, and a new
committee consisting of Messrs. Oebmler,
Snyder and Ernest Ludwig was appointed
to attend to the grievance. Five new
members were elected as follows: Wm. Fal-
coner, superintendent of Schenley Park,
Pittsburg; John J. Murchi, Sharon, Pa.;
Chas. Kerr, Duquesne, Pa.; Archie Elliott
of Elliott & McGinness, Pittsburg, and
John Dummett of Elliott's nurseries,
Allegheny City. The coming convention of
the S. A. F. was thoroughly discussed,
the opinion of those present is that our
club will be fully represented in Cleveland.
REGIA.

Council Bluffs, Ia.

J. R. McPherson made a change in his
affairs the fore part of this month by
taking in a partner for a half interest in
his florist business. McPherson & Reed
will be the style of the firm hereafter. Mr.
Reed is an ex-county treasurer and has a
large circle of friends both in this city and
Omaha. This change affects the floral
part only of Mr. McPherson's business he
continues his large vegetable plant as
before.

Wm. Foster, foreman for above firm is
rejoicing over the birth of a bright bounc-
ing girl the fore part of this month.

G. R. H.

Worcester, Mass.

Trade continues very fair with now
then a wedding to help keep down the
surplus, flowers are plentiful and the
quality good, carnations especially.

Last week's exhibition was very fine,
better roses being shown than at the
regular show. H. F. A. Lange took firsts
on display of roses and cut flowers, F. A.
Blake first on Canterbury bells, Mrs. S.
F. Bennett on sweet williams. A nice dis-
play of wild flowers was exhibited by
Arta Pierce.

Tom Butterworth of South Farming-
ham paid us a visit Monday. A. H. L.

Germination of Tree Seeds.

I would like to know how long it takes
magnolia and tulip tree seeds to germi-
nate. J. M.

Salem, Oregon.

Magnolia seed should be stratified
through the winter and planted in early
spring. If stratified they will soon come
up, and grow off nicely. A great many
seeds are planted as late as March and
April; they come up during the spring or
summer, but I do not know just how they
are treated.

Tulip poplar planted in early spring
come up first year. J. H. H. Boyd.
Cagle, Tenn.

WE LEARN from a daily paper that a
western florist recently "imported the
swainsona from Russia." The dailies are
a great source of horticultural informa-
tion.

Our Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

T. W. WOOD, Pres.; ALEX. RODGERS and J. B. Rice, Vice-Presidents; A. L. DON, 114 Chambers Street, New York, Sec'y and Treas.

CROP REPORTS from California continue favorable.

PEA GROWERS in Canada report present outlook favorable.

SCOTCH GROWERS report probable short crop of pansy seed.

THE *Brooklyn Eagle* for June 21 published an excellent portrait of Mr. C. L. Allen.

VISITING NEW YORK: J. B. Kidd, San Francisco, and R. Moffitz, New Bedford, Mass.

THE Boston seed stores now close on Saturdays at one o'clock; other days at five o'clock.

THE Chas. P. Braslan Co. has applied for articles of incorporation at Chicago and expect soon to commence business as jobbers and growers of garden seeds.

VENTURA COUNTY, California, reports the hottest weather for many years. Sweet peas have been injured. [This is not a leading section for sweet peas.—ED.]

BOSTON.—Mr. B. K. Bliss, the veteran seedsman, was in town this week visiting his many seedsman friends; he is passing the summer at his farm in East Bridgewater, Mass.

BOSTON.—The firm of R. and J. Farquhar & Co. has dissolved and will be succeeded by Robert Farquhar, who has purchased the interest of his brothers in the concern, which will henceforth be known as Robert Farquhar & Co.

To Sell Seed Contracts.

An order was filed in the office of the clerk of the district court to-day, signed by Judge Jamison, granting Elbridge C. Cooke, assignee of Northrup, Braslan, Goodwin Co., the insolvent seedsmen, to sell a large number of contracts which were held by the insolvent with different farmers for the growing of about \$50,000 of seeds for the sum of \$1,000. It would have cost a large amount to care for the crops and complete the contracts which the sale relieves the assignee of, besides protecting the firm's interests.—*Minneapolis Journal*, June 24.

Rochester, N. Y.

The supply of good roses and carnations is not sufficient to satisfy the demand; even the lower grades are disposed of at fair prices, though the buyers are not at all pleased with this class of goods, and would rather use outdoor stuff in place of them if no explicit order is given to the contrary. Outdoor grown sweet peas of all colors are in; the hardy roses are getting scarcer every day, but *Lilium candidum* and *L. excelsum* are plenty, and along with other hardy stuff form the bulk of the stock now offered. Trade has been very satisfactory all through June to the majority of retailers, but is now less active, and it looks as if the annual summer quietness would set in at once. The weather is rather dry, still the season has been more favorable to the growth of outdoor stock than last year. Carnations, violets, etc., are looking better and stronger than this time last season; we had an occasional little

sprinkling, not a regular good rain, but these little showers seem to help things along wonderfully, and though we may complain of the dry weather, in reality there is none of the stock suffering.

Mr. J. Rebstock of Buffalo, accompanied by his young bride, passed through town this week on his wedding trip, but was too bashful to make any calls on his friends, who, however, tender their congratulations.

Another visitor was Mr. T. Meehan of Philadelphia, who came here principally for the purpose of looking over the many new improvements in and about our parks.

J. B. K.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—By good rose grower and florist. Address O. M., care American Florist.

FOR SALE CHEAP—Extra good second-hand 3-inch boiler tubes, 12 feet long, with collars for packing. They take the place of cast iron pipe for hot water at less than half the price. W. H. SALTER, Rochester, N. Y.

FOR SALE—The Anthony Greenhouses, long established, popular, well known greenhouse and cut flower business, well stocked. A bargain. Terms reasonable. Address DEAMUD, care Vaughan's Seed Store, 84 Randolph St., Chicago.

FOR SALE—A bargain; two greenhouses 100 ft. long, in Macomb, Ill., heated with hot water; hotbed sash, tools, wagons, two horses, a large stock of plants, a good established trade, in a good city; 3 years' lease on the ground free. Four acres of growing vegetables. All for \$1,500. I. L. PILLSBURY, Galesburg, Ill.

FOR SALE CHEAP—Whole or half interest in a first-class florist establishment, an area of 40,000 sq. ft. of land, with one new greenhouse and hotbeds, also dwelling with barn, in a city of 8,000 to 10,000 inhabitants. Land lies between two streets. Answers received in German, Norwegian or English. For further particulars address CHR. MARSEN, 1236 Sixth St., Beloit, Wis.

FOR SALE—Near New York City, a large greenhouse establishment, in perfect order, planted out for coming season. Full line of tools, pots, etc., horses, carts, wagons, harness, and in fact everything necessary for the business. Dwelling houses and all out-buildings required; abundance of water, under natural pressure; perfect drainage. As many acres of ground as required. Fine scenery and roads; schools, stores, etc. This place is worth \$50,000; would sell for \$25,000, or \$30,000, according to amount of land taken. Easily subdivided. Terms to suit purchaser. For further particulars, address J. R. T. 267 West 71st St., New York City.

CONSTABLE'S SALE.

By virtue of a levy under executions, I shall sell, at Public Auction, at Elgin, Ill., the entire greenhouse stock of Bach & Koebke, on Friday, July 10th, 1896. For further information inquire of A. M. BURNIDGE, Elgin, Ill.

FOR SALE—Second-Hand Boilers.

- 2-60 H. P. TUBULAR BOILERS.
- 3-40 H. P. TUBULAR BOILERS.
- 1-25 H. P. TUBULAR BOILER.
- 2-25 H. P. LOCOMOTIVE BOILERS.

All the above are in first-class order, well adapted for greenhouse heating, either steam or hot water. Will sell cheap.

THE FLORAL EXCHANGE, 614 Chestnut St., Phila.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Western Springs, Ill.

It is as yet too early to say anything of cannas outside, but nearly all the novelties of the season either are or have been in bloom here at J. C. Vaughan's. There are some good things among them; others are less interesting. Burbank (not yet disseminated) and Italia are the two stars. Of Crozy's new set Souvenir de Mme. Crozy and Chas. Paul were in flower; the former is one of the red and yellow Queen Charlotte type, of which we now have a good many; the latter is much like J. D. Cabos. The French growers seem to be sending out too many too-much-alike cannas now.

Among new roses, Lord Penzance's new hybrid sweet briars made a very favorable impression; they throw up tremendous canes, and their abundant foliage scents the whole house with the real eglantine odor. Crimson Rambler was very vigorous; Climbing Meteor seemed strong and free. In bedding plants there is a new variegated nasturtium, to be sent out next year; its coloring suggests a mammoth glechoma, flower yellow. The richly colored nasturtium Cardinal Prince has proved a great favorite in the mailing trade, also the double forms. A new alyssa, to be sent out next year, is A. Miltonensis; the foliage is bright green, the serrated edges tipped with pale yellow or creamy white. It will form a pleasing contrast with the dark leaved sorts. Swainsona, which is a favorite indoors, is being tried bedded out. One of the crotalarias, which is described as resembling a yellow swainsona, is another novelty now being tested. Cupid sweet pea looked very disappointing; its appearance did not come up to our expectations.

A house filled with Adiantum Farleyense in 4-inch pots was a fine sight; every plant was perfect, and a mass of young growth. There was an interesting lot of Cycas revoluta, showing some very fine crowns.

Chrysanthemums were being benched, ready for specimen flowers, and there was an interesting lot of standards and bush plants. Mr. Wilson is trying somegrafted standards, using a strong growing kind for the stock, such as Pres. Smith for the stock and Mrs. Robinson for the head. The result seems likely to be very satisfactory.

New Yellow Marguerite.

Strong 2½-inch, 6 for \$1.00.

The best Daisy for cut flowers. A pleasing shade of yellow; long stems; blooms the year around. Sample blooms mailed on receipt of 10 cts.

3-inch BRIDES, BRIDESMAIDS, METEORS, 5 cts. Nice, clean stock.

Also small 'MUM' plants.

ASPARAGUS PLUMOSUS, strings 8 to 12 feet long, 75 cts. per string.

NEW ROSE

"Mrs. PIERPONT MORGAN"

Listen for a moment to what a voice from far off Springfield, Illinois, has to say about our young stock of this rose:

May 4, 1896.
"EDWIN LONSDALE, Chestnut Hill, (Station H), Philadelphia, Pa.

"DEAR SIR:—Box of 'Morgan' rose plants arrived Saturday in good shape. Fine Plants. I would like to know how you produce plants of such size in a two (2) inch pot?"

All I can say is that it is all owing to the natural vigor of the variety, and perhaps to some extent to the natural rose growing qualities of our soil.

We have a few more left of the same size. Order early or you may get left, for I do not know of a more profitable variety to grow for cut flowers than MRS. PIERPONT MORGAN. Don't forget our address:

EDWIN LONSDALE, Station H,
Chestnut Hill, PHILADELPHIA, PA.

Worcester, Mass.

The annual rose show of the Worcester County Horticultural Society was held in the society's hall Thursday, June 18, and taking all things in consideration was a fairly successful exhibition. Everything seemed to be against the roses this season; in the first place the very hard frosts that we had early in the autumn, before the wood was thoroughly ripened played the very mischief with them, one grower reported a loss of nearly seven hundred plants, then again early in May when the plants were just sending out their tender shoots we had a severe drouth, accompanied by drying winds that shrivelled things like fire; and lastly an unusually hard battle with the inevitable rose bug which made it somewhat of a task to get a stand of blooms fit for the exhibition table. But in spite of all, we had some good blooms, the small number of exhibits being the only drawback. There was a magnificent showing of pæonies and a decided improvement was noticeable in this line.

G. M. Whitin had a very interesting display of dipladenias, and a fine exhibit of Spanish iris was staged by H. F. A. Lange. President O. B. Hadwen won first premium for pæonies and H. F. A. Lange captured first in the five classes of roses. W. J. Wood was elected judge of flowers to succeed A. H. Lange, who resigned the office last fall. Mr. Wood has been judging the shows since the beginning, but owing to hitch in calling a meeting of the trustees was not elected till June 11.

Business has been very good this last week, owing to the numerous graduations, and although flowers are coming in large quantities we have not a very big surplus as yet; the quality is good. We have had considerable rain lately and it has helped outside stuff immensely; the weather has been very warm. A. H. L.

Galt, Ont.

Spring sales were above the average: prices about the same as last year; weather all that could be desired.

John Wells has gone on a trip to old England. We all wish him a good time and safe return.

I am glad to inform the many friends of Adam Dunn that he is on the road to recovery after a severe attack of pleurisy. Being advanced in years his case gave his friends great anxiety. He had just erected a handsome new greenhouse and had everything in order for the bedding season when he was so suddenly taken sick.

J. W. Scott is still on the sick list.

A. Common has taken to himself a wife. MAC.

TWO REMARKABLE BERRIES.

STRAWBERRY-RASPBERRY,
LOGAN BERRY (*Raspberry-Blackberry*)

We are headquarters for them. Also Golden Mayberry and Sacaline, home-grown plants. Bottom prices for gilt edge stock.

Washington.

No more brilliant gathering has ever assembled at the capital than that which filled the New York Avenue Presbyterian Church June 2 to witness the marriage of Miss Julia Stevenson, second daughter of the Vice-President and the Rev. Martin Hardin, son of General and Mrs. R. W. Hardin, of Kentucky. The fine church was elaborately decorated. About the altar was a banking of fine palms artistically arranged, with quantities of La France roses forming a background for the bridal party. Over the tall arches were garlands of asparagus, held on either side by long bows of white satin ribbon. In the rear of the pulpit the banking of the palms was tall and very effective. The novel idea of marking the reserved pews with flowers was very effective in this instance. The pews in the broad central aisle were marked by graceful clusters of La France roses held by white satin ribbon streamers.

Immediately after the marriage service a reception followed at Hotel La Normandie. The entire lower floor of the hotel was elaborately decorated with foliage plants and La France roses. The flowers were chiefly La France roses. The long hall or corridors were lined on either side with tall palms set in basket jardinières, forming a complete arch through which the bridal party marched. The main parlors were ornamented with foliage plants. The mirrors and chandeliers were festooned with asparagus. The eight mantels were banked with Adiantum Farleyense studded with La France roses. The dining rooms were decorated similar to the parlors. The table was decorated with Farleyense, the center piece was of smilax and asparagus representing a large incandescent light, studded with miniature incandescent lights; radiating from the center were sprays of asparagus, among which were myriads of tiny electric lights. Palms were arranged in all the nooks.

The private dining room, where the bride, groom, bridesmaids and ushers dined, was a bower of beauty. The table was decorated with a center mound of Farleyense studded with La France roses. The mantels were banked with cuneatum studded with La France. The windows where the bridal party received congratulations were curtained asparagus and white satin ribbon, palms forming an effective back ground for the receiving party. These decorations were the work of the Gude Bros. REYNOLDS.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipple Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

"I HAVE PLACED

in Mr. Empson's two greenhouses one of your 8 1-2 'SPENCE' HEATERS. The two houses are 200 feet long, and heater works *perfectly*. In using hot water and steam heaters for over twenty-five years I find that your 'SPENCE' HOT WATER HEATER is the best. I find its prominent features, such as few joints, positive circulation, and large self-cleaning fire surface, very essential to a first-class hot water heater."

PROF. WM. TRELEASE is in the Bahama
Islands.

THE society of Kentucky Florists will
hold their annual chrysanthemum show
November 11 to 14. The advance pre-
mium list has been printed and copies
may be had on application to the secre-
tary, S. J. Thompson, Louisville, Ky.

THE premium list for the chrysanthem-
um show of the Rhode Island Hort.
Society, to be held in Providence Novem-
ber 10 to 12, has been issued. Copies
may be had on application to the secre-
tary, C. W. Smith, 61 Westminster street,
Providence, R. I.

Chrysanthemum Notes.

The plants in the benches in which no
manure was placed in the bottom, should
now be watered regularly with liquid
manure, and the strength of the manure
water may be increased quite rapidly, but
the grower must be ever on the watch
for the first signs of overfeeding. This
can be very easily detected; the foliage
will begin to assume a sickly look, and
the color will be much lighter than it
ought. If this happens stop the liquid
manuring at once for a few days and
sprinkle a little charcoal and lime upon
the soil, and after the plants have regained
their color begin watering again with
weaker manure. Soot, if you can obtain
that which comes from soft coal, is very
efficacious in bringing back the dark
glossy green foliage. This can be used
either in liquid form by hanging some in a
bag in a barrel of water or sifted upon
the soil. If used in a liquid form dilute
with a great deal of water, for the soot of
some coal is very strong in manurial
qualities and burns the plants very
quickly.

Some of the pests of the chrysanthem-
um are making their appearance. The
small grasshoppers are beginning to hop
and fly about, and soon find their way
into the greenhouse, hunting for a nice
juicy meal off the soft end of a rapidly
growing chrysanthemum shoot. They
should be carefully hunted for, and when
one is seen don't give up the chase if you
don't catch him the first time until you
have him fast between your thumb and
fingers and have dispatched him. The
little white hairy caterpillar is on the
ground and is not often seen until he has
done a great amount of damage. Their
work is begun when they are very small,
and the first thing noticed will be one or
more leaves turning brown and looking
like skeletonized leaves. Turn the leaf
over and you will often find two or three
of these little fellows hard at work on the
back of the leaf or on leaves adjacent to it.
The aphid should be kept down always,
and nothing is better than constant fumi-
gation to get rid of the black one. I once
inquired of a friend how I could get rid
of these little pests, saying that I had
fumigated regularly once a week. His
answer was that where the black aphid
had strong foothold, he began a regular
crusade against them, fumigating every

night until they were killed. He said,
"The first night makes them sick and the
next night makes them sicker, but the
third night, they generally give up the
ghost."

The small pot plants can now be turned
into empty benches and grown on there
until about September if desired. Many
growers pursue this plan, for it is much
easier than keeping them in pots through-
out the summer plunged in hotbeds; they
do not need nearly as much attention, for
they are not as apt to run dry, but our
experience has been that those grown in
pots make much the better plants. Those
grown in benches are inclined to grow
much stronger and taller, the roots hav-
ing so much more room in which to
ramble, while those grown in pots, their
roots being constrained, grow slower
and shorter jointed, and not being shifted
just before their buds begin to form pro-
duce much finer flowers.

ELIJAH A. WOOD.

Eel-worm Again.

Mr. Edwards forwards diseased plants
for examination, "has never had anything
similar in his experience, and is at a loss to
understand the nature of the trouble; fears
his man has been neglecting things." The
roots were all matted together with eel-
worm, and the probability is that noth-
ing else contributed to the diseased con-
dition of the plants. At this late date it
will not be worth while to try remedies
for the old plants, but my own experience
with them leads me to suggest that young
stock propagated from them be not
planted this season. If the stock can be
changed (of course taking care to secure
such as is positively free), and also the
soil, there may be no trouble during the
coming season.

This eel-worm business is decidedly pec-
uliar; I have seen the roots of roses at
the time they were pulled out, simply a
mass of galls; yet the foliage and general
appearance of the plants furnished no in-
dication of any such state of affairs, being
apparently perfectly healthy; while in
other instances the plants succumbed to
the disease, with the roots seemingly in a
healthier state. The inference is, I think,
that strong vigorous plants will often
grow and do well after being attacked
by the pest, whereas they are almost cer-
tain death to a batch of weak sickly roses.
I would state here that this reply should

have appeared in print some time ago, but was unfortunately overlooked.

ROBT. SIMPSON.

The White Rose Maggot.

The pest is still doing much damage at the establishment of Mr. Peter Reinberg, Summerdale, Chicago, and no satisfactory remedy has yet been discovered. It seems as yet to be confined to this establishment, which is certainly fortunate for neighboring rose growers. It is a small white maggot, not over a quarter of an inch long. It attacks the young tender flower buds at the base, and as a result the tender flower stem blackens and the bud falls off. Meteor seems particularly susceptible to its attacks.

Specimens were sent to the government entomologist at Washington, but he was unable to definitely determine it. It is evidently the larvæ of some fly, but nothing has been seen that might be considered its parent. Should it be disseminated the rose grower will have another serious pest to combat. However, Mr. Reinberg states that plants which must have been infested have frequently been transferred to his brother's greenhouses, which are near by, but the pest has never been discovered there. The land where his greenhouses stand was for many years devoted to vegetable growing and Mr. Reinberg is inclined to think that the pest is some vegetable maggot which has now found in the young rose buds food suited to its taste.

But this is mere surmise and it will be well to be on guard against this new pest, which may for all we can tell suddenly develop in a number of places. Hand picking is the only known remedy so far and at the very first appearance the pest should be vigorously dealt with.

Blasted Rose Buds.

Specimens received from Mr. Jenkins: The blasting of the buds in this case is undoubtedly caused by the small white worm seen on them in large numbers. I am unable to name the insect, but am pretty certain that it is the same little fellow that has given the Beauty growers farther north considerable trouble during the last two or three years, and for which as far as I know no remedy has been found except to cut off the affected tips and burn them. I would suggest that specimens be forwarded to the professors in the Agricultural Department at Washington for examination, it may be that they can not only furnish us the name, but also suggest a remedy. It is possible that a rather strong solution of tobacco extract such as is recommended for green-fly, only considerably stronger would make their surroundings uncongenial if the plants were well sprayed once or twice a week.

ROBT. SIMPSON.

Hybrid Perpetual Roses.

At the recent rose exhibition in Boston the roses which appeared in best form and were most admired were the following:

Marie Baumann, Eclair, Mlle. Marie Rady, Her Majesty, Earl of Dufferin, Baroness Rothschild, Mme. Gabriel Luizet, Ulrich Brunner, Mabel Morrison, Mrs. John Laing, Mlle. Susanna de Rodocanachi, Victor Hugo, Thos. Mills, Jean Lihaud, Mlle. Eugénie Verdier, Margaret Dickson, Mme. Prosper Laugier, Marchioness of Londonderry, Gustave Piganeau, Anne de Diesbach, Louis Van Houtte, Mlle. Annie Wood, Merveille

THE LAKE SHORE DRIVE IN GORDON PARK
THE PARKS OF CLEVELAND, O.

de Lyon, Souv. de Louis Van Houtte, Mons. Bonceane, Jeannie Dickson, Alfred Colomb, Gloire de Margottin, Comtesse de Serey, S. Reynolds Hole, Duke of Connaught and Sultan of Zanzibar.

Red Rose for Name.

The red rose Mr. Fitzsimmons found growing among his Kaisers, and which he thought might be a sport, is unquestionably a Souv. de Wootton; if he will procure a few blooms of the latter, and compare them with his own variety he will I am sure be satisfied as to its identity.

ROBT. SIMPSON.

Herbaceous Plant Notes.

Platycodons are just now in fine shape, showing great masses of their delicate blue or pure white flowers, so perfect in shape and justly admired by everybody; the plants will endure the dry weather without any particular attention after the first year, and they like a sunny position better than shade. Although under the latter condition they would bloom and grow freely, still they are very apt to grow rather tall, so that the weight of the buds and flowers causes the stems to bend over and lie almost flat on the ground, while in an open exposure they seldom show any weakness in the stalk unless the ground be very rich and moist. Young plants show the same defect, but after being planted a year or two the roots will grow stronger, sending up stouter growth, which remains upright all season through without support of any kind. On our grounds the show of platycodons seldom lasts very long because we cut the stems as soon as fairly well in flower, and find use for them in decorations, etc.; otherwise they would continue to bloom for a much longer time, as is proved by a bed planted two years ago on private grounds, where none of the flowers are cut at any time, and which is to-day one of the principal attractions of that place. This bed was planted to *Hypericum Moserianum*, the low shrub which sends out its numerous large yellow flowers from June to November. They were placed two feet apart

each way, the platycodons the same distance between them, and the plants covered the ground the first season. Still, as the platycodons were not yet well established and bloomed rather sparingly, no particular notice was taken of the plants, but this year everybody admires this pretty and lasting combination, which is well worth repeating. Among coreopsis, gaillardias, the yellow *cenotheras*, *anthemis*, etc., the platycodons would not be out of place, and for lower growing plants like *Achillea aurea*, the pale yellow *helianthemum* or the golden Iceland poppy I would advise the planting of the dwarf and compact *P. Mariesi*, the flowers of which are also of a much darker blue.

Geum atrosanguineum with its brilliant red flowers shows off well against a background of variegated *eulalia*, also in another place intermixed with the white *Achillea ptarmica* fl. pl. Partial shade suits the geums best, and the situation should not be extremely dry, otherwise the foliage will suffer.

White phloxes, of the *suffruticosa* section, planted last spring, intermingled with *Campanula carpathica cœrulea*, have been doing splendidly for a long time past, and the bed promises to form an attraction throughout the season, for the phloxes will flower again in fall.

Daphne cneorum, after a rest of five or six weeks, is again in full bloom; its pretty pink flower heads are delightfully fragrant, and the plants grow so compact and even, few plants look as pretty and are so satisfactory all around throughout the season. Even in winter they keep their pretty foliage, and thereby hide the bare ground from view.

Saponaria caucasica fl. pl. with its lovely pink flowers has no equal as a plant for large masses and stands the sun and dry weather surprisingly well. I saw it the other day planted in front of a large clump of *Bocconia cordata*, and it also was intermixed with a few plants of the late flowering *Anemone japonica rubra*, which would brighten the patch in autumn when the *saponaria* would give up blooming.

The tall growing *Spiræa venusta* or *lobata*, as it is called in some sections,

VIEW IN GORDON PARK.
THE PARKS OF CLEVELAND, O.

should have moist ground to do its best, and when grown under such favorable conditions will really astonish you by the extraordinary size and the more brilliant coloring of its flower heads. A fit companion for this superb pink spiraea, growing to about the same height and requiring the same amount of moisture, is a lately imported plant which came to us under the name of *S. gigantea*, with leaves somewhat shorter and broader than in *S. venusta*, and flower heads of immense size, bluish white in color; surely a very fine late flowering spiraea, whether the name be correct or not.

The old *Physostegia virginica*, either the white or the pale lilac blue forms, are not to be despised when seen in broad masses intermixed with a few taller plants, though they may not possess great beauty and attractiveness as a single plant in a mixed border. A very simple, but effective arrangement I saw lately was a large patch of this plant, loosely dotted over with *Coreopsis lanceolata* and edged with the silvery leaved *Stachys lanata*.

Euphorbia corollata, besides being a most useful thing for cutflower purposes, is decidedly elegant in a bed and remains in good condition for a long time. It resembles the *gypsophila* in some respects, but the numerous little flowers are individually larger and more prominent, still retaining that elegant light and airy character of the *gypsophila*. A few

clumps of *Centranthus ruber* (*Valeriana rubra*) will brighten up the patch and relieve the monotony of the bed if it be a large one, though when planted near the walks and backed by taller growing plants, it alone will produce remarkable effects for a considerable part of the season.

Helianthus buttaris, with light yellow, star-shaped flowers, surrounded by the bushy *Clematis Davidiana* and *Gaillardia aristata grandiflora* is a happy combination seen on a private place in this neighborhood; the blue clustered flowers of the clematis show well against the yellow *helianthus* and the darker colored *gaillardias*.

Galega officinalis among a mass of yellow long-spurred columbines is still in fine condition, and *Lilium speciosum*, together with a few clumps of white *Anemone japonica* springing up between them, give evidence that the bed will continue to be attractive for the remainder of the year.

It is not a common occurrence to see flower beds planted in this fashion, but whenever I find one, it generally is arranged with a view to harmony in color and succession of flowering, though sometimes it happens that we find things most unfortunately huddled together and mixed up in such a manner that no plant shows to advantage, and these are the places where the man in charge has but little confidence in hardy herbaceous plants. To all such men I would say, take the

material available, transplant into the border with a view to harmony and succession, but by all means plant in masses and have a good show at least for a month or two if you can do no better, you surely can improve on your own planting the following year and easily get a succession of bloom all through the season if you only will take the trouble to note the time of blooming and the colors of the different plants you have on hand. No matter if these plants are old-fashioned and considered out of date by a great many of our prominent florists, the public taste for them is surely on the increase, though it may take some time to reintroduce all the old things, for I have found some difficulty in obtaining many of these half-forgotten plants, with which I was familiar years ago when a boy. Nobody seems to grow them now, but occasionally they can be found in private collections on old estates, where they have flourished for a century or more.

Rochester, N. Y.

J. B. KELLER.

Fern Notes.

LASTREAS.

Considering the numerous species and varieties included in this sub-genus of aspidium, there are comparatively few that are of much value for florists' work, and although there are some good things none are grown to anything like the extent the pterises and others are; this is

probably on account of their being so slow in a young state, for when well grown some of the varieties are very pretty; and of a light and distinctive character. Another point in their favor is they do not require much heat, and their fronds being of good substance they last well, though when once they get shabby they are only fit for the rubbish heap; for they rarely recover and make good plants again.

All the lastreas may be raised from spores, which if taken at the right time, germinate fairly well. The fronds should be taken as soon as the first spore cases begin to open. I have perhaps given the same instructions with regard to other ferns but as this is one of the most important matters connected with fern culture it cannot be repeated too often. I also find it is more important to have new spores of the lastreas than of some ferns. Being very slow in a young state they are apt to get over grown by others which grow rapidly, and if care is not taken they may be lost; it is, however, very easy to recognize the true seedlings even before they make the first frond, the prothalli being generally rather large, oblong and of a deep green.

The lastreas succeed best when potted in good loamy soil, about two-thirds good loam, some leaf-mould, and well rotted manure to make up the other third, and sand added, makes a good compost. Those with a single erect crown should be kept down well when being potted on. If the top of the crown is kept just above the surface it will keep the plant firm, and they also make better growth, as the new roots which come from the base take hold of the soil better. Of the most useful sorts *L. patens* may be taken as one, this produces rather long pinnate fronds from a single crown, the fronds being prettily recurved, and of a pleasing shade of pale green.

L. lepida somewhat resembles the above, but has very narrow pinnae, and pinnules curl inwards a little. When well grown, this makes a very elegant table plant, and may be regarded as a most useful fern for florists' work.

L. aristata, the normal green form, though a good fern, is not much grown; but the variegated variety is very popular, the distinct linear marking of greyish green, on the dark bright green surface, makes it very attractive. When grown singly the plants have a one sided appearance, as the prostrate stolons generally grow towards one side of the pots. Young plants should be grown singly and later on two or three may be potted together, placing them so that they grow in opposite directions. When grown this way they make nice specimens.

L. atrata is a serviceable fern but is not much grown, the dark green pinnate fronds, though of good substance, are of a too somber hue to be very attractive. *L. quinqueangulare* makes a nice plant, but is not often met with in good condition, being one of the most difficult to get from spores. *L. triangulare* is another good form; both of the above grow taller than *decomposita*, which otherwise they somewhat resemble. *L. Richardsi multifida* is the only really good crested form that I am acquainted with (except in the hardy British varieties), the pinnae each terminate in a tufted crest, the fronds also have a rather heavy terminal crest. It is of free growth and makes a symmetrical plant, but unfortunately it is nearly deciduous.

L. erythrosora, which is a Japanese species, is well worthy of culture on account of the rich bronzy red tint which

VIEW IN WADE PARK.

BOULEVARD, DOAN BROOKWAY.
THE PARKS OF CLEVELAND, O.

the young fronds have when grown under favorable conditions. To get the brightest tint, the plants should be fully exposed, and must not be allowed to get too dry. *L. varia* also has a bronzy tint, and makes a nice pot fern. *L. prolifera* may be particularly recommended for small pots, but is not of use in anything larger than a 3 inch. It is one of the best for filling the small fancy pots now so much in use.

A. HEMSLEY.

Cycads.

This interesting family of plants includes a number of very handsome members, though but few of them are counted among standard stock for the retail florist, probably more due to their comparatively slow growth than to a lack of beauty. The cycads in general are not

specially difficult to grow, though in common with most other plants require good living in order to give the best results, and the method so often used of keeping them starved in very small pots, comparatively speaking, no doubt has much to do with the slow rate of growth that is often complained of. Good fibrous loam from an old pasture, mixed with some sharp sand and a moderate amount of bone dust and thoroughly rotted manure, forms a very satisfactory compost for these plants, and if the roots are in good condition a large amount of water can be given and properly assimilated. Stagnant water is, however, highly injurious to the cycads, and for this reason the drainage should always be kept in good order.

In reference to temperature it may be said that many of these plants will en-

BROOK IN NEWBURG PARK.
THE PARKS OF CLEVELAND, O.

dure a comparatively low temperature, for instance, 40° to 45° without material injury providing they are kept somewhat dry at the root, but much more progress will be made with similar specimens that are kept at a temperature of 65° to 70° .

The species best known and most valuable to the florist are found among the cycas, a group including six or seven species, and from this number three may be taken as most useful for our purpose. The first in importance is *Cycas revoluta*, the so-called sago palm, a name not strictly correct, though generally accepted in the trade. The dormant stems of *Cycas revoluta*, minus roots and leaves, now form a considerable item in the importations of plants from Japan, being handled in this dry condition by the ton by some large dealers, all of whom readily guarantee them to be the "genuine long-leaved variety," as witness the advertisements that will shortly appear. These dry stems should be potted up at once on their arrival, and placed in a warm house, moderately shaded and kept moist, and in a few weeks most of them will bring forth a new growth of leaves and soon become salable plants. The cut leaves of *C. revoluta* are also imported in considerable quantities, being dried, colored and varnished, and in this condition are quite convenient for certain decorations, though not quite equal to fresh leaves for funeral designs.

The second species to which attention may be called is *C. circinalis*, a large-

growing and very handsome plant, the leaves of which are divided into a large number of dark green pinnae, somewhat drooping and lighter colored beneath. *C. circinalis* is more graceful than the preceding species, but the foliage is more brittle and will not stand as much rough usage as that of *C. revoluta*. *Cycas siamensis* is of similar character to *C. circinalis* in some respects, but darker in color, and the leaves more upright in growth, and it also appears to be a more rapid grower. Seedling plants of *C. siamensis* with good treatment become nice looking specimens in 6-inch pots in about two years, and at this stage of growth seem to throw up leaves in succession rather than in the form of an annual growth as commonly seen among this class of plants.

Dioon edule is a Mexican representative of the cycads, and has been in cultivation for many years. It has pinnate leaves that sometimes attain a length of five to six feet, the pinnae being very stiff and sharp pointed and glaucous green in color. *D. edule* is a decidedly ornamental species, but owing to the stiffness of its foliage has become rather unpopular as a decorative plant. *Encephalartos* also includes some notable members of the cycad family, two of the best species being *E. Altensteinii* and *E. villosus*, the latter being the most common species in cultivation, and having long pinnate leaves, the stems of which and also the crown of the plant being more or less covered with

whitish wool, and the pinnae somewhat toothed and armed with spines. *E. Altensteinii* bears some resemblance to the preceding species but is rather stiffer in outline and has the base of the leaves much swollen. These plants make stems but slowly, and as usually seen the stem is very short and thick.

The macrozamia include several graceful species, these plants being rather lighter in foliage than most of those already noted, and mostly requiring warm house treatment for their best development. Unfortunately the macrozamia are not at all common in cultivation, and they can thus scarcely be reckoned among the available commercial species. *M. Fraserii* is one of the best of this group, having long and pendulous pinnate leaves of very dark green color, which are said to sometimes attain a length of eight feet. *M. Perowskiana* is also good, having very broad fronds of dark green color, which are thrown up from a stout trunk. *M. plumosa* and *M. spiralis* are also worthy of note, both of these having somewhat irregular fronds of slender and graceful outline, and those of *M. spiralis* being lighter in color along the midrib, this giving a somewhat variegated effect.

W. H. TAPLIN.

Clematis Jackmannii and *Yuccas*.

I find a pretty way to treat *Clematis Jackmannii* or *C. J. superba* is to plant a good specimen in a suitable location and

train it to a stout stake six or seven feet high, then plant yuccas around it 2 feet apart in a circle. They do well together, bloom together, contrast splendidly and make a very beautiful object. I have had them blooming in that way lately and they attracted a good deal of attention. Bloomington, Ill. F. A. BALLER.

General Plant Notes.

Ferns: It may safely be said that ferns were never so much in demand as during the past spring season. They were much used by our metropolitan florists for some time before the provincial florists seemed inclined to take them up, but gradually they have come more and more into use, and at the present time the country demand exceeds that of London. Fashions change a little; the heavy crested varieties are less in demand, while even the old form of *Pteris serrulata* now finds much favor. The broad fronded *P. cretica* major, or *Ouvrardi*, as it is often named, is a great favorite and although variegated ferns do not all take well, the old *Pteris cretica albo-lineata*, which a few years ago was hardly worth growing, now sells well. We have lately been able to put a large quantity of *P. Wimsettii* on the market, and find it is much appreciated. It will certainly take first place among the crested pterises. The demand for *nephrolepis* increases, especially for *exaltata*; *davallioides furcans* also sells well. *Selaginellas* are now much more used than formerly, *S. amœna* and *S. Emiliania* being among those which have come to the front. I hope to give a list of the most useful of these later on.

Palms: It can hardly be said that our English markets are yet overdone with good palms; although it was suggested a few years ago that kentias would soon come to the price of geraniums and fuchsias, this has not yet come to pass or at least not for good well furnished plants. Perhaps the scarcest thing just now is *Kentia Belmoreana*, of the larger sizes, even those in 5-inch pots command fully as high prices as they did several years ago, and good specimens in from 8 to 12-inch pots are difficult to find in quantity. Seeds of *Cocos Weddelliana* has been scarce again this season.

Rose Crimson Rambler: We flowered this well early this season and found it was much appreciated. Plants in 8-inch pots with long growths which had been well ripened early last autumn produced a great profusion of bloom, the foliage also was very good; and a great point is the flowers last well when fully out. This will undoubtedly become a popular plant among decorators for early spring work. I may add that it requires good management to succeed well, and I have seen several failures with it; either through the wood not being properly ripened or through injudicious treatment when starting the plants.

Spiræas: Since the adoption of the refrigerator for retarding growth we have spiræas all the season through, and those which have been retarded seem to come equally as well as those flowering at the ordinary season. The old *S. japonica* seems likely to outlive all newer introductions, *S. multiflora compacta* was and is still a favorite with some, but for some purposes we have to go back to the old favorite. *S. astilboides* is now much grown, and the variety *floribunda* seems likely to come to the front. We tried it this season with favorable results.

Geraniums: All kinds of bedding stuff seems to have gone out well this season, but more particularly geraniums. It is not often that demand exceeds the supply,

but it has been the case this season for really good stuff in geraniums, though of inferior quality there has been enough and to spare.

Sweet pea Cupid: This has been tried by a few of the market growers and seems likely to prove a useful plant, and in every respect bears out the description given it. We have grown several hundred plants, and though they have had no special treatment they have done fairly well. I hope to try it under rather different conditions next season. Properly treated it should make a fine window-box plant.

Calla Elliottiana: This fine aroid has been shown in grand condition this season, and promises well to make a useful plant for decorations, but we must wait until the price comes down a little before it will do for Covent Garden Market.

Crassulas: The new hybrid varieties such as *W. Pfitzer*, *M. Buchner* and *Mrs. Wynne*, are useful flowering plants for this season. They give little trouble and flower very freely, making dwarf and compact plants grown on out of doors in summer, and a cool house during the winter. If fully exposed to sun and air they never fail to flower well. A. H.

Japan Longiflorum Grown by Robt. Craig.

The illustration shows a house of very well grown lilies, one of two that Mr. Robert Craig of Philadelphia grew for the Decoration Day trade. It is interesting as a demonstration that the longiflorum bulbs from Japan are equally floriferous with the bulbs grown on the island of Bermuda. The bulbs used were 7 to 9 inches in circumference and produced 7 flowers, average (some more, some less), to each plant. The growth was vigorous and healthy and very even. There was no trace of disease on any of the plants—on the contrary the whole batch was bright and clean.

Among many growers there seems to be an impression that the Japan longiflorums cannot be brought in on time for Easter. This impression is doubtless a relic of the time when Japan bulbs could not be had in the United States until November, whereas now we can get them the third week of September. The testimony of such well-known growers as George Anderson and Jno. Westcott of this city and many in other localities is that they can be got by Easter all right if the bulbs are planted early in October. Mr. Anderson had the finest batch of longiflorum that came in to the Philadelphia market last Easter. The bulbs were also Japan grown.

It is well that growers can patronize this source of supply with confidence, when prices or qualities from other sources are unsatisfactory. G. C. W.

New York.

One does not need to consult the calendar to find that midsummer is here. Profound stillness reigns in the florists' stores and in the wholesale marts, where but a few weeks ago all was hurry and bustle in the morning; the counters are swept clean and there is scarcely a sign of life. Even the Greek has for the time being ceased his chattering and expostulating, and the majority of him has dropped out of sight.

The quantity of flowers coming in is fortunately proportionate to the demand, and the meagre stock of good clean roses is easily disposed of at reasonable prices. Perhaps a larger cut of American Beauty could be profitably handled, there being a special demand for this variety from all

quarters. Bride, Bridesmaid, Meteor and Kaiserin constitute the balance of the list most called for. Carnations are in many cases very fine, but prices rule low for such well grown flowers as some growers are sending in.

J. H. Taylor is one of the few large growers who make a point of running a certain number of houses specially for summer bloom, and is now sending in Brides and Bridesmaids of unexcelled quality, considering the season. These roses occupy houses that have hitherto been devoted to chrysanthemums and forced hybrid roses, of which Mr. Taylor will hereafter grow much less than formerly. He is enthusiastic over his success with roses carried over in the benches from year to year and attributes the failure of some growers with such stock to possible mismanagement in the matter of drying off and again starting the plants, which he considers one of the most vital points. There is a nice bench of the new rose *Dean Hole*, which looks promising and will have an opportunity next season to demonstrate its value. Mr. Taylor had a severe fall from his bicycle recently, but fortunately escaped with a slightly sprained ankle.

In front of Geo. M. Stumpp's store on Fifth avenue may be seen the finest pair of bay trees ever brought to this country. They are pyramidal in form, well furnished and stand ten feet high above the tubs. Frank Schlotzhauer, Mr. Stumpp's head man, left for Los Angeles, California, on July 2 in response to a telegram announcing the death of his father at that city. Mr. Stumpp and family are stopping at the Hotel Wawanda at Liberty in Sullivan County.

The suit of Geo. Cornatus in the supreme Court against his two rival countrymen from the home of the Spartans has been decided in his favor, and the objectionable flower stands on Broadway, Brooklyn, must be removed.

Mr. Keller of the firm of Reed & Keller, wire design manufacturers, will sail for Europe on the *Furst Bismarck* next week.

Philadelphia.

The July meeting of the Florists' Club held last Tuesday evening was quite well attended, and while there had been no paper prepared for discussion there was discussion just the same. Payment of dues was in order at this meeting, and the treasury was replenished to a considerable degree. The last installment was ordered paid on the club's subscription to the bonds of the Horticultural Society, and the members have now the distinction of being bondholders. "What qualifications should a man possess to make him eligible to honorable membership" caused considerable discussion and remains still an open question.

Convention matters were given attention. The route, all rail or rail and boat, hotel accommodations, etc., were taken up. John Westcott was appointed a committee of one to attend to transportation, and D. D. L. Farson was placed in charge of hotel accommodations. Mr. Westcott thought the best route was by rail to Buffalo, and the balance of the distance an all night ride by boat. He had heard that it was likely that the New York and Boston delegation would adopt this plan, and he thought that those going from this city and vicinity couldn't do better than join them at Buffalo, and continue the journey together from there.

The matter proposed at the last meeting of the executive committee of the S. A. F. relative to the membership of the

HOUSE OF JAPAN LONGIFLORUMS GROWN BY ROBT. CRAIG, PHILADELPHIA.

various clubs in that body was discussed, but no definite conclusion reached; it was thought, however, to be a good plan provided the club did not have to pay the dues.

It was proposed to hold at the meeting in August a canna symposium. This is to include an exhibition of all the newer varieties that the committee can obtain, and a discussion on their merits to be under the charge of Robt. Craig. This should be a drawing card, as the canna has been making rapid strides in the past few years, and a collection of the best kinds should make a show worth seeing.

A little was said about bowling and an effort is to be made to get some of the talent together so as to make a respectable showing and get a place if possible. The gunners were not present, having a meeting and arranging matters for their trip to Baltimore, for which city they left Wednesday morning last. Robert Craig was appointed by resolution of the club to represent them on the Advisory Board of Institute Managers. Two exhibitions or institute meetings are held in Phila. each year in connection with the State Board of Agriculture, and being a kindred body it was thought advisable to be represented. Edwin Lonsdale is a member for the Horticultural Society, and he reports the institute meetings very instructive and profitable.

Things are very quiet now; the "Glorious Fourth" is past, and as far as we can learn none of the craft lost any fingers or thumbs. It had usual effect on the business, closing most of the stores all day, being in reality the florists' only holiday. Sweet peas are now very plentiful, and never better; the abundant rains that have fallen recently have done a great deal of good, and most all outside stock is in fine growing condition. One grower

complains of his carnations, saying that many of the young plants are damping off out in the field; this is entirely a new experience for him, and he cannot account for it.

K.

Boston.

If the beach and mountain trade were to open up after the style of ten years ago, Boston could supply the right stock and plenty of it. It would seem that more growers than usual are interesting themselves in the production of good flowers for summer demands, for there has never before been so much really fine stock on the market at this period of the year as at present. When the summer resort trade was booming buyers had to be satisfied with some pretty poor specimens and pay high for them, for there was nothing else obtainable; now that good stock is available in abundance and cheap they do not want it. Flowers are undoubtedly used at these places as generally as they ever were, but local production is now sufficient to supply the demand except in rare emergencies, and the summer shipping business, once so important an item in the wholesalers' trade, is no longer a factor. Local demands are also light and the adoption of the five o'clock closing rule by both retail and wholesale establishments has inconvenienced no one. With many of the stores it might as well be one o'clock as five o'clock, and it is possible that the earlier hour may yet be adopted on Saturdays.

The best roses in market now are Meteors, of which Welch Bros. are receiving large daily shipments. Kaiserin Augusta Victoria is also seen in splendid quality. Bridesmaids and Brides average small at present. Carnations are still good and rather overstocked. Sweet

peas and gypsophila are abundant and form, with carnations, the main stock of the street peddlers, who seem to pick up considerable business, notwithstanding the prevailing dullness.

The Saturday shows at Horticultural Hall have started off with every indication that they will be fuller and draw a larger attendance than ever before. On Saturday of this week gloxinias, hollyhocks, and antirrhinums will be the specialties in the flower department, and next week hydrangeas, achimenes, tuberous begonias and hardy ferns will be especially provided for. On September 2 and 3 will be held the great annual exhibition, when it is expected that the display of aquatics will be the finest ever shown in this country.

Lawrence Cotter has concluded to run most of his rose houses a second year without replanting. A house of Souvenir de la Malmaison at this place is a handsome as well as unusual sight. It is full of buds and is a reminder of the old times when this fine summer rose stood in the first rank.

Pink pond lilies are unusually good this summer, being large and deep colored, but their popularity seems to have waned somewhat.

Visiting Boston, S. S. Pennock, Philadelphia.

Buffalo.

The usual midsummer pacific state of affairs has come upon us, and once more let me tell the readers of the FLORIST that for the past six months of this year Buffalo has the lowest death rate not only of any city in this favored land, but of any community in the world where a record of vital statistics is kept. It was for the six months just passed 11 per thousand. This is wonderful, and is accounted for

not only by its 350 miles of asphalt pavement, its strict sanitary laws, the healthful sweep of Erie's breezes, but a big factor is the good behavior and general moral tone of this most cosmopolitan community. Under these conditions our wealthy people do not all leave the town to seek fresh air in an ocean voyage, a mountain retreat or a fashionable seaside resort. I can't say much about the flower market. There is no difficulty in supplying flowers for the demand.

The firm of Mepsted & Asmus no longer exists. They gave up both the store and the greenhouses a few days ago. The writer knows little about their affairs, but may later.

Mrs. Eckard, the mother of our hard working young florist, George Eckard, died last week, age 54. George and his mother have been quite successful of late years, and through persistent hard work have been doing a good business.

The only stranger in town whom I have run across was Mr. De Forrest, representing Hitchings & Co. There was a good deal of hot water talk while he was around, and a trip to Corfu with W. S. and a Scotch friend was very enjoyable, when the conventionalities of business were cast aside. Mr. De Forrest is a most agreeable companion and can enjoy most anything from a joke to a plate of pork and beans. He thought there was a system of heating in vogue in the village that was simple and most economical.

We are at present blessed more or less with fifteen thousand school ma'ams. The National Educational Association is holding its convention here, and it's a big one. While the fruit of the timothy is seen to adhere to many of them there are many bright people among them, and as a body an honor to the nation. W. S.

Chicago.

The leading sensation of the week has been the reported sudden departure of Otto Mailander of Niles Center, leaving a very large indebtedness behind him. His whereabouts is a mystery, and his place is in the hands of the sheriff. It appears that for some time Mr. Mailander has been acquiring all the ready money possible by the simple expedient of borrowing from confiding friends, and paying for nothing whatever, except the help on his place. He borrowed varying sums from the commission men with whom he did business, giving notes. He borrowed from a number of his neighbors, chiefly farmers, sums varying from a few hundreds to a thousand dollars. He had just got a new boiler, which was not paid for, and his coal bill now owing is said to be \$1400. He owed big bills to the local butcher, grocer, and hardware man. He has not paid for the Dutch bulbs he forced last winter, nor for the Harrisii he cut at Easter. In fact he has paid for nothing whatever except help, which was unavoidable. His credit was so good that people who knew him seemed quite ready to trust him for any reasonable amount, and he seems to have left enough promissory notes to paper a room. He has been buying plants and tools on credit lately; whether these have been shipped to some secluded spot where he will begin life anew, or whether they have been sold again is unknown. The fact of his buying such material gives color to the impression that he intends starting business in some unknown locality, but many of his creditors think he has gone to Europe. His wife remains at Niles Center, and says she is unable to throw any light on the matter. It is esti-

mated that the indebtedness at Niles Center amounts to \$20,000. There is a mortgage on his place at Niles Center, but it only represents a part of its value.

Mr. C. L. Washburn of Bassett & Washburn, had a very unpleasant conclusion to his Fourth of July celebration. When preparing to retire for the night a man was discovered secreted in a closet, evidently waiting for the house to become quiet so he might carry off what he could. In response to a call Mr. Washburn came and met the man at the head of the stairs. He clinched him, but the impetus of the running man was such that they both fell together nearly all the way down stairs, Mr. Washburn bringing up against a partition at the landing with such force as to injure his hip quite badly, though not so seriously as to keep him from attending to business. The fellow escaped, but was subsequently recaptured.

J. W. Rathborne is preparing to tear down and remove the greenhouses at his south side residence. He will not rebuild.

At the meeting of the Florist Club last Thursday evening little but routine business was transacted. At the next meeting the question of arranging for a picnic or some similar outing will be considered and acted upon. It was proposed that the club arrange for a picnic the features of which would include a baseball game, a bowling match and a shooting match. A full expression on the subject will be had at next meeting.

All who contemplate attending the Cleveland convention of the S. A. F. are requested to report to Mr. G. L. Grant, 322 Dearborn street, so that arrangements may be made for a special car if the number going will warrant it.

Business is in a state of innocuous desuetude. It is slower than last week. There is still a certain sale for good roses, but they are scarce, and there is little sale for all the cheap stuff. Prices are just about the same as last week. First-class Kaiserin bring \$4, Meteors \$3. The average prices are \$1 to \$3. Valley is now over, and there is no more to come in until September. Sweet peas are very plentiful at same prices as last week. The only trade now is for funeral work.

A ball game will be played Sunday next, July 12, between the florists and a team of barbers, at Reissig's grove, Riverside. A train on the C. B. & Q. may be taken at 1 p. m. Visitors are requested to bring their bicycles and their lunch, and be prepared for a pleasant afternoon.

Visited Chicago: R. Uttenweiler of the Illinois University, Champaign; John Willis, Danville, Ill.; B. E. Wadsworth, Danville, Ill.; F. Sestier and wife, Des Moines, Iowa; E. P. Clowse, Stuart, Ia.; Lauren A. Perkins, Waukegan, Ill.; Victor Wayman, Madison, Wis.; W. F. Zane, Wheeling, W. Va.; F. W. Ostertag, St. Louis; Chas. McAniff, Supt. Springfield Rose Gardens, Springfield, Ill.

Pittsburg.

Mr. George Oesterle has severed his connection with Mr. Lauch at Carrick, Pa., and now has charge of the greenhouses of Randolph & McClements at South Highland and Baum Sts., East End.

Mr. Henry H. Negley left on Saturday for Georgia, where he has a fine fruit farm; he expects to be absent about ten days.

Mr. Fred. Burki, Bellevue, Pa., was thrown out of his wagon on Tuesday, cause broken front wheel; fortunately the horses were stopped immediately and he escaped with only some severe bruises and a good shaking up. He is to be con-

gratulated on his narrow escape, for if the horses had succeeded in getting away he would have been seriously injured.

Business during the week with the florists has been very good for this time of the year, and everyone is hoping the demand will keep up. There was no very large social events, but numerous small ones, these with funeral work made the volume of business very fair. The weather on the Fourth of July was very rough, raining several times during the day very heavily, preventing the full program as arranged for by Superintendent Falconer of Schenley Park, from being executed, although a large number of people attended notwithstanding, and in the evening, to see a grand display of fireworks, the attendance was estimated at fully 100,000. The most complete arrangements had been made to entertain and amuse visitors and had the weather been fair, Mr. Falconer would have had the satisfaction of giving the greatest celebration we have had yet at Schenley Park. The postponed events, bicycle races and athletic sports will all be brought off this week and next; some very handsome prizes are to be contested for.

The same trouble was experienced by Supt. McAfee at Riverview Park, Allegheny City, although he succeeded in giving most of the races on the program, as it did not commence raining there as early in the day as it did at Schenley. Their firework display was witnessed by a large number and gave great satisfaction.

Mr. Walter Breitenstein has concluded to furnish a novelty and innovation to the trade, namely, he will close his store on the 13th inst and not re-open until September 14, and has so notified his patrons. He thinks there is no pecuniary advantage to be gained by keeping open store during July and August, and therefore closes. During the interim, he will take a trip through the Cumberland and Shenandoah Valleys, continuing to Look-out Mountain, and will probably go most of the way on his "bike."

Mr. James Dell reports trade fair for the season, as with others funeral work helps. He furnished a very handsome design during the week, a blanket 7½x6 feet made with purple and white sweet peas and purple asters, it was very artistic.

Elliott & Uam also report a fair week, in fact were real busy part of the time.

Mr. N. Patterson has returned and evidently has secured what he went for, his health; he says he feels first-class, and he certainly looks it.

Elliott & McGuiness are getting their share of trade and are well satisfied with the summer's business so far.

In my notes for week of June 27, relative to the complaints made at the club meeting about parks, etc., I should to prevent mis-apprehension, have stated that the Pittsburg parks were not mentioned and were not included in the accusation, and now to many of our florists, the complaint about the Allegheny Park is considered very much as making a mountain out of a mole hill.

REGIA.

The committee named in last notes should have read as follows: E. Snyder, S. Gass and O. A. C. Oehmler. Mr. Ludwig was not a member of the committee.

St. Louis.

There is nothing new to be said of the trade; it is the same old summer business as of yore in local retail circles. There is

practically nothing doing; here and there a funeral order serves to break the monotony, but there is little even of that. What you see in the florists' windows now is gladiolus stalks, all colors of asters, and sweet peas. Roses are scarce, as everybody is replanting, remodeling and repainting. Carnations are more plentiful this week. The wholesale men have lots of outdoor stuff on hand that can't be sold, but say that real good stock that could be sold is very scarce.

Convention talk is now the main topic among the florists; who and how many are going will be found out at the next meeting of the club.

The Cannon Floral Co. has closed the main store at 2742 Olive street and moved out to their branch store, 4244 Olive street. Mr. Cannon will only run one store in the future.

Samuel M. Bayles, the old and well-known nurseryman of St. Louis, died in Texas last week. The body was brought here for interment. The funeral occurred July 3, from his late residence, 4390 Lindell Boulevard; a large number of florists and nurserymen were in attendance.

The board of commissioners of what was Lafayette Park, composed of Herbert Durant, Nathan Cole and Jacob Christopher, held a meeting Friday night to discuss the problem presented by the ruin of this once beautiful park. Mr. Durant said of course any trees that can be saved will be given the best care possible, but this number is not great after all the debris has been cleared away. New trees will be set out; fortunately we have some money, about \$2,500 in the shape of a special appropriation, that will defray the immediate expense. The work of removing and replanting has begun in charge of Superintendent F. L. Hunt.

Jordan Floral Co.'s new quarters, 822 Olive street, are very large, and when completed will be one of the largest and finest floral establishments in the city. Mr. Jordan says that this is his second move in 30 years; the first store was at 612 Olive street, the second just one block west at 706 Olive street, and now at 822, one block from the old stand.

Frank Fillmore is very busy just now remodeling and repainting his rose and carnation houses, Frank reports that spring trade was good and that he expects to have a large supply of roses and carnations this fall.

The picnic committee did nothing last week in regards to the coming picnic; the committee could not hold a meeting, owing to chairman Kunz being too busy moving.

Burt Von Simon, with Crosman Bros., Rochester, N. Y., is in the city. He has his wife with him this trip; only two weeks married.

A. Y. Ellison left the city July 6 to take his new position with N. J. Burt & Co., seedsmen, Burlington, Iowa.

Mr. Halstead and Mr. Emmons, both Belleville florists, lost their youngest children last week. They have the sympathy of all St. Louis florists.

The bowlers had a good time Monday night; the attendance was slim owing to a rain storm, but those that did come had fun. Fred Weber was high man of the night, 558; Emil Sebray was second with 512; and Beneke third, 504. Weber was also high on single score, 226. A diamond pin has been donated for the best bowler at the picnic and next Monday night will be practice night for all florists who want to bowl at that event. J. J. B.

Correction.

In the article on page 1248, issue of June 20, under the heading "Adiantum Farleyense," the temperature given in the seventeenth line read "65° to 70°," and not "75° to 70°," as printed.

PROPHETSTOWN, ILL.—Chas. W. Noyes has purchased the interest of W. W. Noyes, in the firm of W. W. and C. W. Noyes, and will continue the business under his own name.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By thorough florist; German, age 25, single. Good references. Address M. C., care American Florist, Chicago.

SITUATION WANTED—To take charge, by a first-class grower of roses, carnations, mums, palms, ferns and general stock; forelog of bulbs, etc. Can give first-class references. Single. Address GROWER, 129 N. Clark St., Chicago.

SITUATION WANTED—By florist, with 11 years' experience in growing roses, carnations, mums, etc., as working foreman or first assistant. Good propagator and design worker; sober and not afraid to work. An up-to-date place preferred. Address FLORIST, care American Florist.

OBITUARY.

BRUCE FINDLAY.

Bruce Findlay, Curator of the Royal Botanic Gardens, Manchester, England, died June 16, aged 61. The news of his death will be received with deep and sincere regret; his name and fame were familiar in this country as in England, and there are many men in America, as in England and her colonies, who owe much of their gardening knowledge to him.

Mr. Findlay was of Scotch extraction, and was born at Streatham, Surrey, in 1835. He began his gardening career at Rollisson's Nurseries, going from there to Kew, Hull and Sheffield Botanic Gardens. In 1858 he was chosen Curator of the Manchester Botanic Gardens, where he served for 38 busy years. In 1881 the citizens of Manchester showed their appreciation of his services by presenting him with a check for £1,000 and a gold watch and chain, his wife being also presented with a gold watch and chain at the same time. In 1890 the Royal Horticultural Society presented him with the Veitch Memorial Medal for distinguished services to horticulture. His death is a very great loss to horticulture, and will be widely regretted.

THE International Horticultural Exhibition to be held in Hamburg in 1897 will last from May to October and thus give every branch of horticulture a chance to be represented at its best. A park in the center of the city has been placed at the disposal of the management and the citizens of Hamburg have provided a guarantee fund of \$125,000, in addition to donating many valuable special prizes. These specials are mainly for orchids, roses, rhododendrons, carnations and decorative plants. The steamship companies will make important concessions to foreign exhibitors.

Grand Rapids, Mich.

The Florists' Club met at the Eagle Hotel July 7; attendance good, Pres. Henry Smith in the chair. After routine business informal discussions were held on subjects pertaining to the trade. Where each member is expected to have a personal interest in the subjects treated this will hold a club together better than even learned essays read by the selected few, with now and then a social thrown in to liven up a bit.

Spring sales were reported as being larger than in former years, but at such cut rate prices as to leave little or no profit. The subject of a combine was discussed to maintain prices at living profit. Mr. W. B. Wiley of Douglas, a prominent fruit grower, talked against the practicability of a combine; the public became possessed of the idea that it was formed

for extortion, and it had a tendency to create dissatisfaction among customers. Rather put a man upon his honor to sell at a living profit; why cannot a florist see that cutting prices below cost is suicidal to the business.

The club held its second annual picnic at Reed's Lake June 23; 97 attended and all was lovely. An exciting game of base ball was played; the employers against the employed, won by a score of 12 to 11. J. A. Creelman was pitcher for the winning side, Geo. F. Crabb catcher. The president of the club, Henry Smith, was umpire. E. A.

A Bignonia Variation.

We have received from Mr. H. Brown, Richmond, Va., blooms of a bignonia originating with him. He informs us that the habit is like B. radicans, but the foliage is much lighter and finer cut. The flowers appear longer than B. radicans, color a deep chrome, the interior striped crimson, borne in ample clusters. Mr. Brown does not inform us of the parentage of his plant. Its appearance is suggestive of some of the South American varieties, and it will doubtless make a very showy plant.

SHELburne FALLS, MASS.—Lucius Fife is rebuilding and enlarging one of his greenhouses, making it 21x54. L. R. Fuller & Son are building a greenhouse 18x41.

The Seed Trade.**AMERICAN SEED TRADE ASSOCIATION.**

T. W. WOOD, Pres.; ALEX. RODGERS and J. B. RICE, Vice-Presidents; A. L. DON, 114 Chambers Street, New York, Sec'y and Treas.

M. E. FAGAN, ex-Chief Seed Division Dept. of Agriculture, is now in the Treasury Dept., and is now making a trip to Alaska.

THE prolonged drouth in France has certainly had the effect to reduce very generally the quantity of marketable sizes of Roman hyacinths, Paper White narcissus and such standard forcing kinds; undoubtedly the grades will be undersize this season, probably at least a centimeter. The bulbs may be hard and well seasoned and make up for this or may not; at any rate the American jobbers will likely have to take them as the Frenchmen see fit to send and be satisfied or fight. Too bad this stock cannot be so graded as to save trouble.

The N. B. G. Co. Stock.

Legal notice of proposed sale of the Northrup, Braslan, Goodwin Co. stock:

COPY OF ORDER OF SALE ENTERED JULY 8.—State of Illinois, County of Cook, ss: County court of Cook county. In re Northrup, Braslan, Goodwin Co., insolvent; William T. Fenton, assignee.

This matter having come on to be heard upon the petition of W. T. Fenton, assignee herein, asking for permission to sell the stock of seeds of the insolvent, situated in the city of Chicago and for directions of the court as to the manner of advertising and offering said stock for sale and the court being fully advised and informed.

It is now ordered, That the assignee forthwith advertise said stock of seeds for sale among such persons and corporations as are interested in the seed trade by circulating catalogues of said seed stock and by such other means as he may deem proper and that said advertisement of the sale of said stock shall call for bids for the same to be presented to the assignee in writing not later than Friday, July 17, 1896; that parties bidding for said stock may make an offer for the whole thereof in bulk or for such portion of the same as they desire; that is to say, for separate lots as designated in said catalogue; that all bids shall be accompanied by a certified check for 10 per cent. of the amount offered which in case the bid is accepted and approved by the court, shall apply on account of their purchase price but which shall be forfeited to the assignee in case such bid is accepted and allowed by the court and the bidder does not take the property thus bid for.

[Signed] O. N. CARTER, Judge.
Dated July 8, 1896.

Tree Planting Laws.

Is there any law in existence, state or municipal, in any of the states or cities in the United States, designating the distance varieties of large growing trees should be planted from dividing property lines in order to avert injuries thereby to adjoining land owners?

Any information from either a legal or scientific view will greatly oblige

READER.

Flower-Mission Drawbacks.

"Julia, what did that poor man say when you gave him that lovely bunch of daisies?"
"He said he would much rather have a good boiled cabbage."—*Chicago Record.*

Seedsmen Wanted.

WANTED—For a New England city, a competent man fully up in all branches of a first-class business. Must know flower, vegetable and farm seeds thoroughly, also catalogue work; must possess executive ability and push and know how to control.

ALSO WANTED a man fully conversant with flower seeds and capable of running that department. Also a man for vegetable seed department, who knows plants. Write full particulars, stating experience, salary expected, nationality, references, etc. All communications strictly confidential. Write to SEEDS, care J. M. Hilton, 39 S. Market St., Boston, Mass.

THE AMERICAN FLORIST COMPANY'S Directory OF FLORISTS, NURSEYRSMEN AND SEEDSMEN

— OF THE —
UNITED STATES AND CANADA,

REFERENCE BOOK, FOR 1896,

Contains the names and addresses of all the Florists, Nurserymen and Seedsmen in the United States and Canada, arranged alphabetically in States and Provinces, the exact branch of the business each is engaged in being indicated by a Key.

ALSO

A list of Trade Organizations, both National and Local, with names and addresses of principal officers, time and place of meetings and date of organization.

Statistics regarding Floriculture, the Nursery Industry and Seed Growing from the last U. S. Census report.

A list of firms in the trade that issue catalogues, with a key indicating the prominence of each branch of the trade in same.

A list of leading Cemeteries in which attention is paid to Ornamental Horticulture.

A list of leading Park Superintendents and of the Botanical Gardens of the United States.

Seasonable Hints for the year about the practical work of the Florist, written by Wm. Scott, giving instructions not only when to do certain work, but how to do it most effectively and economically.

A complete alphabetical list of Roses in commerce in America, brought up to date and of incalculable value for reference.

Similar lists of Chrysanthemums, Carnations and Cannas.

Historical sketches to date of the Society of American Florists, American Carnation Society, National Chrysanthemum Society of America, Florists' Hail Association, American Seed Trade Association and American Association of Nurserymen.

A list of Leading Horticultural Societies.

WISCONSIN FLOWER EXCHANGE,
MILWAUKEE, WIS.

Paterson, N. J.

The decorations at the Beach-Muzzy marriage, which took place in this city on June 24, were the most elaborate seen here for a long time. The parlor in which the ceremony took place was decorated with asparagus and Jacq. roses; the hall was festooned with smilax and fine white flowers; the decorations of the library were in white and pink sweet peas; and the dining room was ornamented with white and yellow roses. A dancing pavilion had been constructed for the occasion, and the walls were almost entirely covered with flowers and foliage and studded with electric lights.

Pittston, Pa.

Mr. Ellis is removing his plant to corner of Montgomery and Wyoming aves. He has thus far complete three houses, one 100x18 and two 75x15. A handsome and commodious office adjoining the greenhouses is now in course of erection. The houses will be heated by steam, a twenty horse power boiler to be shortly placed in position.

Mr. Ellis contemplates enlarging his plant next spring, intending to build five additional houses. HOMO.

Greenhouse Building.

Riegelsville, N. J., John Stone, one commercial house.

Lewiston, Maine, Ernest Saunders, one rose house, 25x175.

Fairhaven, Mass., M. Conroy, one commercial house, 22x125.

Swansea, Mass., Leland Gardner & Sons, two commercial houses.

Braintree, Mass., Hayden & Bates, one rose house.

Highland, N. Y., Wm. Feeter, one greenhouse.

Avon, Mass., Thos. G. Thrasher, one conservatory.

Chester, Me., Mrs. J. E. Farnum, one conservatory.

Warning.

Messrs. Cole Bros., of Peoria, Ill., warn the trade against a man representing himself as George Cole, of Peoria Floral Co., and asking advances on trade plant orders. They say no such concern exists in Peoria. Messrs. Cole Bros. are exclusively cut flower growers.

AMERICAN FLORIST CO.

NEW ROSE

"Mrs. PIERPONT MORGAN"

Listen for a moment to what a voice from far off Springfield, Illinois, has to say about our young stock of this rose:

May 4, 1896.
"EDWIN LONSDALE, Chestnut Hill, (Station H), Philadelphia, Pa.
"DEAR SIR: Box of 'Morgan' rose plants arrived Saturday in good shape. Fine Plants. I would like to know how you produce plants of such size in a two (2) inch pot?"

All I can say is that it is all owing to the natural vigor of the variety, and perhaps to some extent to the natural rose growing qualities of our soil.

We have a few more left of the same size. Order early or you may get left, for I do not know of a more profitable variety to grow for cut flowers than MRS. PIERPONT MORGAN.

Don't forget our address:

EDWIN LONSDALE, Station H,
Chestnut Hill, PHILADELPHIA, PA.

Young Rose Plants.

The following stock was grown for our own use and is guaranteed first-class in every respect:

1000 MRS. J. P. MORGAN, 2½-in. pots, 4c
400 BELLE SIEBRECHT, 2½-in. pots, 4c
1000 BRIDES, 2½-inch pots, 3c
1000 BRIDESMAIDS, 2½-inch pots, 3c

Also a few BRIDES and BRIDESMAIDS, in 3-inch pots, at low figures.

BASSETT & WASHBURN,

THE FLORAL EXCHANGE, 614 Chestnut St., Phila.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns

Syracuse, N. Y.

July has come and with it a decided drop in the retail business; roses are getting scarce, but carnations are plentiful and of good quality for the time of year.

Most of the growers have their roses all planted, having a little earlier start than formerly. Kaiserin is gaining in favor here with everyone. At Marquisee's a bench of it did finely the past season, proving its constant blooming qualities, and as a keeper it cannot be equalled. The soil in this section seems to suit it. Rain is badly needed, outdoor stuff where it cannot be watered suffering badly from the long dry spell, although the carnations and violets are still holding their own in the field.

A Florists' Gun Club is being formed; quite a number of the boys are good shots, and under the management of our genial Harry Bellamy it should be a successful one.

A. D. Campbell, gardener for Major Davis, has gone to Scotland for a six weeks' vacation.

C. Barson, James J. Belden's gardener, is rejoicing over the safe arrival of a ten pound girl. ALPHIA.

Cincinnati.

There is little to say concerning the condition of business at present. Good stock is really scarce, and especially may that be said of roses. Some choice white asters are coming in from Gus Adrian, Clifton, which find a ready sale.

Mr. E. G. Gillett, for many years manager of the J. M. McCullough's cut flower department, severed his connection with this firm on July 1. Many of his friends and customers will be sorry to learn of his departure. Mr. and Mrs. Gillett left for Springfield, O., their former home, for a month's stay.

Mr. James Allen, foreman at Rosebank, returned from his six weeks' vacation east.

Remember the picnic day July 23.

H. SCHWARZ.

Columbus, O.

The Franklin Park Floral Co. has completed its new range of houses, and has them planted. They are putting in one house of Beauties.

Hatton Brothers are reported as doing a good business in their cut flower department, which they added to their business on the 21st of last March, with Mr. Karl Brown in charge, who had been with A. W. Livingston's Sons for five years previous.

Will Gravett of Gravett & Son, Lancaster, O., gave us a call recently. They are going to build a new carnation house this summer.

J. J. Brehmer of Circleville and Mrs. J. L. Miller of Newark were also recent visitors. Both report a good June business.

The Herms Floral Co. of Portsmouth have given up building their proposed new range of houses this summer.

CONVENTION NUMBER

To be issued August 15.

THE ANNUAL CONVENTION NUMBER

— OF THE —
American Florist

WILL BE ISSUED

August 15.

In addition to the usual convention matter it will contain a series of elaborately and richly illustrated articles on the use of Hardy Plants, showing the Florist not only how to use these plants to the satisfaction of customers but how to make them a source of profit.~~~~~

This last should receive the earnest attention of the trade at this time, for the growing demand for Hardy Plants can not with wisdom be ignored. It should be met in such a way as to bring the most returns to the Florists' cash drawer. In our Convention Number we shall give the views of the ablest men in the trade on this subject and will include many illustrations that will be very useful to the *Florist* in presenting the subject of Hardy Plants intelligently and profitably to his customers.~~~~~

This issue will reach every possible trade buyer of consequence in America and will have great permanent value to the advertiser, but there will be no increase over our regular rates, which are~~~~~

News Notes.

ATLANTA, GA.—The Kensington Floral Co. will add two new greenhouses.

BARNEGAT, N. J.—Irving Predmore succeeds to Predmore Bros., dealers in moss and peat.

PONTIAC, ILL.—W. J. Miller is putting in a new boiler and making other needed improvements.

PUEBLO, COLO.—R. J. Graham retires from the firm of Wm. Brown & Co. The business will be continued by Wm. Brown.

INGERSOLL, ONT.—Thos. Sinclair & Son have sold their florist business here to Mrs. C. Kyle & Son, who will continue it in future.

EXETER, N. H.—Frederick C. Hoffman, a Pawtucket, R. I., florist, was married to Miss Harriet M. Weston of this place on June 24.

WARREN, O.—Geo. W. Gaskill is adding a 50-foot extension to his three houses, and one lean-to. Business is good here for the time of year.

HINGHAM MASS.—The Hingham Agricultural and Horticultural Society held its annual rose and strawberry exhibition at Agricultural Hall on June 24.

CLARKSVILLE, TENN.—The Evergreen Lodge Greenhouses are to be moved to a new location and many new houses built. Jas. L. Morton is manager and proprietor.

OTTUMWA, IA —Kemp & Zaring are erecting two new houses, one 20x60 and one 20x84, for carnations and roses, and are putting in a new 25 horse power boiler.

QUAKERTOWN, PA —Chas. E. Youaken, who has been carrying on a florist business in this place for a number of years, has sold out to E. I. Rawlings, a former employee.

DALTON, MASS.—Franklin B. B. Sears, florist of this town, and Miss Miriam A. Barton were married on June 24. The decorations of both church and house were very elaborate.

CHATTANOOGA, TENN.—The first board of park commissioners for this city has been organized, with Geo. M. Bradt as president. The first public park was formally dedicated July 4.

CLARKSVILLE, TENN.—Jas. L. Morton has secured a lease of the Evergreen Lodge Flower Garden, which he formerly managed for J. J. Crusman, assigned, and will continue the business on his own account.

MELROSE, MASS.—The Melrose Horticultural Society had a very attractive exhibition of fruit and roses on the afternoon and evening of June 22. This organization, although only a little more than a year old, numbers now about 75 members. Preparations are being made for an exhibition at the Town Hall in September next.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipple Dopfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

Clear Cypress
Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Kew Gardens Herbarium.

Anyone wishing to know the name of
an unidentified plant may obtain the de-
sired information by applying to the
Royal Botanic Gardens at Kew, sending
seeds, plants or perfect dried specimens.
Such queries should be addressed to the
Herbarium, Botanic Gardens, Kew, Lon-
don W., England. No charge is made
for such information, but it would be
well to send 25 cents for postage, etc.

BALTIMORE, MD.—Wm. Fowler, lately
gardener at Clifton Park, is now with
Mr. Scott, florist, Lauraville, Harford
Road.

Why We Should Attend the Cleveland Convention.

Most florists endeavor to take from
their busy lives a week or two in mid-
summer for a much needed holiday.
Some can afford a longer period of recre-
ation than others, but few there are who
cannot afford a few days away from
home, especially in August. Now the
first duty of a live florist, be he big or
little, is to take part of his vacation in
attending the National Convention of the
Society of American Florists, which this
year is to be held in Cleveland, Ohio. The
selfish man stays at home and is too often
heard to say "What good will it do me
to attend the conventions? all that is
said or done of value will be published in
the trade journals." Yes, there is a whole
lot of you think that way; you are will-
ing to let other men spend their money
and contribute their knowledge, the
result of years of work and brains, while
you stop at home, a beneficiary of the
essays and debates, but not contributing
one cent to make the convention either a
financial or social success. Is this not a
purely selfish view to take of our conven-
tions? It must be evident even to the
most dull that without the annual gather-
ing the essays and papers would not be
read. Many, in fact the large majority
of the florists of the country, will remem-
ber how little those in the trade knew of
each other and what was the state of
trade before the organization of our
national society. If any of you will think
back twenty years you must remember
that you could count on your fingers the
firms that were known nationally, and
many did not know half that number.
The more than marvellous growth of our
business in the past 15 years in all large
communities and throughout the country
at large, a growth not equalled by any
similar industry, can be partly accounted
for by being in sympathy with the general
and wonderful growth and expansion of
all industries and the prosperity of the
country. But I beg to think and firmly
believe that a considerable part of it is to
be acknowledged as the fruits of our
national society and its offspring, the
local clubs.

It is impossible to believe that the won-
derful advancement of our business could
have attained the dimensions it has with-
out the impetus of the national Society of
American Florists. The society has been
the parent of our trade journals, of which
we have at least two, strictly confined to
trade interests, and which are a credit to
those who conduct them, and of the
greatest value to those who subscribe to
them. In them have appeared the best
knowledge of our brightest men, and to
those who read them they give a whole
year of good advice for the small sum of
one dollar.

I am aware there are many bright men

in the trade who have contributed but
little to the trade journals, but it is safe
to say that no florist who has made a
success of his business wishes to keep
back any knowledge from the rest of the
trade. Ours is not a secret business, no
more than that of the medical profession.
Those that think they have a wrinkle and
are going to guard it carefully will find
their time so much occupied that they will
be left behind in the procession.

I have already stated that to the S. A.
F. must be attributed largely the present
dimensions of the business throughout
the country, and this it would be hard to
contradict. The high toned retailer in
some large cities may possibly in his
ignorance have never heard of the S. A.
F. and does not know or think that it is
the grower who produces the fine stuff
that makes his business what it is. There
are, however, some noble exceptions to
this, for our members are made up from
every branch of the business, and the
most valuable and staunch members are
those who have no personal interests to
advance, but merely the general welfare
of the society and the business. Of the
ten men who have had the honor to be
president of the S. A. F. in its ten years of
existence I can point to none who have
sought or accepted that position at a
sacrifice of time and money for any
trade advantage that might accrue. They
filled the chair like the present incumbent,
purely for glory. The florists of the
country, even the most remote parts, have
been immensely benefited by the essays
and discussions that have taken place at
our conventions through the trade jour-
nals. The writer would like to confess,
and does most gladly, an illustration of
this in his own case, where most valuable
information was read on the platform at
the Chicago convention. The author
was Mr. Ernst Asmus, and he frankly
told all of us his way of forcing Dutch
and other bulbs, the varieties to grow,
etc. It was worth the expense of half a
dozen conventions to me, but this is only
one instance in a hundred, and I am only
one in a thousand who has been benefited
by the knowledge gratuitously imparted
to all those who have ears to hear. The
discussions are open to all. Anyone can
ask a question. This would be a good
opportunity for me to say that those
who fancy that our national society is
run or managed by a clique or inner circle
make a big mistake; no such thing exists.
I had the honor to be elected president of
the S. A. F. at Pittsburg last August
merely on my merits as a practical florist,
and while I know there are many of my
brother florists who can talk more under-
standingly about the general business in
which we are engaged and hundreds who
have larger places, there is none who will
strive harder to make our meeting an
unqualified success. Let every loyal flo-
rist who loves his business attend.

I find I have occupied a small space with my introductory remarks and have not yet given any specific reasons why if you have never attended a convention you should the one of this year. Without I trust encroaching on the province of our able Cleveland correspondent I would like to remind you that the Crescent City is a most cool and salubrious place to spend a week. To be national and suit both the east and west, where could you go? But Cleveland of this year has some attractions that Cleveland in its normal condition has not. It is the centennial of its birth, but there will be plenty of room for everybody. A feature in connection with our meeting will be a flower show on a grand scale, and it will be held in the new Armory, one of the finest buildings I have ever seen for the purpose. The S. A. F. has offered several prizes, but the local club has entire charge of the flower show, and there is no doubt it will be worth going hundreds of miles to see. No better opportunity was ever offered to trade exhibitors than they have this year. They will be given a portion of this grand building, and thousands will view their exhibits throughout the whole day. What is still of more importance and calling for a large attendance of those who have the welfare of our society at heart, is to hear and pass their opinion on the proposed new constitution and by-laws, which the executive committee have with much work drawn up, and which will be offered to the convention for its approval. A full text of the proposed constitution will be published in time for your complete digestion, and as many of the changes are of great importance a big vote should be there to approve or reject. Don't stop away and afterwards say they ought to have done so and so. In Cleveland will be the time to give your good advice, and it will be welcome. I am not at liberty to give you the text of all that is proposed, but here is a sample: If a local club, say Flatbush, L. I., for instance, has 25 members in good standing (as many more as you like) and they pay the S. A. F. one dollar for every member in good standing, that makes them members of the S. A. F. without any further payment to the national society, and many other matters of equal importance are embodied in the proposed constitution. Equally important will be the propositions in connection with auxiliary societies.

The program will be replete with new and practical subjects. The social part of the convention is not for me to speak about, but I will take the liberty of saying that for those who attend the convention largely for recreation there will be abundant opportunity to satisfy their tastes in that line, and rest assured our Cleveland friends know how to make you feel at home.

There was published last week in a trade journal some pessimistic trash which I will try and answer in its proper place. The writers of these articles must remember that we are not all alike, and that if the whole race was born in that effeminate way in which we were all intellect and a weak body the race would soon become extinct. It is false to say that the game of bowls or the shooting ever interfered with a business session of the convention; many delight and take pleasure in these innocent games, but they don't get an opportunity to compete in friendly rivalry with a brother florist from a distant town only once a year. And it's a remarkable fact that many of the brightest men who honor the profession are beautifully balanced. They can

be eminently successful in their chosen line, valued members of our society, and yet be broad enough to love a gun or take a hand at bowls or any other manly sport. If a man is physically debarred from any sport outside of an old women's tea party he has my sympathy, but when he is blessed with health and strength, and then has no sympathy with those who like a little sport he is mentally crooked and never will be missed. So friends, bring along your gun, your muscle for speed and skill on the alleys, and I am not afraid but what you will give your earnest attention and help to the primary object of our national society, the uplifting and advancement of our profession and of every individual connected with it, employe and employer.

WM. SCOTT, President of the S. A. F.

Reduced Rates to Cleveland.

All the railroads represented in the Trunk Line Passenger Committee, New England Passenger Committee and Eastern Committee of the Western Passenger Association have joined in the concession granted by the Central Passenger Committee for persons traveling from their territory to the Cleveland convention of the Society of American Florists. The rate granted over all the roads is on the basis of full fare going to Cleveland and one-third fare returning.

In order to take advantage of this reduced fare delegates must observe the following rules:

A certificate must be procured from the ticket agent at starting point, which when presented at the ticket office in Cleveland will entitle the holder to a return ticket at one-third fare.

The certificate must be obtained at time of purchase of going ticket. In no other way can the reduced fare be secured, and neglect of this rule cannot be afterwards remedied.

Certificates can be procured within three days before date of opening meeting, and will be available for return trip for three days after close of meeting (Sunday not counted).

To take advantage of this reduced rate persons must return by same route over which going journey was made, and no stop-over will be allowed on return trip.

Certificates may not be obtainable at all stations. Where ticket agent cannot furnish them passenger should pay local fare to nearest station where certificates can be procured, and on arriving there purchase ticket and certificate to Cleveland.

Certificates must be handed to the secretary on arrival at the convention, his signature on same being necessary before they can be used for return journey.

For further information address the secretary, Wm. J. Stewart, 67 Bromfield street, Boston, Mass.

Herbaceous Plant Notes.

A few days ago Mr. Shepard, superintendent of our famous Riverside Cemetery, while looking over the collection of hardy plants, stopped in front of a clump of *Eryngium* and in his enthusiastic manner exclaimed, "What a grand and magnificent effect could be produced with this plant in a shrubbery!" and undoubtedly Mr. Shepard is right; nobody will dispute his assertion. The steel blue tinge of flower stems and bracts, when seen against a background of yellowish green foliage as we have for instance in the golden elder, the dwarf yellow-leaved

philadelphus, the variegated dogwoods or other shrubs with similar light colored or variegated leaves, is delightfully pleasing to the eye and is clearly seen even at a distance. The *Eryngium*s are certainly a very ornamental class of plants, and most of them retain the beautiful tinge of blue until the fall months. Their leaves are broad and more or less serrated; the flower stems are branching and spring from the center of the crown, bearing numerous globose or elongated flower heads surrounded by lacerated, sometimes spinose, bracts, which along with the upper part of the stems, at first green, change in the different species to a more or less intense steel blue at the time of flowering, and retain this remarkable color until dry. The following varieties are all hardy and withstand our severest cold unprotected.

E. amethystinum, sometimes called *cœruleum* or *cœlestinum*, has long, broad, deeply cut leaves; a whitish nerve runs through the center; it flowers in large branchy corymbs on long stems, and fully one-half of the plant turns a glittering steel blue at the time of flowering. This is considered one of the finest species, and not only good in the border or shrubbery, but is used very largely in foliage beds of sub-tropical character, where the steel blue color is very effective among the dark bronzy foliage as well as in connection with the lighter and yellowish tints. It grows about 2½ feet high and begins to show its remarkable color in June. *E. glaciale* is rare and of very dwarf growth; 8 to 10 inches is its extreme height; the flower heads are of a whitish color and the surrounding bracts are hard and spiny. They turn a pale blue at the time of flowering.

E. Oliverianum is a robust and tall plant, perhaps too coarse to be used except in a wild part of the garden; the bracts surrounding the large flower heads are very stiff and thick, but the blue color of the upper part of the stem is very bright; the height is 6 to 8 feet. *E. maritimum* is another spring variety with broadly cordate leaves of glaucous whitish color; the flowers are pale blue and the bracts long and prominent; it does not change its color and only grows 15 to 20 inches high. Others of the same type are *E. spino-album* and *E. vulgare*. *E. multifidum* is very much like *E. amethystinum*, but perhaps a little weaker in growth. *E. planum* has the main or lower leaves entire, broad and undivided, while the upper ones are parted and deeply serrated. The bracts are narrow and well colored; it attains a height of about 2 feet. *E. giganteum* has large ovate leaves serrated along the edges; the branchy stem bears large heads of flowers, surrounded by spiny, leathery and hard bracts, nearly as long as the oval flower head; it grows about 4 feet high. *E. Burgati* has rough and spiny deeply cut leaves with a bluish white hue and distinct light nerves; the flower heads are white with a faint blue tinge. The bracts surrounding the head are stiff and spiny, thorned at the extreme point, and turn a beautiful whitish blue at flowering time; height of plant 15 to 20 inches.

E. alpinum is a rare species from the Swiss Alps, a curious and very neat plant with cordate undivided leaves, branchy flower stems and finely lacerated bracts; colors up as well as *E. amethystinum* and grows 2 to 3 feet high. It requires, however, a deep moist soil and protection from our burning sun. *E. aquaticum*, unlike the others, has narrow long strap-like leaves with light colored nerves running lengthwise through them; the bracts

TEN ACRES OF AZALEAS GHENT, BELGIUM.

are rather short, flowers very pale blue and the stems grow up $2\frac{1}{2}$ to 3 feet. *E. campestre* grows wild in Europe, and has rounded blue flower heads and divided leaves; the involucre formed by the bracts around the head is very long and pointed at the ends; height 18 inches or a little over. *E. creticum* shows a very distinct growth in its flower stem; it divides near the top into many branches and forms a spready and even surface, which may be compared to an open umbrella; these branches as well as the bracts turn a deep blue when maturing. The involucre is rather stiff and spioy; a rare variety which grows to a height of from 2 to $2\frac{1}{2}$ feet. In addition to the above there are a number of interesting species or varieties in cultivation, perhaps equal in value to some of those named here, but not having seen them for many years I do not distinctly recollect their habit of growth nor their coloring, and cannot describe them here, but I know that all the *eryngiums* are valuable plants either in the border or the shrubbery, and in beds when associated in the right way with corresponding and harmonizing foliage. When planted alone or in indifferent surroundings they may be interesting, but would not be called beautiful by a majority of people, still when introduced in the right place everybody must admire the effect produced by their remarkable color.

In the herbaceous garden we observe that the phloxes of the *decussata* section are several weeks ahead of their time this season, and the extremely dry weather would soon put an end to their flowering, but we took the precaution to cut back part of the plants early in June to stop their progress and force out young growth for later blooming.

The *centranthus*, dark carmine, pink and pure white, all are flowering well

and seem to enjoy the hot sun; their strong fleshy roots seek moisture far down below the surface. *Silene Schafta* is opening its pretty pink flowers and soon will form a pink carpet wherever it is massed closely together. To do its best a partial shaded position is required; here, by inserting a few loose or straggly growing taller plants here and there in the bed, we can bring about just the right condition for this elegant thing.

The pure white flowering *Monarda fistulosa alba* is a very desirable plant; although we may have a multitude of white flowers in the borders at the present time, it can be used in many ways to advantage, especially in damp and low places, where it grows most luxuriantly and blooms very freely. In growth and habit it is an exact counterpart of the well known *M. didyma*. *Calirrhoe involucrata* flowers freely on extremely dry and exposed banks; drouth does not affect it in the least when established; the long tap root is after moisture several feet below the surface and manages to support a dense and healthy foliage in spite of the dry surroundings.

Montbretias are not herbaceous plants, but being perfectly hardy can remain in the same spot for some years, and are in their place when planted between low growing compact plants such as the *arenarias*, dwarf phloxes, *Reseda glauca*, *Aster alpinus*, dwarf silenes, etc. We always have some in the borders and find them very handy for cutting during mid-summer.

J. B. KELLER.

Rochester, N. Y.

Hollyhock Fungus.

"I. E. B." asks what will cure or destroy the above. The disease is a fungus and is dignified with the name *Puccinia*

Malvacearum; one would think the name would kill such a small organism, but it seems not. In referring to Nicholson's "Dictionary of Gardening" the grand work that all florists ought to own, we glean the following: It was introduced to Europe in '72 and spread rapidly and first appeared dangerous to hollyhocks in '73, though specimens were found in Spain in 1869. "For a time it proved most destructive to hollyhocks, but as has occurred with other parasitic fungi its virulence has greatly abated in later years." So there is hope that this microscopic fungi will leave our stately hollyhocks alone. The above quoted author has the following as a cure, which is equivalent to saying, in case of a cholera or yellow fever epidemic, "Kill all those infected and destroy all the weak people who are likely to have it;" his cure is, "Destroy all leaves as soon as they show signs of being attacked, and to prevent the growth of the other food plants of the fungus in the neighborhood of the hollyhocks." In the summer of '72 I grew hollyhocks in Buffalo in rich and deep soil that I have never seen equalled either one or both sides of the Atlantic, but for many years since they have been a failure. It was, however, encouraging to see at our Botanic Gardens a few days ago some fine plants growing as of old, and Prof. Cowell says "The disease is no longer to be feared." WM. SCOTT.

Spiraea Astilboides.

Last spring I forced for Easter three hundred *Spiraea astilboides* and succeeded in getting about two hundred in flower in time. They were grown in 7 and 8-inch pots and found a ready sale at \$9 to \$12 per dozen, the remainder came in flower after Easter and were sold as cutflowers

at a fair price. In the same house *Spiraea japonica* and *S. multiflora compacta* came in flower in time under the same treatment. In forcing *Spiraea astiloides* it would be well to give it one week longer than the other varieties. It is a splendid variety; its habit is distinct from the other *spiraeas* in foliage, which is bold and of good texture, but the great advantage is its large trusses of flowers which are freely produced and carried at least 12 inches above the foliage, and in some cases where the plants were extra strong the flowers were 24 inches above the foliage. It will be a splendid plant to mix in with others in a decoration where the shorter varieties could not be seen unless elevated on a stand; the long sprays can be used also to a better advantage as cut flowers.

JAMES DEAN.

Diseased Carnations.

Enclosed a few samples of carnations. They are affected by some little insect smaller than red spider. I first noticed them on my carnations last fall during a drouth in July and August. They made their appearance this year in the latter part of May, and as we have had plenty of rain through June and up to date I have been expecting them to leave, but they are getting worse right along, so I concluded to write you for information. If you know what they are and the remedy I would be glad to hear from you through the FLORIST or otherwise.

Tennessee.

C. W. C.

I could not find any insects on the sample sprays, but found the same very badly infested with bacteria. The cramped twisted appearance of the leaves with the yellow spots so plainly visible when held against the light show the bacteria very plainly. The leaves often when badly infested show, besides being cramped and twisted, a brownish crust on the injured parts, as if done by insects; this may have given C. W. C. the impression, that it has been caused by insects. This is all the result of the ravages of the bacteria. When the growth is broken in one-half of the soft young leaf, and the other half keeps on growing around the injured spot, it will very naturally assume a crooked and twisted appearance, and when in the infested spots the cell walls and epidermis are destroyed it will assume a dry crusty look. There is nothing to do against this but to give the plants all possible care, assist them in a rapid, healthy growth. Do not let the ground become hard and baked, cultivate but not deeply, only to break the crust. On the other hand if wet leave your plants alone. The ground should only be worked when in the proper condition. If the ground has not been plentifully manured, if poor, give liquid manure. Any thing that circumstances and condition of plants and soil may suggest to assist in a fast healthy growth will diminish the bacteria.

It seems rather strange to me that at this time of the year in a favorable growing season bacteria should gain such a hold, and I feel quite sure these plants must have received a check from some cause or other, and if such should be the case what caused the check can only be

ascertained by C. W. C. himself. When more dry weather sets in, and the plants receive all the care indicated, a change for the better will soon be noticed.

We had to complain of the same trouble and I alluded to it in some of my notes. But our plants were infected with bacteria in the beginning of May, when they were not fully established in the field. We experienced at that time very warm weather, a humid atmosphere, and often warm rains. Our ground being in excellent condition, the plants soon outgrew the bacteria, and at the present time no bacteria can be found. FRED. DORNER.

Nitrate of Soda.

"M. A." wants to know "how to mix with soil and for water nitrate of soda for pot plants." The only safe way to use the above is in a liquid state. The writer has had actual and impressive experience with it used in its natural form; he once put about a peck of it on portions of a carnation bench, size 7x8 feet, soil 5 inches deep, and stirred it in, and then planted the carnations. It killed the whole lot; if there was a survival it was no doubt because the nitrate of soda was not evenly distributed. The only way to use nitrate of soda is in solution, 1 lb. to 30 gallons of water will hurt nothing and will help many plants. Its chief effect is to produce a deep color to both flower and foliage.

WM. SCOTT.

Growing Chrysanthemum Plants for the Market.

BY F. J. FILLMORE.

[Read before the St. Louis Florists' Club July 9.]

I usually pick out the best plants I have and keep them in a cool, light, airy situation, thereby encouraging a good sturdy growth. I put in the cuttings this year January 23, and after being thoroughly rooted potted them into 2½-inch pots and plunged them in a mild hotbed, giving all air possible and removing sash after they were thoroughly established, weather permitting. About the end of March I take off the tops and root them in the usual way, these cuttings making the best plants for 6 or 7-inch pots. I should have stated before that as soon as the first lot are well rooted in the 2½-inch pots they are shifted into 3½, keeping them continually growing. These first plants make specimens for exhibition and also extra large plants in 7, 8 and 9-inch pots. The young plants are kept potted on as fast as necessary, using for compost two-thirds rotted sod with one-third rotten manure. After leaving the 2½-inch pots bone meal is added, increasing the quantity at each repotting and potting moderately firm. I usually put in about one-half inch of charcoal at the bottom of the pots; this keeps the roots loose and sweet.

The plants are kept pinched back until about the 15th of July to 1st of August. About September 1, they are transferred to the houses, giving all the air possible night and day. If cool damp weather sets in a little heat is put on with some venti-

lation at night. After beginning to show buds they are fed with any good liquid manure, weak at first and increasing in strength at every application, usually applied about once a week until buds begin to open.

Disbudding is done to a certain extent, but plenty are left as you all know. St. Louis people in purchasing any plant invariably look for plenty of buds, and as a rule they sell much better than when disbudded so close. Good plants can be grown if rooted much later than the dates specified. Very little tying is done, using as few stakes as possible.

Now as to varieties. Of course dwarf growing ones are best for pot culture, and I think about the best are Ivory, Jessica, Fred Walz, Major Bonaffon, John E. Lager, Vivand-Morel, L. Canning, Gettysburg, Harry May, Falstaff, Miss K. Brown, H. L. Sunderbruch and Diana, the last named being largely used for cemetery purposes. There are a great many other varieties also suitable, but I think the ones that are mentioned are the cream of them all. I have also several new ones of this year's introduction, amongst them Miss A. L. Dalskov, the new pink Ivory. It grows just like Ivory, also Ivoire Rose, which grows just about the same.

To Harden Smilax.

"Miss Ida E. B." of Swampscott asks: "Just how should smilax be hardened? I have been troubled by long strings wilting even with the stems in water."

I have noticed a great difference in the keeping qualities of smilax; that grown in a very rich bed and cut prematurely will be sure to wilt. The usual process of hardening plants or flowers used for decorative purposes is to give them a lower temperature and more air, but this does not hold good with smilax. It will harden in heat as well as in a cooler temperature, but must be left to the proper stage. Smilax when healthy becomes a deep green in color, and it is then mature and will last either in water or out for several days. All retail florists know that in cases of emergency we have to use smilax for a decoration which should have been growing for a month longer, and you must expect a wilting to take place, but as it has not wilted much sooner than the guests and the bride and bridegroom no harm is done. I have several times in these columns given the advice that when cutting a bed of smilax begin at one end and cut clean through as you need it, then you can treat the bed as it needs it. If it has made all the growth you expect withhold water at the roots; that will help to harden it, but never let up on syringing, for red spider has not a sweeter spot to dwell in than the reverse side of the leaf of *Myrsiphyllum asparagoides*.

W. SCOTT.

San Francisco Sweet Pea Exhibition.

The third annual sweet pea exhibition of the California State Floral Society took place on July 10, in Maple Hall, Palace Hotel. The show was not as good as the two former displays of the society on account of the lateness of the season, which made it very hard for the growers to get blooms of the different varieties which were up to the required type and form. However considering the lateness in holding it, the blooms shown were very fine.

Mr. M. Lynch, the seed grower of Menlo Park, had the best display of blooms and also showed the largest collection, numbering some seventy distinct varieties.

BED OF TUBEROUS BEGONIAS. GHENT, BELGIUM

He showed the very latest of Eckford's introductions, also the introductions of several American houses. Had it not been so late in the season many other varieties would undoubtedly have been shown. He also showed his set of new varieties of his own raising. The gem of this set was the new grandiflora white, "The Bride," which we understand is to be introduced this year. It certainly is the finest white sweet pea we have seen here, and with its perfect germinating power will undoubtedly prove a great acquisition. A new salmon striped variety was also shown. This is a very striking novelty possessing the fine rounded or hooded form of the finest Eckfords. It is a selection from Mrs. Jos. Chamberlain and partakes of the size of that popular sort. It is destined to become a great favorite on account of the beautiful combination of color. A new seedling after the style of Apple Blossom was shown that attracted great attention. It is much larger than the above named variety and invariably grows four flowers to the stem. The wings are buff with a faint tinge of rose. The standard is a light rose. It presents a very handsome appearance. In form and texture it is all that could be desired. A pink variety was shown that became quite popular. It is of a Daybreak pink, the wings being a shade lighter than the standards. It has the fine hooded form and is a beautiful self color. It is a selection from Apple Blossom.

An object of interest was a very peculiar novelty which originated from the Princess of Wales. It is a semi-dwarf in habit and has the most peculiar foliage of any sweet pea that has come under my notice. The leaves are large and leathery and of great substance. It produces a seed pod about the size of a bush lima and the seeds are of enormous size. The blooms also are most peculiar; the standard is a semi-circle or more nearly a circle from the center of which protrude the wings.

They do not curve as in the ordinary sweet pea but protude out in a parallel line. It is a very queer departure from the ordinary sweet pea and one that will be watched with interest. The blooms are of immense size and of the same shading as the Princess of Wales from which it originated.

Eckford's '96 set of novelties has proved disappointing to our wholesale growers this year. Crown Jewel is the best of this year's set, and it is truly a beautiful thing. Little Dorrit we do not find any improvement over Blanche Ferry. His Captivation is rather an odd color but we have been roguing it out of Stanley for several years. Its form is very poor and it burns badly in our sun. The same may be said of Alice Eckford in regard to form and not being able to stand our hot sun. The flower is also small. Mikado is rather disappointing, as more than two-thirds of it run back to Ovid, and also to Mrs. Jos. Chamberlain. However it has a good form and substance and with a little careful selection it may become an established variety. Countess of Aberdeen is a very beautiful variety. This first year it does not come true but runs back to a pink variety. The beautiful pink edge it has makes it very desirable. The form is very good also and next season we hope to see this grand variety well established.

A beautiful bunch of Meteor in Mr. Lynch's exhibit was grown in the shade and held the delicate salmon colorings which makes it so attractive. I understand one of our growers has got the hooded form on Meteor, and also that when we get this fine form on one of Eckford's varieties that burn in our sun they hold their color much better and are less liable to burn.

The Sunset Seed and Plant Co. also made a display of some of Eckford's recent introductions and those of other growers.

C. C. Morse & Co. of Santa Clara unfortunately were unable to show, on account of their sweet peas all being out of bloom. A discussion was started and referred to the committee of awards that hereafter at the sweet pea show the society should try and encourage the growers in raising new varieties by offering some medal or certificate of merit for meritorious sorts. A very creditable display of gladiolus was made by the society, showing many new varieties which were greatly admired. Mrs. L. O. Hodgkins exhibited some handsome new cacti.

METEOR.

Extent of Pipe for Two Houses.

We intend building two greenhouses 20x100 and would like to know how many feet of pipe and how strong a boiler it would take to heat them easily. Is it better to heat four houses 20x100 with one boiler?

M. R.

Replying to the question of M. R. as to how many feet of pipe it will take to heat two greenhouses 20x100 each, in the locality where he is located I think it would not be safe to put less than nine ordinary cast iron pipes $3\frac{1}{4}$ to $3\frac{1}{2}$ inside bore for each house; the same to return across the ends to the doors farthest from the boiler, or if he prefer to use 2 inch gas pipe, then there should not be less than thirteen rows in each house. In either case it is better to have a little surplus heating surface, rather than trust to barely enough, and then have to fire hard in cold weather to maintain the desired temperature, as this always means burning fuel extravagantly.

As to the strength of the boiler required to heat two such houses it should be strong enough to stand at least 50 pound pressure of cold water, be perfectly tight and well made, with the metal of as nearly equal thickness as possible in all

parts, and should have a grate surface equal and proportional to the heating surface. A fairly safe estimate for a boiler to heat two such houses would be to have fully 7 feet 6 inches of grate surface with provision for good free draft to smoke stack. This insures a clear bright fire at all times that it may be required.

In answer to the last question (i. e.) if it is better to heat four houses 20x100 with one boiler, I should hardly risk it myself unless I had been first fully satisfied that the boiler was an exceptionally good one, well made and fully equal in every particular to do the work required of it. The greatest objection of one boiler for such an amount of glass is that if an accident should happen (and when it does it is invariably during the coldest weather) then the whole contents are at the mercy of the elements. This means a considerable sum of money. I should very much prefer to take two medium sized boilers rather than one large one; connect them so that in very mild weather one would circulate the water all that was needed, and use the two when needed in colder weather. By this means considerable saving of fuel can be made in early fall and spring months, and where two or more valves are put on the flow pipes on each house. This plan works even better than running two fires all the time. By this I mean that in reasonably mild weather when it is only necessary to raise the temperature in the houses a few degrees, one-third, or even less, of the pipes is all that is necessary to keep the water circulating through, and by shutting off the balance you avoid heating a large volume of water uselessly, thus saving fuel and labor both. In setting boiler, the mistake very often occurs in building too small a flue and not tall enough chimney. This is very poor economy, as extra draft has to be put on at the ash pit door to create the desired combustion, and this often drives a large portion of the heat into the chimney, where it does no good whatever, except to swell the amount of the coal bill and cause more labor in stoking, all of which means a shrinkage in the profits, which are none too much under most favorable conditions at the present time.

JOHN N. MAY.

New York.

At the wholesale cut flower establishments last week is declared to have been the deadest week ever experienced. The weather has been insufferably hot and the streets present a deserted appearance, for everybody who can get away is out of town. The hot weather has had the natural effect on the quality of stock coming in, much of it being very poor. Carnations are small, sweet peas flimsy and roses present a most emaciated appearance. Frank McMahon's roses are an exception to the general rule, Brides, Bridesmaids and Meteors from this place are the best coming to the city, with large full buds, strong stems and fine foliage.

Hulsebosch Bros. are sending in a wagon load of Harrisii lilies every morning. They bring from \$2 to \$3 a hundred, which pays much better than \$5 per hundred in winter. Bulbs from some of the Bermuda growers are late in arriving, the growers on the Island claiming that the bulbs are not sufficiently matured to give good satisfaction. The dealers who have not yet got their shipments are besieged daily by florists who have placed orders with them, all frantic because they fear they will not get their crop in early. A look over the market reports of last

season might cool their ardor somewhat. There were plenty of Harrisii in the market early last winter that did not realize any more money than Hulsebosch is getting out of his outdoor grown stock today.

Auratum lilies are very abundant at present. For a showy window decoration nothing equals these; they are exceedingly effective and cost but little and a good-sized vase of them fills up a store window sufficiently.

Sweet peas are still plentiful but showing the effects of the hot weather. Some stocks of Blanche Perry are coming in with the petals so striped and mottled that it is hardly possible to recognize the variety. The growers think that the seedsmen sold them spurious stock, but most likely the trouble lies in the fertilizer used.

The meeting of the N. Y. Gardeners' Society on Saturday evening was a very pleasant affair. About thirty-five gentlemen were present and there was a good display of flowers, notably Iris Kämpferi. The medals awarded by the N. Y. Florist Club at the recent exhibition were distributed to the winners.

The New York Florists' Club has through its committee on awards given a silver medal and three certificates of merit to W. A. Manda for new roses.

Julius Lang and family are spending the summer at Echo Lake.

A visitor this week, H. H. Battles, Philadelphia.

Buffalo.

There has been signs this few days past of an utter stagnation in business, and what else can be expected? Even the cheap bouquet that is carried to the cemetery is more often than not the produce of the home garden, for he who reveres his lost friend sincerely will most likely be of that good sort that will cultivate his small garden. Cowper said "He that loves a garden loves a greenhouse too," but grand English poet that he was I can see nothing in it. It is certainly not poetry but in Cowper's days greenhouses were not so plentiful and he did not have the inspiring influence of an acquaintance of some of our greenhouse men in West Hoboken. Buffalo is a city of homes and detached houses, and the very large majority have a chance if ever so limited to cultivate a few flowers, and although I don't *hardly* aspire to Cowper's genius I would amend him and say "When you see a man spending his leisure hours in his garden and keeping the same neat and tidy you can trust him for a shave or set of furniture." The style I have assumed is Browning, without attempt at rhyme.

Mr. Mepsted has resigned the presidency of our club, but his resignation has not yet been accepted. We expect a good meeting this week, for these is only one more before the convention. We expect a large delegation to go from here to Cleveland.

You have not heard a word of sport from this city in many months. The fact is we are demoralized, everybody is on the hunt for the necessities of life, and has no time for its trifles. There was a time when Buffalo had a bowling team (you would think so if you saw all the trophies in a heap). Where is that team? "Like the leaves of the forest all scattered and gone." We will try however to get a team together. If we had only practiced as has St. Louis we would expect to put up a game, still without much practice there are some dandies here at the sphere.

There is D. B. Long, C. F. Christensen, J. H. Rebstock, W. A. Adams, S. Anderson, W. Milley, J. Milley, E. I. Mepsted, G. Asmus, G. Eckhart, W. B. Scott, W. S., Wm. Kasting and Phillip Scott, and I almost forgot W. J. Palmer, Sr. In choosing a prize winning team the captain would most likely begun at the bottom and work upwards, but you can't tell. We have never met to roll a game since Pittsburg.

We have had several fine showers of late which has come to make hay cheap, but helps the florists greatly. Carnations in the field are looking fine, better I think than for several years. In another page you will find a few lines about the best road to Cleveland, that is for eastern men.

W. S.

Philadelphia.

The most prominent objects in the stores at present are the water cooler, the palm leaf fans, and the thermometer. Except for the flutter of the fans, the silent trickle of perspiration and the occasional visit to the thermometer and cooler all is as still as a graveyard. Early in the day a few of the commission hustlers and growers put in an appearance, and although almost invariably turned down they come around on the morrow with the same please-buy-something expression on their faces, that sometimes leads to a compassionate sale.

Two to three dollars is the price for the best teas. Testout is now the best pink and Kaiserin is easily leader among the whites. Sweet peas while fine are a drug and sell from 20 cents per hundred down.

The following clipping from a daily newspaper giving an account of some flowers sent to Mr. McKinley a few days ago reads thusly "And one massive jar of superb red roses was just unpacked, sent by a Philadelphia florist, asking that they might have the honor of being named the Mrs. McKinley as they were a new variety." Who is the "Philadelphia florist" who has this "superb red rose"? We miss a good thing occasionally and this has also escaped us. While Philadelphia florists have held their end up in producing good things they seem to have drawn the line at new roses. To be sure there has been a few "sports" notably, Butler's Climbing Wootton, Beavis' White Perle and Burton's American Belle, but nothing apparently to compare with the superb red of this new variety. Please let us pass judgment on a few of the flowers.

Edwin Lonsdale's new Beauty house is now completed and planted. There is but one bed, the side table spaces being utilized for walks composed of cement with a border of the same material, which on the side next the center of the house forms the edging for the rose bed and on the other keeps the water away from the frame work of the base of the house. In this way the best part of the space is occupied by the plants and in every other particular the arrangements seem to be complete.

Wm. Fox of John Burton's establishment was badly injured in a bicycle smashup one day last week. No bones were broken, but it will take him a week or two to get into his normal condition. The bicycle is increasing in popularity to a very great extent and is proving a useful adjunct to business.

George Kester of Cardington, Del. Co., is erecting a house 125x50. Carnations and violets are to be his specialty.

Samuel S. Pennock has returned with his new partner and is kept busy receiv-

ing congratulations. He is erecting a very pretty house in Lansdowne which is to be his future residence.

The gunners are still speaking enthusiastically of their Baltimore trip and of the hospitality of their friends in Maryland. It seemed a trifle greedy to take so many prizes, but it really seems as if our gunners couldn't miss them if they wanted to. At the club medal shoot last Saturday the trophy was won by John Burton with a score of 23 including a handicap of two. Messrs. Reed, Colfesh and George Craig were good seconds with 22 including handicaps. Anderson, the scratch man, made 21. K.

St. Louis.

The regular meeting of the Florists' Club was held Thursday afternoon, July 9, with President Fillmore in the chair. The attendance was good, the best for some time. After the regular routine of work the nomination of officers took place and resulted as follows: For president John W. Kunz, Dr. Halstedt, and Fred C. Weber. For vice-president Frank J. Fillmore. For secretary Emil Schray. For treasurer Robert F. Tesson and Julius J. Benecke. For three trustees Fred W. Ude, Charles A. Kuehn and E. W. Guy. This closed the nomination and the election will be held at the next meeting of the club on the second Thursday in August. The payment of dues will be in order at this meeting. President Fillmore then read his essay "How to grow chrysanthemum plants for the market," which was well received. The question box was then opened; one question was "How to increase the attendance at our meetings." After lengthy argument on this question the answer was that every member take upon himself to be present at all meetings of the club. The meeting then adjourned.

This week trade is extremely quiet; there is no shipping trade and local conditions are equally flat. The rose stock that comes in now is very good, and the average price is \$2 and occasionally \$3 for extra fine stock. Meteors are about the best sellers. Carnations have dropped some in price, 75 cents per 100, and 50 cents for medium grades. Sweet peas are down to 10 and 15 cents a hundred.

Gladiolus stalks are selling at 2 and 3 cents. Asters are still \$1 per hundred. Smilax seems to be plentiful and only brings 8 to 10 cents per string.

J. A. Evans of the Quaker City Machine Co., Richmond, Ind., was a visitor last week.

Chas. G. Fleckenstein has returned after a week's trip to Indiana.

J. M. Jordon has gone east for the summer and will be away until September 1.

The picnic committee held a meeting at Jordan's store Tuesday afternoon and decided to hold the picnic at Clifton Terrace on Saturday, July 25. The committee will visit Clifton Terrace Friday afternoon and make full arrangements. The subscription list has been placed in the hands of the commission men, who will take up the subscription, also orders for railroad tickets. By buying the tickets from the committee the price will be 60 cents a round trip; at the depot they will cost \$1. The programs will be out next week. A fine band for dancing has been engaged, also a band of jubilee singers for entertainment. The prize list for bowling, shooting, running and jumping and other games will be out next week and mailed to all florists.

The bowling Monday night was good and so was attendance. Mr. Evans of

Richmond, Ind., was among the boys and enjoyed the rolling very much. Fred Weber was high man in three games, 546. John Young, who has been absent for six weeks, was again on deck and came in second with 537, and John Kunz third, 494. John Young was high in single score, 232; Fred Weber second with 207. A bowling team for the convention is out of question, as not one has as yet expressed his intention of going. J. J. B.

San Francisco.

Business has been very poor indeed during the last couple of weeks. We seem to have an overstock of everything. Longiflorums of the outdoor crop have come in and swamped the market, but from present indications we shall not be likely to have many more lilies this season. Auratums have made their appearance but as a general rule are of very poor quality. Roses are meeting with very poor success, and immense quantities of them are consigned to the dumps daily. Another thing is that the quality of the roses is as a general rule very poor at this season of the year. We note some excellent Testouts in John H. Sievers' store, which came from his own greenhouses. The blooms were immense and the stems good and stiff. There are quite a few hydrangeas coming in just now which meet with a fairly good sale. Sweet peas, although they can be had in immense quantities, are still holding their own. Lady Penzance is still in the lead as the most popular sweet pea, and justly so, for no other variety possesses such a taking color, together with its fine size and improved form. As the sweet pea season is getting advanced with us now the stems are getting shorter. We note some very fine vases of the new white sweet pea "The Bride" in Pelicano's store on Kearney St. This seems to be what we are looking for in the way of a white seeded white. Carnations, especially Portias, can be had in any quantity and of very fine quality, also gladiolus are very plentiful, and although they are very fine they are not much sought after. Some excellent lily of the valley is to be had, which seems to be the only thing that there is a demand for. All the growers seem to be busy with their greenhouses at present; this is evident by the little we see of them every morning. Nearly all the outdoor plantings of chrysanthemums are over for the season. We also see the asters are making their appearance.

Mr. George Ernst has returned from the springs, after a stay of several weeks, very much improved in health.

Mr. John Carbone is at present busily engaged with replanting at his place at Berkeley. Mr. Carbone is well known as one of our best chrysanthemum growers. He is planting chiefly Philadelphia, Dailledouze, Major Bonnaillon and Mrs. E. G. Hill, which he thinks are about the best sorts that have come under his notice. He showed a very fine batch of young seedlings of his own raising, of which he expects good results this fall. His stock of roses is getting into condition for his winter's work. His stock consists of Bride, Bridesmaid, Testout and Perle.

Mr. Baldocchi of Podesta & Co. is back at his post again after a severe illness of several weeks' duration.

Mr. John Vallance of the Sunset Seed & Plant Co. is staying in Menlo Park for the summer months while he is looking over stock.

The Womans' Exchange, a sort of a co-operative flower store on Post St.,

which is supported by the wealthy class in particular, reports business as fairly good now, notwithstanding the poor reports of the florists. They do not handle any high class flowers, only whatever grade of flowers is contributed by the wealthy class.

Mr. James B. Kidd, representing the Sunset Seed & Plant Co. is on his annual eastern tour.

Mr. Andrew McDonald, lately with M. Lynch at Menlo Park, has resigned and has taken a position with Mr. C. A. Baldwin at Mountain View.

Mr. Sidney Clack, accompanied by his wife, left for a two weeks' vacation last week. Mr. Clack will visit all points of interest in the Northwest. Mr. Mitchell will be in charge during his absence.

The work on E. W. McClellan's greenhouses at Burlingame is progressing rapidly, and Mr. McClellan hopes to begin the planting of his stock in a few weeks.

The Hobart-Baldwin wedding on Tuesday was the swell event of the year and was also a banner day for the florists. It was a white wedding and M. Lynch of Menlo Park supplied the great bulk of flowers. An enormous quantity of sweet peas were used. Mr. Lynch supplied over 100,000 blooms of his new white sweet pea, "The Bride" and over 1,000 blooms of hydrangeas. The church decorations were all under the supervision of the Misses Worn of Post street. This firm also had the decoration for the breakfast and reception. The bride's bouquet was made of white orchids, which were supplied by John H. Sievers.

The conservatory at Golden Gate Park is proving a great source of pleasure to thousands of people daily. It is claimed that more people have visited this conservatory this year than any other park conservatory in this country. The palms and ferns are also in excellent condition and the orchids have been a great source of pleasure to many. Mr. John McLaren takes especial pride in his stock of these beautiful flowers. On the outside of the greenhouses are planted immense beds of yellow pansies, which presents a very striking appearance. Nearly all the bedding is now finished, also the chrysanthemums are planted, but the rabbits are proving such pests that it's doubtful if many will escape.

Mr. Lester L. Morse of C. C. Morse & Co. and Mr. James T. Lynch, representing M. Lynch spent several days inspecting seed crops in the vicinity of Gilroy and Santa Clara last week.

Mr. Waldo Rohnert, who has charge of the flower seed department of C. C. Morse at Gilroy reports that growing crops are all doing well except nasturtiums and Japanese morning glories, which were wiped out with the frost.

Recent visitors: C. C. Morse of Santa Clara, Chas. Navlet of San Jose, Cal.

METEOR.

Toronto.

The combined excursion of the Gardeners' and Florists' Association and the Horticultural Society on Wednesday, the 22d, to the Model Farm of the Ontario Government at Guelph promises to be a good thing and should be well attended. The president and the officials at the farm have kindly promised to do all in their power to entertain the visitors and to make things as interesting as possible for them. There is a great deal on the farm, horticultural as well as agricultural, which would be of great interest to any horticulturist, professional or amateur. A very low return fare (one dollar

for adults, children half price) has been secured from the Grand Trunk Railway. Train leaves Union Depot 7:40 a. m., returning from Guelph 5:40 or 9 p. m., tickets to be obtained of the secretary, Mr. Carter, at his house, 280 Gerrard street, or at the depot on the morning of the 22d. Might I with all due deference to everybody's feelings and opinions suggest that this be made a grand re-union day among the gardeners and florists? We are after all all trying to reach the same goal, although our ideas of the best way to get there may differ. There are many things, however, on which we can all agree; surely we can lay aside all differences for at least one day in the year and agree to have a jolly good time together. The cause appeals to all. Come to Guelph, and bring your wives and families and sweethearts.

Could not some of our country friends also manage to be at Guelph on the same day and join in the festivities? E.

Boston.

Market conditions continue as reported last week. With the exception of a little stray funeral work occasionally there is nothing going on, and a spell of very hot weather has debilitated the stock as well as its owners, so that the quality has fallen off decidedly. A few asters are beginning to show, but with this exception there is nothing new in the market.

The exhibition at Horticultural Hall on Saturday was not as full as usual and hollyhocks which should have half filled the hall were conspicuous by their absence. The hollyhock disease appears to have almost exterminated this grand old favorite in this vicinity. A plant of *Adamia versicolor* in a large tub, well covered with bloom, was shown by Mr. Martin and received the Appleton silver medal. Carl Blomberg showed some fine blooms of hardy nymphæas, among which *N. sulphurea* was especially well represented. There were interesting displays of hardy perennials from Rea Bros. and J. W. Manning, and large contributions of native flowers from several sources. Shirley poppies from W. H. Cowing were splendid.

A. H. Poppey has leased the greenhouses at Reading formerly conducted by Charles Ingram.

The army worm has approached dangerously near to Boston, and owners of gardens are beginning to feel anxious.

Mr. Mulhall, recently with Doogue & Co. and well known in the trade here for the past twenty years, is very low with consumption.

George Mullen's store on Park street has been closed up by his creditors.

P. Welch and Ed. Welch with their families are summering at Old Orchard beach. Visiting Boston, C. Mertz, representing Aug. Rhotert, N. Y.

Chicago.

Everything is very quiet here, trade conditions and prices being much the same as last week. Good stock in roses sells readily for \$2 to \$3, but naturally there is a good deal of very poor material. Sweet peas are still extremely plentiful and cheap, most of them being rather short-stemmed. Smilax is rather too plentiful, and sells for \$10 to \$12.50. Good asters are held at \$1, but a good many poor ones are seen. Golden rod is sent in, but does not sell. There is a good deal of out door stock in different lines. Funerals have been quite numerous of late, the intense heat increasing the death rate, and this is the only work the florists now have. The demand for Ameri-

can Beauties keeps up, however, and good flowers sell out clean.

Nothing further has been learned in the Mailander affair, and the present location of that gentleman is still unknown.

Emanuel Pieser of the Kennicott Company is now at Mackinaw, and intends making the circuit of the lakes before his return.

Mr. and Mrs. Washburn and party are now at Delavan, Wis., where they will be joined by Mrs. O. P. Bassett.

Things are very quiet among the local fraternity; we have not even the athletic diversions of some of the other cities excepting baseball, so it is hardly likely that the Chicagoans will be represented in the athletic contests at the convention.

Jerome B. Rice of Cambridge, N. Y., was in town this week.

Kennett Square, Pa.

J. M. Palmer is building an even span house 36x96 and expects to equip with a tubular boiler.

J. Walters' Sons are erecting a new house 20x100 for vegetables.

C. J. Pennock has commenced a carnation house 22x106.

Wm. Swayne will build one new house 20x100.

Field plants, carnations, are generally looking very well; continued showers have been beneficial. A few who were delayed in planting out have had losses from an early drouth. P.

Kentias.

Please say which is the taller growing of the two kentias, *Forsteriana* and *Belmoreana*. A. M.

Kentia Forsteriana is the taller growing variety of the two, and is also usually more upright in habit.

The leaves of *K. Belmoreana* are generally divided into a greater number of leaflets also, the latter being somewhat narrower than those of *K. Forsteriana*, and the whole plant is more graceful. W. H. TAPLIN.

SITUATIONS, WANTS, FOR SALE.

All the above are in first-class order, well adapted for greenhouse heating either steam or hot water. Will sell cheap.

CLEVELAND STEAM BOILER WORKS, Cleveland, O.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Pittsburg.

Business has been fair the past week for a mid-summer season trade, and all the florists express themselves as being satisfied with the amount done at this time. The club held a business meeting on July 9. After routine business had been attended to, a very full discussion as to the best means of preventing cutting in prices, etc., was engaged in and a committee is to be appointed to formulate some plan or method whereby more uniformity will obtain among the florists, they to report later on; as this will require a greatest of thought and work no time was set for the committee to report. The members are arranging, as many as can do so, to go to Cleveland next month in a body. Mr. Harry Balsley of the Detroit Flower Pot Co. and one of Detroit's park commissioners was a very welcome visitor. He extended a hearty invitation to the Club to visit Detroit after the adjournment of the S. A. F.; it is very probable that a goodly number of the members will accept his kind invitation.

John Bader, treasurer, was at the meeting looking and feeling much better after his trip to the springs in Michigan.

Wm. F. Lauch of Carrick, Pa., is erecting two new houses, one 210x40 feet for carnations, and one 150x23 feet for chrysanthemums. This will give him 8 houses altogether. He is also putting in a new tubular boiler 60 H. P. and a new boiler house. His place will soon be one of the most complete here.

Wm. Standing, Sharpsburg, Pa., also is putting up a couple of new houses 20x150 with new boiler, etc., and improving by grading, etc., the grounds. His business is greatly in plants; with these improvements he expects to be enabled to take care of this increasing business very easily.

E. H. Beaker, East End, Pittsburg, is home from a Chicago trip. He says he had a very enjoyable trip and he looks as if his vacation had agreed with him. He has some valuable information relative to limit of excursion ticket; brother florists can obtain it on application.

Mr. Theodore F. Beckert as well as his brother Albert, have the sympathy of their many friends, each having lost by death this week a child, and another one of T. F. Beckert's is reported as very low.

REGIA.

St. Paul.

Trade has settled down to the usual summer dullness; cut flowers are not very plentiful and the supply of roses and carnations is just about equal to the demand. Funeral work and weddings constitute the bulk of the trade, though sweet peas and other outside flowers find a market.

Fred Franke has built 3 nice houses and intends to grow roses and carnations for the trade.

The assignee of L. G. Venzke has paid a dividend of 6 per cent to the creditors, this being the total realized from the assets.

E. F. Lemke has gone to New York to meet his daughter, who has been studying music in Berlin.

FELIX.

DETROIT, MICH.—Stephen Taplin, has been called in by the Regents of the state university at Ann Arbor to give expert opinion on the condition of the trees, shrubs, etc., on the university grounds, and will have charge of an extensive course of pruning, replanting, etc., during the remainder of the season.

VAUGHAN'S INTERNATIONAL PANSY MIXTURE

THIS mixture is composed of the choicest selections from nineteen American and European Specialists in Fancy Pansy Seed-growing, and is unquestionably The Best General Mixture in Existence. This is the Pansy mixture for every Florist who would realize the highest prices for his flowers and plants. It contains the cream of the cream of every noted Pansy growers' product the whole world over.

The Pansies growing for this mixture have been repeatedly personally inspected by us in the fields and we thus became acquainted not only with the quality of the general assortment of each individual grower, but we also make selections of their choicest varieties. Thus it can be readily understood that we are in position to make up The Finest Combination of kinds in the world, and this we are doing each year with our "International Mixture." It contains, besides all the choicest German Pansies in their wide range of beautiful colorings, the Giant Sorts in variety, with

many Pink, Red, Chocolate, Slate and other Novel Shades. It contains all the separate colors of the Giant Trimardeaus with their immense flowers and rich colors. It contains the Giant Cassier and Bugnot strains, the product of celebrated Scotch strains, the Falaise and Boulogne Giants, in fact, there is no strain of any of the celebrated Pansy Specialists not represented in our INTERNATIONAL MIXTURE. Price, per oz \$10.00; ½ oz. \$5.00; ¼ oz. \$1.50; trade pkt. 50c. (Less 10 per cent. for cash.)

GIANT PANSIES.

Giant Trimardeau, white, large white with a violet center. Pkt. 25c; ¼ oz. 60c; oz. \$4.00.

Giant Beaconsfield, pkt. 25c; ¼ oz. 60c; oz. \$4.00.

GIANT TRIMARDEAU IMPROVED. This strain contains all the new colors of Trimardeau. Pkt. 25c; ¼ oz. 45c; oz. \$3.00.

GIANT CASSIER, a very choice variety of colors, each flower is marked with 3 or 5 blotches, pkt. 25c; ¼ oz. 75c; oz. \$5.00.

GIANT BUGNOT, the flowers are of enormous size, perfectly round, of great substance. Our "Bugnot" contains shades of red, bronze and reddish brown that are not found in any other mixture, pkt. 50c; ¼ oz. \$1.00; oz. \$6.00.

AURORA, a new, pure white giant, pkt. 50c.

GIANT GOLDEN QUEEN, new, golden yellow without any blotches, pkt. 50c.

Giant Paris Pansy Mixture.

The flowers of this strain are as large as the Trimardeau and far superior in color and in substance of petals; having a stout and stiff flower stem. Oz. \$4.00; ¼ oz. \$1.20; ¼ oz. 45c; pkt. 25c.

VAUGHAN'S GIANT PANSY MIXTURE.—This mixture comprises all the above strains and colors, and will give satisfaction to everyone whose trade demands Pansies with large flowers. Per oz. \$5.00; ¼ oz. \$1.35; trade pkt. 50c.

VAUGHAN'S PREMIUM PANSIES, MIXED.—Embracing many shades and colors. Pkt. 25c; ¼ oz. \$1.00; ¼ oz. \$3.25; oz. \$6.00.

CHICAGO PARKS BEDDING PANSIES.—Many colors mixed. 4 ozs. \$3.00; oz. \$1.00, ¼ oz. 30c; pkt. 10c. Write for list of separate colors.

Giant Auricula Colors, very beautiful, pkt. 25c.

Giant Violet Blue, pkt. 25c; ¼ oz. 50c.

Giant Yellow, Five Spotted, new, fine round flowers, pkt. 25c; ¼ oz. 45c.

Giant Hortensia Red, new same shade as Hydrangea, pkt. 25c; ¼ oz. 75c.

Giant Emperor William, ultramarine blue, pkt. 25c; ¼ oz. 60c; oz. \$4.00.

Giant Trimardeau, mixed, pkt. 10c; ¼ oz. 50c; oz. \$1.50.

Giant Striped, pkt. 25c; ¼ oz. 65c.

Giant Trimardeau, Yellow, very showy color, good seller, pkt. 25c; ¼ oz. 45c; oz. \$3.00.

Giant Trimardeau, Purple, flowers very large, pkt. 25c; ¼ oz. 45c; oz. \$3.00.

Giant Coal Black, pkt. 25c; ¼ oz. 60c; oz. \$4.00.

Giant Copper-Color, pkt. 25c.

Mammoth Butterfly Pansy.

A very distinct strain. The flowers are very large, of best form and substance. In coloring they are varied, seldom two alike in handed plants. Oz. \$3.00; ¼ oz. 85c; ¼ oz. 50c; pkt. 25c.

remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to se-
cure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

Cincinnati.

Business has been very dull the past
week all along the line; especially does
this apply to the flower market. Down
town florists receive an occasional funeral
order, about enough to keep them from
going to sleep.

It is rumored that Mr. Rob. Betz will
occupy the Cincinnati Floral Co.'s store
on Walnut St. the first part of September.
Mr. Gear bought out Mr. Meyer's store
on Vine and 15th Sts. Mr. W. C. Nolan
of Walnut Hills will soon leave for the
East; he intends to spend a couple of
weeks at Rockaway and Manhattan
Beach, Long Island. Thursday next, July
23, will be a gala day for the Cincinnati
Florists, this being the day for the third
annual outing. There will be an excu-
sion to Coney Island, where there will be
a bowling contest, ball game, quoits,
foot race, young ladies' race, girls' race,
sack race, boat race and donkey race.

The various committees in charge are
busy arranging suitable prizes. In the
bowling contest, the baseball contest,
and the quito contest, a cash prize of \$10
will be awarded to the winners. To the
winners of all the different races a suit-
able prize will also be awarded. The one
selling the most tickets for the occasion
will also be awarded a prize. From all
appearances the winner of the last will
be Mr. Wm. Murphy, who has up to date
sold about 300.

The committee extends a cordial invita-
tion to all florists far and near; they have
completed all arrangements and can guar-
antee a good time.

Committees of arrangements are earn-
estly requested to be on hand to take the
9 a. m. boat. Programs can be had at
H. L. Sunderbruch's. H. SCHWARZ.

Exhibition at Cleveland.

A copy of the printed premium list for
the "Cleveland Centennial Floral Exhi-
bition" to be held Aug. 18 to 20, during
the S. A. F. convention, has reached us.
In addition to the prizes offered by the
local club several valuable cash prizes are
offered by the S. A. F., and the society's
certificate of merit will be awarded for
the best collection of new and rare plants.
Aug. 19 there will be a competition in
floral arrangements. The list covers all
flowers of the season and the display will
undoubtedly be a most interesting addi-
tion to the usual trade exhibition. Copies
of the list may be had by addressing the
superintendent of the exhibition, Mr. E.
H. Cushman, Euclid, O.

When writing to any of the adver-
tisers on this page please mention the

VISITED CHICAGO: Jerome B. Rice, E. S. Wetherly of Sioux City.

THE proposed sale of the stock of the N. B. G. Co. set for July 17 has been postponed for one week.

MR. E. SCHAEFFEL, of Vilmorin Andrieux & Co., will arrive in New York July 19 on the S. S. LaGascogne.

MR. LEM W. BOWEN returned from Paris July 11. He reports crops on the other side all right and an average yield except perhaps some varieties of turnip.

BOSTON.—James F. M. and John K. M. L. Farquhar formerly of the firm of R. & J. Farquhar & Co., have formed a partnership with the name of Farquhar Bros. and will open about September 1st at 17 Merchants Row. Mr. John Farquhar sailed for Europe per steamer Gallia on Saturday, July 11, to select stock.

Want Assignment Set Aside.

A petition was filed in the County court to-day to set aside the assignment of the Northrup, Braslan, Goodwin company. The latter is the large seed firm of Minneapolis and Chicago which made an assignment in May last. The petitioners are Howcroft & Watkins, who have a judgment against the seed company for \$1,670.

The petition sets up that the assignment of the assets of the company in this state to William T. Fenton is void for the reason that the company through its directors had already made an assignment of all its property to Elbridge C. Cooke at Minneapolis. The petitioners declare that the assignment in this county was unauthorized and the company having handed over all its property to Cooke had nothing more to assign. They ask that the assignment be declared void and that Fenton be ordered to deliver the property in his possession to a receiver to be appointed by the Circuit court. The assignee was ordered to answer the petition in five days—*Chicago News July 17.*

Catalogues Received.

Quaker City Machine Co., Richmond, Ind., ventilating apparatus; L' Horticulture Internationale, Brussels, Belgium, orchids and new plants; Mexican Plant Co., Maravatio, Mexico, bulbs, orchids and cactus; Giblin & Co., Utica, N. Y., heating apparatus.

C. LENGENFELDER,

Berleau and Western Avenue, **CHICAGO.**

Syracuse, N. Y.

At the meeting of the Central N. Y. Horticultural Society the reports from different counties for the fruit outlook seemed very discouraging, apples being the only fruit reported fair, with quinces a complete failure, the trees having been killed in many places to the roots last winter. Messrs. Smiley & Ham gave some valuable information on their method of protecting berry bushes, which was to lay the canes down in late fall and cover with three inches of soil. Mr. Smiley made a test last season with two rows of the thimbleberry; the one that was treated as above being now loaded with fruit, while the other which had only a light straw protection has no fruit to speak of and its growth is scrubby. One of the members gave an account of how J. Elletson of Auburn blooms his callas ten months in the year, his plan being to plunge out in open frames in early summer the plants that have been grown all winter, care being taken to tie up the old leaves, as that is where a good many of the first flowers come from; in fall they are housed as usual and continue blooming all winter, the only period of transition in their growth being for the first four or five weeks they are put into the open air. They are only potted once in three years and have liberal doses of manure water.

Some of the florists report a good trade in funeral work the past week, but white flowers are very scarce. A fine flowered plant of *Dendrobium suavisimum* was noticed in Quinlan's store window and attracted much attention. Since the last writing we have been blessed with a rain and outdoor stuff begins to look brighter.

ALPHA.

Some "Odoriferous" Grafting.

The "fool killer" must have been neglecting his duty in Massachusetts lately. A Lawrence (Mass.) newspaper of July 6 regales its readers with the following choice bit of horticultural information (?), gleaned in North Andover:

Some peonies smell, and some do not, and many people who admire these pretty June flowers wonder thereat. It was the late Gen. Henry K. Oliver, father-in-law of Mr. Joseph P. Battles, who introduced the odor into the peonies, by means of grafting together the roots of rose bushes and those of peonies. The odoriferous peonies are sometimes called Oliver peonies for this reason.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Rochester, N. Y.

Very dry weather prevails in this vicinity; everybody complains that stock is suffering badly; the lawns are dried up in many spots and flower beds look withered where they are not well supplied with water. The light, sandy soil on places near the lake seems to hold the moisture far better than the loam or clay in other districts, and the plants in the sand have made fairly good growth, while in the stiffer ground they are at a standstill. Outdoor flowers show the effects of the heat and dryness; sweet peas are smaller and have shorter stems than usual; the lilies do not last so long, and other hardy stuff drops quickly off the stems. Trade in general is very quiet, as is usual at this season; aside from funeral work very little else is done in the stores, but after all they keep a very creditable show in their store windows, composed mostly of the cheaper flowers, ferns in quantity, palms and various other ornamental plants, for which there is still a limited demand. In the greenhouses everybody is busy yet, either throwing out and replanting roses or chrysanthemums. Many have finished up their rose houses, but chrysanthemums are not all planted yet. The repotting of palms and ferns is still going on, which along with the ordinary every-day outdoor work, keeps the greenhouse men constantly busy.

Mrs. F. Schlegel and her daughter of the firm of F. Schlegel & Sons left here last week for a prolonged trip to Europe; they will remain away for three or four months. Mr. John Charlton and wife are also on a tour through England and the continent. J. B. K.

Kansas City, Mo.

The Florists' Club met Thursday, July 9, the regular monthly meeting, at the greenhouses of R. Jarrett. The meeting was well attended, a majority of the members being present. It was decided to hold a picnic at Budd's Park, July 21, and it was requested that every Kansas City florist shut up shop for the day and bring their wives and best girls and have a rousing good time. Mention of the '96 'mum show was enthusiastically received, and a committee was appointed to look up a hall or place to show in, if possible with twice the space of the hall used in '94 and '95, as everything points to a larger show than ever, there being more 'mums grown to meet the sure prospects of an increased trade. As everyone seems to be going to enter for prizes this year, the exhibit promises to be very much larger. It was also decided if any way possible to hold the show for a week, making every day a "special day." After the regular business was disposed of, those present were invited into the spacious parlor and dining room of Mr. Jarrett, where a bounteous repast provided by Mrs. and the Misses Jarrett was partaken of, not forgetting the pleasure of listening to some fine music, both instrumental and vocal, provided by Miss Jarrett and others. After this the meeting broke up with good wishes and good night to our kind hosts. The next meeting will be held at the greenhouses of Mr. A. Barbe, Aug. 13. B.

THE ANNUAL CONVENTION NUMBER

— OF THE —

American Florist

WILL BE ISSUED

August 15.

In addition to the usual convention matter it will contain a series of elaborately and richly illustrated articles on the use of Hardy Plants, showing the Florist not only how to use these plants to the satisfaction of customers but how to make them a source of profit.*****

This last should receive the earnest attention of the trade at this time, for the growing demand for Hardy Plants can not with wisdom be ignored. It should be met in such a way as to bring the most returns to the Florists' cash drawer. In our Convention Number we shall give the views of the ablest men in the trade on this subject and will include many illustrations that will be very useful to the *Florist* in presenting the subject of Hardy Plants intelligently and profitably to his customers.*****

This issue will reach every possible trade buyer of consequence in America and will have great permanent value to the advertiser, but there will be no increase over our regular rates, which are*****

News Notes.

YORKLYN, DEL.—N. S. Way is building two houses 20x100 for tomato forcing.

HAZLETON, PA.—H. W. Montgomery is building an additional house 100x20 for roses.

BURLINGTON, VT.—John Wilson has purchased the stock in the store recently conducted by A. W. McIntosh.

WILLOWDALE, PA.—Rakestraw & Pyle will add two houses 20x100 for tomatoes and two 8x100 for mushrooms.

TOUGHKENAMON, PA.—Wm. Richards has in course of construction two houses 20x100 and a violet house 8x100.

MACOMB, ILL.—S. T. Danley is building three houses, one 28x65 for roses, one 11x65 for carnations and a lean-to.

GENEVA, N. Y.—G. R. Watson of the nursery firm of R. G. Chase & Co., was married on June 14 to Miss Anna M. Chapman.

CONCORD, N. H.—The N. H. Horticultural Society will hold its third annual exhibition at Phoenix Hall in this city on September 22-24.

DETROIT, MICH.—A recent issue of the *News-Tribune* contained an illustrated article on city shade trees by Stephen Taplin, in which special attention was given to the need of expert instruction in street planting.

KINGSTON, N. Y.—Valentine Burgevin, who for a period of forty years has been the leading florist in this city, has retired from business. He will be succeeded by his sons George and David under the firm name of Valentine Burgevin's Sons.

CONCORDVILLE, PA.—P. M. Sharpless is starting a new plant of four houses 20x100 for carnations and tomatoes, and 1 violet house 8x100, and will put narrow houses with shingle roof between his large houses for forcing mushrooms.

FARMINGTON, ME.—The annual convention of the Josselyn Botanical Society of Maine opened in this town on July 7 and continued four days. A large attendance of members and others from every section of the state was present, and interesting papers were read by a number of specialists. Officers were elected as follows: Honorary president, Dr. Wm. Wood; president, A. L. Lane; secretary, Prof. M. L. Fernald, Cambridge, Mass.; treasurer, C. H. Knowlton.

Scranton, Pa.

Trade is rather spasmodic, though on the whole things are moving along as well as could possibly be expected at this season of the year.

During the past week Mr. G. R. Clark had a prominent wedding decoration, which was carried out on a most elaborate scale. Sweet peas, roses and carnations were used in profusion and to good advantage.

Florist Mause is about to join the firm of Davis & Bigelow, Davis & Co. to be the name of the new firm. Homo.

The products of combustion in the

"SPENCE" HOT WATER HEATER

are not allowed to reach the smoke-pipe in a direct line. They are obliged to travel over and around the water so many times (see cut showing arrangement of flues through which heated gases pass) that when they finally leave the heater they have imparted all their available heat to the water. This of course means economy in the consumption of fuel.

Chrysanthemum Notes.

The plants in the benches should now be given a top-dressing of manure. We do not use the manure too fresh, but prefer that which was made last winter and has been turned over once or twice. Manure made during the summer months has not the strength of that made during the winter when the animals are fed much more grain than is generally the case at this season of the year, and another thing, fresh manure attracts all the different kinds of insects, and they quickly take advantage of it for an abiding place. Cow manure is generally used for top dressing, but if sheep manure can be obtained we would advise the using of a mixture of both, about one-third sheep manure to two-thirds cow manure. It is sometimes advisable to mix in a little good fibrous loam, as it helps to keep the manure in place, binding it together, and prevents the washing of the manure to the back of the benches. A sprinkling of fine ground bone and lime on top of the soil before placing on the top-dressing will be of very great assistance when the plants begin to develop their flowers. The lime seems to cause the bone to act much more quickly than when the bone is placed on the ground alone. It used to be our custom in making up the compost heap to sprinkle the lime on the top of the manure and then sprinkle the bone on top of the next course of sod; then when we turned over the heap we would often find small lumps of bone covered with mould, but now we use the bone and lime together, and when we turn the heap we find that the lime in dissolving had freed the manurial qualities of the bone and the whole had thoroughly dissolved and become disseminated through the heap. After the top dressing has been put on discontinue the use of liquid manure until the feeding roots have run up and taken a good hold in the mulch.

The small bush plants grown in pots should now be shifted into their blooming pots; 6-inch pots should be large enough unless the plants were started too early and have now grown too large. Those that are in benches can remain there for a month longer yet, and both those in pots and benches can be stopped for some time yet. The middle of July used to be the date for stopping bush plants for the last time, but if you want to grow these

low, small bush plants that so many people desire, you will have to continue stopping until the last of August. There is plenty of time after that date for the plant to make a six inch shoot, on top of which it can bear its flower. Some varieties, however, like Ivory do not want to be stopped quite so late, for this variety sets its buds very early. Other varieties if stopped too late will grow blind as it is termed; that is will not set any buds. Mr. Geo. Bullock, Golden Hair, and C. B. Whitnall can be placed among these. If the grower does not know the habits of the different varieties the 15th of August is a good date to cease all stopping, and then he can experiment with a plant or two of each variety which he desires to grow and watch for the result.

The plants to be grown for sprays should now be stopped for the last time, for you want a good long stem to make the flowers marketable. These plants can now be fed a little weak liquid manure, and once a week is often enough when you start. They will not begin to set their buds until about the 10th of September, and there is plenty of time yet before beginning heavy feeding. They should be carefully kept tied up so that they receive all the benefits possible from the air and sun, and have good straight stems when they bloom.

ELIJAH A. WOOD.

Carnation Notes.

We had for a time quite dry weather; copious rains came last Sunday in time to relieve all vegetation from serious suffering. Carnations have a splendid stand at our place, and I see the same as far as my scope of observation extends, which as I have said before is rather limited; but reports from all over the country are very favorable, and the outlook for good strong healthy plants to house is very encouraging.

Those who followed instructions, and commenced the preparation of the soil for the benches last fall, should bear in mind that planting time will soon be here, and anything they wish yet to add, as well rotted manure, bone, horn shavings, wood ashes or anything that would be of benefit, to supply a lack in the soil, should be added now, giving the soil a final turning and mixing. Be always careful not to handle the soil at all when wet. I would not advise making the soil too rich, for several reasons that I will try to explain. I would rather see the soil in

such a condition that it contains a sufficient supply of well decomposed ready food, than a lot of raw undissolved matter. When a plant is lifted we can only preserve a part of the roots; in fact if all the roots adhered to the plant, we would find it rather cumbersome in transplanting, and would to my belief rather retard immediate root action to some extent; but the root pruning the plant receives in the process of lifting we may consider sufficient. The plant is torn from the ground and receives a complete check; is transplanted in the new soil on the bench; it will take up moisture through the roots, but about the same as a cut branch will when set in water. Its power of discrimination is disturbed; I may say the sense of taste exists only in the fine hair roots that were left in the ground when lifted. The plant will and has to absorb moisture, water, from the soil, to neutralize the evaporation through the leaves, and keep the plant in a working condition. Only water is needed, but in an overstocked soil much uncongenial matter and indigestible raw food is absorbed with the water. Root action, the formation of new roots, has to come as in a cutting, from the stored up resources in the plant, and all the raw food in the soil is of no benefit, rather injury, caused by the involuntary absorption with the water, when at the time the power of discrimination is disturbed.

Again we all know plants can be overfed, especially at the time when they are unable to assimilate and digest all the food piled around them, they should have that later on when they grow stronger, become thoroughly established and then it can be best applied in liquid form or a top dressing.

These are the reasons why I advise not to make the soil too rich, and recommend to add all the nourishing elements in time, to be thoroughly incorporated in the soil, and have time to decompose and change into ready food to be available at the time when plants are convalescing from the rude shock they have received by transplanting. This is the time when ready digestible food is of the greatest importance. Plants may overcome such mistreatment, but much valuable time will be lost, and the abundance of raw material, and the lack of ready soluble food is very often the cause why plants will not take immediate hold of the new soil, turn sick, and become the prey of disease. We cannot grow any good blooms, without plenty of nourishment, but when and how to apply it, makes all the difference.

FRED DORNER.

Cypripediums.

It is a fact well known to orchid cultivators that there is no genus so satisfactory as the cypripedes; there is a sure crop of bloom, quite often twice in the year; the flowers are of long duration, long enough for the grower to keep them until he has a customer who appreciates a good thing, the plants will thrive in the shady corners with nominal attention, and most satisfactory is the knowledge that the plants do not deteriorate as the years go by.

I know of one of the best rose growers who grows a large quantity of *Cypripedium* insignie. In the summer during its growing season, it occupies the benches of the propagating house and stays there until after the crop of flowers is marketed, then the plants, huge specimens, are placed under the benches until the propagating season is past and the cypripediums have had a good rest and are starting to grow again and need light and air during their growth. It is a side issue, but these often make up the difference between failure and success in business.

The group of cypripedes shown is as they appeared during the month of May; there was no attempt at artistic arrangement, for the camera would not admit of a group of large dimensions. It is composed largely of *C. Lawrenceanum* and allied kinds, such as *C. barbatum*, *C. ciliolare* and others of hybrid origin. The *Selenipedium graude* shown is one of the triumphs of the skill of the hybridist. It is superior to both of its parents as a garden plant, having exceptional vigor, and retaining most of the flowers on the stem until all are open and available for use.

The other photograph shows *C. Lowii* and *C. selligerum majus*, the latter being one of the best and most vigorous hybrids among cypripediums. Our plant came three years ago in a three-inch pot and is now in an eight-inch and a fine specimen. It is a much more vigorous grower, larger flower and freer to bloom than the type. *C. selligerum majus* is one of the many fine plants that have been sent out by the Messrs. Veitch, and is the result of a cross between *C. barbatum* and *C. philippinense*. E. O. ORPET.

South Lancaster, Mass.

Dendrobium Alba-sanguineum.

The beautiful dendrobe that has been favored by the authorities with the above name, has had to stand ever since its introduction in a living state as one of the misnomers of the earlier botanists. The name would imply white and red, but the flowers really are a buff yellow with deep crimson markings on the lip, and of unusual size for the dwarf habit of the plant. Like all other dendrobes it is a native of the East Indies, where it has a wide distribution, and as a garden plant, is of dwarf tufted habit, of very easy culture, and one of the handsomest of the genus. It is a pity that its influence cannot be felt in hybridization; we have tried many times to use it both as a pollen and seed parent, but hitherto it has refused to be potent in either direction, nor do we hear of any hybrid that has affinity to *D. alba-sanguineum*. E. O. ORPET.

South Lancaster, Mass.

Cattleya Superba Splendens.

This is one of the few true cattleyas that come to us from Brazil. It inhabits a wide area of Equatorial Brazil, and needs in our system of culture, the warmest part of the orchid house. It should be kept in the winter in a temperature of at least 60°, and when treated thus and given plenty of light and air in summer, we find no difficulty in cultivating it year after year, and it has never failed yet to flower twice during the summer. *C. superba splendens* is one of the richest colored species we have, and well worth cultivating in the most select collections.

E. O. ORPET.

Miscellaneous Seasonable Hints.

By the time you have your roses and chrysanthemums planted and a general clean-up you begin to receive the first arrivals of *Lilium Harrisii*. The lilies are hurt by remaining out of the ground any length of time, and if it is not possible to get them potted at once you can put them in flats and cover with dry earth; that will prevent their drying out till you can get at them; 7 to 9 has not yet arrived with me, but 5 to 7 have, and the first arrival is already potted. With us the *Harrisii* lily is not alone a great Easter favorite, but it has become an essential at all seasons when it can be had, which is now all but a few months in the year. Although not a seasonable hint, yet I might mention how well it pays to save your old bulbs in the spring that you have cut from and plant them out in April in a good piece of ground. Many, in fact most of them, will send up flowering stalks, and how useful they are in July and August. It well pays for the little labor it costs, only don't treat the bulbs too barbarously between the time of cutting the flower and planting out time. Give them some light and not much water. It is desirable to have flowers from the newly bought bulbs as early as possible, and they can be had from middle of October on throughout the winter. For early forcing the small bulbs are much the best. I once tried with a view to save pots and room a lot of 5 to 7 bulbs in square boxes about 15x15 inches, planting 16 bulbs in each box. It was not a success in any feature. A 5 to 7 bulb deserves a 5-inch pot, nothing less; it is not the pot that will take up the room on the bench, it is the plant when well grown, and a 5 inch will give the roots room enough to develop a good flower and healthy plant. For the early crops there is no advantage in placing them outside. Set them on a bench in any house that is shaded and cover the surface of the whole batch with a couple of inches of excelsior or straw; that will keep the soil from drying out every day. The continual drying out and watering is anything but beneficial to the bulbs. When the growth appears of course remove the covering. If you have no bench to spare a frame will answer, but cover with glass with plenty of ventilation, and be sure that in time of heavy rains the pots are not standing in water. Do not plant the bulbs deep; if you can just see the top of the bulb after the first watering you will be just right. I have known young men to say and old men to think that because it is proper to plant a lily bulb or a hyacinth 6 inches below the surface when planting a bed or border that the same conditions should exist when forcing the plants in pots. Not at all; it is quite a different case.

With the larger size bulbs and those wanted for late winter and Easter it is no use delaying potting when you have the time and material. It is not the time you plant that will determine the flowering; it will be the temperature you give them and the time you begin to force or bring them into the houses. An excellent plan with the large bulbs that you are growing to sell as plants, and which should have a 6 or 7-inch pot, is to let the top of the bulb and the soil be a good 2 or 2½ inches below top of pot. When they have made a growth of 4 or 5 inches about the time you are housing them after 'mums are cut, say end of November, you can fill up the pot to proper depth, and this addition of soil will be of benefit to the roots, which are sent out from the stem above the bulb. Lilies like a light

GROUP OF CYPRIPEDIUMS IN CONSERVATORY OF MR. E. V. R. THAYER, SOUTH LANCASTER, MASS.

rich soil. By rich I mean plenty of decomposed manure with the sandy loam, but no manure unless it is well rotted. Finally, why the smaller bulbs are so much better for early forcing than the large is that as 90% are used for cutting you can get most all the flowers out when cutting a stem and sacrifice few buds, and all those who make bunches of lilies know how much easier it is to make an artistic bunch with stems of 3 or 4 flowers than one with three open flowers and 5 buds.

It is time to sow mignonette on the bench for winter cutting; sow without delay; 15 inches apart each way is close enough. A few seeds sown at that distance can be thinned out to one strong plant when they are up an inch or two. A rather heavy rich loam will produce the finest spikes; 6 inches of soil is none too much on the bench. Mignonette transplants badly, and it is best sown where it is to grow.

Pansies that are wanted for winter bloom should now be sown, as only a small quantity for this crop is needed. They can be sown in a flat and kept in a shady place till large enough to transplant, but sow thinly or they will be spindling plants; and look out for red spider; it does not always occur with pansy seedlings, but when it does it is ruination to the little plants and is hard to dislodge. Pansies to be profitable in winter must have a higher temperature than violets, and while the latter can be, and in many places are, grown with great success where not a ray of sunshine reaches them during the five dark months of winter it would be folly to expect *Viola tricolor* to bloom under such conditions. All the light and sunshine that can be gathered is needed for the pansies, and not less than 45° at night for temperature. After shifting the date of sowing pansy seed—for spring sales—many times

during the last twenty-five years I have determined that for this latitude the middle of August is about right. If much sooner they become too large when winter sets in. If much later they are too small in the spring to flower early enough for early spring sales. Get the best pansy seed you can buy, don't be guided so much by the beautiful red, white and blue pictures you see in the literary works of our artist seedsman, but find out who is well known as a specialist and reliable firm with these favorite flowers. Sow in a frame and cover with a shaded sash, which should be raised four or five inches back and front. When well up remove the sash entirely or they will draw up weak. Don't think a few extra hours in carefully sowing is foolishly spent. Sow in drills two or three inches apart, covering just sufficient to hide the seed, and don't sow too thick in the drills. It is impossible to tell in writing how to let the seed drop from your finger and thumb; it would be as impossible to teach a man by writing how to handle a pen, surgical instrument or a billiard cue.

WM. SCOTT.

Circulating Steam and Hot Water.

We are putting in a new 25 H. P. boiler and intend running hot water and steam. How many openings and what size return and openings would be necessary?

HOT WATER AND STEAM.

Your correspondents "Hot Water and Steam" have struck a new idea, and one that seems to me hardly practical. To circulate steam and hot water both from the same boiler is something new and I have not been able to find any engineer who will endorse it.

Looking at the thing from the common sense standpoint, I am compelled to say that I think the thing is entirely impracticable.

I would advise "Hot water and Steam" to confine the circulation to one or the other system, whichever they may think will suit their purpose best. For a 25 horse power boiler, if for hot water circulation, not less than a 5-inch outlet for flow, and a 3-inch inlet for return should be used; the outlet of course should be on top of the steam dome, and the return at the bottom of the boiler. If they intend to use it for steam, then probably a 4-inch outlet for the steam and a 2½ or 3 inch for the return condensed water would be all that would be necessary. To prevent the steam forcing the water back up the return pipes, it is always best to put a return steam pipe as low as possible in the boiler pit before returning them into the boiler.

"Unless Hot water and Steam" intend to keep a night fireman, my advice would be to confine themselves to hot water circulation, and in the end I think they would find it much more economical and also much more satisfactory. I know that this is contrary to the advice of some of our people who have steam in regular use, but I am simply giving my experience in the matter. We have a steam plant here that is conceded by all who have seen it to be as good a plant as can be erected, but we are very apt to have an elbow burst or a union give out, or a hundred and one other little items occur, creating more or less trouble and certainly constant watching all the time, whereas in hot water circulation I do not think we have spent one hour for repairs upon any of our systems of hot water since they were erected. Furthermore our hot water heating is unquestionably cheaper in point of fuel than our steam heating, as we have kept very careful records of all our systems ever since they have been in operation, and we find this is the case every year, which combined with the certain amount of annoyance

and care required in looking after the piping and so on, connected with our steam apparatus, we find a considerable item in advantage of hot water.

JOHN N. MAY.

The Way to Cleveland.

I have already received some enquiries from eastern friends about the boat from Buffalo to Cleveland, and although the Secretary may give more official notice later, it seems to me a little information at once is not too early. There is a magnificent boat leaving Buffalo every night at 8:30 Eastern standard time, running direct to Cleveland, reaching there about 7 o'clock in the morning. The boat may not be quite as well as one of the sound steamers, but almost. The fare is \$2.00 without stateroom. It is really the way to go from the East to Cleveland or that part which you can go by water. For New York City and all adjacent territory the train which they should take should be with a doubt the glorious Empire State Express which leave New York City at 8:30 a. m., arriving in Buffalo 5 p. m. The ride is a dream and there are but three stops between the great city and Buffalo. All necessities will be found on the train. This gives you a few hours to breathe some pure oxygen. To Boston men, and that means all of New England, a train leaves over the Boston and Albany about 7 p. m., getting to our town at noon, giving them time enough to realize the extent of asphalt and the beautiful park system of Buffalo. Philadelphia is already posted, and if trains do not suit to catch the boat, and they should be compelled to spend 10 hours in this city they will not regret it. Last but not least, our friends from Canada, more particularly from Toronto, can leave there at 2 p. m. and have lots of time to make connections with the Cleveland boat. Only a few miles of that journey will be on land and those few hours will be entirely on the banks of the St. Lawrence river, for from the head of Lake Superior to the Atlantic it is only the St. Lawrence widened out in places. There are many towns and cities tributary to these roads of which it is unnecessary for me to speak, but all I trust will help to swell the crowd going to Cleveland.

WILLIAM SCOTT.

Cleveland Hotels.

Following is a list of Cleveland hotels at which rates have been secured for those attending the S. A. F. Convention.

Name.	Capacity.	European plan.	American plan.
The Hollenden	300	\$1.00	\$3.00
Forest City House . . .	100	—	2.50 to 3.00
Weddell House	100	—	3.00
American House	50 to 75	—	2.00 to 2.50
The Garlock with bath, private dining room for parties		—	2.50
The Stillman	150	—	3.00
Hawley House	100	—	1.50

Cleveland.

President Scott and Secretary Stewart arrived in the city on Tuesday morning, and in conjunction with the local officials, made final arrangements for the convention program. These details are in Secretary Stewart's hands and through him will be furnished to the trade papers. It may be said, however, without trenching upon that gentleman's territory, that it is very strongly believed that convention visitors will be much pleased by the various features of the program. Army and Navy Hall, used for meeting purposes, is highly satisfactory in every particular,

THE BUILDING IN WHICH THE SOCIETY OF AMERICAN FLORISTS WILL HOLD ITS CONVENTION AT CLEVELAND.

being convenient in location, of the most desirable dimensions, on the ground floor, and amply provided with committee rooms for all purposes. The exhibition hall is near by, and cannot be excelled in desirable features. The room is ample for every emergency, and every foot of it is available for use, all being lighted equally by the glass roof and no part of it obstructed or hidden from view from any part of the hall. The entrances are handy in all parts of the building, so that exhibitors will have no difficulty in handling their goods. The fact that the local society gives a flower show in connection, that will be liberally advertised, adds much to the desirability of the opportunity for trade exhibits. Applications for space have been liberal and are still coming in, but the size of the hall enables the management to assure good space to all who may desire it.

Concerning the flower show feature your correspondent would say again for the benefit of those who may have overlooked previous information, that premium lists and entry blanks may be obtained of the secretary, Wm. J. Leitch, Glenville, O., J. M. Gasser, 101 Euclid Ave., or E. H. Cushman, Euclid P. O., Ohio. To the latter gentleman should also go applications for floor space for the trade exhibit, he being superintendent of that department. It might also be said in this connection that the Hon. Wm. McKinley, of whom doubtless quite a few readers of the AMERICAN FLORIST have heard more or less, has been invited to make the opening address, and it is hoped that he will be able to arrange his affairs so as to accomplish it. He has promised to do his best, although unable as yet to state definitely.

Suitable arrangements have been made with the hotels and applications for quarters may be sent to the chairman of committee on hotels, Mrs. E. G. Wilson, 606 Jennings Ave., Cleveland.

It should also be said that the chairman of committee on shooting is very desirous that the club captains who have not yet communicated their intentions to him, should do so at once in order that all necessary arrangements may be made. This applies also to individuals. Address communications to S. N. Pentecost, Republic Street, Cleveland. Bowling men should write H. A. Hart, 1274 Detroit

Street, who is chairman of the committee on bowling. In both of these matters the committees will provide desirable trophies for both individual and club records.

There is very little to record concerning business, as everything is very quiet; a little funeral work is about all that keeps the stores going. The weather so far this season has been favorable to growing stock, by reason of the very abundant rains. We have in fact, had very nearly too much, while the weeds thrive gloriously. Asters are beginning to appear more plentifully and shortly will be in full crop. So far they have been very fair in quality and the aster bug has not yet appeared to embitter the life of the grower. He usually appears about as soon as the aster flowers, but so far this season has not shown up, possibly owing to the amount of rain that we have had. Dry, hot weather appears to suit him best. There has been considerable complaint concerning sweet peas not flowering as they should. They seem to have made fully as much growth as in other years, but the flowers are lacking both in quantity and quality. Blanche Ferry and Emily Henderson are doing slightly better than other sorts, but even these two old reliables are by no means up to the mark. There seems to be enough of them to go around, however, so the loss is not so serious.

Harry Basley of Detroit and J. Austin Shaw of New York, who represents Siebrecht & Wadley in these parts, have been in town lately.

A.

Boston.

There is but little for the city florists to do and that little is accomplished at a minimum cost as far as stock is concerned. There is no ruling price on anything; almost any offer is accepted as a lucky windfall. The out-of-town florists and growers find enough to do, however, to keep the weeds down, the recent abundant rains having given these a vigorous start. Garden flowers and shrubs have improved greatly in appearance since receiving the much needed moisture but lawns are as brown as ever in many localities. This brownness is not entirely the result of dryness as any one who will take the trouble to turn up a piece of the loosened sod will be convinced when he

SELENIPEDIUM GRANDE.

CYPRIPIEDIUM LOWI.
CYPRIPIEDIUM SELLIGERUM MAJUS.

sees the numerous fat white repulsive looking grubs underneath. The effective remedy for this pest has not yet come to light. He divides the honors at present with the army worm. Tales of the destructive work of the latter are coming in constantly from various parts of the state, and they are approaching within an uncomfortable distance of Boston. A gentleman had a few specimens of him at Horticultural Hall on Saturday. He is about one and one-half inches in length, striped light and dark grey, hairless, and travels about with amazing rapidity.

The exhibition at Horticultural Hall on Saturday, July 18, was very full and interesting. Hardy ferns were the specialties and there were several exhibitors who showed forty varieties and upwards each, all named and some of them very rare. Carl Blomberg won first prize on these and Mrs. P. D. Richards second. Hattie E. French staged a beautiful collection of native grasses and sedges. From Dr. C. E. Weld came a set of six plants of achimenes that were pronounced the best seen here for years. It was also prize day for gloxinias. J. S. Bailey's flowers were of fine form and richest coloring and took first premium, Dr. Weld being second and J. L. Little third. J. S. Fay filled a whole table with hollyhocks, which made a brilliant display but showing unmistakably in every bloom the effects of the dreaded hollyhock fungus. Mr. Fay also showed a large number of roses, hardy phloxes and larkspurs. The nymphæas and other aquatic flowers from Jas. Brydon and Carl Blomberg attracted great attention. One of the most beautiful flowers ever shown was Mr. Brydon's *Nymphaea Marliacea ignea*, its rich deep color being especially admired. These with snapdragons from John Jeffries, hardy herbaceous flowers from Rea Bros., tuberous begonias from Dr. Weld and E. S. Converse and a promiscuous display of choice things from James Comley and others together with the luscious berries and other fruits shown, all combined to make an exhibition well worth seeing.

A few asters are now coming in to the market, white and purple being the only colors yet seen. They are only fair in quality as yet. Sweet peas are very plentiful and much of the stock of these coming in is unsold or sold at a figure that does not pay for picking and marketing. One of the worst features about the sweet pea at this season is its short existence in perfection after being cut. In less than twenty-four hours after its receipt in the city its bright color has fled and evidences of decay are plain. Carnations are small sized at present and roses are small and in most cases badly mildewed.

The existing dullness affords an opportunity for those who wish to enjoy frequent outings and many who are unable to go to country or seaside for an extended vacation take advantage of the many facilities for a few hours sail in the harbor or further away. A sail to Portland was indulged in by half a dozen of the boys on Friday last. On reaching there they were captured by Jos. A. Dirwanger and his good lady, who entertained the party with hospitality free and unlimited.

J. Newman & Sons are doing some rebuilding at their greenhouses in Winchester. D. Zirngiebel is making extensive improvements and adding some fine houses to his establishment at Needham.

The funeral of ex-Governor Russell called for a large quantity of fine flowers and many handsome designs were made.

Jackson Dawson has not been enjoying his usual good health. His attendance at the convention is doubtful.

Toronto.

The shade trees of this city are suffering severely from a plague of the white Tussock Moth, the chestnut trees appear to be its "particular vanity." The Parks Department and other bodies as well as many private citizens have taken the matter in hand in an energetic manner and are making a well directed attack on the enemy. Spraying with a solution of

Paris green is the remedy for killing the caterpillar, tar bands round the trunk for preventing them climbing up again after having been blown or shaken off the leaves, and brooms and scrub brushes for cleaning off the cocoons and eggs out of the bark.

A nice gentle rain descended on Sunday night and Monday morning which has freshened things considerably, but we still want more. Altogether we have had a dry time of it since the spring opened. The beds in the parks however, are doing fairly well but have not filled in quite so well as they ought to have done at this time of year. The two long carpet beds running down from the main entrance of the pavilion at the Horticultural Gardens are a great attraction and are well worth looking at. They were designed and planted by Mr. E. Collins.

The excursion to Guelph tomorrow will be well patronized. E.

Washington.

Now that the schools have closed, the usual quietness in trade has set in; the monotony being broken only by an occasional wedding or funeral. The commencement exercises of the schools did not materially increase the bank accounts of the florists this season. There was an unusual falling off in the use of flowers at these exercises. There was a large number of weddings in May and June, but only a few of them were liberal to our florists. The majority of them were quiet affairs and the decorations were confined to the drawing and dining rooms. A great many of the society people have left the city for the hot month, and the florists look for a long breathing spell, but they will not be idle; they are all busy benching their roses, chrysanthemums and carnations.

Mr. G. H. Brown of the propagating gardens has planted his carnations on benches, where he proposes flowering them this winter; in the fall he contemplates erecting a house over them. The structure will be 30x125 feet. The plants

are at present as fine as one could wish them, in fact they are far ahead of those planted in the open ground. For the past few years Mr. Brown has been compelled to plant his carnations on benches where they were to remain and he says the result has been equally as good, if not better than when grown outdoors and lifted in the fall. Many of our growers are inclined to think that to bench them is the better way. However, Mr. Brown did not resort to this mode from choice, but owing to the lack of space, which he could give to winter blooming plants out doors, he being cramped for room by the stock of shrubbery and other hardy plants he is compelled to carry to decorate the public parks. To look at the small enclosure situated on the Potomac south of the Monument grounds one would wonder where all the plants required for decorating the parks were to come from. There is not an inch of space wasted in the few small houses allowed for growing the plants. Just as soon as the receptions at the White House are over all plants forced for winter bloom are thrown out, and swinging shelves are put in over the benches, then the rush for bedding plants begins. By this time the cutting beds are crowded with soft stuff ready for potting, and hundreds of boxes of seedlings are ready for pricking off. The entire force is put at potting, and by the time it is safe to risk geraniums in cold frames, all the available space is filled, and so the work continues in a rush planting out and refilling the space until the planting is finished, which is usually about July 1. Mr. Brown is very much hampered in his work by the lack of funds. The appropriations are barely sufficient to keep the parks in order during the summer, and to prepare them for spring planting, and when the time for planting out arrives Mr. Brown finds himself confronted with the fact that his money is almost exhausted and the general care of the parks has to be neglected in order to do the bedding. One would suppose that congress seeing the condition of things would make more liberal appropriations for the care of the parks, certainly sufficient to keep the grass nicely cut, and do the planting and keep the beds in condition after they are planted. Yet when we take into consideration the work Mr. Brown is compelled to do with the small amount of money at his disposal, we wonder how he manages it.

REYNOLDS.

San Francisco.

Business is indeed very quiet, in fact there is nothing doing at all, the buying public being all away at summer resorts and elsewhere. Sweet peas are still the main thing coming into the market, and are likely to be for quite a while yet. As a general rule the quality is very fine and the blooms are excellent, also holding their color well. However, the fakirs are now swarming the street corners with immense baskets of sweet peas which they offer at 5 cents a bunch. Roses are now rather scarce, or properly speaking, the growers are resting their stock preparatory to their winter work. They are very cheap, whatever is being handled. Beauties are rather scarce also. Bridesmaids and Brides are very small on account of the very great heat we are having. Carnations are holding their own and are of excellent quality, Scott being the chief variety sought after. We noted some excellent yellow carnations, Dean Hole, from M. Lynch's place, which were really very fine. This is a fine vari-

DENDROBIUM ALBO-SANGUINEUM.

ety, the only trouble being that it is too shy a bloomer. *Lilium auratum* is not over plentiful and finds ready sale. Longiflorums are about over for the season and the growers and dealers are very glad, as the supply was much greater than the demand. *Coreopsis* is also plentiful, with only an occasional call for it. Asters have made their appearance, but as yet are not of very good quality, although we have seen some of Semple's white which were excellent and find ready sale. *Gladiolus* are plentiful, but there seems to be no call whatever for them. Many of the growers have finished their chrysanthemum plantings both outdoor inside. We think that many more 'mums are being grown inside this year than any previous season.

Mr. George Green, who was formerly professor of Botany at Berkeley, and who is now in Washington, D. C., is expected here during the latter part of this week. Mr. Green is ranked as the most eminent botanist in this country.

Mr. Geo. Ernest is again at his post after several weeks' vacation at Camp Taylor in Sonoma county, and is much improved in health.

Mr. Jas. Mitchell, who was superintendent of the greenhouses of Sidney Clack at Menlo Park, has resigned his position and left for San Francisco.

The decorations of the Baldwin-Hobart wedding last week were the most elaborate ever attempted here on the coast. Immense quantities of sweet peas, lilies, roses, etc., were used. The church was beautifully decorated with hydrangeas and palms. The Misses Worn had the contract, which they filled very acceptably.

At a recent meeting of the State Floral Society Vice-President Mrs. Ellen Hodgkins reported that \$390.25 had been realized by the last show of the society, but that the expenses and premiums amounted to over \$370, leaving a balance of only \$20 in the treasury. She urged upon the society the necessity of showing more interest in these shows hereafter. At her suggestion Mr. John Henderson, the treasurer, was instructed to pay the premiums, which amounted to \$192.50, to the successful competitors to whom they had been awarded. President Wickson called the attention of the society to the formation of a new floral society in Berkeley

which already has a nucleus of over 200 members, and which promises to do much for the interests of floriculture in Alameda County. He expressed an opinion that the formation of societies in different parts of the state would stimulate interest in the State Floral Society, which must of necessity be their head center. He also suggested the advisability of encouraging the development of new sweet peas by offering premiums for the most desirable novelties and greatest number of new departures by our California growers. After listening to a discussion on sweet peas in general and of the novelties shown the meeting adjourned.

The San Mateo County Floral Society has decided to hold a chrysanthemum show during the latter part of October and has decided to offer cash prizes to encourage the growers to compete.

The various committees in charge of the "Carnival of the Golden Gate" as the carnival to be held in San Francisco this fall is to be known, are making rapid progress towards a successful termination of the scheme, which we trust will prove successful.

Mr. J. Murray, who recently arrived from the East, has taken charge of the rose houses at M. Lynch's place at Menlo Park.

METEOR.

St. Louis.

While the quantity of stock coming in is small still it is more than the market requires. Roses are coming in better than they have been; price \$3 per 100 for all kinds. Kaiserin is decidedly the best at this season, and has the call in white roses. Carnations cut from the field, are in much better form than ever before at this season of the year. Daybreak is preferred and sells at \$1 per 100. Sweet peas continue plentiful and do not pay for the picking. *Gladiolus* and asters are also plentiful. *Gladiolus* sell at \$2, and asters at \$1 per 100.

Some of the growers will begin housing carnations next week, and they are looking fine this early in the season, with Daybreak in the lead. All varieties are promising, and prospects for a good crop of blooms in the early fall are encouraging.

J. W. Dunford at Central is building two new houses 125x25. Mr. Dunford reports that he lost about \$2,000 on his fruit crop through the cyclone.

CATTLEYA SUPERBA SPLENDENS.

Mrs. M. Ayers of the Ayers Floral Co. has gone east for the summer, and will be back by September 1.

Alex Waldbart is looking for a new place in the western part of the city for growing cut flowers. Mr. Waldbart, who has been sick for a long time, is now much better.

The picnic committee made all arrangements at Clifton Terrace, Ill., for the outing last week, but the enthusiasm is not what it should be this year; the florists are slow in subscribing, and unless more interest is shown the picnic will have to be postponed or given up. The committee has done all in its power, spent time and money to bring about a successful outing.

The bowlers came out in full force Monday night, including our old friend Carl Beyer, and he rolled as of old. In the three games rolled Emil Schray was high man with 546, Fred Weber second, 494, and John Kunz third, 483. The highest single score was made by John Young, 199; Schray second, 197, and Fillmore third, 194. The next bowling will be at the picnic; no strikes and spares can be made, only the pins that one knocks down will be counted, and only 12 balls can be rolled by one man. J. J. B.

Indianapolis.

The Indianapolis Florists' Club has discontinued meetings during the summer; it is, however, probable that a canna display will be given in the beginning of August. Trade has settled down to nearly a standstill, with a splurge here and there.

A recent visit to the parks showed them to be in much better condition than before. The new park commission means business; while their finances are now very limited there are prospects that a good round sum will come forward another year. City Florist Robert McKeand has planted out more than 71,000 plants in the different parks and squares, surely a good beginning. The present

greenhouses comprise about 18,000 feet, with more glass to be added towards spring. Electric lines now run to Garfield Park, where the greenhouses and dwelling of the florist are located.

Robert McKeand being secretary of the Society of Indiana Florists, an informal meeting of the local members was held at his house on Thursday evening, July 16, to arrange for the meeting of the state society and also to arrange for the annual outing of the Florists' Club. The meeting was well attended, much better than expected. The state meeting to complete premium list and make all arrangements for the Tenth Annual Chrysanthemum Show will be held at Dennison Hotel, Century Club rooms, Monday afternoon, July 27. The Florists' Club's annual outing will come off the next day, July 28, at the Bellevue Club House, Anthony Wiegand, F. B. Alley and John Hartje being the committee on arrangements. The members attending the meeting at Garfield Park were agreeably surprised by a spread of good things put before them by Mr. McKeand and his estimable wife.

The special premium list for the chrysanthemum show is much heavier this year than ever and more are expected, making a formidable list to be divided among the different items.

John Heidenreich was married to Miss Anna Kempe on July 10. A reception was held in his new home adjoining the greenhouses, cor. Applegate and Morton Sts., in the evening, a good time for everyone in attendance.

The wife of Julius Joachannii, florist for the Alcazar Store, died Thursday, July 2. The case is rendered more sad by the death of a new-born baby, also. Eight children survive their mother.

Ernest Huckriede & Son are putting up two greenhouses 80x16 each, also putting in a large boiler to heat the whole place with steam, doing away with flues.

E. A. Nielson has moved his dwelling and will add just as much more glass as he has now; 2 houses 20x12, 1 house 50x

20, and 2 houses 48x11, 8500 feet in all. Carnations and roses in all of them.

A. Pahud has added one house, short-span to the south, 20x70 for roses. He reports having had a very good trade this spring; he has a very favorable location, being at the entrance of Crownhill Cemetery.

Martin Braendlein is remodeling his boiler shed and putting in a good large boiler.

Bernie A. Fohl, reported to have gone away on account of financial trouble, has returned. He expects to resume at once. He says everything was idle talk.

Several market gardeners are putting up considerable glass for early vegetables next season.

A. T. Boddington of Pitcher & Manda visited us last week, having been sick for some time in Detroit. He reports business not as bad as expected, but in general all business is suffering, the outlook is somewhat cloudy.

Thanks to the efforts of our state vice-president of the S. A. F., John Evans, Richmond, a good delegation will go from Indiana to the Cleveland convention. During a recent visit of the writer to a convention in Cleveland he had occasion to see a great deal of the park system; what there is finished is simply grand, with many other places of interest about the city. From indications at the present time, the Cleveland convention will be one of the best attended. The dues restriction taken off will help very materially. W. B.

Philadelphia.

O'd humidity is getting his work in just now with a vengeance, but as there is scarcely anything happening to worry us except perhaps that some fret on this account, we manage to stand the heat tolerably well. A slight addition to the decoration of the store fronts is seen in jars of gladiolus and tuberoses standing by the doors with a card on a stick in the center 5 cents a stalk. Sweet peas are also priced and placed within reach of the passers by, all of which is done to try and coax a little trade.

Some very nice asters are now coming in and if there was any business should sell well. They are put up 25 flowers in a bunch at \$1 per hundred. Sweet peas are very plentiful and have no regular price. There are some nice roses from the stock planted out for summer cutting, John Burton's Beauties and Jacob Becker's La France being very good.

James Cole has torn down one old house and is erecting a much larger one in its place; the new structure is to be 200 feet long by 20 wide.

S. S. Pennock's trade is growing so that another and much larger wagon is to be added to his equipment in the near future.

The Gun Club goes on steadily gathering laurels and adding prizes to its already large collection. A nice case with these hard fought-for and well-won evidence of their skill will be quite an ornament in the new club room. Last Saturday they met and defeated the strong Forest Gun Club of this city in a ten man team match by 27 points. The average of the Florists was nearly 19, which is very good for ten men. On August 1, they are to shoot against a number of strong clubs at the annual games of the Caledonian Club at Washington Park, a pleasure resort near this city. The bowlers are also going to take a hand in a team match on the same occasion and try for a prize as well as get

a little much needed practice. The suggestion of the Buffalo club that the various teams contribute towards a national prize to be howled for at the annual conventions, is a most excellent one, and the Philadelphia club will gladly join in the movement to purchase such a trophy.

Mr. Scott's article on "Why we should attend the Cleveland Convention" is most excellent and contains truths that many of us are apt to forget when wondering whether it pays to go or not. The book of proceedings is very useful and always contains much valuable information that is worth far more than the cost to those who stay at home, but to those who attend it is also a valuable book of reference as it carries them back to the convention itself and brings to their minds many things seen and heard, the evidence of which can be obtained only by being present. There is not much said by members of the craft as to their intentions as yet, but it can be safely said that a very good delegation will be sent from this city.

Wm. K. Harris, Jr., the oldest son of Wm. K. Harris, was married last Tuesday evening, the 21st, to Miss Alice Simpson. The ceremony was performed in their own residence, 758 South 51st street, in the presence of a large gathering of relatives and friends. The bride carried a bunch of lilies of the valley. The house is beautifully furnished and was handsomely decorated for the occasion. The happy couple have the best wishes of their many friends for a long and happy life.

Visitors in town: Henry Graham of Terre Haute, Ind., and James B. Kidd of Sunset Seed and Plant Co., San Francisco, Cal. K.

New York.

The flower trade continues very dull with no indications of immediate revival. All varieties of summer stock are coming in as usual and in rather inferior quality.

Many of the city florists are bicycle enthusiasts and find in it a diversion during these dull times. The big bicycle parade at Long Branch last Saturday was participated in by a goodly representation of the florists. Allie Warendoff was awarded first prize, a gold medal, for the best decorated wheel and the first prize for tandem went to Herman Warendoff and Mr. Held. Another expert on the bicycle is James Weir, son of the popular John Weir, Jr. He rode a tandem in the parade.

George Welch of Ramseyes underwent a delicate and dangerous surgical operation for cancer on the tongue some weeks ago. It is now reported that the operation was a great success and that although a large part of the tongue was removed he talks with little difficulty. The daily papers have devoted considerable space to a discussion of the event.

Much sorrow is expressed by those who were so fortunate as to listen to Wm. Hamilton Gibson's interesting lecture at the Pittsburg convention last summer on bearing of the sudden death of that gifted gentleman. All were looking forward with hope to hear him again at some future time. His death is a great loss to floriculture.

Henry A. Siebrecht, Jr., has severed his connection with the Rose Hill Nurseries at New Rochelle and has taken the position of general superintendent and buyer for the plant and flower department at the big store of the Siegel, Cooper Company, which will commence business on September 1. This immense establishment

is located on Sixth avenue, Eighteenth and Nineteenth streets, and an extensive range of greenhouses has been erected on the roof. A better man than Mr. Siebrecht for the management of this department it would be impossible to find. The New Rochelle place, comprising upward of fifty greenhouses, has been under his management for the past eight years, and that means experience.

The exodus of the fortunate ones to transatlantic scenes still goes on. Thomas Jones, of Short Hills, sailed on Monday, July 15, and J. Gerlach, of Newark, on July 16.

Mr. W. H. DeForest, of Kent Place Nurseries, Summit, N. J., died suddenly on Thursday, July 16.

Visiting New York: A. H. Hews, Cambridge, Mass.

Chicago.

The past week has been a very quiet one: Thursday was perhaps the duller day of the season. Prices in most stock remain stationary. Very fair roses are coming in from new stock, Perles being especially good, but the early part of the week all roses opened out almost as soon as unpacked, on account of extreme heat. Much needed rain occurred on Thursday, being extremely wet all day, and while it depressed trade it was highly beneficial to outdoor stock. Flowers brought in on Friday, however, appeared to have suffered from the storm. Sweet peas, which had been selling, the very best, for \$1.25 a thousand, and from that down to one cent a bunch, suddenly fell short, being beaten off by the wet. All the early part of the week they were terribly overstocked. Field carnations looked very dragged on Friday morning. The best sell now for 75 cents, and from that down to very low figures. Selected whites and Scotts are most in demand. Asters are quite plentiful, and generally very poor. Most of them show the center badly, and are uneven in color. The best go at from 35 to 75 cents per hundred; few at the latter figure. White and purple are preferred. Gladiolus is very plentiful, and sells slowly at 50 to 75 cents a dozen stalks. *Lilium Harrisii* is now over. Auratum is fine, and holds at \$8 to \$10; it sells excellently. Speciosum is not seen yet. Water lilies, while cheap, have sold very well. Double sunflowers, coreopsis and gaillardias are plentiful and cheap. Even the fakirs look on them coldly, and want roses, though they have been handling a tremendous number of sweet peas of late.

Fred Otto is going to build two greenhouses, each 18x80, at 1142 North Kedzie avenue.

Mr. Kohlbrand, manager of Klehm's Nurseries, accompanied by his wife, is making a ten days' visit to Cleveland.

Mr. E. Pieser was the victim of a bicycle accident at Mackinaw lately, owing to a trial of strength between his bicycle and a tree. The wheel is a wreck, but Mr. Pieser suffered no damage beyond a severe shaking.

At the recent ball game between the florists and barbers the florists were the winners, with a score of 18 to 17. The next game will probably occur in two weeks' time, between the wholesalers and retailers.

Mr. J. C. F. Meyer, for many years foreman for R. J. Lewis, has leased Mr. Lewis' greenhouse plant for five years, and will continue the business on his own account.

Mr. Walter Rennison, Sioux City, Ia., was a recent visitor. He will spend the next few weeks at Lake Geneva.

Utica, N. Y.

The usual summer conditions prevail at this time. Trade is very quiet. Sweet peas, phloxes and other out of door stuff is about all that is offered. Among the rose growers some have finished replanting and others are hurrying the work along. As a consequence very few good roses are to be had. These are mainly Kaisersins and some Cusins. A few carnations are still to be seen, but they look the worse for wear. A good soaking rain on the 20th gave new life and vigor to the carnations and violets in the field, which were beginning to feel the drouth badly. By the way, there are more schemes for growing violets being tried here than ever before. Some are being grown under glass all summer; others are out of doors potted in frames. In one or two instances the grower has removed the glass and planted directly in the benches, this last to avoid lifting, while others still cling to field culture. The carnations in the field are better than usual at this time of year; cause, plenty of early rains.

Mr. F. E. Shaw, who purchased the place formerly run by Glover & Co., consisting of ten houses on Sunset avenue, is making some changes. The heating apparatus is being renovated, and some of the houses rearranged for the better. One large house is planted to Beauties. His carnations in the field are extra strong. Some fine gloxinias were noticed here. Mr. Shaw reports a very satisfactory trade.

Mr. J. C. Bigelow, when called on, was very busy with funeral week. He is still cutting some fine McGowans, and what is seldom seen nowadays, some Alegatiers. This last carnation would still put to shame some of the later introductions. There was a quantity of bloom in sight, and Mr. Bigelow will grow it still more largely. He reports a good trade and will build a 100-foot house to accommodate an increasing business.

F. J. B.

Syracuse, N. Y.

Trade for the past week has been good, a noted increase in the volume of business being done over the corresponding period of last year.

Mr. Chas. Miles, for the past few years with P. R. Quinlan & Co., has gone into business for himself, having taken the establishment of W. D. Rutland, Vermont. Mr. Miles is a practical all-round florist and good workman, and his many friends in the trade here wish him success in his new venture.

Mr. Atkins, of Siebrecht & W., gave us a visit last Saturday and told us to keep a sharp lookout for the army worm, which has been causing such great destruction to crops in nearby places, too close to be pleasant for some of us who have our carnations planted some five or six miles out in the country. This pest is not entirely new, but this year it has turned up in a good many new parts, completely cleaning off every vestige of vegetation that is in their way, large fields of corn and oats being left bare. They're an ugly-looking caterpillar from two to three inches long, nearly as thick as a lead pencil and of a brownish green color. No doubt they derived the name of army worm from the way in which they go to work, moving in millions from one field to another, which takes but a few hours to be demolished. The farmers are trying different means to stop them, some digging ditches around the crops, others keeping a roller going constantly

up and down to crush them; this is done where the ground is level enough to be practicable. ALPHA.

Columbus, O.

Trade has been exceptionally dull even for July, exceedingly warm weather having its effect.

The Columbus Seed Company have dropped their cut flower business entirely and will devote all their energies to the seed trade.

Local trade has been somewhat affected by some of our florists disposing of their surplus on the markets, which has a tendency to cut prices.

There will be a very large attendance of florists from this section to the convention, it being so near home.

Geo. Miller of Newark was a recent caller. They are just finishing their new place, consisting of three new houses 20x100.

The many friends of Mr. E. G. Gillett were surprised to learn of his business change, and wish him all success in his new business.

J. B. Romans is cutting some good Beauties now. B. K.

Conneaut, O.

The past week has been a busy one, the centennial anniversary of the landing of Moses Cleveland here was most fittingly observed, and in consequence quite a number of plants were sold, new window boxes filled, etc. This practically wound up the most successful bedding-out season ever known here, and the stock has been cleaned out thoroughly.

The decorations for the centennial were remarkably good. The residence of Miss Venen, the principal florist, was made most attractive, and by many was pronounced the handsomest and most artistic. Flags, bunting, evergreens, flowers and hanging baskets were the materials used.

In the cemetery here very few plants are bedded out, owing to the work of that most despicable class, graveyard thieves, who would steal a good plant in less than twelve hours after it was planted. This is what has discouraged people from planting good plants on the graves. Vases are much used. H. Y.

From Toronto to Cleveland.

Stewart will at an early date give information about transportation to Cleveland, but as plans are sometimes made a long way in advance I want to let my Toronto friends know that we have secured a round trip ticket from Buffalo to Cleveland for \$3.00. Having but a few hours stepped off her clean decks I can assure you she (the City of Buffalo) is fast, commodious, and on her will be found all the comforts of home. It would be impossible to be seasick on her unless you took something to produce it. To be serious, we hope to see many Canadian friends at Cleveland, and to those from Toronto and vicinity it would be best to take a return ticket to Buffalo and then purchase the return ticket to Cleveland. There is no excuse that it is too far away from home this time. W. S.

Foreign Notes.

Two new lilies from China have recently been flowered in Italy. One of these, which has been named *Lilium chinense*, is described as having a flower somewhat similar in shape to *L. Martagon*, but larger; color a rosy orange,

etched over the greater portion with dark purple spots. A variety of this species in which the markings are extra dark and numerous is called *L. c. atropurpureum*. The other species, somewhat similar in appearance to *L. chinense*, but botanically very distinct, is *L. Biondii*; the segments of the flower are more revolute, the color being a more decided orange scarlet. Both are likely to be valuable garden flowers.

M. Moser, the well known florist and nurseryman of Versailles, France, has been decorated by the Emperor of Russia with the Order of St. Stanislas, in recognition of his fine display of trees and shrubs at a St. Petersburg exhibition.

Smilax.

"J. G. S." wants to know how far apart to plant smilax. If you think you will keep the bed in undisturbed for 3 or 4 years, plant 1 foot apart in the rows, and the rows 15 inches apart. If you intend to plant annually, which is the best way, then 8 inches apart between plants and the rows 10 inches apart will be enough. WM. SCOTT.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By florist and gardener; references. Address W. B., care Am. Florist.

SITUATION WANTED—By first-class rose and cut flower grower, at once. GEORGE LINE, Ottumwa, Iowa.

SITUATION WANTED—As working foreman. Good grower of roses, carnations and mums. First-class references. W. S., care American Florist.

SITUATION WANTED—By good, all around gardener; 7 years' experience. Good references. Address W. C., care American Florist.

SITUATION WANTED—First-class grower roses, carnations, pot plants, etc.; good floral worker; good references; lifelong experience; age 33, English. F. W. GODFREY, Hackensack, N. J.

SITUATION WANTED—By an experienced florist—cut flowers preferred, roses and carnations. South or west preferred. Address J. L. SHEA, Fredonia, Crawford Co., Ind.

SITUATION WANTED—By the latter part of August, as rose grower; 16 years' experience; good worker. Best references. Those needing a hustler need only apply. State wages. Address ROSES, care American Florist.

SITUATION WANTED—By first-class florist, with best of references; thoroughly understands growing of roses, mums, carnations; can take full charge; sober and industrious. Correspondence solicited. D., care American Florist, Chicago.

SITUATION WANTED—As foreman or manager by a first-class grower of roses, carnations, mums, palms, ferns, violets, bulbs and general stock; 22 years' experience; best of references, single; correspondence solicited. FLORIST, 129 N. Clark St., Chicago.

SITUATION WANTED—By a No 1 practical florist and gardener, one who understands the growing of cut flowers and general collection of plants; American, age 35 years, single, sober, honest and industrious, not afraid of work. Address W. C., 406 Virginia Ave., Indianapolis, Ind.

WANTED—To buy, second-hand boiler, pipes and glass for two small greenhouses. FRED OTTO, 1142 N. Kedzie Ave., Chicago.

WANTED—A first-class rose grower, one with long experience. Must have the best of references. Seven iron houses. Address A. K., care American Florist, Chicago.

WANTED—A first-class propagator and grower of roses and general stock for catalogue trade. Single German preferred. State age, experience, and wages expected. Address with references, L. TEMPLIN & SONS, Calla, O.

FOR SALE—120 3x6 sash. Who wants them? Address C. T. BURGESS, Avoca, Iowa.

FOR SALE—At half price three greenhouses, stock, boiler, pipes and everything belonging to it. If applied for soon. W. S. P., care American Florist.

FOR SALE—Cash Register No. 79, check printing and total adding; used only a few months, and is new. Will dispose at a bargain or trade. E. HIPPARD, Youngstown, O.

FOR SALE—Four hot water boilers; will heat 30,000 square feet of glass. All less than price of one new. Address or call. BLANT & NOE, Forest Glen, Ill.

FOR SALE OR LEASE—Five greenhouses, dwelling, sheds, etc. No competition. Half price. Bargain. Reason, bad health. For particulars address B., care American Florist, Chicago.

FOR SALE—Very cheap for cash: greenhouses, 300 feet of glass, steam heat; also ground 100x200 ft., 5 room dwelling, office and boiler room. All in good condition. Best reasons for selling. WM. G. WHITE, Ovid, Mich.

FOR SALE—Cheap, cheap; one No. 16 Hitchings corrugated boiler; one No. 4 Scollay; two No. 3 Scollay; will sell at a sacrifice. Also have 3000 feet Flach pipe, at a bargain. Address CHAS. L. MARSHALL, 705 Stevens St., Lowell, Mass.

WANTED.

Florists, Seedsmen and Florists' Supply Houses, please send Catalogues, or call on HENRY SIEBRICHT, JR., 251 Sixth Ave., care Siegel, Cooper Co., New York City.

FOR SALE OR RENT.

THE GENERAL HORTICULTURAL EXHIBITION, to be held in Hamburg, Germany, from May to September, 1897, issues a premium list which offers great inducements to exhibitors. The prizes include some 300 gold, 2600 silver, and a number of bronze medals, and 30,000 marks in cash prizes. Most of the transportation lines make special rates for exhibits, Hamburg having excellent facilities in this line. Communications from intending exhibitors should be addressed to the "Committee of the General Horticultural Exhibition of 1897, Hamburg, Germany."

FAMILIAR TREES AND THEIR LEAVES is the title of a new volume by F. Schuyler Mathews, written with the view of familiarizing tree lovers with our most familiar specimens. It is liberally illustrated with over two hundred drawings by the author. The classes of trees are not arranged according to botanical rules, but according to the shape of the leaf. This is certainly the easiest way for amateurs who do not wish rigidly botanical instruction, though perhaps open to criticism from a scientific standpoint. The drawings, however, will render the identification of any leaf desired very easy. Care has been taken in giving the botanical names, though we think it a mistake to give two synonymous botanical names together without explanation. The unbotanical for whom the book is designed, will be unable to discriminate. It is a slip, also, to give the established botanical spelling of *Ailantus* as *ailanthus*; this is not correct, though it appears in the latest revised edition of Gray's Botany. The tree in question is *Ailantus glandulosa*, not *Ailanthus glandulosus*. The book is very prettily bound and well printed, and is provided with a copious index. (D. Appleton & Co., New York, publishers.)

Catalogues Received.

J. M. Thorburn & Co., New York, trade list vegetable seeds; E. H. Krelage & Son, Haarlem, Holland, wholesale list bulbs; J. M. Thorburn & Co., New York, trade list bulbs; Wisconsin Flower Exchange, Milwaukee, Wis., plants, bulbs, and florists' requisites; D. B. Long, Buffalo, N. Y., plants, bulbs, seeds, and florists' requisites.

Tree Planting Laws.

In answer to the query of Reader, page 1316, I would say (without time for special reference to our law library) that generally overhanging neighbor's branches may be cut away, and no doubt all roots growing into one's ground may be cut away also.

VAUGHAN'S
INTERNATIONAL PANSY MIXTURE

THIS mixture is composed of the choicest selections from nineteen American and European Specialists in Fancy Pansy Seed-growing, and is unquestionably The Best General Mixture in Existence. This is the Pansy mixture for every Florist who would realize the highest prices for his flowers and plants. It contains the cream of the cream of every noted Pansy growers' product the whole world over.

The Pansies growing for this mixture have been repeatedly personally inspected by us in the fields, and we thus became acquainted not only with the quality of the general assortment of each individual grower, but we also make selections of their choicest varieties. Thus it can be readily understood that we are in position to make up The Finest Combination of kinds in the world, and this we are doing each year with our "International Mixture." It contains, besides all the choicest German Pansies in their wide range of beautiful colorings, the Giant Sorts in variety, with

many Pink, Red, Chocolate, Slate and other Novel Shades. It contains all the separate colors of The Giant Trimardeans, with their immense flowers and rich colors. It contains the Giant Cassier and Bugnot strains, the product of celebrated Scotch strains, the Falaise and Boulogne Giants, in fact, there is no strain of any of the celebrated Pansy Specialists not represented in our INTERNATIONAL MIXTURE. Price, per oz \$10.00; ½ oz. \$5.00; ¼ oz. \$1.50; trade pkt. 50c. (Less 10 per cent. for cash).

GIANT PANSIES.

Giant Trimardeau, white, large white with a violet center. Pkt. 25c; ¼ oz. 60c; oz. \$4.00.

Giant Beaconsfield, pkt. 25c; ¼ oz. 60c; oz. \$4.00.

GIANT TRIMARDEAU IMPROVED. This strain contains all the new colors of Trimardeau. Pkt. 25c; ¼ oz. 45c; oz. \$3.00.

GIANT CASSIER, a very choice variety of colors, each flower is marked with 3 or 5 blotches, pkt. 25c; ¼ oz. 75c; oz. \$5.00.

GIANT BUGNOT, the flowers are of enormous size, perfectly round, of great substance. Our "Bugnot" contains shades of red, bronze and reddish brown that are not found in any other mixture, pkt. 50c; ¼ oz. \$1.00; oz. \$6.00.

AURORA, a new pure white giant, pkt. 50c.

GIANT GOLDEN QUEEN, new, golden yellow without any blotches, pkt. 50c.

Giant Paris Pansy Mixture.

The flowers of this strain are as large as the Trimardeau and far superior in color and in substance of petals; having a stout and stiff flower stem. Oz. \$4.00; ¼ oz. \$1.20; ½ oz. 60c; pkt. 25c.

VAUGHAN'S GIANT PANSY MIXTURE.—This mixture comprises all the above strains and colors, and will give satisfaction to everyone whose trade demands Pansies with large flowers. Per oz. \$5.00; ¼ oz. \$1.35; trade pkt. 50c.

VAUGHAN'S PREMIUM PANSIES, MIXED.—Embracing many shades and colors. Pkt. 25c; ¼ oz. \$1.00; ½ oz. \$3.25; oz. \$6.00.

CHICAGO PARKS BEDDING PANSIES.—Many colors mixed. 4 ozs. \$3.00; oz. \$1.00; ¼ oz. 30c; pkt. 10c. Write for list of separate colors.

G. LENGENFELDER,

Berleau and Western Avenue, CHICAGO.

Pittsburg.

There has been no improvement in trade here this week; business being very quiet, but notwithstanding the very bad weather this month, only eight days without rain, and a rainfall of more than six inches over the normal amount, the volume of business done has been greater than last summer, and to that extent our florists are content. Flowers are plenty, gladiolus and asters coming in rather freely now and of good quality. Nearly all the florists are at home yet; many of them will not go away until the convention week, taking it in as part of the summer outing.

Julius W. Ludwig has gone to North East to the Lake View Camp; he intends making the tour of the lakes and will meet the club at Cleveland in August in time for the bowling contest.

Mr. James Semple of Bellevue had a very fine collection of gladiolus in market this week, many of them the new varieties with blooms measuring over five inches.

Miss Huscroft, one of Steubenville's florists, was a visitor this week; reports trade there as fairly good. Mr. Wienkler with W. W. Barnard & Co. of Chicago was also with us. REGIA.

San Jose, Cal.

Trade during school commencements which have occurred lately was all that could be desired. Sweet peas were used in large quantities and the stores did a big business, especially Chas. C. Navlet and Edw. W. Parsons. Lady Penzance sweet pea is the favorite here as it is in San Francisco. Lilies and roses were in demand at the time also. However since that rush is over business has settled down to its normal state at this season of the year. Chas. Navlet's new store is always tastefully and artistically decorated.

Mrs. Dunlop, who had a store at 11 E. Fernando street, closed up last month and has gone out of business.

At Mr. E. Bourguignon's place everything is looking well and healthy. This place is noted for its fine roses during the winter months. Mr. Bourguignon also makes a specialty of cyperus of which he grows thousands and ships quite a lot to the east every summer.

Mr. Edw. Parsons has moved from his old stand to the more commodious store formerly occupied by Mrs. Dunlop. This step was necessary on account of the increasing business. At Mr. Parson's greenhouses at 10th and Market streets, everything is looking excellent especially the roses, carnations and palms. The sweet peas here are also looking very good. Mr. Smeke Parker is in charge here. METEOR.

Allentown, Pa.

Geo. Ellsworth & Co. have added two additional fair sized houses to their plant; they intend also to give their other houses some overhauling.

Kratz & Shelley have built a violet house, covering 100x12. HOMO.

CRABB & HUNTER, Grand Rapids, Mich.

Worcester, Mass.

The summer dullness is upon us and trade is very quiet with the exception of funeral work of which there has been considerable in a small way. We are getting plenty of flowers with the exception of good roses, but as there is no call for them we don't mind. Peas are getting very plentiful and soon will be a glut, as everybody who has a square foot of garden plants peas, and consequently no one makes a cent; one florist (so called) is selling peas for two cents a bunch (25). Carnations have held up nicely and are just beginning to show the effects of the hot weather, but are still plentiful and sell as well as anything. Carnations in the field are looking fine; we have been fortunate in getting enough rain so far. The planting of chrysanthemums will about equal last year's, but more early varieties and but very few late; they went begging last Christmas.

The weekly exhibitions of the Horticultural Society are keeping right up to the standard and are being very well attended. At this week's show (July 16) the following first premiums were awarded. Display cut-flowers, F. A. Blake, floral basket, H. A. F. Lange; display of petunias, F. A. Blake. A number of gratuities were given for meritorious exhibits not scheduled.

H. F. A. Lange and wife are spending a month in Nova Scotia. A. H. L.

Shamokin, Pa.

Mr. Geo. W. Parmley has moved into his new store, located at the intersection of Independence and Orange streets, two of the most prominent thoroughfares in town and in the very heart of the business center. The store has a frontage of 50 feet, the whole being taken up by four French plate show windows, each 9x11 and a massive French plate glass door. Besides the store proper Mr. Parmley has fitted up a large and commodious room on the second floor and a basement. The whole place is lighted by electricity and presents a most attractive appearance.

A rather novel feature introduced is that of hoisting up or letting down the refrigerator into the basement from one of the windows. This feat is accomplished by means of an ingenious device, a sort of "crank" which looks almost automatically. Everything else about the place, the counters, show cases, etc., is arranged with a view to convenience and adaptability. HOMO.

Wilkes-Barre, Pa.

Mr. I. G. Marvin's additional range of houses is nearing completion. Among other things which Mr. Marvin intends growing on a larger scale than heretofore will be chrysanthemums; of these he will have over fifteen thousand plants, some of the best kinds and varieties known having been introduced. A very prominent society wedding, during the past week, has kept Mr. Marvin quite busy. Aside from the elaborate church and house decorations there were a number of bouquets and boutonieres furnished, the bridal bouquet consisting of fine orchids arranged with swainsona. Each of the bridesmaids carried a handsome bouquet of sweet peas, as did also the flower girls. HOMO.

BLOOMINGTON, ILL.—Mr. Frank L. Washburn of A. Washburn & Son, was married to Miss Belle Aldrich of the same city June 24. After an extended wedding trip they will be at home to friends after Aug. 15.

THE ANNUAL CONVENTION NUMBER

— OF THE —
American Florist

WILL BE ISSUED

August 15.

In addition to the usual convention matter it will contain a series of elaborately and richly illustrated articles on the use of Hardy Plants, showing the Florist not only how to use these plants to the satisfaction of customers but how to make them a source of profit.***

This last should receive the earnest attention of the trade at this time, for the growing demand for Hardy Plants can not with wisdom be ignored. It should be met in such a way as to bring the most returns to the Florists' cash drawer. In our Convention Number we shall give the views of the ablest men in the trade on this subject and will include many illustrations that will be very useful to the *Florist* in presenting the subject of Hardy Plants intelligently and profitably to his customers.***

This issue will reach every possible trade buyer of consequence in America and will have great permanent value to the advertiser, but there will be no increase over our regular rates, which are.***

AMERICAN FLORIST CO.

322 Dearborn Street,

CHICAGO.

Atlantic City, N. J.

The florists of this lively town by the ocean do not seem to experience any lack of business. The season has indeed proved a most prosperous one, decorations of some sort or other having kept the florists quite busy. The dedication of the new board walk, which took place on Wednesday the 8th inst., terminated in a grand banquet at the St. Charles Hotel. Florist D. B. Edwards had the decoration in charge. In addition to numerous palms and plants there were plenty of cut flowers used. Red roses, white carnations and daffodils were used to good advantage in working out the city colors, red, white and blue.

Mr. Edwards has recently received a respectable sized check from the government in payment for the work performed on the grounds surrounding the light house.

Among the many other attractions within and around Atlantic City, the light house with its beautiful surroundings are not the least to draw visitors.

The season is now at its height. The hotels are crowded, the stores are busy and the florists seem to get their fair share.

HOMO.

Bridgeport, Conn.

Bridgeport florists report the best season for bedding plant trade ever experienced. Funeral work has been abundant of late and good prices have prevailed. One of the most effective flower beds in the city is a very large bed of *Strobilanthes Dyerianus* in front of the residence of James Horan. It is the central attraction of a very showy and well kept establishment and in a location close to the N. Y. N. H. and H. R. R. where it is admired by thousands of people daily. Mr. Jas. Horan's illness incapacitates him from active work but his son is pushing business vigorously and three new houses are being erected, two of them iron framed by Thos. W. Weathered's Sons. There are 100,000 carnations in the field.

Middletown, Pa.

Bauder Bros. who equipped their plant some two years ago, have a good paying local trade; they find quite a demand for their flowers from the surrounding towns and villages. Roses and carnations of the standard varieties are the flowers principally grown. They intend enlarging their plant and growing for the wholesale market.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

**Clear Cypress
Greenhouse Material**

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Carnation Notes.

I advocate an early transfer to the houses, and now is the time to get everything in readiness to take advantage of circumstances. If we are prepared to take advantage of probably a few days' cool weather for the transfer, it may save much perspiration and the plants much wilting. We must have an eye for everything that may tend to bring the plants over their period of transplanting as quickly as possible, and to have everything in readiness will prove the greatest help to accomplishment.

At our place we shall commence transplanting, if circumstances are favorable, by the 15th or 20th of August. We commence that early for several reasons. The main object is early blooms, to advance the season altogether, to have most flowers in the winter months. We had this past season an abundance of flowers, more than ever before through the late spring months, at the expense of the winter time, when flowers are mostly wanted, and all on account of our backward stock and some late planting. One other reason to commence this early, is to have this important work done by my experienced hands, even the handling of the soil. And I cannot expect to do this work in one day or one week, or be just favored with the right kind of weather when I am ready. No, I have to be ready when the favorable time appears, do the work in an understandingly careful way, and get done even with the last house in time.

The object in view is to be ahead of time, which can only be of benefit, and to have time to spare for selection of the most suitable days for this important work, which must be beneficial again.

FRED DORNER.

Enriching Carnation Soil.

I have sod soil piled up one year for my carnations. What can I add to it to encourage growth? Have plenty of sheep manure if that will add to the value of soil, or would bone meal be best?

Illinois.

W. J. M.

Rotted sod certainly will make the best soil for most any plants, but for carnations much depends on the texture of the soil the sod has grown on, and I much prefer the sod from land that has been under cultivation for some time than new land. As to the texture of the soil a clay loam is preferable, and sod cut on such soil will when decayed be of the very best quality, and any fertilizer, as sheep manure, cow or horse manure, if well decomposed, can be added, relative to its strength. Bonemeal, fine horn shavings (these will decay quicker than bone) are very beneficial, but would advise to use these very judiciously; the same with wood ashes, and a little sprinkle of common salt. These, especially ashes and salt, it is better to apply later with some top dressing or in liquid manures. If the sod is cut on sandy soil or black prairie soil, and clay loam is obtainable, I would use half and half, or one part clay loam to two of sod, according to the heaviness of the sod, with addition of manures

as mentioned above. If the sod is piled up it would be well to spread it more and expose it to the effects of wind and weather; at the same time have all the fertilizers thoroughly mixed in ready for the bench. In the matter of manures one has to use a good deal of judgment as to the quantity required. Of strong manures, as sheep and hen manure, too much may very easily be given, while some others may not contain half the nourishment we give it credit for, and are in this way very deceiving. Most of the time we are groping in the dark; experiment has to be our guide, and I believe a judicious use of different manures in proportionate quantities will give better results than only one kind used exclusively.

FRED DORNER.

Carnations Dying Back.

Why do our McGowan carnations in the field after making an apparently healthy growth of about three or four inches wither and die back to where they started from? They all seem to be eaten by some insect around the base of the branch. Can it be the work of ants? At the roots of nearly every plant affected there seems to be a nest of ants. Any suggestions you may make on the above will be greatly appreciated by

Pennsylvania.

D. H. M.

It is rather a difficult thing to arrive at a correct diagnosis without seeing the plants. If eaten it must be done by some insects, but hardly think the ants are the perpetrators. The real ones are probably drawing the ants, the same as mealy bugs and aphids do. I would advise Mr. M. to examine a little closer if he cannot find any other insects but ants, and if so an application of some tobacco extract diluted with water will very likely be the remedy.

FRED DORNER.

Chrysanthemum Notes.

Some of the plants are now beginning to show a bud that looks very much like a crown bud, accompanied as it is by side growths, but it is yet too early to select a bud for a good bloom. These should be carefully picked out and the strongest shoot selected and carried on until it in turn sets its bud. We have always had failure with buds selected before the 21st of August, they producing flowers with the lower petals all twisted out of shape, in fact the bloom is apt to look more like a swab than a chrysanthemum flower, and if it is of a pink or red shade it will be badly faded and nobody would be able to recognize it or call it by name.

But it will be soon time to take the buds, and as I find that there are many persons who do not yet know which is a crown or terminal bud, it might not be out of place to describe the two and note the difference. Mr. Elmer D. Smith in his paper read before the Society of American Florists at the convention in St. Louis described both buds very fully, and those having the copies of the proceedings of S. A. F. for 1893, or a file of the trade journals for that year can turn back and

see the illustrations printed, which will show them conclusively the difference between the two buds.

The crown bud makes its appearance from August 1st to September 15th, and sometimes a little earlier or later, depending a great deal upon the time when the plant was struck and its subsequent culture, and the different varieties all vary as to the time of the setting of this bud. Its greatest length is perpendicular and immediately it is set by the plant three growths make their appearance around it, on some varieties all three starting from the same point at the foot of the bud stalk and on others at the base of the upper leaves. The bud sets on the top of a long flower stalk and as the stalk lengthens, from its side will often grow what look like small malformed leaves.

The terminal bud, which sets much later, takes its name from the fact that it is the end of growth of the stem. The greatest length of this bud is horizontal and is accompanied by a number of smaller buds which surround it. This is the bud which forms the flower on the bush plants, or in fact on all plants that are allowed to pursue their own course, for the growths that surround the crown bud take all the strength of the plant, and it soon shrivels up and disappears.

The plants should now be kept well tied up and looked after carefully that they do not get dry. The benches are full of roots and the strong growing plants, aided by the hot sun, soon draw out the moisture in the soil. Keep the plants well syringed, for the wood should be kept soft, and it assists greatly in keeping down the insects. Keep the side growths that appear up the stem carefully picked off, so that the main shoot can receive all the strength of the plant, and also all suckers that appear at the base of the plant. These should be very carefully removed, for if done carelessly great injury is sometimes done to the root of the plant.

ELIJAH A. WOOD.

Murraya Exotica.

There is frequently a demand for orange blossoms at a season of the year when orange trees have long passed the blooming period, and no efforts seem to be made by florists to supply this deficiency. In the *Murraya exotica* a good substitute is found for material for bridal bouquets, and although this plant has been introduced in Europe more than a century ago and cultivated in the United States by a few amateurs for at least fifty years, still it seems to be almost unknown in the florist trade, as well as its value ignored.

It is an evergreen shrub, native of India and sub-tropical Australia. In Bengal it is known as China-box and Kaminee. Linnaeus classed it with the order of Aurantiaceae but subsequently it has been included in the order of Rutaceae. In European collections it is also known as *Chalcas paniculata*. Well-grown plants attain a height of 8 to 10 feet; its habit is bushy, but should be annually slightly pruned to keep it in a more compact form, then its foliage increases in size and the neat shining dark green color of its pinnae leaflets intensifies. During summer and fall at irregular periods, it produces a profusion of corymbs of orange-blossom-like flowers, and although these last but a few days they scent the air all around with a delicate honey-like fragrance. Each crop of flowers is succeeded by numerous small oblong red berries, not unlike those of the holly, and being retained during winter add to the attractiveness of the plant as well as affording

MURRAYA EXOTICA.

decorative material. The berries are edible and have a pleasant aromatic flavor.

Murraya needs ample pot room and a liberal supply of plant food. An annual application of bone meal when repotting in February intensifies the color of the foliage, increases the size of the flowers and causes it to bloom more frequently. When properly treated the first crop of flowers usually appears here during May; another during July and this is succeeded at intervals of from four to six weeks until fall. For winter give it the temperature of a cool greenhouse, but during summer it thrives best when given full sunshine outdoors, when it brings out its delightfully fragrant crops of flowers.

P. J. BERCKMANS.

Fruitland, near Augusta, Ga.

Fern Notes.

GYMNOGRAMMES.

Although this genus includes some of our most beautiful ferns, there are few that are of much service for ordinary decorations, their great drawback being that they do not stand well. Some of our florists use the best varieties of the gold ferns and silver ferns for choice work, and if plants are in good condition they will stand fairly well. Cut fronds are also used to some extent, especially the best forms of gold ferns. It is not necessary to give a long list of sorts. *G. chrysophylla* and *G. Lauchiana* are the two best golden varieties. *G. Alstoni*, which has all the pinnules curled inwards, so the golden under surface is shown off to advantage, is a most desirable variety. The best crested varieties are *Parsoni* and *chrysophylla grandiceps*. Of the latter we have a fine variety named *superba*, in which the golden farina (or powder) covers both the under and upper surface of the fronds, and is of a very rich golden color.

Of silver varieties the best is *G. Peruviana argyrophylla*, the true form of which is heavily covered with silvery white farina, on both under and upper surface of the fronds. *Mayi* is a good variety of more vigorous growth, but not quite so white. *Wettenhalliana* and *multiceps* are

the best crested forms; both of these vary considerably and are not so white as *Peruviana*. *G. Martensi* makes a good pot plant and is very free. The surface of the fronds is of a deep green, and under surface slightly covered with pale yellow. *G. tartarea* differs in having a white under surface to the fronds.

All the gymno grammes come freely from spores, and among seedlings considerable variation will be found. It is very essential to select the very best forms for saving spores from. With care they may be kept fairly true; but the fact that among large batches we get all shades from the pure white of *G. peruviana* to the deepest golden of *chrysophylla* will prove how difficult it is to fix their parentage. The spores germinate very quickly; if they are not found in the first crop it will be useless to keep the seed pots. *Martensi* often proves a very troublesome weed among other sorts.

They all require stove treatment and should be grown singly. They succeed best in a light peaty compost and require good drainage. After the plants are well established a little manure may be given, but this should be used carefully. Being of rather slow growth and making comparatively few roots, they often suffer through being overpotted. Carefully treated, they may be grown on into large specimens, but they are never more effective than when large enough for a 6-inch pot.

Like other stove ferns, they may be gradually hardened off when large enough for decoration, and will then last much longer than when taken from a high temperature. When grown for cut fronds the plants should be grown to a good size before they have any fronds cut, as young plants will be very much weakened by taking the matured fronds. A. H.

Scale on Ferns.

I have some sword ferns infested with black scale. It starts with a little dark brown spot, then turns black; it is somewhat similar to scale affecting oleanders. I have had to cut the ferns down several

times on account of it. Could you give me a remedy? D. M.

Santa Rosa, Cal.

Scale insects on ferns are rather difficult to treat with an insecticide, from the fact that the fronds are liable to injury. Dipping in a solution of "Lemon Oil" insecticide may be tried if the foliage is fully developed and hard, but if this fails (and such a result is quite probable) then hand cleaning with a sharpened stick and a small piece of sponge is about the only reliable method. If the plants are badly infested it would pay better to throw them away and procure a fresh stock.

W. H. TAPLIN.

Philadelphia.

Oh for a breeze from Greenland's icy mountains, it would be very acceptable at this writing, for it is very warm hereabouts; wonder what the Lake Erie breezes are like. It might tempt a few more at present doubtful candidates for the journey, if they were guaranteed cool and refreshing.

The business nowadays is not worth speaking about, the volume is so exceedingly small. Although many of the growers have ceased coming to town, save an occasional trip after that "little" balance there is enough stock floating about to save the dealers the annoyance of sending to the country for it when needed. La France, Testout, Meteors and Kaisers are fairly good and plentiful at \$3 per hundred, Beauties 75 cents to \$1 per dozen, carnations 50 to 75 cents per hundred, asters 75 to \$1, sweet peas 3 to 5 per bunch of 25 sprays.

Evans the ventilator man is about, keeping an eye on the new houses now going up in this neighborhood; he reports a good business. The Quaker City wheel and chain is certainly a familiar sight in the greenhouses in this locality.

Horticultural Hall is rapidly approaching completion, and as the scaffolding comes down the handsomely decorated walls and ceilings give an idea of the beauty of what the completed building will be like. The fine artistic surroundings should be an incentive to make the next chrysanthemum show the finest ever given by the society. The splendid quarters of the Florists' Club will no doubt infuse new life into the organization and a large increase both in interest and membership is confidently expected.

While business is so dull a little more attention is given to the pastimes of the business. Those interested in base ball are meeting to decide the relative merits of their teams. Thus far the Craigs have not suffered a defeat, having won once from the Dreer club and defeated the Chestnut Hill team twice. The second game was played last Saturday, the score being 17 to 11. The Craigs have a pitcher named Lord; it is to be presumed that with such a powerful ally their record for the season will remain untarnished.

The shooters have had another go for the Donaldson medal, with the result that Edward Reid wears it for the second time, sharing honors with George Craig in this respect. A. B. Cartledge gave him a hard chase, tying him at the first 25 targets, but in the second series he won with a score of 23 to 21. The shoot at the Caledonian games will no doubt be a great contest, 7,000 targets have been ordered and it is feared there will not be enough.

John Gardiner & Co. have given up the retail department of their business and will confine themselves hereafter entirely

to the wholesale trade. Their fixtures, which were complete in every respect and especially adapted for a retail seed store, have been purchased by the Farquhar Brothers of Boston.

David Landreth & Sons have closed their branch store at Delaware avenue and Arch street.

The craft lose a good friend in Robert Scott, who died July 23, aged 78. He retired from active business some ten years ago, but there are many who remember with pleasure his kind and genial manner. He was one of the oldest members of the Horticultural Society, being elected a life member in 1848. By strict attention he built up a large and profitable business which is continued by his son Alexander Scott.

Mrs. John Nisbet died and was buried last Saturday.

John Burton gave a trolley party to Willow Grove Park last Thursday in honor of Mrs. M. Thomas and her daughter of Baltimore, who are spending a few days in this city. K.

OBITUARY.

ROBERT SCOTT.

Robert Scott, one of the oldest florists of Philadelphia, died on Wednesday evening July 23, at his home, of general debility. Mr. Scott had attained the ripe old age of 78 years, he being born in Lanarkshire, Scotland, in 1818. He came to this country in 1847 to accept the position of foreman for Robert Buist, which place he occupied for two years, when he bought out a florist named Rementer and established himself at 18th and Wharton streets this city. Mr. Scott was a strict Presbyterian and would transact no business of any kind on the Sabbath day. When Mr. Rementer heard of his determination he informed him that he would surely not succeed, as he had found it hard work to make both ends meet, and Sunday had always been his best day. Mr. Rementer proved a poor prophet, however, as Mr. Scott always referred with pride to the fact that he had a balance of \$1,000 on his first year's business, and his observance of the first day of the week in this respect was strictly adhered to throughout his business career.

In 1858 Mr. Scott purchased the ground at 19th and Catherine, where he has since conducted a very successful business. It might be mentioned here that he was succeeded in his old place by Mr. Craig, the father of Robert and George Craig, where they received their first training in the business.

Mr. Scott was of the old school to which James Ritchie, Robert Buist, Mr. McKenzie and John Dick belonged, of these Mr. Dick now alone remains. He was a large grower of camellias, azaleas and roses. His stock of the latter during the period from 1860 to 1875 averaged about 40,000 plants annually, and while now this is not looked upon as large, at that time it was the most extensive in the country. He was one of the first to issue a descriptive catalogue of the roses and while he seems not to have originated any new kinds he was fully up to the times in his selection of the best varieties of the European growers. About 1880 his son Alexander was given an interest in the firm and an extensive addition to the plant was erected at 18th and Jackson and the cultivation of roses for sale as plants was conducted on an extensive scale.

In 1885 Mr. Scott retired from active participation in the business, which has

since then and will now be continued by his son. He was one of the oldest members of the Penna. Horticultural Society, and took a great deal of interest in its affairs, serving as a judge for a number of years. When in active business in all his dealings with the trade Mr. Scott was the soul of honor and his mild and genial disposition made fast friends of all those whose good fortune it was to come in contact with him. Many a poor member

THE LATE ROBT. SCOTT.

of the craft, a seeker for work, had reason to bless him for his generous help and advice.

Mr. Scott was married twice, his widow, two daughters and one son survive him. K.

Montreal.

If your readers have not heard from us for some time they must not think we are less alive than usual. Your correspondent has been so much engrossed in his own private affairs that he could not find time to even think of anything else. Although I have not met a florist who said he has had more business than he could attend to the past spring, I believe, everything considered, there was little to complain about. The plant trade was very satisfactory, everyone getting pretty well cleared out. Some complaints were heard in the early part of the season about price cutting on the part of a few nervous growers, who, finding themselves with a larger stock than last year, imagined that to dispose of it prices should be lowered, never taking into account the steady increasing demand for good bedding plants in our city, in common with all other cities which are growing as ours is. An evil which the legitimate plant grower of Montreal has to contend with is the quantity of plants (rubbish if you will, but plants all the same) which are put on the market by the public institutions. These institutions enjoy advantages in the shape of exemption from taxation, cheap labor, etc., which enables them to put goods on the market at a price with which the florist, who has to pay the full price for everything he requires, cannot compete.

The season has been exceedingly favor-

able to the production of outdoor flowers; sweet peas are good and abundant; asters and gladiolus are also plentiful and of fine quality. Carnations are rather scarce now, as are also roses; the latter are of very poor quality.

Most of the planting is done now, and the quantity of 'mums on the benches in this vicinity far exceeds any former year.

I have not heard of any new glass going up here this summer; the feeling is that there is about enough already. One thing is certain, that there is more money invested in glass here than is paying interest.

The prize list for the chrysanthemum show has been in the hands of the members of the club for about a month; copies may be had by applying to Mr. Fred Bennett, secretary, Montreal G. and F. Club, 255 St. Martin street.

Final arrangements were completed at the last meeting of the club for the exhibition of sweet peas and asters, which will take place at the next meeting of the club on the first Monday in August. Prizes will be offered for the best 50 blooms white, 50 pink, 50 blooms mixed and 25 ditto, and the largest and best collection, 12 blooms of each, all with foliage; asters, 6 blooms white, 12 blooms ditto, and 12 and 24 blooms mixed—the flowers must be staged by 7:30 p. m.

The members of the G. & F. Club, with their friends, held their annual picnic at Isle Grosbois on the 22d, and it was thoroughly enjoyed by all present. The amusement consisted of a cricket match, a football match, quoit match and a long program of races for the members, their wives, daughters and children, all of which were well contested and came off very satisfactorily. Among those who distinguished themselves before the wickets was Walter Mott, the popular representative of Henry A. Dreer Co.

The chances are favorable for Montreal to be well represented at the convention of the S. A. F. this year. BEAVER.

Toronto.

The excursion of the Gardeners' and Florists' Association and the Horticultural Society to the Model Farm at Guelph on Wednesday last was a great success, and it is safe to say that every one of the sixty-five who attended returned home well satisfied with the day's outing. It was certainly the best summer affair that has yet been held. All the farm officials, from the president and professors down, treated the visitors with the utmost cordiality, and gave them an insight into the working and objects of each department. The president in a short speech after lunch said that it was the intention to devote more attention to horticulture than had been done in the past. The visitors wandered all over the farm and examined the outside farm experiments, the fine cattle, the poultry, the dairy and cheese factory and their machinery. Mr. Squirrel, the outside gardener, showed them everything of interest in the park, vegetable and fruit garden and herbaceous borders, all of which looked most flourishing and in the best of condition and apple order. The greenhouses and flower garden under Mr. James attracted a great deal of attention, especially the former. The large conservatory contains many very large and fine specimens of palms, greenhouse flowering and foliage shrubs and plants, all looking very clean, bright and healthy. The stove also and three other houses contain many objects of interest and are run in a manner which shows that Mr. James

GROUP AT THE PICNIC OF THE ST. LOUIS FLORISTS, JULY 25.

THE ST. LOUIS FLORISTS' GUN CLUB, JULY 25.

is a man who thoroughly knows and loves his business. After having "done" the farm, many of the boys drifted down to the town and indulged in an hour or two of conviviality and frivolity. In the words of one of the company "everybody spread themselves but nobody wobbled."

Thanks, President Scott—I am sure there will be a Canadian contingent at the convention this year; certainly Toronto will do her best to send over her complement. We have been rather backward in coming forward at the late conventions, but I think that owing to the short distance and low fare we should show up in good force this year. E.

St. Louis.

The great event of the season among the florists and their friends has come and gone, with nothing but pleasant recollections; the third annual picnic of the St. Louis florists, held at Clifton Terrace, Ill., Saturday, July 25. A special train started at 8:25 a. m., two others following at 12:30 p. m. and 1:45 p. m. In all about 300 florists, including growers, store and commission men, with their wives, children and sweethearts, participated in the outing, and not one could be

found who said he did not have a good time.

The feature of the picnic was the band of negro jubilee singers. The orchestra gave delightful music for the dancing, which was participated in by the younger class. The youngest florist at the picnic was Charlie Kuehn, Jr., and the oldest was Luther Armstrong. The committee, composed of J. W. Kunz, Fred Weber, Emil Schray, Charles Young and J. J. Beneke, had mapped out a program for the day, and were busily engaged putting same into execution. The first event was the three-legged race; this was won by Will Holtz and George Augermuller, both employes of C. A. Kuehn. Next in order was the 100-yard dash; the entries were large, and had to be run in heats; first heat was won by John Manson, and the second by Will Edle. In the final run between Manson and Edle Manson won. The prize was a beautiful silk umbrella. The next race was for boys under 12 years; Herman Weber, son of Fred Weber, won in a walk. The prize was a pocket knife.

Then came the ladies' race, open to all. The first prize was won by Miss Lena Meinhardt, and the second by her sister, Miss Tillie Meinhardt. The shooting con-

test came next, and was managed by the Gun Club; Chas. Young came out first, E. W. Guy of Belleville second. The last item on the program was the most exciting of all, the tug-of-war; the teams were selected by Chas. Young and J. J. Beneke, and Luther Armstrong was selected as referee; ten men were on each side. After a hard pull Beneke's side won.

The bowling match was postponed, and the club will roll for the prize on its alleys at home next week. J. J. B.

New York.

One of the wholesalers referring to the present inactivity in business remarked that "the retailers seem to have neither money nor heart to make any effort," which describes prevailing conditions exactly. Sweet peas, asters and gladioli constitute the greater bulk of the flowers coming in and these are sold for what they will bring. Carnations are small sized everywhere. Roses of good salable quality are not readily found and those who want them have to pay accordingly. Meteor and Kaiserin are in the lead as to quality and price. Lily of the valley is used but sparingly at this season of the year, being in demand only for special occasions and then not in quantity. The growers arrange to have but a few on hand, consequently it is hard to depend on excepting when ordered in advance. A good many tuberose are seen at the market in the morning.

On all sides the complaint of poor collections is heard. It appears to be chronic in cut flower, seed and supply trade alike and applies equally to trade accounts and bills against retail customers. According to the experience of some, drafts are returned unhonored much oftener than they are paid even when drawn on parties of established good reputation. This inability or disinclination to pay bills is unusually noticeable the present season.

Finn, Cole & Co., manufacturers of sash, doors and blinds have made an assignment. They had quite a trade in sash for florists' use.

The sad news comes from Pearl River that John Thorpe, Jr. (son of "Uncle John") has lost both his arms through an accident at the mills where he was employed.

Alex. Burns and family are summering at Sayville, L. I.

Boston.

Arrangements have been completed for the trip from Boston to Cleveland and return via the Hoosac Tunnel and West Shore Railroad to Buffalo and thence to Cleveland by steamer. Train leaves Union Station, Boston, at 3 p. m., Sunday, August 16, and boat arrives in Cleveland at 7 a. m. on Tuesday, all day Monday being available, for those who so desire, to visit Niagara Falls or other places of interest in and about Buffalo. Ticket for the round trip from Boston to Cleveland and return via this route will cost but \$17, and it is hoped that this very low rate together with the many inducements offered on the way and at Cleveland will bring out a large delegation. The Boston people will be glad to have the company of all those from New England, Canada, eastern New York or other sections who may find it convenient to join them. Sleeping accommodations on train and boat will be secured for those who apply early by W. J. Stewart, 67 Bromfield street, Boston.

Harvard Botanic Garden staged a superb collection of hardy herbaceous

flowers at Horticultural Hall on July 25. The brilliant display attracted a crowd of admirers, and labels were industriously consulted and memoranda made for future use. A silver medal was awarded. Sweet peas were the specialty on the schedule. First and second premiums for both display and named varieties were taken by H. A. Jones and E. A. Weeks respectively, and it is somewhat singular that both these exhibitors came from Worcester, the local growers being but slimly represented. Carl Blomberg's show of aquatic flowers filled three large tanks at the head of the hall and comprised many nymphæas, from the tiny *N. pygmaea* roses up to varieties of enormous size, besides pontederias, sagittarias, sedges and grasses, and the graceful *Papyrus antiquorum*, the latter in bloom, a rare occurrence here. This was the date for the first exhibition of native mushrooms, and it brought out several large and interesting collections of fungi, edible and otherwise.

Business is at a standstill, and things are decidedly monotonous. Rarely have the retail stores been so deserted and quiet, even in midsummer, and on all hands unprecedented dullness is reported. Everyone seems to take the situation in a matter of fact sort of way, and all appear to feel that in due time business will pick up all right. Asters are getting plentiful, and pink pond lilies are also abundant; otherwise the stock coming in remains as to variety and quantity about as it has been all through July.

W. A. Bock has pulled down two houses each 20x160, and is replacing them with modern houses of best construction. He has three large houses full of the famous Boston fern.

Visitors in town: H. A. Bunyard, representing Pitcher & Manda, Short Hills, N. J.; Martin Renkauf, representing H. Bayersdorfer & Co., Philadelphia; and S. Skidelsky, representing M. Rice & Co., Philadelphia.

An Ampelopsis Blight.

With this note is sent a sun print of a spotted leaf of *Ampelopsis tricuspidata* (Veitchii).

The leaf shows the destructive work of a leaf fungus bearing the botanical name of *Phyllosticta ampelopsidis* E. & M. In ordinary language it is a "leaf spot" and the enemy that causes it is a minute plant feeding upon the substance of the Japanese Ivy.

It is most likely that the entrance is made through the epidermis of the leaf near the center of what afterwards becomes a brown oval spot. From the point of entrance the threads spread in all directions and sap the tissue of its vitality. After a time the fungus produces its fruit in the form of minute pimples upon or near the surface of the brown and dying substance of the leaf. With a hand lens these dark specks can be easily distinguished, but with a compound microscope these specks are seen to be flask-shaped bodies filled with minute oval bodies that are the spores of the fungus. It is by means of these spores that the fungus is able to spread from leaf to leaf and plant to plant.

The above, in short, is the nature of the ampelopsis blight. It is not difficult to conceive that if this trouble should increase, as it is likely to do, the beauty of this splendid creeper will be destroyed and even the life of the vines endangered. There is no reason why spraying should not be hopefully engaged in, for this enemy is very closely related to the black rot of the grape, which has been success-

AMPELOPSIS BLIGHT.

fully checked by the Bordeaux mixture and other standard fungicides. The orchardist and trucker have learned that spraying pays, and now the gardener must in the same way preserve his susceptible ornamental plants in their health and beauty.

BYRON D. HALSTED.

Rutgers College, New Brunswick, N. J.

Chicago.

See heading "Chicago to Cleveland" for information about railroad arrangements for those who will attend the Cleveland Convention. As the expense of the trip will be inconsiderable a large number should take advantage of this opportunity to not only attend the convention but to see one of the prettiest cities in the country, and in the midst of its centennial celebration festivities.

Trade conditions are still unchanged. First-class rose stock still sells, especially Beauties; Perles are also in demand, but trade is of course very quiet, and rendered still more so by the very warm weather. Carnations vary in price from 50 cents to \$1, most of them being field grown. Some fine indoor flowers have been cut by Mr. Mundt. Sweet peas vary both in quality and price, the latter being from \$1 to \$1.50 per thousand, Swainsona sells for \$1 a dozen bunches, the bunches containing about 15 sprays. It is found very useful for funeral work, and we hear of its filling the place of valley very acceptably for a wedding bouquet. Tuberose are quite plentiful. Auratum is good at \$1 to \$1.50 a dozen. Gladiolus sells for \$4 a hundred, but does not go very quickly; a good deal is coming in. Asters continue the same as last week, and there is the usual abundance of herbaceous stock. Most of the city stores have a somewhat deserted look.

A florist from a neighboring town who was visiting Chicago recently had a somewhat unpleasant experience. Being found in the vicinity of a crooked character for whom the police were looking the innocent florist was arrested, and in spite of the fact that he had no acquaintance whatever with the "tough," he was sent to the Bridewell in default of fine imposed. After a great deal of trouble and red tape he was released at the end of five days through the good offices of Flint Kennicott. Evidently it is not safe for a desperate character engaged in the nefarious

occupation of cultivating roses and carnations to come within reach of our vigilant police.

C. W. Northrup has been visiting his relatives in New Jersey.

The familiar building at 59 Wabash avenue will soon be deserted by the florist fraternity. Winter & Glover, W. E. Lynch and George Piepgras are all moving to more commodious quarters on the second floor of the building 19-21 Randolph street, just east of Wabash avenue. They will all be better situated here, and the change is an advantageous one. The space occupied is considerably larger than in the old building. Mr. Lynch is adding a full line of florists' supplies to his stock, for which increased space was necessary.

Visited Chicago: Louis Bauscher, Freeport, Ill.; J. Austin Shaw, New York.

Syracuse, N. Y.

Those who grow carnations are now very busy getting the houses ready for planting, as the general sentiment amongst the growers is that the earlier they are housed the better. Henry Burt is about the first, having a house 200 feet long already planted with Daybreak and Silver Spray; his plants are in grand shape this year, ranging from 8 to 10 inches through already. Spray always does well on his soil, the texture of the leaves being so tough they are practically rust proof. Stem rot in the field has not been nearly so bad as last year. A very noticeable thing with this disease, if it be cutting bench fungus or not, is that the earliest propagated plants are the ones which suffer most from it.

Louis Guillaume is hustling repairs along at his new place on Salina street and expects to be along with the retailers when trade opens up this fall. Heretofore Mr. Guillaume has been a very successful carnation grower for the wholesale market.

Roses all over are looking very promising. A very noticeable thing is the lack of manure daubed over the beds this season. Some of the growers are at last beginning to believe that stimulants cannot take the place of real strength, and that to make themselves first master of that which promotes health and vigor is the road that leads to success, fine points easily coming afterwards.

BOUGAINVILLEA GLABRA. GROWN BY CHAS. DURHAM, NEWTOWN, O.

The recent rains have caused a transformation with outdoor stuff and flowers are to be had more plentiful; peas are now in their prime and sell fairly well. The cut flower trade is about the same as last week, although the orders are not very large there are quite a number of them.

ALPHA.

In the note of the visit of F. L. Atkins the statement that he represented Siebricht & Wadley was an error. Mr. Atkins is still with Pitcher & Manda.

Cincinnati.

The Cincinnati florists' picnic and outing which occurred Thursday, July 23, is now a thing of the past. Everything passed off smoothly. The contests came off in rotation, except the baseball game and donkey race, which were declared off on account of rain. The bowling contest was the first on program, the College Hill boys winning; highest score 262. Mr. John Fries was in the lead pitching quoits. A beautiful silver cup and other valuable presents were given in the various contests. The committee having charge of the picnic deserves a good deal of credit for their untiring efforts, as everything proved to be a success.

Among the outside florists present were Theo. Bock of Hamilton, Mr. F. Pentland and Mr. Giesy of Lockland, Mr. and Mrs. H. Behrens and daughter of Middletown, Mr. and Mrs. Herrick of Covedale.

The outing was a grand success and will be long remembered.

We regret to announce the death of Mrs. Alb. Heckman of Covington. Mr. Heckman receives much sympathy in his bereavement.

H. SCHWARZ.

Tamarix sps. about 35 ft. high, but has suffered during the past three winters. The tree is 25 years old and girths 2 feet 8 inches at three feet from ground.

Several examples occur of good sized trees of Rhus semialata, Chionanthus virginica, etc., but the laburnum and a few others stand more here than in western New York.

EVERGREENS.

Cryptomeria japonica.
Cunninghamia sinensis.
Taxus baccata, are all three 20 feet or rather more, but require slight shelter from buildings.
Trenton, N. J. JAMES MACPHERSON.

Late Legal Decisions.

IMPLIED WARRANTY IN SUBSTITUTE FILLING OF ORDERS.—That a sale of an article by a particular description constitutes a warranty that the article answers to that description, is well settled. But the supreme court of North Dakota goes a step farther, and holds that, because, when in response to an order for an article described in a particular way by the purchaser, the seller delivers an article of that general nature, though not fully corresponding with such description, the law regards his act as equivalent to a sale of such article by the particular description set forth in the order, therefore he is to be considered to have warranted that it corresponded to such description. The illustration furnished by the case under consideration, Northwestern Cordage v. Rice, 67 N. W. Rep. 298, is of an order for a quantity of pure Manila twine. The company of which it was ordered having assumed to fill the order, the court holds that it must be deemed to have warranted that the article delivered was in fact pure Manila twine. And, what is of not less importance, the court further holds that the acceptance by the pur-

BUILDING IN WHICH THE TRADE EXHIBITION WILL BE HELD AT CLEVELAND.
[THE TITLE IN LAST ISSUE WAS AN ERROR]

chaser of an article which does not correspond to the warranty, with knowledge of the defect, does not, as a matter of law, bar his right to rely upon the warranty. It is a circumstance to go to the jury, on the question whether there was a breach, and possibly whether the purchaser has not waived his right to insist upon damages for it. This is certainly a remarkable decision in some of its aspects. The court itself seems to realize this, and in anticipation of the applications that may be sought to be made of it in the future, without trying to forestall the exceptions which may have to be made in different cases, the court says that it believes it to be in the interests of justice, and to fairly express the sense of business men upon the subject, that whatever form a warranty assumes, if there is in fact a warranty, the mere acceptance of the property will not, as a matter of law, bar a recovery for a breach of the warranty, although an inspection of the property would have led to a discovery of the defective condition of the thing delivered should not necessarily preclude a reliance upon the warranty. One reason for this is that the purchaser is often so situated that it is necessary for him to accept the article in its defective condition.

Property Rights in Advertising Cuts.

Are there any? If advertising cuts cannot be copyrighted, as such, does the law recognize any right in them, which it will protect? The supreme court of Pennsylvania seems to furnish a favorable answer in its comparatively recent decision of the case of Shaw v. Pilling, 34 Atl. Rep. 446. This was an action brought to recover for the infringement of a trade-mark. The parties sued not only used the name which the other had adopted, but also the exact pictorial representation of the article itself. It was not an accidental resemblance, but an admittedly intentional copy, the excuse offered therefor being that the parties supposed the name was a merely descriptive one, which they might use, and, as to the picture, that there was a custom of the trade for deal-

ers to "borrow" each other's cuts for advertising purposes. This, the court says may have been entirely true, and what the parties did they may have done ignorantly and innocently; but their acts were susceptible of a different interpretation, and it was for the jury to say what was their true intention. The judge could not have taken this question from them, nor could he have instructed them, says the supreme court, that such a custom if proved, would be a defense. No custom of other people, even in the same trade, it declares, can excuse one man taking another's property without his consent. Here the court seems to recognize property rights in advertising cuts. What remains is to show damages by their invasion. And in this case the court further holds that it was proper for the plaintiff to give evidence of the falling off of his custom concurrently with the defendants' beginning to use the trade-mark. The same rule ought to apply as well where the complaint is a wrongful appropriation of an advertising cut, not strictly speaking a trade-mark. The logic of this decision is clear.

GENEVA, N. Y.—The C. L. Van Dusen Co. has been organized with a capital of \$6,000, for the purpose of growing and selling nursery stock.

WRENTHAM, MASS.—Geo. A. Draper, a well known florist of this town, died on Sunday, July 12, from paralysis of the brain, aged 45 years. He will be greatly missed in the town, in business and socially.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By first-class florist. Good designer. All references. Address J. J., care American Florist, Chicago.

SITUATION WANTED—As foreman of a commercial place in or near Chicago. Best of references as to ability, etc. Address H. 27, care American Florist, Chicago.

SITUATION WANTED—As rose grower in a commercial place, by a German; 5 years' experience; age 28; married. Good reference. Address C. WAGNER, 218 ADD ST., Newburgh, N. Y.

SITUATION WANTED—By good all around florist, in or about Chicago; 10 years' experience; German, age 32, single, and willing to work. First-class references. Address R. K. Postoffice, Maywood, Ill.

SITUATION WANTED—As manager or foreman in a private or commercial place; 20 years' practical experience in all branches of the business. Best references. Address MANAGER, Box 103, Tom's River, N. J.

SITUATION WANTED—By the latter part of August, as rose grower; 16 years' experience; good worker. Best references. Those needing a hustler need only apply. State wages. Address RONES, care American Florist.

SITUATION WANTED—As foreman or manager by a first-class grower of roses, carnations, mums, palms, ferns, violets, bulbs and general stock; 22 years' experience; best of references, single; correspondence solicited. Address FLORIST, 129 N. Clark St., Chicago.

SITUATION WANTED—As foreman or manager in large commercial or private place, by a first-class grower of roses, carnations, mums, bulbs and general stock; 22 years' experience; age 35; married. Has been foreman, having full charge in large place for the past 4 years. Can furnish best of references. Address F. BEU, Collingdale, Del. Co., Pa.

PANSY SEED.

If you want the finest large and fragrant Pansy flowers, TRY WOODBURY'S noted seeds. A FINE ASSORTED COLLECTION 50c. Finest German and Giant-flowered French strains blended, or either separate, 200 seeds 30c; 1/2 oz. \$1.00; oz. \$3.00. DAVID B. WOODBURY, Pansy Specialist, South Paris, Me.

Pittsburg.

A very large number attended the club meeting on the 23d ult., when all arrangements for attending the convention of the S. A. F. at Cleveland were practically concluded. The club will not go all together, as some will go by the Lake Erie and others by the C. & P. railroad; the rates are the same on both roads, but are not the rates secured by the S. A. F., and the countersigning of tickets will be avoided. At our next meeting on the 13th the committee will know how many expect to go; one thing is certain about that part, there will be a large delegation on hand. W. F. Lauch was appointed captain of the bowling team; he is one of our most enthusiastic bowlers. The committee to formulate a plan for more harmonious and beneficial methods of business among the florists consists of James B. Murdock, chairman; Samuel McClements of Randolph & McClements; and H. L. Hartman of Hartman Bros. No time has been set for their report, as all realize the importance and difficulties of the subject, and know it will require a great deal of time to overcome them. After the meeting adjourned the members held a "social," everyone expressing himself satisfied with the "set-up" provided by the entertainment committee.

Trade has been of the usual summer variety, very light; in fact if it were not for funeral work it would not amount to anything. The past week has been, on account of rain and wind storms, a very disastrous one in this section of Pennsylvania. On Monday there were two cyclonic storms which has about ruined outdoor crops of all kinds; they were the severest ones we have experienced for years. Settled weather, of a different kind from that of the last two months, is most anxiously hoped for by everybody.

Miss E. B. Maxwell, the florist of Wilkinsburg (Station D, Pittsburg P. O.) has returned from a fortnight's trip to Buffalo and Niagara Falls. REGIA.

VAUGHAN'S INTERNATIONAL PANSY MIXTURE

THIS mixture is composed of the choicest selections from nineteen American and European Specialists in Fancy Pansy Seed-growing, and is unquestionably The Best General Mixture in Existence. This is the Pansy mixture for every Florist who would realize the highest prices for his flowers and plants. It contains the cream of the cream of every noted Pansy growers' product the whole world over.

The Pansies growing for this mixture have been repeatedly personally inspected by us in the fields, and we thus became acquainted not only with the quality of the general assortment of each individual grower, but we also make selections of their choicest varieties. Thus it can be readily understood that we are in position to make up The Finest Combination of kinds in the world, and this we are doing each year with our "International Mixture." It contains, besides all the choicest German Pansies in their wide range of beautiful colorings, the Giant Sorts in variety, with

many Pink, Red, Chocolate, Slate and other Novel Shades. It contains all the separate colors of the Giant Trimardeans, with their immense flowers and rich colors. It contains the Giant Cassier and Bugnot strains, the product of celebrated Scotch strains, the Falaize and Boulogne Giants, in fact, there is no strain of any of the celebrated Pansy Specialists not represented in our INTERNATIONAL MIXTURE. Price, per oz. \$10.00; ½ oz. \$5.00; ¼ oz. \$1.50; trade pkt. 50c. (Less 10 per cent. for cash).

GIANT PANSIES.

Giant Trimardeau, white, large white with a violet center. Pkt. 25c; ¼ oz. 10c; oz. \$4.00.

Giant Beaconsfield, pkt. 25c; ¼ oz. 10c; oz. \$4.00.

GIANT TRIMARDEAU IMPROVED. This strain contains all the new colors of Trimardeau. Pkt. 25c; ¼ oz. 10c; oz. \$3.00.

GIANT CASSIER, a very choice variety of colors, each flower is marked with 3 or 5 blotches, pkt. 25c; ¼ oz. 10c; oz. \$5.00.

GIANT BUGNOT, the flowers are of enormous size, perfectly round, of great substance. Our "Bugnot" contains shades of red, bronze and reddish brown that are not found in any other mixture, pkt. 50c; ¼ oz. \$1.00; oz. \$6.00.

AURORA, a new, pure white giant, pkt. 50c.

GIANT GOLDEN QUEEN, new, golden yellow without any blotches, pkt. 50c.

Giant Paris Pansy Mixture.

The flowers of this strain are as large as the Trimardeau and far superior in color and in substance of petals; having a stout and stiff flower stem. Oz. \$4.00; ¼ oz. \$1.20; ½ oz. 65c; pkt. 25c.

VAUGHAN'S GIANT PANSY MIXTURE.—This mixture comprises all the above strains and colors, and will give satisfaction to everyone whose trade demands Pansies with large flowers. Per oz. \$5.00; ¼ oz. \$1.35; trade pkt. 50c.

VAUGHAN'S PREMIUM PANSIES, MIXED.—Embracing many shades and colors. Pkt. 25c; ¼ oz. \$1.00; ½ oz. \$3.25; oz. \$6.00.

CHICAGO PARKS BEDDING PANSIES.—Many colors mixed. 4 ozs. \$3.00; oz. \$1.00; ¼ oz. 50c; pkt. 10c. Write for list of separate colors.

Giant Auricula Colors, very beautiful, pkt. 25c.

Giant Violet Blue, pkt. 25c; ¼ oz. 50c.

Giant Yellow, Five Spotted, new, fine round flowers, pkt. 25c; ¼ oz. 50c.

Giant Hortensia Red, new, same shade as Hydrangea, pkt. 25c; ¼ oz. 15c.

Giant Emperor William, ultramarine blue, pkt. 25c; ¼ oz. 60c; oz. \$4.00.

Giant Trimardeau, mixed, pkt. 10c; ¼ oz. 50c; oz. \$1.50.

Giant Striped, pkt. 25c; ¼ oz. 65c.

Giant Trimardeau, Yellow, very showy color, good seller, pkt. 25c; ¼ oz. 45c; oz. \$3.00.

Giant Trimardeau, Purple, flowers very large, pkt. 25c; ¼ oz. 45c; oz. \$3.00.

Giant Coal Black, pkt. 25c; ¼ oz. 60c; oz. \$4.00.

THE PREMIUM LIST of the flower displays to be held at the American Institute Fair September 28 to October 29 is now ready, and may be had from the Director, Chas. Chamberlain, 113 W. 38th street, New York. The chrysanthemum classes include a number of liberal premiums.

RUBBECKIA LACINIATA FL. PL., which came out as a novelty this year, promises to be a useful florists' flower. It begins to bloom the latter part of July, growing 4 to 6 feet high; the long-stemmed flowers of a rich yellow suggest in form a reflexed chrysanthemum, with irregular petals giving a starry shape. It is a good keeper, and more refined than the double sunflowers.

THE new single border geranium Mars has made a very favorable impression on those who have seen it. The committee of the Cleveland Club, who recently passed upon some plants sent for exhibition by Mr. Henry Eichholz, of Waynesboro, Pa., believe it will be a decided acquisition as a border plant and as a bedder in small beds on account of its profusion of bloom. The color is white and salmon, habit very dwarf, leaf with dark brown zone.

THE U. S. DEPARTMENT OF AGRICULTURE has issued a very valuable bulletin on "The Shade-tree Insect Problem in the Eastern United States," by Prof. L. O. Howard, reprinted from their yearbook for 1895. It deals with the insects at present most destructive to our trees, giving remedies or preventives of their depredations. It is a timely and valuable paper, and will be found useful by every tree owner. It may be obtained on application to the Department of Agriculture, Washington, D. C.

STRAWBERRY CULTURE, recently received by us, is the first number of a series of garden handbooks, to be published in pamphlet form. It has 30 pages, bound in paper, and discusses its subject very clearly and fully. Of course it deals with the matter from an English standpoint, which would no doubt be modified considerably in our climate. Very full instructions are given for forcing strawberries, as well as growing them out of doors. (Published by Geo. Tucker, 1, 2 and 3 Salisbury Court, Fleet street, London; price, two pence.)

Our Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

T. W. WOOD, Pres.; ALEX. RODGERS and J. B. Rice, Vice-Presidents; A. L. DON, 114 Chambers Street, New York, Sec'y and Treas.

Pacific Seed Gardens.

Onions have done splendidly this season all through the Santa Clara valley, and there is no chance of a shortage of onion seed from this section. Red Wethersfield, which was short last year, is in splendid form this season.

At C. C. Morse and Co.'s new seed farm at Gilroy the first thing that drew our attention was the immense onion fields. As far as the eye could reach on both sides of the railroad track was nothing but hundreds of acres of onions presenting a beautiful silvery gray appearance in the midday sun. Long drainage ditches have been dug all through the farm to drain off the seepage from the adjacent mountains. A big acreage of American Flag leeks were growing nicely and promised good results. The golden self blanching celery looked very pretty with its light golden color in contrast with the other darker sorts. Hollyhocks are also grown here, but did not do much this season.

The great specialty of this firm is lettuce. They undoubtedly have the largest trade in lettuce seed in the world. They are growing over seventy-five named varieties. Immense fields of black seeded Simpson were passed, all looking excellent with the exception of a few places where they were washed out by the winter rains, but a second sowing had made an excellent growth and promised as good results as the early sown plants. The new lettuce "The Morse" showed up in excellent form. We also saw a large acreage of southern curled mustard, which was nearly ripe. In places the fly has made its appearance, but not so as to do any damage. A field of Cos lettuce looked well.

Radish seed is another important factor in this firm's business, a very large acreage being grown. In many places that terrible fly had done much damage, but in other places it was perfectly free from it. Many varieties are grown here.

At the Miller ranch we found many interesting things. Mr. Waldo Rohnert has charge of the flower seeds on this place, and they are a credit to him. We saw a lot of mixed seedling hybrid sweet peas growing, of which great results are expected. They indeed presented a beautiful sight, and that well known seedsman W. Atlee Burpee after looking at them exclaimed "It is worth a trip to California to see." On this place was also seen a large area of lettuce. Spinach had been cut, and they were beginning to harvest at that time. The crop of it as a general rule will be very good. The chief sorts grown were Long Standing, New Victoria, Savoy, Leaved and New Zealand. Here also is grown quite a lot of centaurea in different sorts, which was in full bloom. Passing further we came to a patch of Cupid sweet pea, which looked beautiful, almost covering the ground with their white flowers. This variety has been watched closely this season for "sports," but so far without avail, coming very true at all times.

Passing more onion fields we came to the sweet pea trial grounds. This year's set of novelties have proved rather disappointing, with the exception of Countess of Aberdeen and Crown Jewel, the latter named sort being the best of Eckford's

set. The varieties introduced by W. Atlee Burpee, namely, Greyfriar, Oddity, Ramona, Juanita and Daybreak, were looking fine; also J. C. Vaughan's America showing up in excellent shape and of good size. As soon as we get the rounded form on this variety we are going to have a gem.

We passed beds of poppies, stocks, pansies and asters. Semple's chrysanthemum flowered varieties do excellent here, as they do throughout the state. The Giant Comet is also a great favorite.

We came upon the novelties that are to be introduced this coming season, and some of them have bright futures, for instance, the salmon striped sweet pea possessing the finest form and texture, which is a selection from Mrs. Jos. Chamberlain. A curious coincidence is that this sweet pea originated simultaneously with this firm and Mr. M. Lynch last season. We saw some fine double Boreaton, also Firefly, which was slowly taking on the hooded form. Another selection from Eliza Eckford was also fine, being as a lighter shade throughout than its parent.

Of the older sorts Katharine Tracy has made a wonderful growth, but one fault is that as a general rule it has only two flowers to the stem. Out of Crown Jewel also comes a light lemon of grand form and size, and from present indications it looks as though it is going to be black seeded. If we can get a black seeded lemon color sweet pea I begin to think that a step has been made towards the sulphur yellow so long sought for.

On this ranch over 150 hands are employed to keep everything in proper condition.

At Santa Clara, where the original farm is situated, we first went to the old farm which is a short way out of town where there were large lots of lettuce and onions growing, all looking in the pink of condition. Radishes also were growing here but were badly infected with the fly.

The Murphy Ranch, where the farm proper is located, contains over 1,000 acres of fine level land fed by flowing artesian wells. Here was seen the newer sweet peas growing in large lots and promising good crops. An object of interest was a new onion to be sent out by one of our leading seed houses this season to be called the "Pink Prize-taker." It is a pink selection from the original Prizetaker and possesses all of the good traits of that now famous variety which also originated here. Here was grown the new Mignonette lettuce which has to be cut twice before it will run to seed, so hard is the head.

Great fields of carrots were in full bloom and one of the prettiest sights of all was a stretch of parsley in full bloom standing over 8 feet high of bright yellow colored flowers. A field of Creole onions was struck with the blight and showed up poorly.

One thing which is almost a total failure this season in California and also we understand in other parts of the country is the cabbage crop. It is almost entirely destroyed and the yield will be almost nothing. Nasturtiums also are in the same condition. We came to the new "Blanche Ferry Cupid" which is identical with Cupid with the exception of color, which is the same as Blanche Ferry. This is a great acquisition and will undoubtedly have as large a run as Cupid. An odd thing is that this is no sport from Cupid but originated in Santa Clara nearly 100 miles from where Cupid was found.

Large lots of hollyhocks, cosmos and

other flower seeds are being grown here, also salsify is now being harvested and looks well. Endive also is in fair condition.

During the next month and during the harvesting season over 300 hands will be employed on this great farm, which is now being spoken of as the largest and best known in the seed trade.

METEOR.

OHIO tomato growers report serious injury to some varieties by heavy rains with extreme heat.

JAMES B. KIDD, representing the Sunset Seed & Plant Co., San Francisco, was in Chicago this week.

THE stock of the Northrup, Braslan, Goodwin Co. at the Chicago warehouse has been sold to L. W. Dean for \$10,000.

ORANGE, MASS.—G. L. Frye, of the firm of Frye & Burrell, has taken a position as travelling salesman for the D. M. Ferry Seed Co., of Detroit.

HONEOYE FALLS, F. Y.—The Edward F. Dibble Seed Co. has gone into a receiver's hands. This company was incorporated some two years ago with a capital of \$20,000, which has now shrunk to about \$5,000, with out-standing liabilities of about \$17,000.

Catalogues Received.

Wisconsin Flower Exchange, Milwaukee, Wis., bulbs; Dammann & Co., San Giovanni a Teduccio, Italy, plants, bulbs and seeds; Mexican Plant Co., Maravatio, Mexico, orchids, bulbs, etc.; American Boiler Co., New York and Chicago, valves.

Greenhouse Building.

Taking as a basis for estimate the incidental notes that appear from time to time in our trade reports, it appears that at the lowest calculation the extent of new glass structures erected in the United States for commercial purposes during the past three months must amount to at least one million square feet. This record during a period of widely extending financial depression, when business enterprises of any kind are undertaken with timidity, is surprising, and it is safe to say that the rapid and increasing extension of the florists' trade is realized by but few.

The substantial character of the houses recently erected as compared with the majority of the structures of a few years ago is worthy of note, also the fact that the greatest reported increase of glass area is in the vicinity of large centers, where, judging from the constant reports of overstock and unprofitable returns, it would seem that the capacity of existing establishments is amply sufficient for all needs of the business for several years to come.

While to some of us it looks as though the time had arrived when it would be wise to "go slow" in further investment in greenhouse property, yet we must presume that the gentlemen who are putting their money in so persistently know why they do it, and their evident faith in the stability of their business notwithstanding their oft-repeated complaint that prevailing prices on their goods had now gone below the cost of production, is certainly very gratifying to contemplate, and we cannot but feel that as soon as a general business revival sets in great prosperity is sure to come to an industry that has been able to display so much of vigor under unfavorable conditions.

Berleau and Western Avenue, CHICAGO.

Greenhouse Building.

Marlboro, Mass., F. A. Howe, one commercial house, 35x80.

Lowell, Mass., H. B. Greene, 3 commercial houses, each 19x68, one 23x54.

Pittsfield, Mass., A. J. Loder, one greenhouse.

Columbus, O.

Exceedingly heavy storms on the night of the 27th did much damage to shade trees through the southern part of the city. Long continued rains have done great damage to growing crops, many thousands of acres being under water.

The employees of A. W. Livingston's Sons played a game of base ball with a nine from the State University; the score was 24 to 11 in favor of the former.

M. D. Cole and Frank Danzer spent Saturday and Sunday in Detroit, Mich.

R. H. Murphy of Urbana gave us a call Saturday. He says he will raise no cut flowers the coming year, but will devote all his space to rose plants. B. K.

Norwich, Conn.

Mr. Joseph Smith is quite busy giving his entire plant a thorough overhauling. He has also added a carnation house 75x15.

Mr. Geo. Brooks has removed his greenhouses from Greenville. Mr. Brooks has not quite decided as to the place upon which to build his new houses. Homo.

Onions for Fall Sowing.

Can some reader of the FLORIST tell me which is the best onion to sow in the fall, leave out over winter and produce early green onions in the spring for market? Also the right time to sow. BEEDER. Wisconsin.

SADDLE RIVER, N. J.—John G. Esler, secretary of the Florists' Hail Association, had the fore finger of his right hand badly crushed and broken while pumping water with a hot air engine, last Monday afternoon.

SALT LAKE CITY, UTAH.—Mr. Geo. W. Barrows succeeds Barrows & Smith, Mr. Henry D. Smith retiring. Mr. Barrows is building an addition 18x62 to one greenhouse and a store in connection.

FORCING ROSES.

LA FRANCE, PERLE, TESTOUT, KAISERIN
good stock, 5 cts.

MCCREA & COLE, Battle Creek, Mich.

Newport, R. I.

Roses, carnations and sweet peas of good quality (the latter exceptionally fine) are in abundance, and the demand as well as the prices commanded seem to be fully in touch with the quality offered. Mr. A. Brandt's new store, 134 Thames street, is a great improvement on his former place, the store being large, commodious, well lighted and well adapted for a first-class floral establishment. A visit to Mr. Brandt's greenhouses was a rare treat, for aside from the pleasure of beholding five thousand hydrangeas, veritable giants, arranged in several long rows on the grounds adjoining the greenhouses, there was a deal to be enjoyed in the two grape houses, filled with the choicest varieties. Another thing that was well worth seeing and admiring was a patch of ten thousand carnations, as fine and as healthy a collection of varieties as I ever beheld. Hydrangeas and carnations seem to be Mr. Brandt's hobby, he having met with exceptional success in growing both. I should have mentioned that violets are also one of his great favorites, among other varieties his sport of Marie Louise being a fine bloomer and a splendid grower, the stems averaging eight and nine inches in length, and the flowers being correspondingly large. "My experience taught me," remarked Mr. Brandt, "that unless you shade your young violet plants or protect them as much as possible from the sun, no soil, however rich, will insure good results. I believe in 'protection'."

HOMO.

Providence, R. I.

Friday evening, July 24, saw the largest attendance for months at meeting of the Florists' and Gardeners' Club of Rhode Island. The session was full of life, and from President T. O'Connor, who with good natured dignity occupied the chair, down to the most retiring member in the further corner, there was abundant and unmistakable evidence of that spirit which makes a club prosperous and insures success in advance to whatever it undertakes. The subject for special discussion was the proposal to extend an invitation from the club to the Society of American Florists to hold its meeting for 1897 in Providence. After full consideration of the subject in all its bearings the proposition was enthusiastically carried by a practically unanimous vote, and every member present pledged himself to do all in his power to make the meeting of 1897 a grand one if the national society should see fit to accept the invitation. There were present F. W. Fletcher of the *New England Florist*, W. Tailby of Wellesley and Secretary W. J. Stewart of the S. A. F., all of whom congratulated the Providence brethren upon the prospect of having the grand old society as a visitor to New England once more, and assured them of the hearty sympathy and co-operation of the Boston fraternity.

Conneaut, O.

R. C. Ehr Gott will soon begin to build one house 15x50 feet for roses and carnations, and in the spring will add 30 feet to the present house, with boiler room and potting shed. He had not yet decided whether he will use hot water or steam, and will wait till the convention before deciding. Miss Venen, the only other florist here, will also attend.

Denver, Colo.

A severe hail storm visited Denver the afternoon of July 25, doing a distressing amount of damage to the beds and shrubbery at the city park, also breaking a considerable amount of glass for the florists in that part of the city. The soft wooded stuff bedded out in the park is all cut up, so that it is practically ruined, in many places the hail having cut plants down to the ground, while nearly every plant in the park lost every leaf. Supt. Graham put a large force of men at work cleaning up the debris as soon as possible after the storm, and by Sunday noon had the grass cleaned off and the drives and walks repaired, but the damage to the bedding cannot be repaired this season. The Park Floral Co. lost between 5,000 and 6,000 pieces of 10x12 double strength glass, besides having considerable damage done to their carnations, etc., planted out in the field. The Colfax Floral Co. also suffered, losing about 2,500 square feet double strength glass, also sustaining severe loss to outdoor stuff. Emil Glauber, Montclair, lost about 500 feet of glass, and Mrs. R. Mauff suffered considerably from breakage at her Logan avenue place.

A visit to the various establishments and about the city shows that the summer's work at the various places is well under way, and many improvements have been made. Gallup has two new carnation houses, each 18x125, nearly completed. Mrs. R. Mauff has a new asparagus house 60x50, 20 feet high, nearly ready to glaze. The Colfax Florist Co. are preparing to complete their new carnation house, which will be 30x150 when finished. D. S. Grimes & Son are rebuilding a large rose house and making other improvements.

The H. H. Given Co. has nearly finished tearing down the Alameda avenue plant and has begun the erection of two new houses as an addition to the Red Leaf Conservatories. Perhaps the most encouraging sign of all is the tendency of the Denver florists to confine themselves to specialties this season. With the exception of the large retail establishments the majority of our growers are growing some particular specialty, which will undoubtedly be a good thing for the trade in general.

Good roses are scarce at 4 and 5 cents, carnations begging at \$1, smilax 20 cents, Beauties scarce at any price.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.
